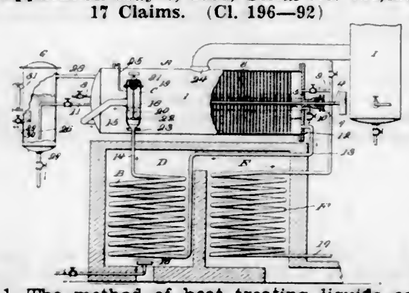
In Germany March 10, 1934
1 Claim. (Cl. 196—53)

A process for the treatment of distillable carbonaceous materials with added hydrogen or an added gas containing free hydrogen at an elevated temperature between 200° and 700° C. and a pressure in excess of 20 atmospheres, having at least 100 cubic meters of hydrogen present per ton of carbonaceous material treated, which comprises effecting said treatment in the presence as a catalyst of a fine granular free metal selected from the group consisting of aluminum, magnalium and aluminum bronze, finely distributed in the carbonaceous material treated, and between 0.01 and 1% with reference to the amount

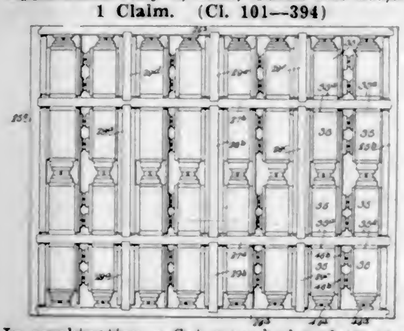


of the said carbonaceous material of a non-metallic substance comprising free halogen or hydrogen halide, the halogen portion of said non-metallic substance being selected from the group consisting of chlorine and bromine.

2,100,355

METHOD AND APPARATUS FOR UTILIZING MOLTEN MATERIAL IN HEAT TREATMENT OF LIQUIDS NOT MISCIBLE WITH THE MOLTEN MATERIAL

William O. Pray, De Beque, Colo., assignor to Pray Research Corporation, De Beque, Colo., a corporation of Colorado

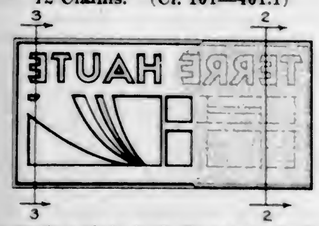


Application May 7, 1934, Serial No. 724,430
17 Claims. (Cl. 196—92)

1. The method of heat treating liquids consisting passing a stream of the same through a vessel in contact with the exposed surface of a moving mass of molten metal moving in a reverse direction to the movement of the stream of liquid and simultaneously transferring heat absorbed from within said mass through said stream of liquid as said stream moves through said vessel by alternately immersing and removing therein a plurality of spaced surfaces transversely disposed to the flow of said molten material, simultaneously filming a portion of said liquid as said stream moves through said vessel and applying the additional heat absorbed from said molten mass to said filmed liquid.

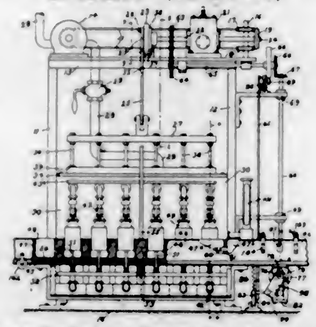
3. An apparatus for heat treating liquids comprising a vessel in which molten material is adapted to be maintained at a predetermined level, means for initially heating the same, a heating coil in communication with said molten material within said vessel, means for circulating said molten material through said vessel and coil, a plurality of spaced foraminous discs mounted to revolve transversely within said vessel with portions thereof submerged within said molten material and means for causing liquid to flow over the exposed surface of said molten material and through said discs.

2,100,356
PRESS BED LOCK-UP
William H. Ritenour, Pittsburgh, Pa.
Application May 4, 1933, Serial No. 669,345
1 Claim. (Cl. 101—394)



In combination, a flat press bed and an assembled book-chase structure comprising a plurality of longitudinal head bars **27** dividing the space parallelly within the two outside bars **26** into sections wherein the heads of the type-pages squeeze against the longitudinal head bars **27** by locking means employed at the feet of the type-pages; and a plurality of transverse bars **28, 29** jointing the longitudinal bars **27** at right angles and dividing the space parallelly between the outside bars **25** into sections of two pages' capacity setwise wherein the opposite sides of the type-pages will squeeze against the transverse bars **25, 28, 29** by locking means employed at the sides of the type-pages.

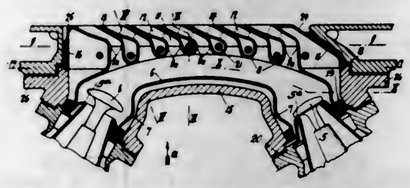
2,100,357
CASTELLATED NUT BLANK
William McLure Rosborough, Charlotte, N. C.
Application December 24, 1931, Serial No. 583,068
4 Claims. (Cl. 85—34)



1. A castellated nut blank having the metal of the body of the blank compressed and dense as compared to the metal of the locking lugs, and having extruded locking lugs, the metal of the locking lugs being uncompressed and not dense as compared to the metal of the body of the blank.

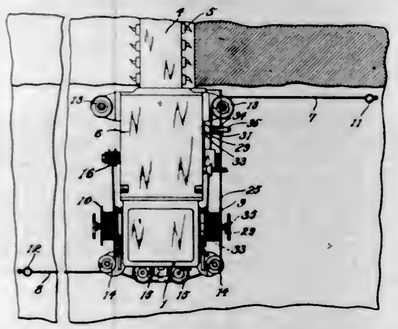
2,100,358
PAPERBOARD PRINTING PLATE AND PROCESS OF MAKING SAME
James S. Royse and Paul R. Turner, Terre Haute, Ind., assignors to Thomson Symon Co., Terre Haute, Ind., a corporation
Application October 28, 1935, Serial No. 46,971
12 Claims. (Cl. 101—401.1)

1. A printing plate including a supporting base and a printing body, the latter comprising a relatively dense liner of paper board stock, and of but slight thickness, and a relatively thicker main portion of paper board stock secured at opposite faces to the liner and the base.



2,100,359
DEVICE FOR FILLING CONTAINERS WITH LIQUIDS
Samuel Saeta, Los Angeles, Calif.
Application November 12, 1935, Serial No. 49,345
15 Claims. (Cl. 226—95)

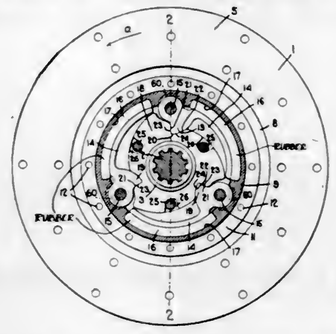
1. In a device of the character described, a shaft, means for rotating said shaft, a tank for liquids, means for supplying liquid to said tank, a plurality of pump cylinders connected with said tank and receiving liquid therefrom, a piston for and reciprocating in each of said cylinders, a liquid-carrying connection leading from each of said cylinders, a nozzle for and attached to each of said connections, means for simultaneously presenting an empty container to each of said nozzles, a member connecting all of said pistons through which they are reciprocated in their respective cylinders, a pitman connected with said member, a crank member rotatable with said shaft, said member having a plurality of apertures therein at various distances from the shaft and the pitman having a corresponding plurality of apertures therein, and means for connecting the pitman to said crank member through the corresponding apertures in the pitman and crank member, the arrangement of the apertures being such that the pistons will always begin their power strokes at the same point with reference to the respective cylinders and the length of said strokes will be varied in accordance with the aperture in the crank member through which the pitman is connected.



2,100,360
NOZZLE CHANNEL CONSTRUCTION
Georg Schaper, Muelheim-Ruhr-Broich, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a corporation of Delaware
Application April 20, 1935, Serial No. 17,467
In Germany April 23, 1934
8 Claims. (Cl. 60—41)

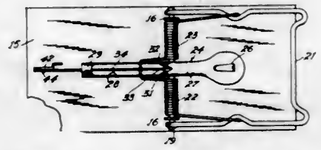
1. In a constant volume explosion turbine plant, the combination of a constant volume explosion chamber, a nozzle assembly for directing the gases generated in said chamber against a turbine rotor, a nozzle channel between the nozzle assembly and the outlet end of the explosion chamber, an outlet valve at the discharge end of the chamber controlling the communication between such chamber and the nozzle channel, the walls of said channel being relatively thin and being provided with one or more lateral passageways leading into the nozzle essembly, a relatively thick walled jacket about said channel and spaced therefrom to provide a cooling chamber adapted to receive a current of cooling agent, the jacket being connected to said

channel to seal the cooling chamber, and elastic connections between said channel and said jacket for elastically suspending the channel within the relatively rigid jacket for enabling the channel to expand and contract as the temperature of its walls and the pressure thereon vary.



2,100,361
MINING MACHINE
Leon E. Simmons, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application September 13, 1935, Serial No. 40,450
25 Claims. (Cl. 262—30)

1. In a mining machine, a machine frame having a smooth bottom surface adapted to rest upon and slide over a mine floor, a rigid cutter bar projecting forwardly from said frame, means for feeding the machine bodily laterally over the mine floor during the cutting operation, and jack means extending longitudinally of the machine at the advancing side thereof and connected to the machine frame for tilting the machine about an axis extending longitudinally of the machine while the bottom surface of the machine frame at the receding side of the machine remains resting on the mine floor.

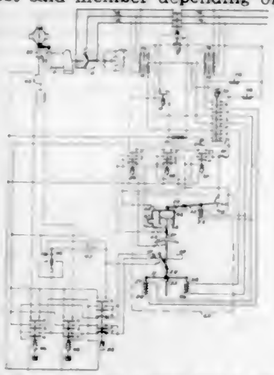


2,100,362
CLUTCH CONSTRUCTION
John A. Stahle, Boston, Mass., assignor of one-half to Thorwald Lillemoen, Watertown, Mass.
Application November 23, 1933, Serial No. 699,349
4 Claims. (Cl. 192—68)

2. Clutch mechanism comprising a driven shaft, a driven clutch member thereon having a hub portion fast on the shaft and a clutching portion encircling the hub portion and capable of a limited turning movement relative thereto, said clutching portion having means for engagement with a driving clutch member, a plurality of two-armed levers pivoted to one portion of the driven clutch member, each lever having a long arm extending at substantially right angles to a radial line and also having a short arm, a resilient backing for the long arm of each lever on

the outside thereof, and a permanent torsional-strain-transmitting connection between the short arm of each lever and the other portion of the driven clutch member said hub and clutching portion having cooperating means other than the levers to limit the relative turning movement between them.

2,100,363
ANIMAL TRAP
Herbert A. Stilson, Chicago, Ill.
Application August 13, 1934, Serial No. 739,541
12 Claims. (Cl. 43—83)

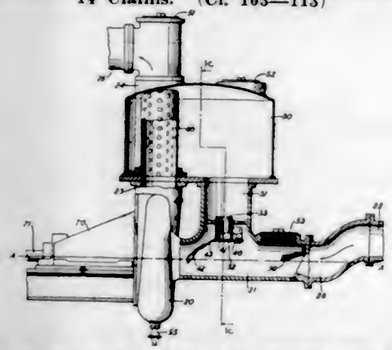


1. In an animal trap comprising a base, and a spring actuated jaw pivoted thereon, the combination of a trigger cooperating to lock said jaw in operative position, and comprising an elongated body portion and an apertured enlarged head, and a support carried on said base having means on one side thereof extending into and removable in its normal condition from the aperture in said trigger for pivotally carrying the same.

2,100,364
CONTROL SYSTEM
Edward H. Stivender, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application February 14, 1936, Serial No. 63,923
14 Claims. (Cl. 171—118)

11. A device for controlling the connection of two alternating current circuits including a control member, means connected with the circuits for causing said control member to be displaced at a speed substantially proportional to the rate of variation of the phase angle between the voltages of the circuits, a second control member, and means connected with the circuits for causing the second said control member to move

transversely to and assume a position in the path of the first said member depending on the said



rate of variation of the phase angle between the voltages of the circuits.

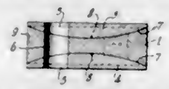
2,100,365

SELF-PRIMING IMPELLER PUMP FOR GAS AND FLUID MIXTURES

Albert C. Stratton, Lincoln Park, N. J., assignor to Alfred S. Marlow, Ridgewood, N. J.

Application May 18, 1931, Serial No. 538,129
14 Claims. (Cl. 103—113)

1. A pumping system for pumping varying mixtures of air and water which comprises a centrifugal pump having a suction opening, a suction connection for the main water flow into said opening, a recirculation path for said pump of negligible impedance and effective as a reservoir for priming water, a short restricted passage forming the junction between said path and said suction connection and presenting substantially the total impedance to flow in said path, and a shutter member for said passage having a plurality of surfaces for impact with the reserve flow through said passage and fastened to extend into the air zone within said suction connection for operation by varying impact with the main flow through said suction connection to shut off the reserve flow through said passage.



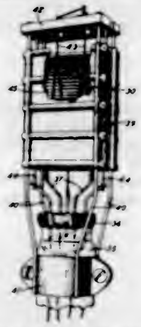
2,100,366

VALVE

Stephen Leslie Tyler, Garden City, N. Y.

Application January 5, 1935, Serial No. 501
6 Claims. (Cl. 251—84)

1. A rotary disc type valve comprising a rotor and associated stators, each provided with a registrable port, and in which a rotor surface is curved and the contiguous surface of the stator complementarily curved, said curved surfaces being the



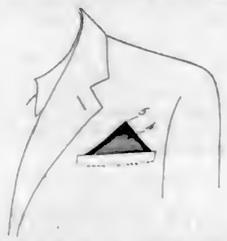
sole means for positioning the rotor, the flow through said valve being substantially parallel to the axis of rotation.

2,100,367

ELECTRIC DISCHARGE DEVICE

Frank E. Ward, Williston Park, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application June 16, 1932, Serial No. 617,491
7 Claims. (Cl. 250—27.5)



3. In combination, a discharge device having a heatable cathode coated with an alkaline earth emissive substance, a stem supporting leading-in wires for said cathode and another electrode, and a deposit of a non-conducting oxide of the group consisting of nickel, chromium, aluminum and manganese on said stem surrounding said leading-in wires to combine with said emissive substance to form an inactive, stable, insulating compound.

2,100,368

HANDKERCHIEF SIMULATION

James Price Weyman, San Antonio, Tex.

Application April 16, 1935, Serial No. 16,671
2 Claims. (Cl. 35—56)

1. A handkerchief simulation comprising a plurality of connected sections each including outer and inner layers of material with the outer layers arranged to receive the inner layers therebetween, each section being of a different color and having angled free portions disposed whereby any one may be individually displayed from the pocket of a user.

2,100,369

TEXTILE MATERIALS AND METHOD OF MAKING SAME

William Whitehead, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application July 20, 1935, Serial No. 32,455
10 Claims. (Cl. 260—101)

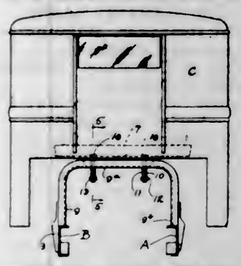
1. In a process for the manufacture of organic acid esters of cellulose hydroxy alkyl ethers, the steps of forming an alkali-cellulose, etherifying the alkali-cellulose with an etherifying agent selected from the group consisting of ethylene oxide and the homologues thereof, the amount of etherifying agent being from 3.5 to 4.5 parts by weight of ethylene oxide or molecular equivalents of its homologues, and esterifying the alkyl hydroxy ether of cellulose so produced in the presence of a condensing agent in such a manner that there are more than 2½ acyl groups combined with said alkyl hydroxy ether of cellulose.

2,100,370

VULCANIZATION OF RUBBER

Ira Williams, Woodstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application May 18, 1935, Serial No. 22,171
12 Claims. (Cl. 18—53)



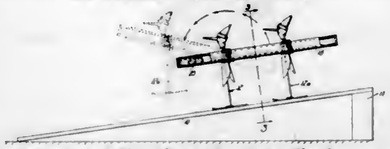
5. The method of vulcanizing rubber which comprises incorporating in a rubber mix an acidic type sulfur containing accelerator and a diaryl guanidine sulfate.

2,100,371

MOTOR VEHICLE CONSTRUCTION

Benjamin B. Bachman, Philadelphia, Pa., assignor to The Autocar Company, Ardmore, Pa., a corporation of Pennsylvania

Original application June 16, 1934, Serial No. 730,863. Divided and this application March 29, 1935, Serial No. 13,605
6 Claims. (Cl. 296—35)



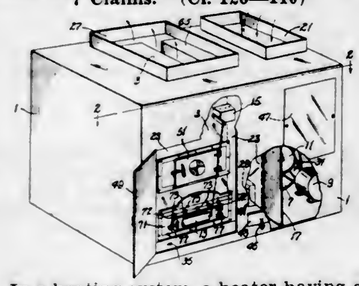
1. The combination with a frame, as that of a vehicle chassis, of a body and means for connecting said body to said frame for controlled relative movement, said means including a rigid supporting member spanning said frame in vertically spaced relation thereto, lateral extensions rigid with said frame forwardly of said supporting member, devices connecting the forward part of the body in proximity to its base line in bearing engagement with said lateral extensions and devices located on either side of the median line of said body, for connecting the rear part of said body in bearing engagement with said member in a zone an appreciable distance above the base line of said body, all of said devices including resilient elements functioning to yieldably control the relative movements of the parts interconnected by said devices, and permit said body to rock laterally upon said member.

2,100,372

MOVING TOY

Armand Barton, Chicago, Ill.

Application January 18, 1937, Serial No. 121,229
18 Claims. (Cl. 46—134)



1. A device of the character described comprising a pair of longitudinal members provided with spaced vertical supports constituting figures, a lively weight within said members, and means for shifting the center of gravity of said members to cause oscillation of said members around one of said supports.

2,100,373

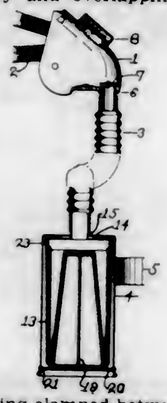
HEATING APPARATUS

Vernon S. Beck, St. Louis, Mo.

Application May 29, 1936, Serial No. 82,500
7 Claims. (Cl. 126—110)

1. In a heating system, a heater having a combustion chamber and a draft intake, an enclosed heater casing about said heater, a blower constructed to receive cool air and force the same through said heater casing, a draft casing communicating with said heater draft intake, said heater casing and said draft casing having communicating means therebetween, means in said last-named communicating means automatically openable under super-atmospheric pressure in the heater casing to provide a super-atmospheric pressure in said draft casing available at said draft inlet, said draft casing also having an outside communication, and means in said outside communication normally standing open to permit a natural draft to said draft opening but constructed automatically to close upon the attainment of super-atmospheric pressure in said draft casing.

2,100,374



FILTERING ASSEMBLY FOR RESPIRATORS

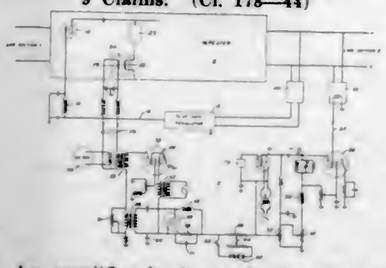
Edmund J. Biever, Kohler, Wis.

Application March 11, 1936, Serial No. 68,203
2 Claims. (Cl. 183—71)

1. In a respirator, the combination of a canister unenclosed on the side normally bottommost; an air pervious rack having a solid top portion; means for attaching said top portion to said canister, said rack being spaced from said canister

to leave an air space therebetween throughout a substantial portion of its surface area; a nipple attached to said top portion and extending through said canister whereby to provide communication between the interior of said rack and the exterior of said canister; a filtering element of dust impervious material enclosing said rack supported thereby and overlapping said solid top

portion and being clamped between said top portion and said canister when said frame is attached to said canister as aforesaid; a second rack adapted to fit within said first mentioned rack and to engage said filtering element and fold it back upon itself in acute angles and means for securing and positioning said second mentioned rack in said canister.



2,100,375

GAIN CONTROL

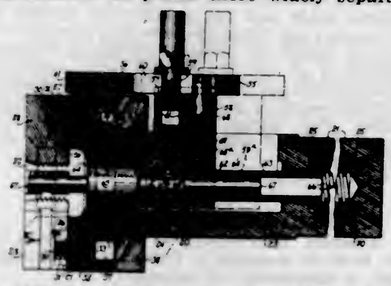
Royer R. Blair, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application May 1, 1936, Serial No. 77,303

9 Claims. (Cl. 178—44)

1. An amplifier having a backwardly acting gain control from an output portion to an input portion of the amplifier, said gain control including an amplifier having a backwardly acting gain control from an output to an input portion thereof, and means making the response of the second-mentioned gain control slow in comparison with the response of the first-mentioned gain control.

2,100,376



TAPER-THREAD-CUTTING TOOL

Albert F. Breitenstein, New Haven, Conn., assignor to The Geometric Tool Company, New Haven, Conn., a corporation of Connecticut

Application October 10, 1936, Serial No. 104,934

10 Claims. (Cl. 10—120.5)

1. In a taper-thread-cutting tool, the combination with a body-member having two spaced-apart bearing-surfaces within its interior and a passage leading laterally therefrom; of a plurality of advanceable and retractable taper-thread-cutting chasers carried by the said body-member; an oscillating chaser-operating unit operatively associated with the said chasers to move the same with reference to an article being threaded; and a taper-control unit effecting the progressive turning movement of the said chaser-operating unit and including a bearing-member having a relatively-large and a relatively-small bearing-portion respectively bearing in the spaced-apart bearing-surfaces within the said body-member at points more widely separated

than the largest diameter of the larger of the two bearing-portions of the said bearing-member, the said taper-control unit also comprising a post-like portion member rigidly carried and guided directly by and extending outwardly from the said bearing-member through the passage leading from the interior of the said body-member at a point intermediate the respective opposite ends thereof, and a member carried by the said rigid post-like member and having cam-like engagement with a portion of the said chaser-operating unit and effecting the oscillation thereof as the taper-control unit is moved axially of the tool structure.

2,100,377

ARTICLE OF MANUFACTURE AND METHOD OF MAKING SAME

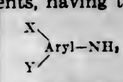
Merlin Martin Brubaker, Wilmington, Del., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application May 31, 1934, Serial No. 728,455

10 Claims. (Cl. 91—68)

10. A transparent, moistureproof, flexible, heat-sealable film comprising a regenerated cellulose base having a coating thereon containing a film-forming substance and a wax material, said film-forming substance consisting of a polyether resin comprising the alkaline reaction product of a polyhydric phenol and an organic polyhalide whose halogen atoms are attached to different carbon atoms, said carbon atoms being joined to other atoms solely by single bonds.

2,100,378



AZO DYES

James I. Carr and Crayton K. Black, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application September 7, 1935, Serial No. 39,630

19 Claims. (Cl. 260—86)

2. A dyestuff being the product formed by diazotizing an arylamine, free from water-solubilizing substituents, having the formula

in which X is one of a group consisting of H and NH_2 and Y is one or more negative substituents other than water-solubilizing substituents, and coupling it to an aceto-acet-nitro-anilide free from water-solubilizing substituents, said coupling component containing only one aryl nucleus.

2,100,379

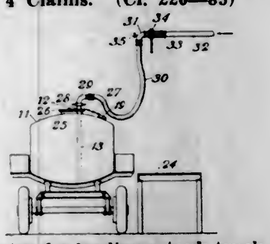
HORTICULTURAL IMPLEMENT

William F. Cervenka and Fred Miller, Traverse City, Mich.

Application April 3, 1936, Serial No. 72,452

2 Claims. (Cl. 306—14)

1. In a horticultural implement, in combination: a tool element and an elongated handle element pivotally connected for relatively turning movement about an axis transverse thereto; a latch pivotally mounted on the handle element turnable inwardly to a position engaging the tool element for holding said elements against such relative movement; a collar on the handle element turnable therearound and slidable therealong to and from a position engaging the latch for holding the same in its said position; a foot rest pivotally mounted on the collar for turning movement to and from operative position transverse the axis of the handle element and turnable with the collar to angular positions about said axis.



2,100,380

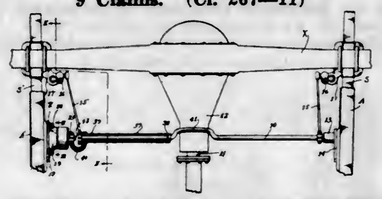
TRUCK TANK LOADING APPARATUS

George W. Chenicek, Chicago, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application December 9, 1935, Serial No. 53,465

4 Claims. (Cl. 220—85)

1. Apparatus for loading a tank truck comprising a truck tank carried by said tank truck, a filler pipe for said tank permanently installed as a part of said tank truck, said filler pipe terminating at its upper end above the normal liquid level in said tank and terminating at its lower end within said tank near the bottom of said tank, attachment means carried by the upper end of said filler pipe, and a filler line, said filler line comprising a permanently installed delivery line leading to a storage tank, a valve in said delivery line, a vacuum breaker in said delivery line on the delivery side of said valve above the normal liquid level in said tank, a flexible hose connected to said delivery line at one end, and a quick attachment coupling carried by the free end of said flexible hose adapted to cooperate with said attachment means to form a liquid-tight joint therewith.



2,100,381

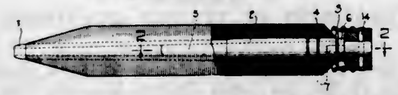
STABILIZER STRUCTURE FOR AUTOMOBILES

Harry L. Chisholm, Jr., Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York

Application March 21, 1936, Serial No. 70,046

9 Claims. (Cl. 267—11)

1. Stabilizing structure for an automotive vehicle, comprising a torque bar extending across and supported on the vehicle chassis, levers and links connecting the ends of said bar with the respective ends of a vehicle axle, a shock absorber mounted on one side of the vehicle chassis adjacent the said torque bar, and a transmission connection between said shock absorber and said bar at substantially the middle point thereof for transmitting torsional movement at said point to said shock absorber.



2,100,382

WEAVING DEVICE

Thomas Boss Congdon and Charles Jacob Long, New London, Conn., assignors to Celanese Corporation of America, a corporation of Delaware

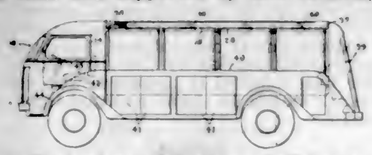
Application July 22, 1936, Serial No. 91,824

2 Claims. (Cl. 139—207)

1. A weaving device for adapting the cop type of yarn package to looms normally employing a quill, said device comprising a cop supporting member, said cop supporting member having a recess adapted to receive the flange of a cop tube, a collar in said recess adapted to abut against said flange, said collar being of smaller diameter than said flange and spring means clamped between said collar and said cop supporting member adapted to engage with said flange and to retain it in abutment against said collar.

2,100,383

TRUCK TANK AND CAB



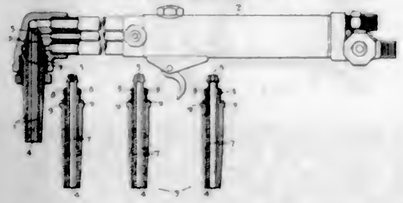
Augustine Davis, Jr., Cincinnati, Ohio

Application April 6, 1934, Serial No. 719,272

2 Claims. (Cl. 280—5)

2. A truck tank body comprising a tank including sides and a top welded to said sides, a false top for the tank including integral extensions of the tank sides projecting above the connections of the tank top with the sides, transverse carlines extending across the tank body and supported at their ends by the extensions of the

tank sides, and a top shell extending across the top of the tank between said extensions of the tank sides and supported by said carlines, the



longitudinal edges of the top shell being connected with the upwardly projecting extensions of the tank sides.

2,100,384
OXYGEN CUTTING APPARATUS

George M. Deming, East Orange, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York

Application September 29, 1932, Serial No. 635,342
1 Claim. (Cl. 158—27.4)

A cutting tip having an oxygen delivery orifice and a restricted oxygen inlet orifice, the relative sizes of said orifices being substantially in accordance with the formula:

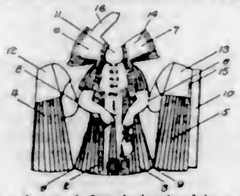
$$A_r=\left(\left(\frac{4000\pm700}{P}\right)-14\right)A_o^{1.56}$$

wherein A_r is the cross-sectional area of the oxygen inlet orifice in square inches, A_o is the cross-sectional area of the exit orifice in square inches, and P is the absolute value in pounds per square inch of a selected operating pressure common to a set of tips of different powers.

2,100,385
TREATMENT OF TEXTILE AND OTHER MATERIALS

Henry Dreyfus, London, England

No Drawing. Application April 20, 1935, Serial No. 17,487. In Great Britain May 22, 1934
2 Claims. (Cl. 91—68)



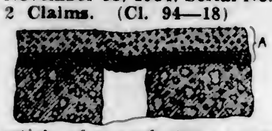
2. Process for impregnating cellulose acetate filaments, threads, yarn and like materials with cellulose, which comprises subjecting said materials to the action of ethanol, treating said materials with a viscose solution containing less than 2% of cellulose, said ethanol having a precipitating action on said viscose solution, subjecting said materials to a light wash whereby the sticking together of the filaments or threads is prevented, and then regenerating the cellulose from the viscose carried by said materials.

2,100,386
PAPER DOLL'S DRESS

George Hyde Emery, Norwalk, Conn.

Application October 9, 1935, Serial No. 44,289
3 Claims. (Cl. 46—157)

1. In a dress for a paper doll, a front section, main rear sections at opposite sides of the front sections foldable rearwardly back of the front section with one of the rear sections overlapping the other, auxiliary rear sections carried by the front section and foldable rearwardly into overlying relation to end portions of the main rear sections with one auxiliary rear section overlapping the other, and means carried by one auxiliary rear

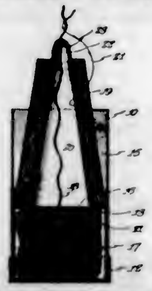


section and adapted for interlocking engagement with the other auxiliary rear section and one of the main rear sections to releasably hold the auxiliary and main rear sections folded rearwardly.

2,100,387
PRODUCT FOR COVERING HIGHWAY JOINTS

William C. Ferguson, St. Louis, Mo.

Application November 15, 1934, Serial No. 753,147
2 Claims. (Cl. 94—18)

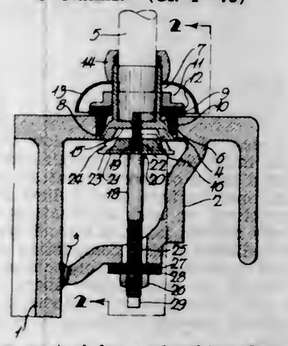


1. As an article of manufacture, a cover strip for joints in roadways and the like comprising a strip of fabric impregnated with tacky asphalt in such manner that one surface of said fabric is substantially entirely covered with asphalt, while the other surface of said fabric is substantially all exposed, and free from asphalt, the asphalt, however, penetrating the interstices of said fabric in such manner that it presents a tacky surface for said second-named fabric surface, whereby said strip, when applied to a roadway, adheres thereto with the second-named fabric surface directly juxtaposing the roadway surface without substantial amounts of asphalt therebetween.

2,100,388
HOLDER AND METHOD FOR KNITTING, CROCHETING, AND ANALOGOUS PURPOSES

Ralph K. Fisher, New York, N. Y., assignor of one-half to Oregon Worsted Company, Portland, Oreg., a corporation of Oregon

Application February 20, 1937, Serial No. 126,781
10 Claims. (Cl. 242—159)

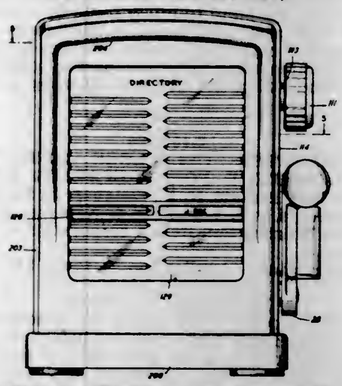


9. The method of associating two strands of material which consists in arranging one strand wrapped upon a supply member having a passageway through its interior; passing another strand through said passage-way and arranging the same in contact with said first mentioned strand; and then simultaneously withdrawing both strands while holding said supply member stationary and thereby wrapping said first mentioned strand around said other strand in natural untwisted condition.

2,100,389
FLOW CONTROL FOR URINALS AND THE LIKE

Gordon P. Gavin, Kohler, Wis.

Application July 31, 1937, Serial No. 156,620
3 Claims. (Cl. 4—75)



1. A flow control for a plumbing fixture comprising a tubular spud connection having an outwardly flaring flange at its lower extremity, means for connecting said spud connection to a flushing rim, means for connecting a supply pipe to said spud connection, a web extending across the interior of said spud connection, a plurality of lugs on said web, a flow regulating stem having threaded connection with said web, a shoulder on said flow regulating stem, a flow regulating disc positioned on said flow regulating stem and abutting said shoulder, said flow regulating disc being grooved to receive the aforesaid lugs, means for holding said regulating stem in position on a flushing rim, and means on one extremity of said flow regulating stem adapted for engagement by a tool whereby to rotate said stem.

2,100,390
CALL TRANSMITTER

Harold W. Goff, Great Neck, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application February 18, 1937, Serial No. 126,416
10 Claims. (Cl. 179—90)

4. A call transmitter comprising normally closed contacts, a plurality of operating members for said contacts, a rotatable shaft for moving said members in a circular path for actuating said contacts, a plurality of cams, one of said cams being movable, a rotatable code element, and means operated by the movement of said rotatable shaft and cooperating with said element for controlling the operation of said movable cam for operating contacts.

2,100,391
VITREOUS COMPOSITIONS OR GLASSES

Hans Georg Grimm, Heidelberg, and Paul Huppert, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany

No Drawing. Application August 12, 1936, Serial No. 95,630
11 Claims. (Cl. 106—36.1)

1. A clear vitreous composition obtained by fusion and comprising an oxidic component and a vitrifying component containing between 10 and 100 per cent by weight of Al_2O_3 and P_2O_5, Al_2O_3 being present in a proportion which, reckoned on P_2O_5, is larger than that present in $AlPO_4$, but does not exceed about 4 parts by weight per each part of P_2O_5.

2,100,392
ALKYLARYLANTHRAQUINONE DYESTUFFS

Norman Hulton Haddock, Prestwich, and Colin Henry Lumsden, Gatley, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain.

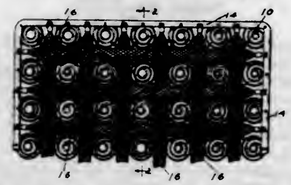
No Drawing. Application June 25, 1935, Serial No. 28,352. In Great Britain June 28, 1934
10 Claims. (Cl. 260—60)

1. Compounds of the formula

Aq—X—R'—R

in which Aq stands for an anthraquinone radical; X stands for a linking radical of the class consisting of —NH—, —O—, —S—; R' stands for an arylene radical of the class consisting of phenylene, naphthylene and acenaphthylene, and R stands for a long chain alkyl group containing from 8 to 20 carbon atoms.

5. Compounds of the formula



Aq—X—R'—R

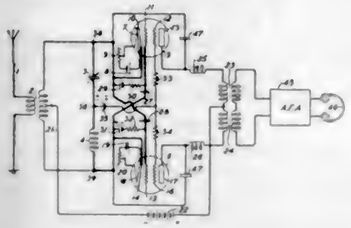
in which Aq stands for an anthraquinone radical, X stands for a linking radical of the class consisting of —NH—, —O—, —S—, R' stands for an arylene radical of the class consisting of phenylene, naphthylene and acenaphthylene, and R stands for a long chain alkyl group containing from 8 to 20 carbon atoms, and which carry in the molecule at least one sulfonic acid radical.

2,100,393
BEDSPRING

Lawrence H. Hamilton, Niles, Mich., assignor to National Standard Company, Niles, Mich., a corporation of Michigan

Application March 9, 1936, Serial No. 67,833
1 Claim. (Cl. 5—230)

A spring structure comprising a plurality of rows of coil springs, means interconnecting said



springs, upper and lower frames surrounding said springs and the lower of which is provided with means supporting the lower ends of said springs, and lengthwise-yieldable supports at right angles to each other between said rows and carried over and under each other and which are attached at their ends to said upper frame substantially in the plane of the upper ends of said coil springs and otherwise freely movable relative to said springs and each of which comprises a braid made up of spring steel wires each extending the full length of the support and carried alternately over and under each other diagonally of the braid and which are spread apart to form a relatively wide mesh and which bend back across the braid at the edges thereof and are permanently set beyond the elastic limit of the steel at said edges to form in effect a large number of small springs yieldable in the plane of the braid.

2,100,394

RECEPTION OF FREQUENCY MODULATED WAVES AND CIRCUITS THEREFOR

Raymond A. Heising, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application January 23, 1936, Serial No. 60,420
10 Claims. (Cl. 250—20)

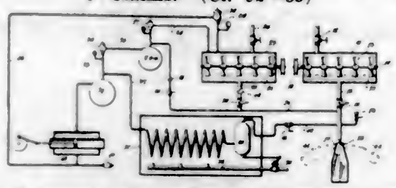
1. An amplifier for amplifying oscillations of frequency above a fixed cut-off frequency without amplifying oscillations below the cut-off frequency comprising an electron discharge device having a cathode, an anode and two interposed grids, an inductance element and a capacity element constituting a series path tuned to the cut-off frequency, and means for connecting the cathode and one grid across the inductance element and for connecting the cathode and other grid across the series tuned path.

2,100,395

MOLDING OF PULP

Roy D. Heymann, Woodbridge, Conn., assignor, by mesne assignments, to Pulp Products Company, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application February 11, 1935, Serial No. 6,129
4 Claims. (Cl. 92—54)



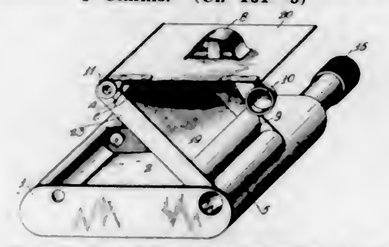
1. The herein described method of making molded paper pulp containers having substantially smooth interiors, which comprises successive introduction into a foraminous mold, of a pulp suspension containing 1¾% to 2% of fibres, at a pressure of from one to 10 pounds, followed by a pulp suspension containing ¼% to ¾% of fibres at a pressure of 10 lbs. to 30 lbs. per square inch, the duration of the flow of thick pulp suspension being shorter than that of the thin pulp suspension.

2,100,396

HYDRO-PNEUMATIC PULP MOLDING

Roy D. Heymann, Woodbridge, Conn., assignor, by mesne assignments, to Pulp Products Company, Inc., New York, N. Y., a corporation of Delaware

Application March 9, 1935, Serial No. 10,219
9 Claims. (Cl. 92—55)



1. A process of forming a hollow pulp article having an impervious wall which comprises establishing a layer of loosely matted pulp fibers upon the inner surface of a hollow foraminous mold, depositing on and intermatting with said first loosely matted layer, a second layer of soluble nitrocellulose fibers, compacting said layers within said mold and contacting said second layer with a solvent for said soluble fibers whereby to coalesce said second layer of fibers into an impervious solid coating adhering to said layer of pulp fibers.

2,100,397

POCKET CIGARETTE ROLLER

Erik Edward Hollander, Kearny, N. J.

Application November 5, 1931, Serial No. 573,099
3 Claims. (Cl. 131—5)

3. In a device of the class described, a casing, a tubular compartment at one end thereof, means for holding cigarette papers in the casing, a paste-holding compartment in the casing, a movable plate mounted in the casing, means for manipulating the plate to apply paste to a cigarette paper and insert said paper in the tubular compartment, a cigarette forming member in the tubular compartment, and means for contracting and withdrawing the cigarette-forming member.

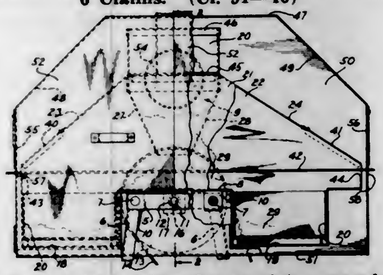
2,100,398

REGENERATED CELLULOSE STRUCTURE AND METHOD FOR PREPARING SAME

Emil Kline, Buffalo, N. Y., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application October 24, 1934 Serial No. 749,823
18 Claims. (Cl. 8—5)

1. The process which comprises incorporating into viscose made from cellulose having an alpha cellulose content of at least 92% a compound soluble therein, said compound having at least 14 carbon atoms and being taken from the class consisting of an alkali metal salt of naphthalene



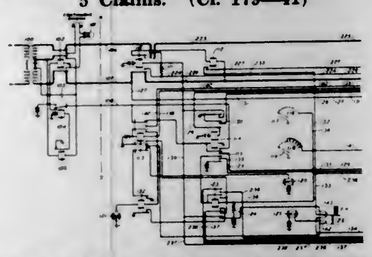
sulfonic acid condensed with formaldehyde, alkali metal petroleum sulfonate, alkali metal abietene sulfonate, polymerized alkali meta thiophenol and its formaldehyde-bisulfite condensation product, alkali metal stearyl sulfate, alkali metal oleyl sulfate, alkali metal cetyl sulfate, alkali metal myristyl sulfate, and an alkali metal salt of the product obtained by sulfating a normal primary acetylated aliphatic alcohol, spinning the viscose into threads, fabricating the thread into a fabric with a textile material having a lower affinity than said thread for dyestuffs of the class consisting of basic and naphthol dyestuffs, and dyeing said fabric with a dyestuff taken from the class consisting of basic and naphthol dyestuffs.

2,100,399

POWDERED MATERIAL APPLYING APPARATUS

David A. S. Laing, Montreal, Quebec, Canada, assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application April 17, 1936, Serial No. 74,827
6 Claims. (Cl. 91—46)



1. In an apparatus for applying powdered material to moving articles, a table for supporting a supply of said material in the path of said moving articles, a hopper for maintaining the supply of material on said table, and means for moving said hopper and table in a direction transverse to the direction of movement of said articles.

2,100,400

TELEPHONE SYSTEM

Ernst von der Linden, Millburn, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application June 30, 1936, Serial No. 88,134
5 Claims. (Cl. 179—41)

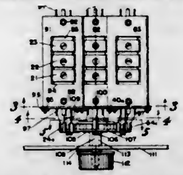
1. In a telephone system, an operator's position, a line terminating thereat, a common battery cord circuit at said position including a supervisory signal device adapted to be connected to said line, a source of ringing current, and means in said line responsive to the connection of said cord with the line for connecting said source to the line and displaying said supervisory signal for a predetermined time interval.

2,100,401

MANUFACTURE OF ORTHO-AND PERI-ARYL DINITRILES

Reginald Patrick Linstead, South Kensington, London, and Arthur Reginald Lowe, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain

No Drawing. Application August 4, 1936, Serial No 94,284. In Great Britain January 13, 1933
11 Claims. (Cl. 260—99.30)



1. A process for the manufacture of aryl nitriles which comprises heating a gaseous mixture comprising a molecular excess of ammonia and a member of the group consisting of orthophthalic acid, ortho-phthalic anhydride, phthalamic acid, phthalimide, and phthalamide at a temperature between 360° and 550° C. for a period of time between about 2 seconds and about 24 seconds in the presence of a catalyst adapted to transform an amide into a nitrile.

2,100,402

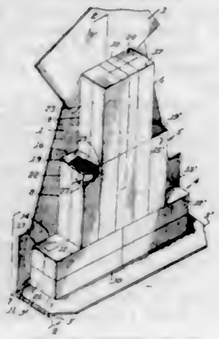
MULTIBAND INDUCTANCE UNIT

Walter Lyons, Flushing, N. Y., assignor to Hazeltine Corporation, a corporation of Delaware

Application January 10, 1936, Serial No. 58,468
6 Claims. (Cl. 250—40)

1. In a multi-band radio receiver having a plurality of tunable stages; a compact, multi-band inductance unit comprising; rotary switching mechanism including an actuating shaft and a plurality of contacts disposed about said shaft, said contacts comprising a plurality of groups, at least one for each of the stages of the receiver; a group of inductance elements for each of the stages of the receiver the inductance elements of each of said groups being non-inductively related to the inductance elements of the other of said groups, each group including a plurality of inductance elements having different inductance values for operation over the several bands of the receiver, said groups of inductance elements being mounted with their axes parallel to the axis of said shaft and being angularly disposed about the axis of said shaft at substantially equal radial distances, said inductance elements of each of said groups being similarly disposed with respect to said axis, and axially spaced along said axis, said groups of inductance elements having terminals in proximity to their respective groups of contacts; and short and substantially linear connections between the terminals of each group of inductance elements and its respective group of contacts.

2,100,403



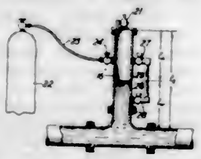
DISPLAY DEVICE

Ralph J. Mancuso, Brooklyn, N. Y., assignor, by mesne assignments, to Carl Percy, Inc., New York, N. Y., a corporation of New York

Application June 1, 1935, Serial No. 24,470
17 Claims. (Cl. 40—126)

1. In a display device, the combination of a sheet of material providing a substantially upright display wall, said wall having a portion partially cut therefrom and foldable out of the plane thereof to form the front and top walls

of a display formation, and a second sheet of material foldably secured to the foldable portion



of said first sheet, said second sheet forming the side walls of said display formation.

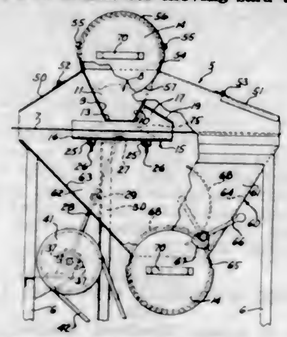
2,100,404

FLUID TRANSMISSION

Warren P. Mason, East Orange, N. J., George T. Stanton, Mamaroneck, N. Y., and John E. Tweeddale, Newark, N. J.; said Mason assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York, and said Stanton and Tweeddale assignors to Electrical Research Products, Inc., New York, N. Y., a corporation of Delaware

Application August 16, 1932, Serial No. 628,980
3 Claims. (Cl. 138—26)

3. In a water supply system comprising a main conduit and a pump for maintaining water pressure therein, means for suppressing pulsations of the water pressure due to the pump comprising a side branch having unrestricted communication with said conduit, said branch having a closed end and containing a column of water having thereabove a cushion of air, and said cushion being adapted by variations in volume to accommodate differences of pressure in said column of water incident to the operation of the pump, wherein said volumes of air and water may be so proportioned as to produce resonance in said branch at the pulsation frequency of said pump.



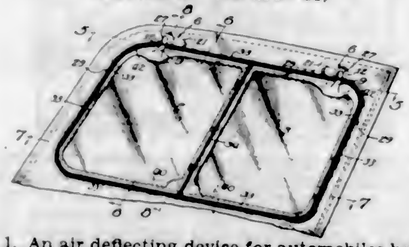
2,100,405

COATING APPARATUS

Joseph C. Morris, Verdun, Quebec, Canada, assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application September 2, 1936, Serial No. 99,041
9 Claims. (Cl. 91—46)

1. In an apparatus for applying powdered material to moving articles, a hopper for directing a supply of powdered material into engagement with the moving articles, a table positioned below said hopper for holding a supply of said powdered material, and means for moving said table in a



direction transverse to the direction of movement of said articles.

2,100,406

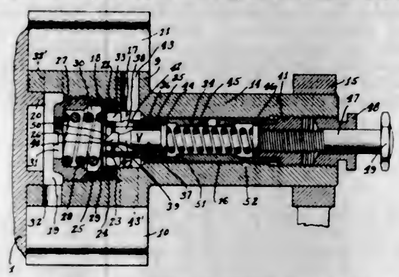
AIR DEFLECTING DEVICE FOR AUTOMOBILES

Willard L. Morrison, Lake Forest, Ill.

Application May 16, 1934, Serial No. 725,842
Renewed April 8, 1936
14 Claims. (Cl. 296—44)

1. An air deflecting device for automobiles having closed bodies and having a window opening surrounded by a window frame, comprising an air deflecting section extending in a vertical direction, when in its closed position, from the top to the bottom of the window opening pivotally supported in position in the window opening between its front and rear edges and nearer its front edge than its rear edge so as to be moved about a movable up and down axis intermediate its front and rear edges, said axis movable to various angular positions by pressure applied to said deflecting section.

2,100,407



VALVING ASSEMBLY FOR HYDRAULIC SHOCK ABSORBERS

Ralph F. Peo, Carl F. Lautz, and Gervase M. Magrum, Buffalo, N. Y., assignors to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York

Application February 8, 1936, Serial No. 62,943
8 Claims. (Cl. 188—100)

1. A valving assembly for controlling the fluid flow in a hydraulic shock absorber, comprising an orifice plate having an orifice passage therethrough, a valve plug having a tapered outer end engaging in said orifice passage to define therewith an annular orifice, said valve plug being shiftable by fluid pressure in one direction for exposing more or less of its beveled end to said orifice to thereby increase the orifice area, a guide

support for said valve plug and a tension spring therein resisting axial movement of the valve plug, said orifice plate having ports therethrough independently of said orifice, a valve disc seated

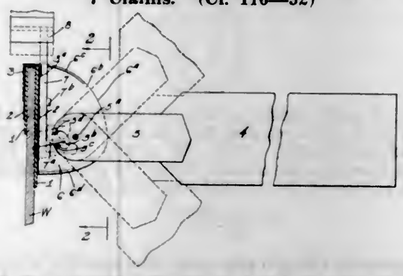
against said orifice plate, a spring yieldably holding said valve disc seated for closure of said ports, said valve disc being arranged to be unseated by fluid flow in the opposite direction for exposure of said ports to such flow.

2,100,408

FINISH FOR FABRICS OF ORGANIC DERIVATIVES OF CELLULOSE

Herbert Platt, Cumberland, Md., assignor to Celanese Corporation of America, a corporation of Delaware

No Drawing. Application June 18, 1935, Serial No. 27,178
12 Claims. (Cl. 91—68)



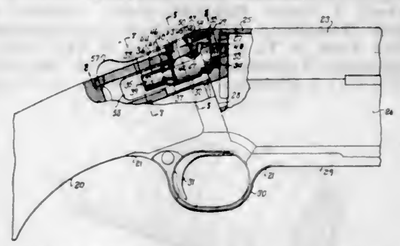
1. In a method of finishing fabrics containing derivatives of cellulose containing organic substituent groups to impart thereto a smooth hand and prevent slipping of weave and stitch distortion, the step of applying to the fabric a liquid medium comprising the resultant product obtained by mixing together in a liquid a resinous material, an alkaline material and sodium silicate.

2,100,409

VEHICLE DIRECTION SIGNAL

Donald C. Porter, San Diego, Calif.

Application November 26, 1935, Serial No. 51,617
7 Claims. (Cl. 116—52)



1. In a vehicle direction signal, the combination with a conventional closed vehicle door, with an upwardly and downwardly shiftable window, of a bracket mounted tightly on the upper edge of said window, a second bracket secured thereto and extending from one side thereof, a signal arm with one end pivotally mounted in said second bracket, and a signal arm shifting bar reciprocally mounted in said second bracket for engagement with said signal arm at one end and engageable with the upper inner edge of the door at its upper end.

2,100,410

TAKE-DOWN FIREARM

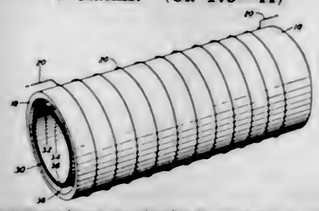
Edwin Pugsley, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a corporation of Maryland

Application June 16, 1936, Serial No. 85,476
6 Claims. (Cl. 42—75)

1. A take-down firearm including in combination: a butt-unit having a frame-member organized therewith; a barrel-unit separable from the said butt-unit and having a rigid frame-member interfitting with the frame-member of the said butt-unit; the frame-member of one of the said units being provided with a threaded portion for the reception of an adjustable coupling-abutment; and releasable coupling-means for holding the two said units in assembled relationship, including a threaded coupling-abutment having threaded engagement with the aforesaid threaded portion of one of the frame-members, the said coupling-means also including an oscillating coupling-lever mounted on the exterior surface of the frame-member complementing the frame-member carrying the said coupling-abutment, the said coupling-lever having a rigid coupling-cam directly engageable with the said threaded coupling-abutment.

2,100,411

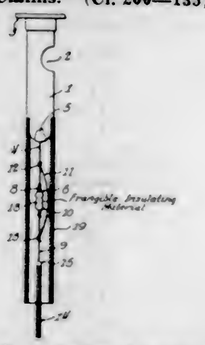
METHOD OF INCREASING THE CORROSION RESISTANCE OF ALUMINUM ALLOYS AND PRODUCTS RESULTING THEREFROM



Otto Reuleaux, Hanover, Germany, assignor to Vereinigte Leichtmetall-Werke Gesellschaft mit beschrankter Haftung, Hanover, Germany, a corporation of Germany

No Drawing. Application October 15, 1935, Serial No. 45,120. In Germany October 16, 1934
4 Claims. (Cl. 148—32)

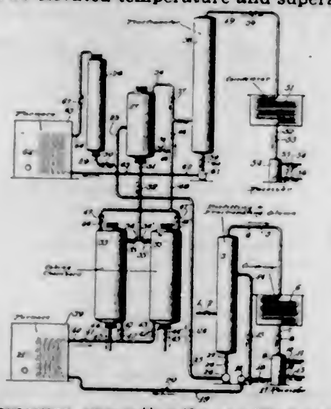
1. The process for producing a high strength integral corrosion resistant aluminum article containing an appreciable amount of copper and having a surface hardness greater than and a corrosion resistance substantially equal to that of pure aluminum which comprises welding a very thin layer of pure aluminum to a core of aluminum-copper alloy of the age-hardening type to form a composite article having (1) a high strength, corrodible core, (2) a low strength, corrosion resistant coating, and (3) a bond containing copper and uniting said core and said coating and having a thinness approximating that of a conventional bond; heat treating said composite article at an annealing temperature beyond the usual annealing time for a period up to 30 minutes to cause accentuated diffusion of said copper throughout said coating; stopping said heating just prior to the occurrence of the copper in the surface skin of said coating whereby the bond and coating substantially disappear and an integral article is formed having high strength and having copper diffused substantially throughout the same except in the surface skin which is



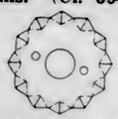
practically devoid of copper and which has a hardness greater than that of pure aluminum and a corrosion resistance practically that of pure aluminum.

2,100,412
TEMPERATURE-COMPENSATED DEVICE
Herbert J. Scott, Oakland, Calif., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application February 9, 1935, Serial No. 5,873
7 Claims. (Cl. 178—44)

2. Temperature controlled electrical apparatus comprising a metallic tube, and means including a metallic tubular cylinder disposed in radially variable spaced parallel relation with said metallic tube and having sufficient surface area for controlling the capacity of said metallic tube in a selected manner in accordance with temperature change and means for slidably adjusting said cylinder axially with respect to said tube.



2,100,413
FUSE LINK FOR EXPULSION FUSES
Alwin G. Steinmayer, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application March 21, 1936, Serial No. 70,117
14 Claims. (Cl. 200—135)

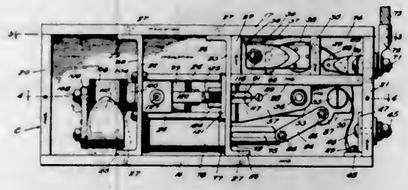


1. A fuse link including an insulated strain section shunted by a fuse wire, said section including a frangible insulator, in combination with an insulating tube mounted on said link and surrounding said strain section and fuse wire, said tube being secured to said fuse link, whereby said fuse wire is not subjected to destructive mechanical stresses.

2,100,414
CONVERSION OF HYDROCARBON OILS
Kenneth Swartwood, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application July 15, 1933, Serial No. 680,556
8 Claims. (Cl. 196—49)

1. A process for the conversion of hydrocarbon oils which comprises separating, by distillation, hydrocarbon oil charging stock for the process into low-boiling and high-boiling fractions, further separating from the high-boiling fractions any heavy components of a residual nature unsuitable for conversion at elevated temperature and superatmospheric pressure, subjecting the latter to coking at low-pressure, subjecting the remaining lower boiling components of said high-boiling fractions of the charging stock to conversion at elevated temperature and superatmospheric pressure, separating the resulting vaporous and residual liquid conversion products, subjecting the latter to coking together with said heavy residual components of the high-boiling fractions of the charging stock, subjecting low-boiling fractions of the charging stock to independently controlled more severe conversion conditions and contacting the resulting highly heated products with the residual materials undergoing coking for the purpose of assisting their reduction to coke.

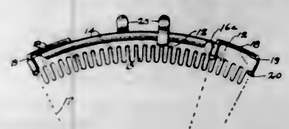
2,100,415
WOOD JOINING ARTICLE
Olav Trygve Theodorsen, Oslo, Norway
Application May 28, 1935, Serial No. 23,956
In Germany March 30, 1935
3 Claims. (Cl. 85—11)



1. A wood joining article comprising a plate in the form of a regular star and having slits extending inwardly from the points of the star and bisecting the angles thereof to provide teeth, the angles of the teeth being less than

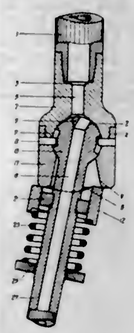
$$\frac{(n-2)\ .180^\circ}{2n}$$

degrees in which n represents the number of star points bent out from the plane of the plate alternately to both sides.



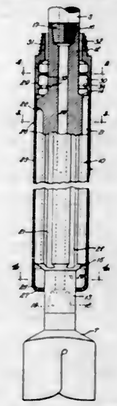
2,100,416
SAFETY DEVICE FOR AIRCRAFT AND OTHER CONVEYANCES
John E. Torbert, Jr., National City, Calif.
Application July 13, 1936, Serial No. 90,408
18 Claims. (Cl. 244—1)

17. In a safety apparatus for vehicles, an element mounted for movement into and out of a set position, a latch for releasably securing said element in a set position, and means for moving said latch out of position to secure said element, said means mounted for swinging and universal



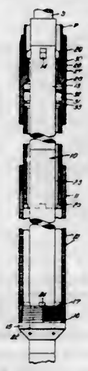
tilting movement about the latch and moved in a direction to move the latch to a releasing position by a jolt caused by sudden stopping of a moving vehicle.

2,100,417
HAIR WAVER
Maggie T. Viggers, Lafayette, Colo.
Application May 7, 1937, Serial No. 141,215
7 Claims. (Cl. 132—38)



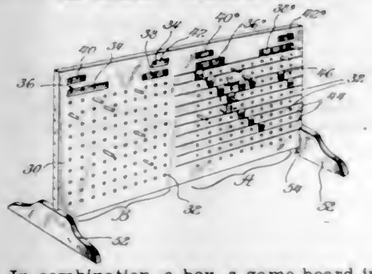
1. A comb for use in a hair waving device having two substantially identical combs hingedly connected at their ends by links of equal length, said comb having its ends formed with tubular projections forming hinge bearings.

2,100,418
ORIENTING DEVICE FOR BOREHOLE DEFLECTING TOOLS
Alexander G. Weilkanov, San Francisco, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application June 12, 1937, Serial No. 147,904
5 Claims. (Cl. 255—1)



1. In a method for orienting in an inclined borehole a deflecting drilling tool comprising a universal joint provided with marking means indicating the deflection plane of said joint, the steps of lowering said tool in a flexed position into a borehole on a drill string, lowering into the drill string a clinometer capable of indicating the deviation plane of the borehole and adapted to receive an impression from the marking means on the universal joint when said joint is flexed, and recording the angular displacement in a horizontal plane of the deviation plane of the borehole with the deflection plane of the universal joint.

2,100,419
DRILL COLLAR FOR WELL DRILLING STRINGS
Jesse C. Wright, Los Angeles, Calif.
Application November 14, 1936, Serial No. 110,819
17 Claims. (Cl. 255—28)

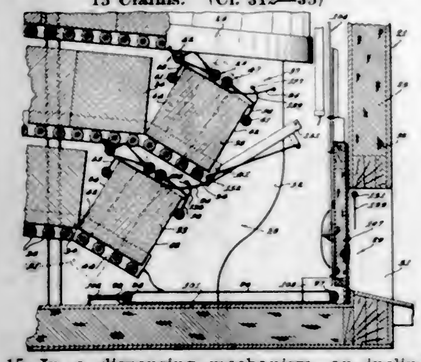


1. A drill collar for use in a drilling string including, a body to be connected in the drilling string and having a passage for conducting the circulation fluid, a fluid duct separate from said passage and vertically spaced openings for discharging fluid from said duct, and means associated with the body for receiving flushing fluid from a wash-over pipe and delivering it to the duct.

2,100,420
DRILL COLLAR FOR DRILLING STRINGS
Jesse C. Wright, Los Angeles, Calif.
Application November 14, 1936, Serial No. 110,820
18 Claims. (Cl. 255—28)

1. A drill collar including, a body to be connected in a drilling string, a ported tubular member surrounding and secured to the body, and a valve tube entering the member to supply fluid thereto and shiftable to control its ports.

2,100,421
GAME
Benjamin F. Wupper, Park Ridge, Ill.
Application March 14, 1932, Serial No. 598,562
15 Claims. (Cl. 273—130)



1. In combination, a box, a game board in the form of a cover for said box, and a pair of supports for said cover pivoted on said box and arranged to be folded within the latter.

2,100,422
PRESERVING AND WRAPPING CHEESE
Herman Wyssbrod, Louisville, Ky.
No Drawing. Application December 10, 1936, Serial No. 115,266
2 Claims. (Cl. 99—178)

1. The method of preserving the freshness of Swiss cheese which comprises removing all rind and mold from the cheese, applying a light covering of salt to the surfaces of the cheese, wrapping the salted cheese in a cloth previously moistened with white wine, further wrapping the cheese in a second cloth previously moistened with glycerine and thereafter sealing said wrapped cheese in an impervious wrapper.

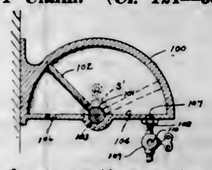
2,100,423
DELIVERY MECHANISM FOR ICE VENDING MACHINES
Maxwell T. Zeigler, Huntington Park, Calif., assignor, by mesne assignments, to Zeigler Packaged Ice Machinery Corporation, Huntington Park, Calif., a corporation of California
Application January 21, 1932, Serial No. 587,954
15 Claims. (Cl. 312—35)

15. In a dispensing mechanism, an inclined chute having its lower end of greater inclination than the balance of the chute, rock shafts rotatably mounted over the lower end of the chute, arms carried by the rock shafts engageable with the front and back sides of an article positioned on the lower end, and means for rotating the rock shafts independently of each other so as to swing the arms into and out of the path of an article passing along the chute.

2,100,424
WALL OR FLOOR STRUCTURE AND SECURING MEANS
Le Roy B. Bachelder, Dayton, Ohio
Application September 18, 1936, Serial No. 101,447
12 Claims. (Cl. 72—19)

1. The method of assembling a wall or floor structure, made up of slabs of material having recesses in their marginal faces intermediate the front and back planes of the slab, with a fastening means having a shank and a head complemental to the recesses in the marginal faces of the slabs which comprises positioning a slab against a suitable backing, driving the shank of the fastening means into the backing until the head of the fastening means is in substantial alignment with a recess in the marginal face of the slab, and then bending the shank of the fastening means until a portion of the head thereof is disposed in the recess.

2,100,425
LACQUER SOLVENT AND THINNER
Franklin A. Bent and Simon N. Wik, Berkeley, and William Ponig, San Francisco, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application August 8, 1936, Serial No. 94,919½
9 Claims. (Cl. 134—79)



1. A liquid solvent mixture suitable for the manufacture of lacquers and lacquer thinners which has a high solvent power for cellulose ethers, esters and ether-esters and forms therewith solutions of high concentration and low viscosity characterized by having a smooth evaporation curve over a wide range and high resistance to humidity during drying resulting in the deposition of films of the cellulose derivative which are clear, tough, homogeneous and substantially devoid of blush, said solvent mixture consisting of from 3% to 74% by weight of a mixture of ketones having a smooth evaporation curve, from 1% to 50% by weight of an alcohol, and from 25% to 83% by weight of a conventional liquid hydrocarbon diluent material, the alcohol-content and the hydrocarbon-content of the mixture having evaporation rates similar to the evaporation rate of the ketone mixture, said solvent mixture having ketone mixture and hydrocarbon diluent ranges of 3% to 55% by weight and 44% to 83% by weight, respectively, when the diluent is an aromatic hydrocarbon, and ketone mixture and hydrocarbon diluent ranges of 14% to 74% by weight and 25% to 45% by weight, respectively, when the diluent is an aliphatic hydrocarbon, whereby the solvent mixture is evaporative without any substantial variation in the ketone to alcohol ratio therein.

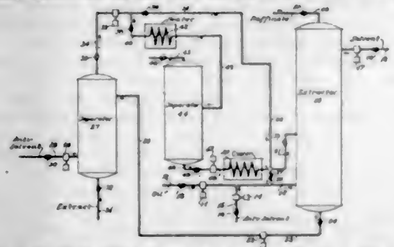
2,100,426
ELECTRIC SERIES-PARALLEL SWITCH
Arthur F. Berger and Max Voege, Dayton, Ohio, assignors to The Master Electric Company, Dayton, Ohio, a corporation of Ohio
Application July 20, 1935, Serial No. 32,430
4 Claims. (Cl. 200—6)

1. A circuit changer switch for alternating the connection of electrical elements from parallel relation to series relation and vice versa, including a recessed circular housing, a series of electrical contacts arranged in spaced circular sequence, and connected with different electrical elements, a cap for the housing having limited rotative engagement therewith, a pair of bridging members carried by the housing cap and by rotation thereof engageable with different pairs of contacts, an internal marginal flange on said housing cap a shouldered projection upon the exterior of the housing beneath which the flange is engageable to retain the cap and housing in assembled relation, spaced recesses on the interior of the cap, and a projection integrally formed on the housing engageable in the recesses alternately upon relative rotation of the cap and housing to temporarily hold the cap and bridging elements carried thereby in their adjusted position.

2,100,427
AUTOMATIC GLARE SHIELD
Samuel J. Blocker, Dallas, Tex.
Application September 20, 1935, Serial No. 41,457
1 Claim. (Cl. 121—38)

A motor for operating motor vehicle glare shields and the like, said motor comprising a substantially semi-cylindrical casing having end walls, a rock shaft for said motor, the ends of said shaft extending outwardly of the casing through openings in said end walls thereof, the floor of said casing between said openings being formed to provide a bearing seat for said shaft, a vane rigidly carried by said shaft within said casing, said vane having a fluid-tight engagement with said end walls and the cylindrical top of said casing, a fluid line connection in the floor of said casing at one side of said shaft to provide means for actuating said vane in one direction, the floor of said casing on the other side of said shaft being formed to provide an opening therein for the maintenance of atmospheric pressure in said casing on that side of said vane, a coil spring about one extended end of said shaft and anchored thereto and to the adjacent end wall of said casing and tending to actuate said shaft and vane in the other direction, the portion of the other end wall of said casing through which said other end of said shaft extends being formed to provide a boss, a set screw threaded in said boss and movable to engage said shaft extension whereby to lock said shaft and vane in a selected position, and a side portion of said casing being formed to provide means for attaching said casing to a plane surface with said bottom at right angles to said surface.

2,100,428
FISHING ROD AND REEL
Albert Johnston Bond, Mercedes, Tex., assignor of forty-nine percent to Lewie H. Henry, Mercedes, Tex.
Application December 21, 1936, Serial No. 117,084
4 Claims. (Cl. 43—20)



1. The combination with a fishing rod having a butt section in the form of a fishing reel having two reeling spools and an endless belt or chain connecting said spools, of a retrieving or cat-head spool, a fishing line passing about said cat-head spool a plurality of times and passing to and attached at one end to said endless belt or chain, and manually operable means for simultaneously driving one of said first-named spools and said cat-head spool at the same speed.

2,100,429
PROCESS FOR SOLVENT EXTRACTION OF OILS
Ulric B. Bray, Palos Verdes Estates, Calif., assignor to Union Oil Company of California, Los Angeles, Calif., a corporation of California
Application April 10, 1934, Serial No. 719,910
11 Claims. (Cl. 196—13)

1. A process for the solvent extraction of oil by a selective solvent into an extract phase comprising oil dissolved in said solvent and a raffinate phase substantially insoluble in said solvent which comprises commingling with the oil to be extracted an anti-solvent soluble in said extract phase and adapted to form a two phase system with the raffinate and countercurrently extracting said mixture with said selective solvent, separating extract phase from raffinate phase and rejecting an intermediate raffinate from said extract phase by commingling said extract phase with an anti-solvent substantially soluble in said rejected intermediate raffinate.

10. A process for the separation of oil containing paraffinic and non-paraffinic constituents into fractions relatively more paraffinic and frac-

tions relatively less paraffinic than the original oil which comprises, commingling said oil with a selective solvent for the relatively less paraffinic oil fractions and thereby forming a raffinate phase containing the relatively more paraffinic oil fractions and an extract phase containing the relatively less paraffinic oil fractions dissolved in the selective solvent, separating said phases, contacting the extract phase with a liquefied normally gaseous hydrocarbon and thereby dissolv-

ing the relatively more paraffinic oil fractions present in the extract phase, separating the liquefied normally gaseous hydrocarbon solution of the relatively more paraffinic oil fractions from the remaining extract phase, removing substantially all of the liquefied normally gaseous hydrocarbon from the oil fractions recovered from the extract phase and returning said oil fractions recovered from said extract phase to the oil feed entering the extraction system.

2,100,430

MANUFACTURE OF SOLES

Ernest Lindon Butler, Lynn, and Joseph Harrington, Jr., Wenham, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

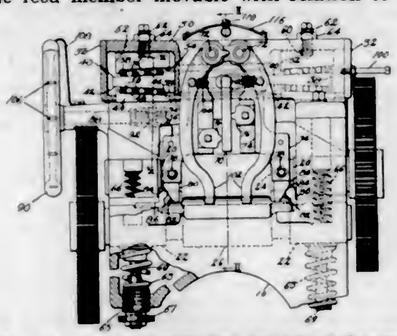
Application January 16, 1936, Serial No. 59,442

7 Claims. (Cl. 12—146)

1. That improvement in the art of making a complemental insole-outsole combination consisting of an outsole having a projection on its forepart and an insole having a correspondingly located complemental recess, which comprises removing material from an outsole blank to even it, assembling the outsole blank and an insole blank in superposed relation with an adhesive substance between them, compressing the laminated blank, removing material from the insole layer to even the laminated blank, and splitting the laminated blank into the complemental insole-outsole combination.

2,100,431

SPLITTING MACHINE



Thomas B. Clarke and Hubert Boothroyd, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

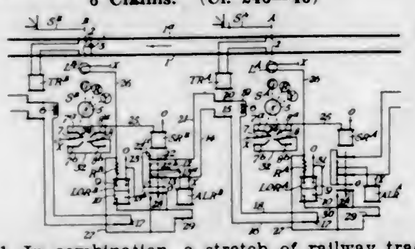
Application June 23, 1936, Serial No. 86,827

In Great Britain July 16, 1935

8 Claims. (Cl. 69—13)

1. In a splitting machine, a fixed knife provided with an elongated cutting edge, a feed member, means for initially adjusting said feed member with relation to the cutting edge of the knife to provide a gap of predetermined width in accordance with the desired thickness of a piece of material to be trimmed from a work-piece, a yieldable feed member movable with relation to the

knife in accordance with the density of the workpiece fed by said members past the knife, and mechanism for causing movement of the yieldable feed member in one direction to effect a proportionately less movement of the other feed member in an opposite direction.



2,100,432

RAILWAY SIGNALING SYSTEM

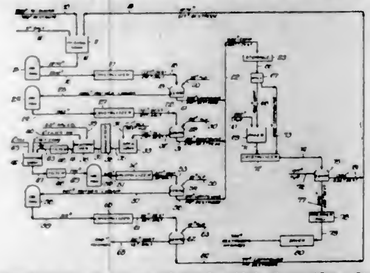
Paul H. Crago, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Original application June 10, 1936, Serial No. 84,498. Divided and this application April 10, 1937, Serial No. 136,118

6 Claims. (Cl. 246—46)

1. In combination, a stretch of railway track divided into blocks, a relay associated with each block, each said relay having two windings, a signal for each block controlled by traffic conditions in advance and by the associated relay and including a lamp which at times becomes lighted to cause the signal to display an indication, a constantly closed checking circuit for each lamp including the one winding of the associated relay and effective for energizing the associated relay but not for energizing the associated lamp, and means effective when a train approaches a signal for connecting the other winding of the associated relay in parallel with the one winding to thereby cause the signal lamp to become lighted.

2,100,433



PRODUCTION OF DEXTROSE

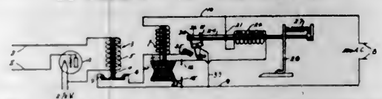
Julian K. Dale, Decatur, Ill., assignor to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware

Application October 4, 1935, Serial No. 43,562

9 Claims. (Cl. 127—40)

5. The process of recovering dextrose from an impure solution, which comprises mixing the impure dextrose solution with salt in an aqueous medium, concentrating the aqueous medium to a density of the order of 43 to 44° Bé., subjecting the resulting aqueous solution of salt-dextrose compound to crystallization at a temperature of between 45 and 70° F. over a period of from 35 to 40 hours, centrifuging the crystalline salt-dextrose compound to free the same from its mother liquor, subjecting the mother liquor to an additional concentration and crystallization, centrifuging the crystallized mother liquor to produce a second quantity of salt-dextrose compound and a second mother liquor, subjecting said second mother liquor to conversion, concentration and crystallization, centrifuging the crystallized second mother liquor to produce a third quantity of

salt-dextrose compound and a third mother liquor, subjecting said third mother liquor to concentration and crystallization, centrifuging the crystallized third mother liquor to produce a fourth quantity of salt-dextrose compound, mixing said fourth quantity of compound with additional dextrose and salt for re-processing, subjecting the other of said quantities of said salt-dextrose compound to a water extraction in which the compound is added to the extraction water at a rate sufficiently slow to produce only a small degree of supersaturation in the extraction liquid, centrifuging the resulting crystallized dextrose, and including the liquor from said last named centrifuging with the fourth quantity of salt-dextrose compound.



2,100,434

SOUND-CONTROLLED ACTUATING MECHANISM

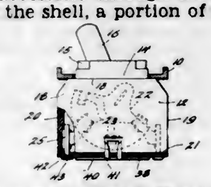
G. Howlett Davis, Jr., Detroit, Mich.

Application November 14, 1933, Serial No. 698,021

13 Claims. (Cl. 179—100.4)

1. In combination, an actuating mechanism adapted to operate another apparatus, means for setting said mechanism in motion, said means being operable by the effect produced by the traveling of a reproducer needle in a blank groove, with no recorded frequency, formed in a sound record, said apparatus being inoperative on the relative movement between said needle and recordings on said record.

2,100,435



ELECTRIC SWITCH

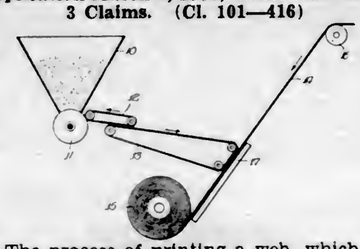
Victor R. Despard, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Syracuse, N. Y., a corporation of New York

Application April 6, 1934, Serial No. 719,383

12 Claims. (Cl. 200—67)

10. In an electric switch, in combination, a shell of insulating material having an apertured front wall and an open back for the insertion of switch mechanism, a combined contact and wire terminal device within the shell and adjacent an end thereof, the wire terminal portion of the device being accessible through an opening in the said end of the shell, a portion of said device en-

gaging in a recess in the shell, said device having an extension reaching beyond the plane of the back of the shell, a closure plate for the open back of said shell having engagement with said extension, and means holding said plate to said shell.



2,100,436

PRINTING

William H. Engel, Mount Vernon, Ohio, assignor to Shellmar Products Company, Mount Vernon, Ohio, a corporation of Delaware

Application March 1, 1937, Serial No. 128,336

3 Claims. (Cl. 101—416)

3. The process of printing a web, which comprises printing the web with a relatively slow-drying ink, magnetically depositing particles of a ferrous metal on said web, winding the web into roll form to permit said ink to dry, unwinding the roll, and magnetically removing said particles therefrom.

2,100,437

PROCESS FOR THE PRODUCTION OF ANHYDROUS HYDROCARBON DERIVATIVES

William Engs, Oakland, and Gerald Henry van de Griendt, Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

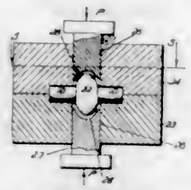
Application October 13, 1936, Serial No. 105,394

11 Claims. (Cl. 260—156)

1. In a process of producing a substantially anhydrous oxygen containing derivative of an olefine having at least four carbon atoms per molecule, the steps of removing water from the aqueous derivative by mixing therewith hydrocarbon in the liquid state containing said olefine, subsequently distilling a mixture of said derivative and said hydrocarbon to drive over water and said hydrocarbon, recovering the substantially dry olefine derivative as bottom product and using the olefine containing hydrocarbon distilled off as a source of further olefine derivative.

2,100,438

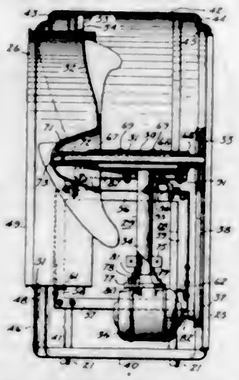
METHOD FOR MAKING STOP COCKS



Edward E. Forrester, Denver, Colo.; Irene Forrester executrix of Edward E. Forrester, deceased

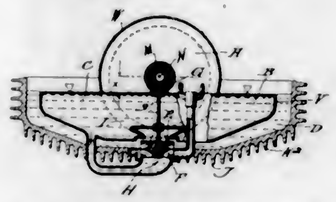
Application August 10, 1936, Serial No. 95,149

2 Claims. (Cl. 29—157.1)



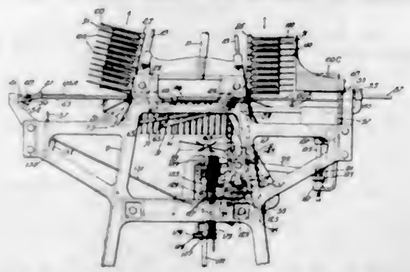
1. The method of making a stop cock body from

a tubular member of ductile metal comprising the steps of expanding a section of the tubular member at substantially its middle portion to produce a circular enlargement concentric with the member, subjecting the circular enlargement to deforming pressure on diametrically opposite points for changing the enlargement to a transversely extending tapered chamber substantially circular in a plane perpendicular to the axis of the tubular member, confining the member in a die having a cavity of the size and shape of the body desired, inserting into and against the ends of the



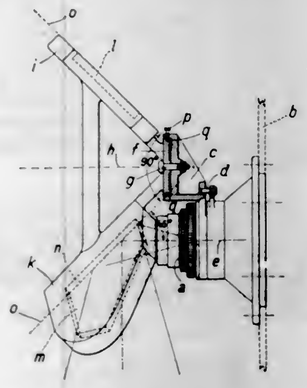
member shape forming plugs, thereby subjecting the ends to a compressive pressure producing a stress beyond the elastic limit of the metal whereby the body will be shortened, the wall thereof thickened and forced against the outside of the plugs and simultaneously therewith subjecting the interior of the member to a hydraulic pressure producing a stress beyond the elastic limit of the metal whereby the body will be expanded and forced against the inside of the cavity to assume the shape of the latter and whereby the inside of the member will be given a shape conforming to the shape of the plugs.

2,100,439
BLOWER OR FAN
Arthur Friedman, Shaker Heights, Ohio, assignor to Air Controls, Inc., Cleveland, Ohio, a corporation of Ohio
Application September 14, 1935, Serial No. 40,558
4 Claims. (Cl. 230—117)



1. A blower comprising in combination, a sheet metal casing having side, top and bottom walls, the rear and front of said casing being open for the ingress and egress of air; a frame within the casing including horizontally extending bracing elements disposed along the side walls of the casing, and horizontally extending bracing elements disposed between the top and bottom walls of the casing and extending between the side walls; said last named bracing elements being connected to said first named bracing elements to form said frame, means for connecting said frame to said casing; a fan and power unit disposed within the casing; said unit including a shaft bearing, a shaft journaled therein, a fan and a driven element carried by the shaft, a motor for driving the driven element and carried by the bearing; and means for resiliently supporting the bearing on said frame.

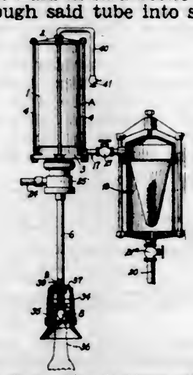
2,100,440
LATERAL FLUID CONTAINER FOR HYDRAULIC TRANSMISSIONS
Dietrich Gössler, Heidenheim (Brenz), Germany
Application April 30, 1936, Serial No. 77,247
In Germany April 25, 1935
4 Claims. (Cl. 60—54)



1. In a hydraulic transmission, a hydraulic circuit including a hydraulic power transmitter, an outer fluid container extending laterally of said power transmitter on opposite sides thereof, an inner fluid container arranged within said outer fluid container, a pump for pumping fluid between said outer container and said inner container, and a second pump for pumping fluid between said inner container and said power transmitter.

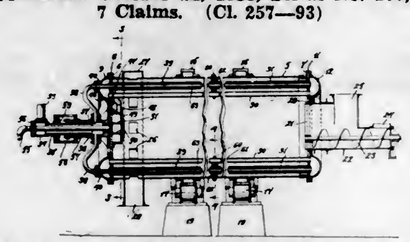
2,100,441
DRIER
Chester W. Greene, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application September 20, 1935, Serial No. 41,434
7 Claims. (Cl. 198—24)

1. A machine of the class described having, in combination, a conveyor provided with article carriers, said conveyor having upwardly and downwardly traveling runs, means for operating the conveyor, spaced supporting rods extending lengthwise of the machine in proximity to the runs, feeding means one for feeding articles to be dried into the path of the carriers and one for feeding dry articles out of the path of the carriers, said feeding means being slidably mounted on the rods, and means for operating said feeding means in timed relation to the operation of the conveyor.



2,100,442
REFLECTING SYSTEM FOR OBJECTIVES OF REPRODUCTION CAMERAS
Carl Herrmann, Jena, Germany, assignor to the firm of Carl Zeiss, Jena, Germany
Application November 27, 1936, Serial No. 113,070
In Germany April 17, 1936
2 Claims. (Cl. 88—74)

1. A reflecting system, comprising a carrier, means for attaching this carrier to the objective of a reproduction camera, a disc mounted on the said carrier and rotatable about an axis, two holders attached to the said disc, a plane reflector disposed on the one of the said holders, and a roof-edge reflector consisting of two plane mirrors inclined to each other at an angle of 90° and being disposed on the other of the said holders, the edge in which the two plane mirrors of the roof-edge reflector touch each other lying on a conical surface whose axis coincides with the axis of rotation of the said disc, the said plane reflector touching a generatrix of the said conical surface, the optical axis of the said objective intersecting one of the generatrices of the said conical surfaces at an angle of 45°, this optical axis intersecting the said plane reflector when this plane reflector assumes operative position, in which the said one generatrix lies on the said plane reflector, and intersecting the edge in which the two mirrors of the said roof-edge reflector touch each other when this roof-edge reflector assumes operative position, in which the said one generatrix coincides with the said edge, the said reflectors, when in operative position, facing the said objective.

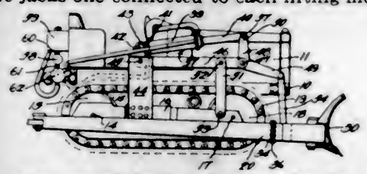


2,100,443
BOTTLE EMPTYING AND BEVERAGE RECLAIMING DEVICE
Julius H. Kintzele, St. Louis, Mo.
Application March 27, 1935, Serial No. 13,233
7 Claims. (Cl. 221—74)

3. A device for the purpose described comprising a normally closed tank to receive and maintain under pressure fluid from a bottle being emptied, a tube adapted to be positioned in said bottle during the emptying operation and having its upper end opening into said tank above the bottom thereof but at a point substantially below the top thereof whereby air in said tank will be trapped in the upper part thereof by fluid entering said tank, means for passing air under pressure into said bottle above the level of fluid therein whereby the fluid in said bottle will be forced upwardly through said tube into said tank, and

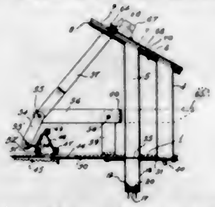
a duct leading from the bottom of said tank to carry therefrom fluid emptied from a bottle.

2,100,444
ROTARY DRIER
Charles O. Lavett, Buffalo, N. Y., assignor to Buffalo Foundry & Machine Co., Buffalo, N. Y., a corporation of New York
Application October 24, 1936, Serial No. 107,463
7 Claims. (Cl. 257—93)



1. A tubular rotary drier, comprising a rotary shell having end heads, each of which is formed to provide an annular header, an annular series of tubes in said shell connecting said headers, said series of tubes being spaced from the axis of said shell so as to provide a relatively large, unobstructed central passage through said shell, a steam pipe connected at one end to one of said headers and extending through the center of one of said tubes to the opposite header to discharge steam therein for distribution to said tubes, an external steam conduit extending radially outward from the axis of said shell and supplying steam to said steam pipe, means for removing the condensate from the header having said steam pipe connection whereby the flow of steam, condensate and non-condensible gases through said tubes is concurrent and means for admitting the materials to be dried into said shell and removing the dried materials therefrom.

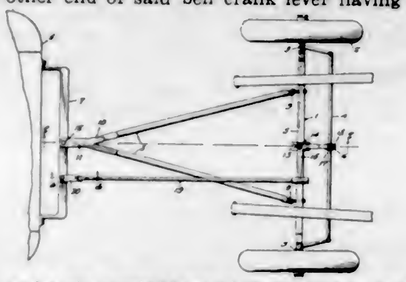
2,100,445
TRAIL BUILDER
Charles Le Bleu, Los Angeles, Calif.
Application April 2, 1935, Serial No. 14,235
13 Claims. (Cl. 37—144)



9. A machine for moving dirt and the like comprising a tractor, track laying units disposed at the opposite sides thereof and pivoted with relation to the tractor adjacent the rear ends thereof, a blade disposed transversely of the front of the tractor structure, a blade frame substan-

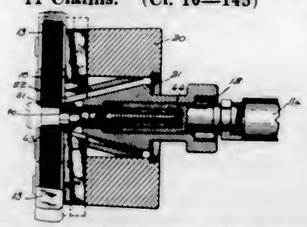
tially U-shaped to extend across the front of the tractor and along opposite sides thereof and to the front of which the blade is secured, means articulately connecting the blade supporting frame to the rear of the tractor for vertical movement and transverse tilting movement, lifting means disposed at opposite sides of the tractor and articulately connected with the blade supporting frame to move the same, a pair of hydraulic jacks one connected to each lifting mech-

anism, a source of fluid under pressure for said jacks, valve means for controlling the flow of pressure fluid to the jacks for simultaneously actuating both of the jacks in the same direction in lifting and lowering the blade supporting frame, valve means for simultaneously actuating said jacks in opposite directions, and means whereby pressure applied by the blade to the jacks will cause an adjustment of fluid within and between said jacks to maintain the blade in its transverse set position.



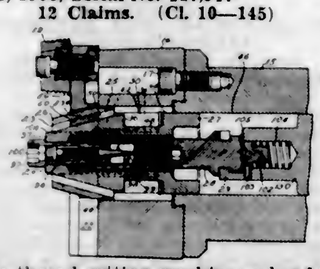
2,100,446
COIN REGISTER
Murdock Macdonald, Cleveland Heights, Ohio
Application September 10, 1935, Serial No. 39,946
2 Claims. (Cl. 194—8)

1. In a coin register, the combination of a dual coin receiving passage of two different widths, the larger for the passage of correct size coins and the smaller for the passage of incorrect size coins, indicating means connected to the larger width passage for signalling the insertion of correct size coins in said dual passage, and a second indicating means located below and adapted to receive coins from the smaller width passage for signalling the insertion of incorrect size coins in said dual passage.



2,100,447
TRAILER HITCH
Lester L. Mahaffey, Carrier, Okla.
Application December 16, 1935, Serial No. 54,745
1 Claim. (Cl. 280—33.55)

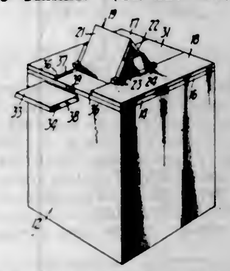
A trailer hitch comprising a V-shaped tongue having its ends pivotally and detachably connected to an axle of a trailer, a bifurcated plate secured to the apex of the tongue, an attaching bar secured to a towing vehicle and having the bifurcated plate pivotally and detachably connected thereto, a steering bar detachably and pivotally connected to the attaching bar, a bell crank lever pivoted to the axle of the trailer, a ball and socket joint connecting one end of the bell crank lever to the steering bar, a clamp secured to a steering mechanism of the trailer, the other end of said bell crank lever having a



slot, and a pin carried by said clamp and extending through the slot.

2,100,448
COLLAPSIBLE TAP
Frederic Nell, Waynesboro, Pa., assignor to Landis Machine Company, Waynesboro, Pa., a corporation of Pennsylvania
Application February 5, 1935, Serial No. 5,129
11 Claims. (Cl. 10—145)

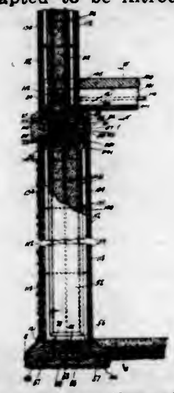
1. In combination a tap head, radially movable chasers in said head, an operating member for moving said chasers, said operating member when in one position serving to maintain the chasers in operative relation and retractible to a position where the chasers may be removed from the head, a rod upon which said operating member is movably mounted, and a member adjustably connected with said rod with which said operating member is adapted to abut for determining the operative positions of the chasers.



2,100,449
THREAD FORMING MECHANISM
Frederic Nell, Waynesboro, Pa., assignor to Landis Machine Company, Waynesboro, Pa., a corporation of Pennsylvania
Original application June 16, 1936, Serial No. 85,563. Divided and this application December 28, 1936, Serial No. 117,947
12 Claims. (Cl. 10—145)

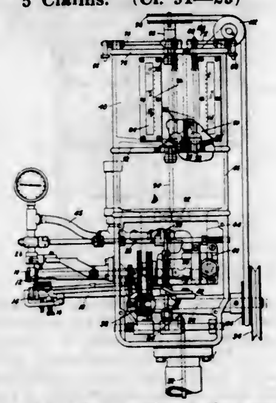
1. In a thread cutting machine; a head having a plurality of radially extending guideways there-

in; a plurality of chasers slidably mounted in said guideways; an axially shiftable control member mounted in said head; a plurality of radial projections on said control member having inclined camming wings thereon; inclined surfaces on said member cooperating with said camming wings to form a plurality of inclined cam grooves; said chasers being provided with projections interlocked with said cam grooves; means for moving said control member to slide said chasers in said guideways; said movement terminating in each direction with said chaser projections interlocked with said grooves; means for causing relative movement between said moving means and said control member to release said chaser projections from said groves; said inclined surfaces being extended beyond said radial projections to support said chasers with their projections aligned with said grooves when in released position.



2,100,450
CARBOY CAP CONSTRUCTION
Peter Nelson, San Francisco, Calif., assignor to Stauffer Chemical Company, a corporation of California
Application September 5, 1936, Serial No. 99,580
5 Claims. (Cl. 217—56)

1. In combination, a carboy casing having a top thereon through which projects a carboy neck, a cap for said neck, including two angularly positioned members secured together with an end of each member in angular abutment with an end of the other member, a pair of strips extending across said top to cover said top and along each side of said cap, an end closure secured to said top and abutting one of said cap members and positioned between said strips to cover said top, and another end closure slidable on said top and between said strip members to latch and release said cap and cover said top, said strip members extending over a portion of said slidable closure on opposite sides thereof to restrict movement of said slidable closure to a sliding movement between said strip members parallel to the plane of said top.

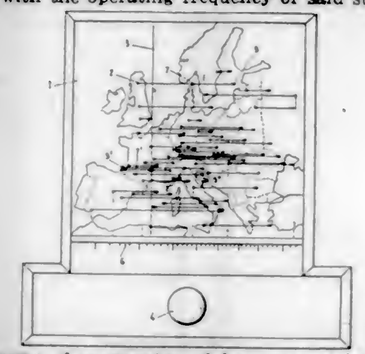


2,100,451
BUILDING CONSTRUCTION
Layton M. Parkhurst, Lackawanna, N. Y., assignor to National Parkhurst Systems, Inc., Lackawanna, N. Y., a corporation of New York
Application April 10, 1935, Serial No. 15,601
9 Claims. (Cl. 72—1)

1. A building construction including adjacent concrete members reinforcements embedded in said concrete members and the reinforcement in one concrete member having an eye-shaped coupling which overlaps the correspondingly shaped coupling of the reinforcement in the other concrete member, a tubular locking pin arranged in a socket formed in said concrete members and passing through the eye couplings of the reinforcements therein and provided with openings leading from its bore to its periphery, and a cement filling adapted to be introduced into the

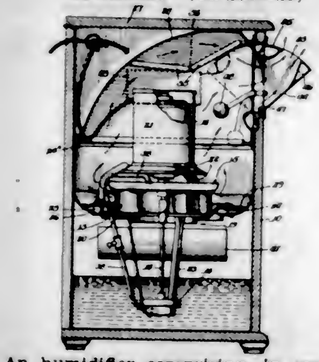
bore of said pin and pass through the openings thereof and into the space between said pin, eye couplings and concrete members for sealing the joints between the same.

2,100,452
CEMENTING MACHINE
Clifford Roberts, Winchester, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application July 27, 1936, Serial No. 92,791
5 Claims. (Cl. 91—25)



3. In a machine for coating a shoe part, an applying device, a mixing chamber connected to said applying device to supply coating material thereto, a removable cover for said mixing chamber supporting supply reservoirs formed integrally with said cover, a cover for said reservoirs, and an agitator for said mixing chamber having a shaft journaled in the covers of said mixing chamber and reservoirs respectively.

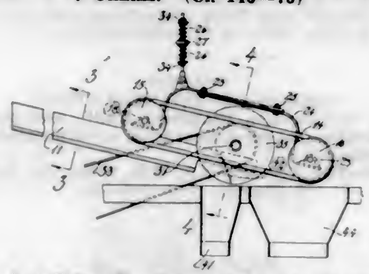
2,100,453
TUNING DIAL FOR RADIO SETS
Umberto Quintavalle, Milan, Italy, assignor to Fabbrica Italiana Magneti Marelli Soc. An., Milan, Italy, a company of Italy
Application December 8, 1936, Serial No. 114,819
In Italy December 20, 1935
7 Claims. (Cl. 116—124.1)



1. In a radio receiving set, a dial having a geographical map thereon, a spot on said map in

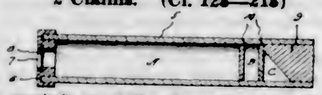
register with the geographical location of a sending station, a mark having a position corresponding with the operating frequency of said station

by terms of progression of frequency, a leading line connecting said spot and mark and a pointer movable in progression of frequency across said dial.



2,100,454
HUMIDIFIER
Simon E. Schroeder, Chicago, Ill.
Application October 19, 1931, Serial No. 569,587
Renewed June 15, 1936
10 Claims. (Cl. 261—29)

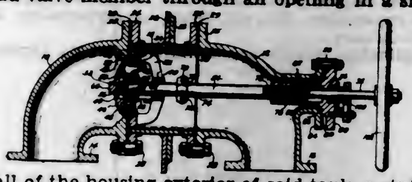
1. An humidifier comprising, in combination, a casing having an inlet and an outlet opening in its lower and upper portions, a circumferential flange within the casing positioned intermediate the inlet and outlet openings, operating mechanism within said casing comprising a spray forming device, power means for driving said device, means for supplying water to said device, and a fan inducing a flow of air through said casing, a frame uniting the operating mechanism into a unitary structure and resting on said flange removably to support the mechanism with said fan substantially at the level of said flange, and an annular member secured to said frame and cooperating with said flange to prevent the passage of air except through said fan.



9. A cabinet type humidifier comprising, in combination, an upright casing having an inlet and an outlet opening, said outlet opening being located in the side of said casing near the top thereof, means creating a flow of air vertically upwardly through said casing, means forming a spray within said casing to add moisture to the air flowing therethrough, a hood within said casing deflecting the air flow from the vertical, outwardly through the outlet opening, and a prismatic spout-like member extending outwardly of the opening during the operation of the humidifier redirecting the air flow upwardly to remove excessive mechanically entrained moisture, said member being pivotally mounted in said opening and biased to swing to closed position flush with the side of the casing when the humidifier is inoperative.

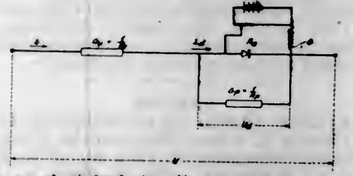
2,100,455
FRUIT SPLITTER
Channing W. Souther, Laguna Beach, and Henry S. Farnsworth, Santa Ana, Calif., assignors to Natural Food Products Company, Orange, Calif., a corporation of Delaware
Application April 29, 1936, Serial No. 76,998
7 Claims. (Cl. 146—73)

1. A splitter for fruit having an elongated major axis, comprising: an inclined gravity feed chute having two side walls inclined at an angle to each other so as to form a V; means, in the bottom of the V, extending upwardly therein to form a ridge longitudinal of the chute, said ridge being in the more elevated portion of the chute; and a splitting knife mounted to operate lengthwise of the chute in the less elevated portion thereof.



2,100,456
MEDICINAL CARRYING TUBE
Vincent Homer Spensley, Albuquerque, N. Mex.
Application November 2, 1936, Serial No. 108,887
2 Claims. (Cl. 128—218)

2. A container of the character described comprising an elongated hollow body having a closure at one end, a partition snugly disposed in the body and defining individual compartments in the tube, a longitudinally movable member disposed in the opposite end of the hollow body, said longitudinally movable member having a reduced portion defining a compartment in cooperation with the said partition, said longitudinally movable member having a protruding portion adapted to engage the partition off center to tilt the said partition as the longitudinally movable member is urged inwardly of the hollow body, thereby changing the tube from a multiple compartment container to a single compartment container and allowing the contents of the compartments to mix.



2,100,457
VALVE
Arthur J. Trott, Greensburg, Pa., assignor to Walworth Patents Inc., Boston, Mass., a corporation of Massachusetts
Application December 27, 1933, Serial No. 704,148
9 Claims. (Cl. 137—21)

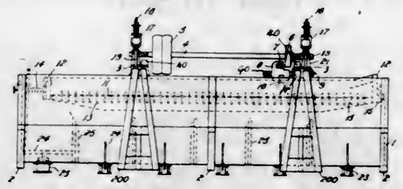
1. A valve assembly for storage tanks and the like, comprising in combination, a housing secured intermediate its ends to a tank wall and projecting into said tank, said housing having an outlet exterior of said tank, a valve body secured to the housing within the tank, a valve member movable into and out of engagement with said body, a rotatable operating stem extending from said valve member through an opening in a side

wall of the housing exterior of said tank, a stuffing box member surrounding the stem and secured to the housing in sealed engagement with the said opening, packing in said stuffing box engaging said stem, a sleeve projecting from the stuffing box member into the housing but being exterior of said tank, and interengaging threaded portions on the sleeve and stem located wholly within the housing beyond said packing.

2,100,458
ELECTRICAL CIRCUIT WITH MODULATING OR RECTIFYING DEVICES
Hans Walter, Berlin-Siemensstadt, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany
Application May 18, 1934, Serial No. 726,340
In Germany May 18, 1933
5 Claims. (Cl. 250—21)

1. In an electrical circuit, a rectifying device, a resistance in series with said device, means for applying alternating current wave energy to said device and resistance, and a second resistance in parallel with said device, said resistances being so dimensioned that the conductance of the resistance in parallel with said rectifying device is practically null with respect to the applied alternating current and the conductance G_T of the resistance connected in series with said rectifying device with respect to said applied alternating current is determined by the expression

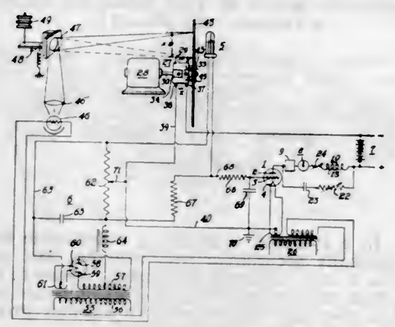
$$\frac{2\beta^2_d}{\gamma_d} - \alpha_d$$



wherein α_d, β_d, γ_d, denote the coefficients of the current-voltage i_d, u_d characteristic

$$i_d = \alpha_d . u_d + \beta_d . u_d^2 + \gamma_d . u_d^3 + \ldots$$

of the rectifying device.

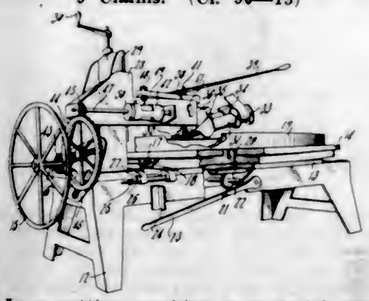


2,100,459
JIGGING MACHINE FOR CONCENTRATING ORES AND OTHER MATERIALS
Stanley Dawson Ware, London, England
Application May 13, 1935, Serial No. 21,233
In Great Britain May 17, 1934
6 Claims. (Cl. 209—425)

1. Jigging machine for concentrating ores and other materials of the vertical and horizontal reciprocating submerged screen type having a single driving shaft, vertically and horizontally extending cams fitted on said shaft, transverse members or bridges from which the screen is suspended, and vertical cams co-operating with said transverse members to impart vertical impulse strokes to said members and the screen a

horizontal reciprocating carrier, a horizontal spring bar bridging the screen and flexibly attached to the sides thereof the horizontal impulse strokes being imparted to the screen by the horizontally extending cam through the medium of said horizontally reciprocating carrier engaging said horizontal spring bar.

2,100,460
ELECTRIC GAUGE AND METHOD FOR CONTROLLING THE CURRENT OUTPUT OF GRID CONTROLLED GLOW DISCHARGE TUBES
James E. Specht, Orrville, Ohio, assignor to John M. Hopwood, Dormont, Pa.
Application January 14, 1935, Serial No. 1,589
12 Claims. (Cl. 250—41.5)



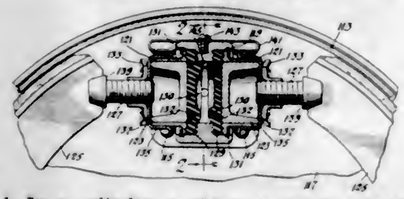
1. An electric gauge for measuring, recording and/or controlling a variable comprising a glow discharge device having plate and grid circuits, means for supplying interrupted unidirectional voltage to the plate circuit thereof, a source of voltage for the grid circuit, means for normally maintaining the grid bias at a value below the critical value thereof, means for impressing a voltage on the grid of such value and polarity that the normal grid bias is neutralized and rendered positive by an amount which exceeds the critical bias voltage and causes the device to break down and pass current in the plate circuit thereof, and means operating synchronously with said interrupted supply of plate voltage and responsive to a variable condition for controlling the time of application of said break-down bias voltage with respect to the period of duration of the plate voltage to cause the plate current of said device to vary with said condition.

2,100,461

APPARATUS FOR CUTTING TIRE MOLDS

Lisle M. Watson and Raymond F. Ternes, Detroit, Mich., and Lester G. Budlong, Mount Vernon, N. Y., assignors to United States Rubber Products, Inc., New York, N. Y., a corporation of Delaware

Application October 11, 1935, Serial No. 44,552
9 Claims. (Cl. 90—15)



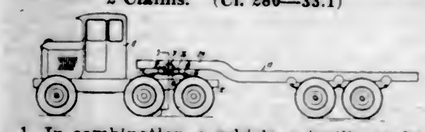
1. In a cutting machine, a material support, a cutting tool, means for causing relative movement therebetween, a stop ring, comprising a plurality of independently adjustable members collectively providing a slot, movable in synchronism with such relative movement and a follower cooperating the slot for controlling the amount of such movement.

2,100,462

HYDRAULIC WHEEL CYLINDER BRAKE

Charles E. Wellman, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application March 20, 1937, Serial No. 131,978
6 Claims. (Cl. 60—54.6)



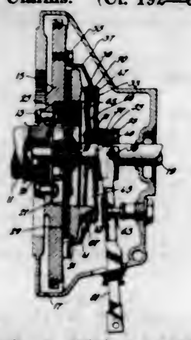
1. In a cylinder, a piston, a deformable disc, peripherally secured to said cylinder, said disc having a face engaging said piston, means to admit fluid under pressure against the opposite face of the disc, said disc having an annular groove entering its piston engaging face.

2,100,463

VEHICLE CONSTRUCTION

Walter W. Wohlfarth, San Francisco, Calif., assignor to A. Ted Ashjian and J. B. Sweet, both of Fresno, Calif.

Application June 22, 1936, Serial No. 86,467
2 Claims. (Cl. 280—33.1)



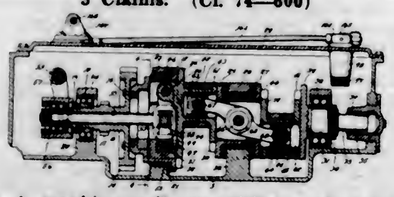
1. In combination, a vehicle, a trailing vehicle, a fifth wheel mounted upon said vehicle and carried thereby, shaft support means carried by said fifth wheel and extending above said wheel, a first shaft carried by said support means, a link hinged at one end on said shaft and hanging therefrom, a second shaft engaged with the other end of said link, and means securing said second shaft to said trailing vehicle.

2,100,464

FRICTION CLUTCH

John O. Almen, Royal Oak, and Henry J. Kirschner, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application September 28, 1936, Serial No. 102,886
12 Claims. (Cl. 192—68)



1. In a clutch, a driving member, a driven member, facings therefor, normally stressed yielding means to bias said members into frictional engagement, releasing mechanism to additionally stress said yielding means and release said clutch, said yielding means being an axially coned annulus having a substantially zero rate throughout its normal working range, and formations in said annulus to extend the range of zero rate beyond the normal working range whereby an advantageous mechanical advantage is afforded for the releasing mechanism.

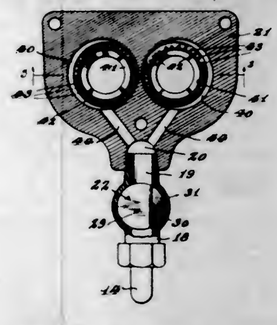
2,100,465

VARIABLE SPEED TRANSMISSION UNIT

Charles E. Baker, Wethersfield, Conn.

Application November 28, 1933, Serial No. 700,047
5 Claims. (Cl. 74—600)

3. A cranking unit comprising a plurality of rotating members mounted in separate bearings, oppositely disposed slots in said rotating members, radially adjustable cranking members slidably mounted in said slots, means comprising a toggle mechanism for adjusting said cranking members on said cranking unit, and means for rotating said cranking unit.



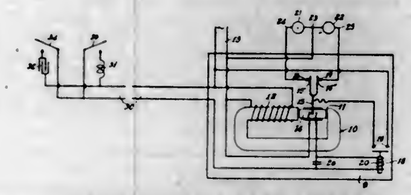
2,100,466

MEANS FOR PROMOTING COMBUSTION IN INTERNAL COMBUSTION ENGINES

Frederick George Cavendish Bashford and William Perry McLaren, Montreal, Quebec, Canada

Application January 22, 1936, Serial No. 60,334
3 Claims. (Cl. 123—119)

1. Means for promoting combustion in internal combustion engines comprising a carburetting device associated with the intake manifold, a secondary mixing device between the carburetor and the intake manifold, said mixing device comprising a pair of chambers defined by circumscribing spaced walls, the inner of said walls tapering in the direction of flow of the gaseous fuel



and having gas inlet apertures opening upon the chambers, gas outlet apertures formed adjacent the base of the chambers, a common hot air connection for the mixing device, means for feeding hot air thereto in graduated quantities, and separate conduit means between the air connection and the chambers.

2,100,467

TELEMETERING SYSTEM

Perry A. Borden, Waterbury, Conn., assignor to The Bristol Company, Waterbury, Conn., a corporation of Connecticut

Application October 2, 1934, Serial No. 746,482
9 Claims. (Cl. 177—352)

3. In combination: a phase-selective relay means connected to a source of alternating current and provided with a plurality of normally closed contacts having a conductor common thereto, said contacts being opened alternatively in response to the phase position of the alternating current in an electro-responsive element of the relay means, a non-selective relay having an actuating winding in series with the electro-responsive element of the phase-selective relay, local circuits and instrumentalities controlled by said phase-selective relay contacts and energized through the operation of the said non-selective relay, and a two-conductor control circuit connected at one end with the electro-responsive element of the phase-selective relay means and to the winding of the non-selective relay means, and a plurality of means at the other end of the said two-conductor control circuit adapted to be bridged across said control circuit for introducing different impedances therein to control the time-phase position of the current in said two-conductor control circuit.

2,100,468

CATALYTIC HYDROGENATION OF ALKYL SUBSTITUTED PHENOLS

Merlin Martin Brubaker and Benjamin W. Howk, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application October 30, 1935, Serial No. 47,428
25 Claims. (Cl. 260—153)

1. The process which comprises catalytically hydrogenating mononuclear monohydric phenol which is alkyl substitued, said alkyl group containing at least seven carbon atoms, at a temperature within the range of 100°–250° C.

2. The process in accordance with claim 1 characterized in that the reaction is carried out at a temperature of about 150° to about 190° C.

3. The process in accordance with claim 1 characterized in that the reaction is carried out at a pressure of 500 to 3000 pounds per square inch.

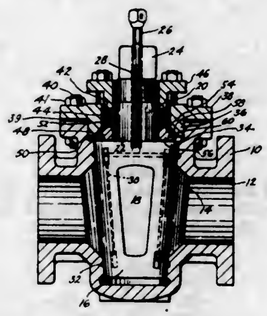
22. A mononuclear monohydric cyclohexanol which is monoalkyl substituted, said alkyl group containing at least seven carbon atoms.

2,100,469

GERMICIDE AND FUNGICIDE COMPOSITION

Cornelia Burwell, Ann Arbor, Mich.

No Drawing. Application March 17, 1934, Serial No. 716,174
3 Claims. (Cl. 167—22)



1. A germicidal and fungicidal, saponifiable composition, comprising synthetic fatty acids derived from an oxidized petroleum hydrocarbon and an alkali metal hydroxide.

2,100,470

VALVE

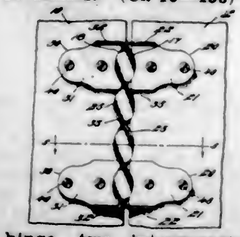
Charles H. Cotton, Kewanee, Ill., assignor to Walworth Patents, Inc., Boston, Mass., a corporation of Massachusetts

Application July 23, 1935, Serial No. 32,765
5 Claims. (Cl. 251—103)

1. A valve comprising a casing having a valve seat, a valve member movable on said seat, a cover at one end of the valve member and secured to the casing, a stem extending from the valve member through said cover and spaced therefrom to form a stuffing box, a packing for the valve member housed within said stuffing box, a gland for exerting pressure on said packing and thereby holding said valve member in engagement with its seat, and means for sealing the valve against leakage when the packing is removed, said means including a member loosely mounted between and engaging the packing and valve

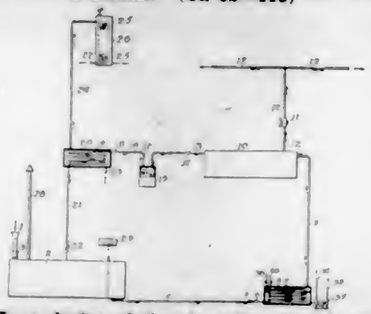
member, said member projecting partly within said stuffing box and being adapted for sealing engagement with the cover.

2,100,471
CREAM DIPPER
Scott Covalt, Van Nuys, Calif.
Application December 28, 1936, Serial No. 117,846
2 Claims. (Cl. 210—51.5)



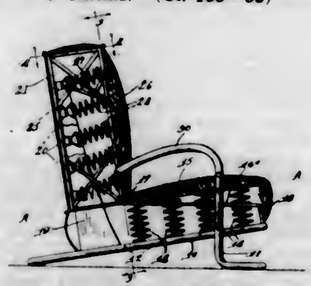
1. A cream dipper comprising; a tubular body having an integral internal flange at the bottom; a disk valve adapted to seat upon the upper surface of the flange to close the bottom; and an upstanding member attached to the flange and extending through a perforation in the valve; said perforation being fitted to the upstanding member in such manner as to allow the valve to tilt; and the upstanding member being provided with means for preventing the valve from becoming displaced therefrom.

2,100,472
BARGE
Albert J. Dawson, Sewickley, Pa., assignor to The Dravo Contracting Company, a corporation of Pennsylvania
Application June 6, 1936, Serial No. 83,907
1 Claim. (Cl. 114—26)



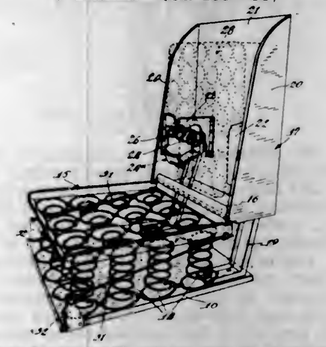
A barge structure including a body having parallel walls and a rake-end in which the side and bottom walls meet in a bilge curve, the radius of bilge curvature being uniform throughout the body and increasing in the rake-end from that of the body outwardly to a maximum and then decreasing again.

2,100,473
HINGE
Adolf Ensslin, North Attleboro, Mass.
Application October 13, 1936, Serial No. 105,396
10 Claims. (Cl. 16—153)



9. In a hinge, two interengaging spirally twisted strips, and leaves comprising attaching portions and flange portions, said flange portions being disposed at right angles to the attaching portions and integral with the ends of the strips.

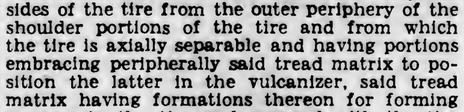
2,100,474
COMBINED AIR CONDITIONING AND HOUSE HEATING SYSTEM
John Underhill Fish, Oak Park, Ill., assignor, by mesne assignments, to J. U. Fish Trust, composed of Elizabeth M. Fish, Paul L. Miller, and Eustace J. Knight, trustees
Application October 4, 1935, Serial No. 43,639
3 Claims. (Cl. 62—115)



1. In a device of the class described, a reservoir containing liquid propane, a reservoir containing propane gas, a pair of tanks each communicating with one of said reservoirs, coils in each of said tanks, a medium in each of said tanks surrounding said coils, one of said tanks having said medium sealed therein and communicating with said liquid reservoir, means located between said last-mentioned tank and reservoir adapted to expand said liquid propane and force it through said coil in said last-mentioned tank to absorb the heat of said medium to provide the latent heat necessary for changing the state of the liquid propane to a gas, means for forcing said gas so produced to said gas reservoir, means located between said gas reservoir and the other of said tanks adapted to compress said gas and force it through said tank, the medium in said tank being adapted to absorb the latent heat produced by the change of state of the propane, said liquid propane being adapted to pass from said coil to said liquid reservoir for reuse, and means for utilizing the medium in both of said tanks for heating, refrigerating and air-conditioning purposes.

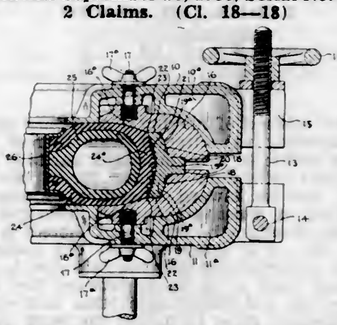
2,100,475
SPRING SEAT CONSTRUCTION
Hyland C. Flint, Grosse Pointe, Mich., assignor, by direct and mesne assignments, to Patent Sales, Inc., a corporation of Michigan
Application August 9, 1934, Serial No. 739,144
9 Claims. (Cl. 155—53)

1. In a device of the character described, a base, a horizontally extending seat frame supported by said base and capable of vertical movement, a vertically extending support on said base fixed against movement, a back rest including a frame adjacent said support and connected to said seat frame for vertical movement therewith, rockers pivotally mounted on said support and on said back rest frame, and a compression spring between cooperating pairs of rockers between said support and frame whereby said back rest may have horizontal movement against the compression of said springs, said back rest frame including portions enclosing said vertically extending fixed support and projecting rearwardly thereof whereby said seat frame and back rest frame being adapted to be upholstered by a preformed continuous strip entirely enclosing the same.



2,100,476
SPRING SEAT CONSTRUCTION
Hyland C. Flint, Detroit, Mich., assignor, by direct and mesne assignments, to Patent Sales, Inc., a corporation of Michigan
Application June 24, 1935, Serial No. 28,181
7 Claims. (Cl. 155—53)

1. In a device of the character described, a base for resting on a supporting surface, a horizontally extending seat frame, movable means on said base supporting said seat frame for vertical movement thereof, a substantially vertically extending support fixed relative to said base, a substantially vertically extending back rest comprising a single housing of box-like formation enclosing said fixed support and engaging said seat frame for vertical movement therewith and having horizontal movement relative thereto, and relatively stiff and other relatively soft flexible supporting means confined within said housing to follow the vertical movement thereof, said relatively soft flexible supporting means being supported by said housing, and means connecting said stiff flexible supporting means to said fixed support and to said housing for permitting free floating movement of said housing, said stiff flexible supporting means being adapted to offer relatively great resistance to the movement of said housing as a whole and said soft flexible supporting means being adapted to offer relatively little resistance within said housing to the horizontal movement of the body of an occupant resting thereagainst.

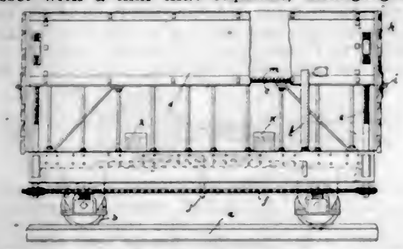


2,100,477
WASHRAG HOLDER
Adam Fritz and Richard J. McCarthy, Philadelphia, Pa.
Application May 14, 1936, Serial No. 79,678
1 Claim. (Cl. 15—231)

A wash rag holder comprising a handle, a dished element carried by one end of said handle, a ring, slightly larger than said dished element, hinged to the rim of said dished element on the side thereof opposite that from which said handle extends and adapted to clamp in position a wash rag draped over said dished element, and means for detachably securing said ring to said

handle to retain said ring in its clamping position relative to said dished element comprising a resilient hook formed on said ring diametrically opposite to the hinging thereof and yieldingly engaging an opening in said handle near said dished element.

2,100,478
FULL-CIRCLE TIRE RETREADING VULCANIZER
Leo O. Grange, Chicago, Ill., assignor to Safety Vulcanizer Company, Chicago, Ill., a corporation of Illinois
Application September 26, 1936, Serial No. 102,772
2 Claims. (Cl. 18—18)



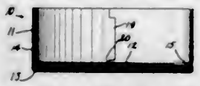
1. In a tire retreading vulcanizer cooperating annular vulcanizer sections, means for clamping said sections together, removable and replaceable annular side wall matrices, means for removably securing said matrices to the inner faces of the vulcanizer sections, and an annular removable tread matrix, said side wall matrices and said tread matrix having cooperating surfaces for clamping the tread matrix between the secured side wall matrices in tread molding position when the vulcanizer is closed, said side wall matrices having surfaces for molding only the sides of the tire from the outer periphery of the shoulder portions of the tire and from which the tire is axially separable and having portions embracing peripherally said tread matrix to position the latter in the vulcanizer, said tread matrix having formations thereon for forming recesses in the tire and engaged with the tire only between said outer peripheries of the said shoulder portions, said tread molding matrix being removable from the vulcanizer with the vulcanized tire and radially separable from the periphery of the tire.

2,100,479
APPARATUS AND METHOD OF MAKING EXPANDED CEMENT ARTICLES
Albert Henderson, Pittsburgh, Pa., assignor to William P. Witherow, Pittsburgh, Pa.
Application October 23, 1934, Serial No. 749,593
10 Claims. (Cl. 25—121)

1. In a method of making expanded cement articles the steps consisting in reducing the vol-

ume of a vessel to form a measure filling said vessel with a mix that expands, enlarging the

volume of the vessel and permitting the mix to expand and substantially fill said enlarged vessel.



2,100,480

METHOD OF MAKING CONTAINERS

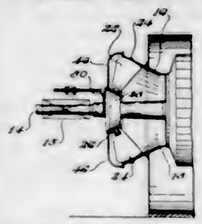
Abram S. Hirshman, Brooklyn, N. Y., assignor to Cordiano Can Co., Inc., Brooklyn, N. Y., a corporation of New York

Application January 14, 1937, Serial No. 120,481

2 Claims. (Cl. 113—120)

1. The method of making a container including subjecting the circular wall thereof to a forming action to simultaneously partially form an inward extending annular lip at one end thereof and an inward extending annular reverse fold to constitute a bead, inserting into said wall through the other end thereof a snug fitting disc of a relatively stiff but somewhat yielding material and pressing said disc to snap over said bead so as to lie between the latter and the lip, and finally subjecting said wall to axial pressure so as to flatten the bead to project further inward and to simultaneously cause said lip to be curled to thus secure said disc to said wall.

2,100,481



FAN

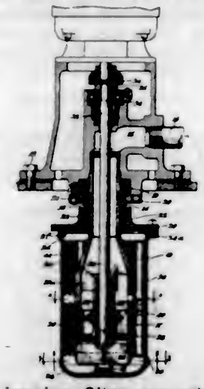
William Hay Howden, Glasgow, Scotland, assignor to B. F. Sturtevant Company, Hyde Park, Mass., a corporation of Massachusetts

Application January 26, 1933, Serial No. 653,643

Renewed September 17, 1936

1 Claim. (Cl. 230—114)

A fan comprising a rotor, a casing, a conical inlet, a hollow conical hub within the inlet, a series of vanes having at their inner ends pivots journaled in the hub, the axis of each vane being perpendicular to the conical wall of the hub, a crank on each pivot extending perpendicularly therefrom, a rotatable ring within and peripherally supported by the hub and having a series of inwardly extending projections forming slots to receive the ends of the cranks, and control means to rotate the ring to adjust the vanes uniformly.



2,100,482

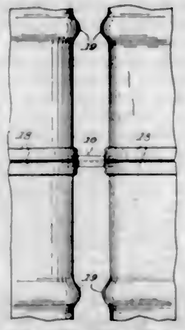
FILTER

Robert L. Irwine, Union, N. J., assignor to Motor Improvements, Inc., Newark, N. J., a corporation of Delaware

Application June 24, 1936, Serial No. 86,943

11 Claims. (Cl. 210—167)

1. A self-cleaning filter comprising a tubular rotatable filtering element, rotary pump means within said filtering element and having its inlet communicating with the interior of said filtering element, a discharge passage for filtered liquid, a distributor for directing a thin stream of liquid against the inner surface of said filtering element from one end to the other thereof, said pump means having its outlet communicating both with said discharge passage and said distributor, means for driving said pump means for sucking liquid through said filtering element and supplying a portion thereof under pressure to said distributor, and means associated with said pump for rotating said filtering element.



2,100,483

STACKING DRUM

Albert E. Jesser, Apollo, Pa.

Application March 5, 1932, Serial No. 596,907

10 Claims. (Cl. 220—97)

1. A clip for supporting one drum upon another comprising a metallic strip having flanges struck downwardly and upwardly therefrom on both sides for engaging the ends of the supporting and supported drums internally and externally.

2,100,484

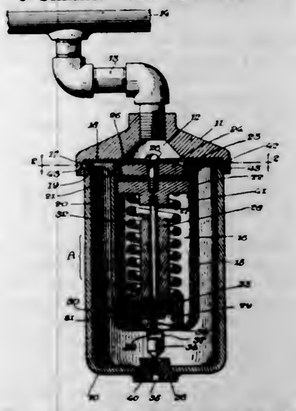
COMPOSITION AND DRYING OF THE SAME

Walter J. Koenig, Trenton, N. J., assignor to Sloane-Blabon Corporation, Trenton, N. J., a corporation of Delaware

Application February 23, 1935, Serial No. 7,717

7 Claims. (Cl. 91—70)

1. In the treatment and hardening of an oxidized oil having double bonds in conjugate arrangement, the steps which comprise adding reactive volatile organic substance to the oil in excess whereby a film-forming mixture including unreacted volatile organic substance is formed, then spreading the mixture into films on a supporting base and heating the spread mixture to elevated temperatures, sufficient to simultaneously slowly evaporate the remaining volatile constituents of the film-forming mixture from the film surface forming a gaseous protective blanket over the film and substantially exclude oxidizing gases from contacting the film and sufficient to cause a substantially non-oxidizing hardening of the oil.



2,100,485

DRAIN VALVE FOR COMPRESSED AIR RESERVOIRS AND THE LIKE

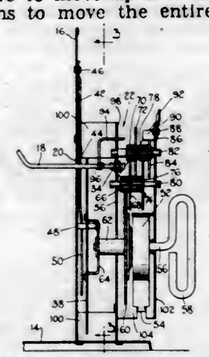
Peter A. Lindemann, Downsville, N. Y.

Application September 9, 1936, Serial No. 99,912

9 Claims. (Cl. 137—103)

1. A drain valve for the purpose described, comprising a housing, a casing supported within said housing to provide a chamber between the casing and the housing, said housing having an air inlet leading to the interior of the casing, and also having a discharge opening, and said casing having a passage in communication with the said chamber, a piston valve mounted in said casing in co-operative relation to said air inlet and passage, a spring normally urging said valve into sealing relation with the said passage, a valve for said discharge opening, means including a lost-motion coupling operatively connecting said latter valve with the piston valve, and vent means leading from the interior of the casing to the outside atmosphere.

2,100,486



DANCING FIGURE TOY

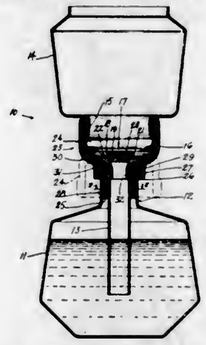
Raymond Lohr, Erie, Pa., assignor to Louis Marx & Company, Inc., New York, N. Y., a corporation of New York

Application April 28, 1936, Serial No. 76,746

20 Claims. (Cl. 46—138)

1. A dancing toy comprising a loosely jointed figure, a stage or platform on which the figure simulatedly dances, means causing at least part of the figure to move up and down and additional means to move the entire figure bodily

from one side to the other side of the aforesaid stage or platform, and motor mechanism for causing both of the aforesaid movements.



2,100,487

COFFEE MAKER

John E. Marsden, Philadelphia, Pa.

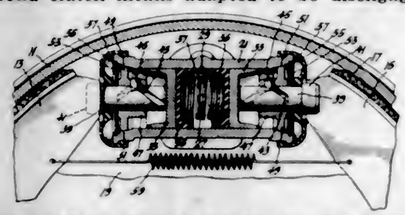
Application November 17, 1936, Serial No. 111,243

8 Claims. (Cl. 53—3)

1. A vacuum coffee maker including a lower container having a wall defining a top opening, an upper container having a bottom outlet portion, a tube separate from said containers and extending from said outlet portion into the lower container through said opening and in annularly spaced relation to the said wall of said opening, a single means of flexible elastic material comprising a plurality of portions, one for connection with the outlet portion, and the other for engaging said wall and said tube for thus interengaging the containers and the tube with the upper container, a generally rigid filtering device within said means, the latter coacting with the outlet portion to directly operatively secure the filtering device.

2,100,488

BRAKE ADJUSTMENT



Olaf Rasmussen, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Michigan

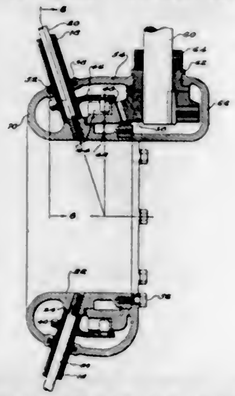
Application June 3, 1936, Serial No. 83,178

11 Claims. (Cl. 188—79.5)

1. In a brake, a drum, a shoe to engage the drum, actuating means including reciprocable

piston and plunger parts to move said shoe, first clutch means having a threaded engagement with one of said parts whereby said first clutch means is adjusted axially of the actuating means, and second clutch means adapted to be disengaged

from the first clutch means to permit a limited joint movement of the said plunger part and the first clutch means and engage the first clutch means to limit the retracting movement of the shoe and actuating means.



2,100,489

FAN

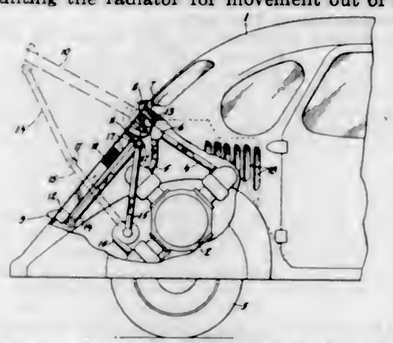
Earl L. Richardson, Hyde Park, Mass., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a corporation of Massachusetts

Application July 31, 1936, Serial No. 93,550

11 Claims. (Cl. 230—114)

1. A fan having a shaft, an inlet, a plurality of simultaneously adjustable vanes, a hub, a support for each vane to permit pivotal movement of the vane about an axis substantially perpendicular to the inlet wall and oblique to the axis of the shaft, a rotary actuating member having a plurality of grooves, a crank on each vane support, and a member on each crank received in a corresponding groove of the actuating member and conforming to the walls of the groove in line contact therewith, all of said members and vane supports having axes intersecting in the axis of the rotary member to permit adjustment of the vanes by the rotary member without cramping of said members in the grooves.

2,100,490



COOLING SYSTEM

Edward V. Rippingille, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

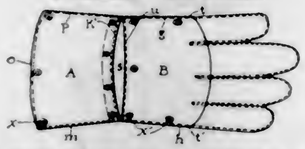
Application January 7, 1937, Serial No. 119,392

8 Claims. (Cl. 180—54)

1. In a motor vehicle, a body having an engine compartment therein, an engine mounted in the compartment adjacent an inspection opening in the wall thereof, an engine cooling radiator normally positioned in said opening, means mounting the radiator for movement out of the

opening to enable access to the compartment and a foldable pipe connecting the engine and radiator for liquid flow therebetween in all relative positions of the radiator and engine.

2,100,491



GLOVES AND MITTENS FOR MINER'S USE

Almon F. Robertson, Kirkland Lake, Ontario, Canada

Application August 2, 1934, Serial No. 738,064

In Canada November 17, 1933

4 Claims. (Cl. 2—161)

1. In combination with a glove and the like, a protective cover adapted to be applied to the back of the glove extending laterally substantially over but not more than the entire width and extending lengthwise from approximately the wrist to approximately half the distance between wrist and the finger ends, and coacting means on the glove and said cover for detachably securing the latter to the former, said means being positioned rearwardly of the knuckles whereby the bending movement of the fingers is not impeded.

2,100,492

PNEUMATIC SHEET MATERIAL AND METHOD OF MAKING

Jay J. Sindler, Malden, Mass., assignor to Converse Rubber Company, Malden, Mass., a corporation of Massachusetts

Application October 23, 1933, Serial No. 694,732

5 Claims. (Cl. 154—2)

4. Process of making flexible sheet material, comprising the steps of assembling a plurality of lengths of hollow, plastic, unvulcanized rubber tubing, longitudinally in continuous direct contact with each other, immediately after forming the same and while the surfaces are in tacky condition, to form a layer thereof, applying a backing sheet to said layer and integrating the same together and to said backing by light compression.

2,100,493

INSECTICIDE

Lloyd E. Smith and Houston V. Claborn, Washington, D. C., dedicated to the free use of the Public

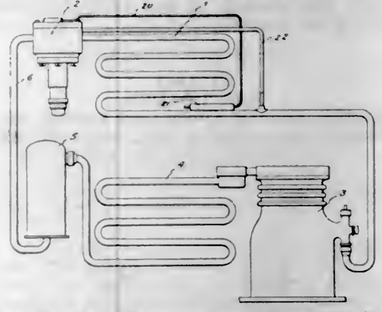
No Drawing. Application June 3, 1936, Serial No. 83,310

4 Claims. (Cl. 167—30)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An insecticide containing as its essential active ingredient a compound of the general formula

where R is a benzene nucleus and y represents hydrogen, an alkyl group, nitro group or iodine.



2,100,494

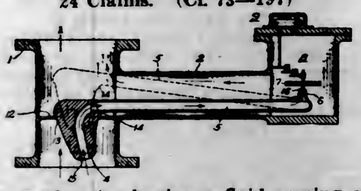
EQUALIZING CONNECTION FOR REFRIGERATION SYSTEMS

Robert L. Sparks, Clayton, Mo., assignor to Alco Valve Company, Inc., St. Louis, Mo., a corporation of Missouri

Application December 3, 1935, Serial No. 52,729

5 Claims. (Cl. 62—2)

1. In a refrigeration system, an evaporator intercalated between the usual high and low sides of said system, a valve controlling the admission of liquid refrigerant to said evaporator, pressure-responsive means for operating said valve, said operating means being actuated proportionately to the variable resultant pressure of opposed pressures, one varying directly with the temperature of the evaporator adjacent the outlet and the other being the pressure of the refrigerant at a point in the system adjacent the outlet of the evaporator and varying directly with the load on the evaporator.



2,100,495

FLUID METER

Wilbur W. Stevenson, Pittsburgh, Pa.

Application May 18, 1935, Serial No. 22,155

24 Claims. (Cl. 73—197)

1. A fluid meter having a fluid-passing opening, a plug therefor of such contour as to gradually uncover said opening upon predetermined increased fluid flow, a rotatable turbine wheel on which fluid upstream of said opening is made to impinge, and means responsive to such uncovering for varying the angle of such impingement.

2,100,496

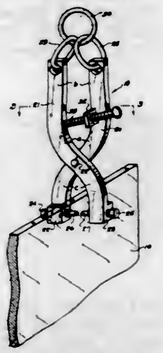
BLEACHING OF CELLULOSIC MATERIALS

Maurice C. Taylor and James F. White, Niagara Falls, N. Y., assignors to The Mathieson Alkali Works, Inc., New York, N. Y., a corporation of Virginia

No Drawing. Application February 18, 1936, Serial No. 64,458

5 Claims. (Cl. 8—2)

1. The method of bleaching cellulosic material which comprises subjecting the cellulosic material to an initial treatment with a bleaching agent from the class consisting of chlorine and the hypochlorites, which bleaching agent will act upon the coloring matter carried by the cellulosic material and which, if maximum bleaching were obtained with it, would act upon the cellulosic material with destructive action thereon, permitting such treatment to proceed until substantial action on the coloring matter has taken place, discontinuing said initial treatment before substantial destructive action on the cellulosic material has taken place, and thereafter subjecting the thus treated cellulosic material to a bleaching treatment with an aqueous acid solution containing a chlorite of a metal of the class consisting of the alkali metals and the alkaline-earth-metals, whereby the cellulosic material will be bleached without substantial destructive action.

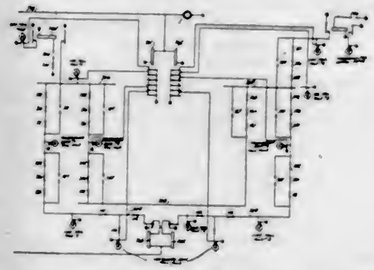


2,100,497

TONG

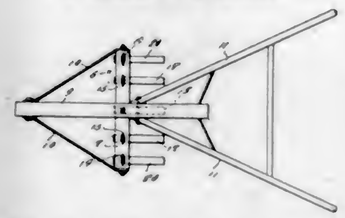
Gerald White, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio

Application October 5, 1935, Serial No. 43,654



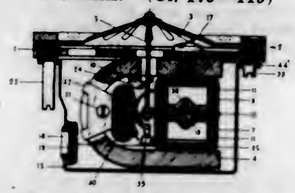
4 Claims. (Cl. 294—118)

1. A tong for supporting a glass sheet in a vertical position during tempering, comprising a pair of upstanding complemental tong members pivotally connected together in overlapping relation intermediate their ends so that they may be swung toward and away from one another and having oppositely facing jaw portions at the lower ends thereof and handle portions at their upper ends, adjustable sheet gripping elements carried by the jaw portions and adapted to engage opposite faces of the sheet, and an adjustable stop screw carried by one handle por-



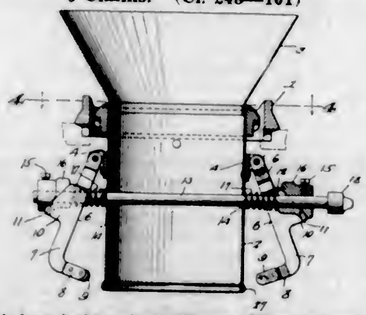
tion and engaging the other handle portion for limiting movement of the jaw portions toward one another.

2,100,498
SIGNAL CONTROL CIRCUITS
Thomas U. White, Chicago, Ill., assignor to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application October 10, 1932, Serial No. 636,984
6 Claims. (Cl. 177—311)



1. In a signalling system, a plurality of signals, circuits for said signals including a circuit connected to all of said signals, signal control contact sets interspersed throughout the length of said circuit, means for operating any set of said contacts to interrupt the circuits of one or a plurality of said signals depending upon the contact set operated, auxiliary circuits for all signals, and means for closing said auxiliary circuits consequent to the actuation of said first means and until the desired set of said contact sets has been opened, each auxiliary circuit including only sufficient current flow to operate one signal.

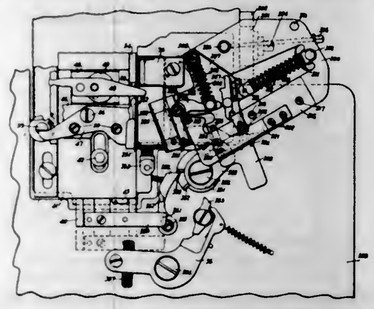
2,100,499
HARROW
William F. Whitehead, Bassfield, Miss.
Application November 5, 1936, Serial No. 109,352
4 Claims. (Cl. 55—127)



1. In a combined harrow and cultivator construction of the class described, a frame including a relatively stationary unit, said unit being of longitudinally elongated form and channel-shaped in cross-section, the web portion of said unit being provided with a plurality of longitudinally spaced slots, the flanges thereof being formed with a plurality of pairs of longitudinally spaced notches, the respective pairs of notches being aligned with adjacent slots in a manner to dispose each pair of notches in substantial registry with each complemental slot, and a plurality of spring teeth, the shank portions of said teeth being adjustably and detachably connected with the slots and complemental pairs of notches in the manner and for the purposes described.

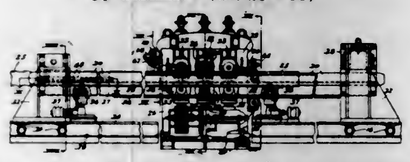
2,100,500
TELEPHONE UNIT
Albert E. Woodruff, Oak Park, and Hans Sengebusch, Villa Park, Ill., assignors to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application August 2, 1934, Serial No. 738,030
3 Claims. (Cl. 179—119)

3. In a telephone unit, a spool of insulating material for a coil comprising a pair of complementary parts, each part consisting of a channel shaped section in which the coil winding is wound to hold the two parts together, said parts having opposite flat sides abutting and one of the parts being cut away to form an opening, an armature in said opening, and means in said opening for supporting said armature therein, said means comprising a centrally raised portion on the channel side of each of said parts for accommodating the supporting means.



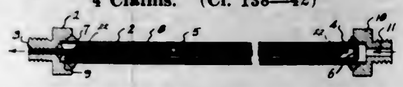
2,100,501
BAG HOLDER
Albert E. Bennett, Green Cove Springs, Fla.
Application September 25, 1936, Serial No. 102,602
6 Claims. (Cl. 248—101)

5. A bag holder including a filling sleeve, opposed yokes pivotally connected thereto and having diverging gripping arms, a longitudinally slidable equalizing and connecting rod extending diametrically across the sleeve and through the yokes, a cam carried by the rod, and means for actuating the cam to shift the rod and move the yokes toward the sleeve into bag gripping positions.



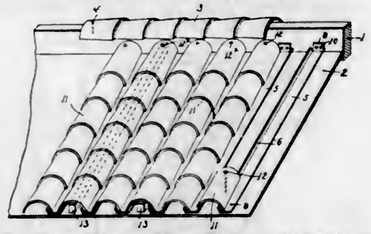
2,100,502
WELD TESTING DEVICE
Robert D. Campbell, Chicago, and William Huebert, Glen Ellyn, Ill., assignors, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Application February 24, 1936, Serial No. 65,406
7 Claims. (Cl. 29—33)

1. The combination, with a machine for welding contacts on springs or other metallic members as they are fed successively through the machine, of a weld testing device adapted to be attached to said machine, and means included in said testing device for momentarily interposing a predetermined resistance to the normal movement of each spring through the machine, said



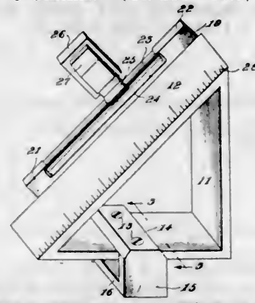
resistance being applied through the contact, thereby automatically testing the strength of each weld after it is completed and before the next weld is made.

2,100,503
MANUFACTURE OF PIPE BLANKS
James V. Caputo, Crafton, Pa.
Application February 11, 1935, Serial No. 6,034
Renewed April 13, 1937
53 Claims. (Cl. 29—33)



1. Apparatus for preparing tubular blanks for welding comprising a mill for engaging and working on the blank, a mandrel extending through the mill and adapted to be moved back and forth therethrough, and means for supporting said mandrel including a pair of movable yokes, one on each side of the mill, said mandrel-supporting means being adapted to permit a blank having an axial seam cleft to pass onto one end of the mandrel and off the other.

2,100,504
RESTRICTED FLOW REFRIGERANT FEEDING DEVICE
Lewis M. Crosley and John W. Dunn, Cincinnati, Ohio, assignors to The Crosley Radio Corporation, Cincinnati, Ohio, a corporation of Ohio
Application October 19, 1934, Serial No. 749,090
4 Claims. (Cl. 138—42)

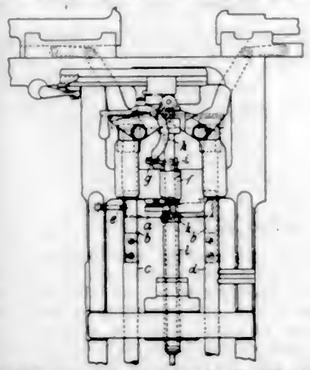


1. A restricted flow of device comprising at least two tubes, one inside the other, said tubes being of substantial length and means at the end thereof for introducing fluid and for causing said fluid to traverse a path which comprises the bore of one tube and the space between said tube and the other tube for substantially the entire length of said device, said path being of such dimensions as will serve to feed an evaporator from a condenser in a mechanical refrigerator, and maintain an appropriate level of refrigerant therein.

2,100,505
TILE ROOFING
Harold Gimeno, Norman, Okla.
Application March 15, 1937, Serial No. 131,023
2 Claims. (Cl. 108—10)

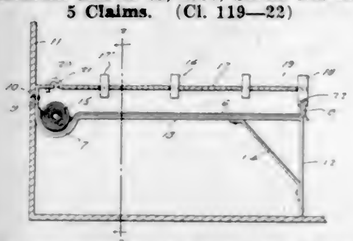
1. In clay tile roofing, the combination with the ridge purlin, the underlay and the rows of cover clay tiles mounted on the underlay, of metal pan strips, one common to each two adjacent rows of cover tiles, on which strips said tiles rest unconnected, in view of which one or more tiles may be removed and replaced without effecting the pan strips, and means to secure said pan strips in place so as to leave a free and unobstructed drain way beneath the tiles, between their longitudinal edges and the sides of the pan strips.

2,100,506
PRINTER'S MITER GAUGE
Claude Fogle Hanlon, Wewahitchka, Fla.
Application January 4, 1937, Serial No. 119,030
5 Claims. (Cl. 164—10.5)



1. A miter gauge comprising a triangular frame having a base and an elongated inclined work-supporting surface, a bracket secured to the base for detachably connecting the frame with a cutting machine and with the lower end of the work-supporting surface adjacent the cutting knife, a scale extending lengthwise of the work-supporting surface adjacent one edge thereof, a plate secured to the frame and projecting above the work-supporting surface adjacent the opposite edge thereof for providing a work edge guide, a rod supported by the plate adjacent the upper edge thereof, and a work-engaging and holding member slidably and pivotally connected with the rod.

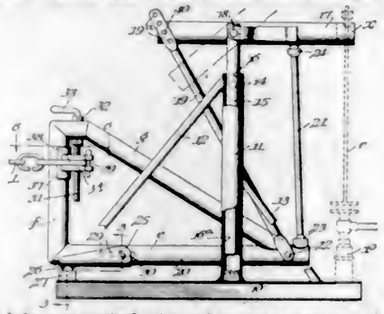
2,100,507
TYPOGRAPHICAL SLUG CASTING MACHINE
Arthur Staniland Hayward and Victor Dougall, Altrincham, England, assignors to Linotype and Machinery Limited, London, England
Application August 3, 1936, Serial No. 94,001
In Great Britain August 14, 1935
6 Claims. (Cl. 199—51)



1. A typographical slug casting machine com-

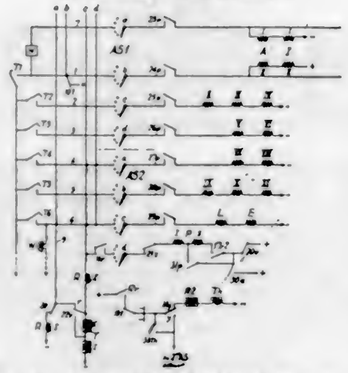
prising matrix-clamping jaws and a control rod therefor, means for conditioning the control rod for a quadding or centring operation of the jaws, a device for justifying the matrix line, means for

limiting the movement of said justifying device, and means associated with said conditioning means whereby said limiting means are set, in order to operate when the movement of said jaw control rod exceeds a prearranged amount.



2,100,508
DROPPING BOARD AND ROOST FOR POULTRY
Frank Brodie Herbert, Westwood, N. J.
Application March 25, 1937, Serial No. 133,060
5 Claims. (Cl. 119—22)

1. In combination, a drop board having a trough at one end, a roll of flexible material resting in said trough and to extend over the surface of said drop board as unrolled to provide a cover for the drop board surface, said drop board at the end thereof remote from said trough being provided with an upstanding flange over which the free end of the roll of flexible material is draped, and a roost hinged at one end and adapted to be raised and lowered at its forward end, said roost at said forward end being provided with a rail having a groove in the bottom edge thereof receiving said flange in a manner to secure the end of the extended portion of the flexible material draped over said flange.

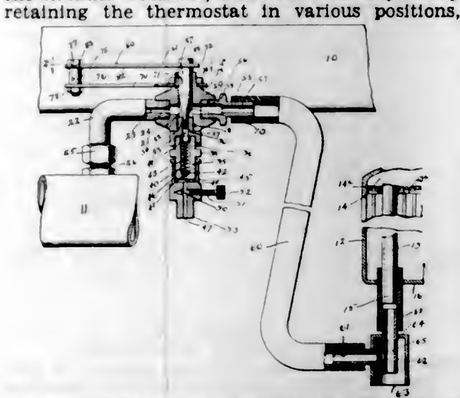


2,100,509
PUMP JACK
Wilford P. Heffernan, Humble, Tex., assignor of one-fourth to Charles G. Eidson, Houston, Tex.
Application April 20, 1937, Serial No. 138,013
7 Claims. (Cl. 74—103)

1. A pump-jack comprising a lifting beam mounted in vertical guides, a jack-rocker, a connection between the jack-rocker and the lifting beam for raising and lowering the latter, said jack-rocker comprising a bell-crank-lever one end of which is connected with the lifting beam and by which and said guides the lifting beam

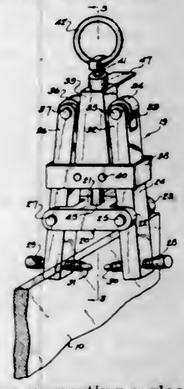
is solely supported, the other end portion of said lever being connectable to pull line.

2,100,510
TELEPHONE SYSTEM
Reinhold Hoefert, Berlin-Gatow, and Kurt Wollack, Berlin, Germany, assignors to Siemens & Halske Aktiengesellschaft, Siemensstadt near Berlin, Germany, a corporation of Germany
Application May 7, 1936, Serial No. 78,396
In Germany May 10, 1935
18 Claims. (Cl. 179—18)



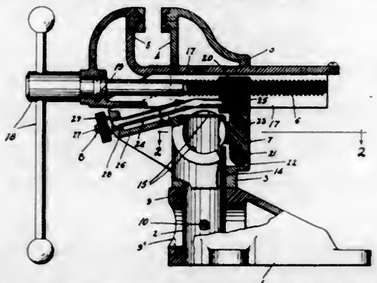
3. In an automatic telephone system, automatic switching means, subscriber controlled means for operating said switching means to establish a connection with another subscriber, said switching means remaining operated for the duration of the connection, and means in case said switching means is inadvertently released and the established connection is disconnected for automatically reestablishing said connection independent of any control by the subscriber.

2,100,511
CHARGE FORMING DEVICE
Harry A. Kelty, New Castle, Pa.
Application February 27, 1935, Serial No. 8,540
3 Claims. (Cl. 123—25)



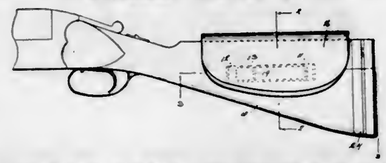
1. In an internal combustion engine having an intake manifold and an exhaust manifold, a device for supplying an additional fluid to the intake manifold comprising a valve casing, a valve in the casing, means for placing the casing in communication with the intake manifold, a thermostat having one end pivoted on

the casing and swingable towards or away from the exhaust manifold, and means for adjustably retaining the thermostat in various positions,



said thermostat being connected with the valve for operating the valve to open position when said thermostat is set in operation by the heat of the exhaust manifold.

2,100,512
GLASS SHEET SUPPORTING MEANS
Stephen K. Kotowski, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a corporation of Ohio
Application September 6, 1935, Serial No. 39,371
5 Claims. (Cl. 294—116)

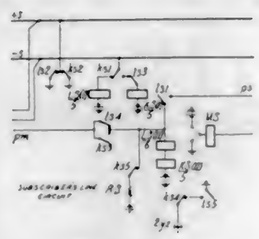


1. A tong for supporting a glass sheet in a vertical position during tempering, comprising a substantially horizontal supporting member, a pair of substantially vertical lever arms pivotally carried at the opposite ends of said supporting member, said arms extending above their pivotal points to a greater distance than beneath the same, adjustable sheet gripping elements carried at the lower ends of said lever arms, freely rotatable rollers carried at the upper ends of the said lever arms, a substantially vertical pin carried by the supporting member between the lever arms, a wedge-shaped member slidably mounted upon said pin and movable upwardly to rock the lever arms about their pivots to move the gripping elements inwardly into sheet engaging position, said rollers riding along the inclined faces of the wedge-shaped member, and a strap encircling said lever arms and to which the wedge-shaped member is secured.

2,100,513
VISE
Lester E. Mershon, Los Angeles, Calif., assignor to Fray-Mershon, Inc., Los Angeles, Calif., a corporation of California
Application August 11, 1936, Serial No. 95,342
2 Claims. (Cl. 81—33)

1. In a vise, a base, a post carried by said base, a body having a bore therein receiving said post and permitting rotation of the body thereon, a fixed jaw on said body, an adjustable jaw on said body, means for adjusting said adjustable jaw including a rotary screw, a locking member pivoted at one end on said body and having a threaded aperture at its other end receiving said screw, said member having an intermediate portion disposed to lockingly engage said post, and manually operable means for moving said member into frictional locking engagement with said post.

2,100,514
SLIDING CHEEK PIECE FOR GUNS
Elmer E. Miller and Howard L. Miller, Millersburg, Pa.
Application August 18, 1936, Serial No. 96,678
5 Claims. (Cl. 42—71)



1. In a gun stock, a longitudinally extending, slotted guide frame inserted within the side wall of the gun stock, a cheek rest disposed upon and extending down over the side face of the gun stock and having a portion thereof extending into said slot of the guide frame, this portion being shorter than the slot, a plate bearing against the inner face of the guide frame and having sliding engagement therewith and attached to the inwardly extending portion of the cheek rest, and a spring attached at one end to the inner face of the guide frame and at the other end to one end of said plate and urging the plate and the cheek rest rearward.

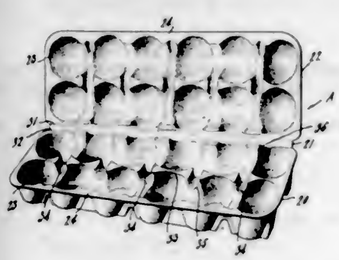
2,100,515
TELEPHONE SYSTEM
William George Patterson, Mottingham, London, and Reginald Griffith Dixon, Eltham, London, England, assignors to Siemens Brothers & Company Limited, London, England
Application November 9, 1935, Serial No. 48,952
In Great Britain November 14, 1934
3 Claims. (Cl. 179—27)

1. In a telephone system, means including a plurality of serially related automatic switches in-

cluding both backward and forward selecting switches operated to establish a connection between the calling and the called line, means enabling the calling party to release his line from

the connection and make another call, and means for maintaining all of said switches in their antecedent operated position and for guarding them against intrusion by other calls until the called party hangs up.

2,100,516



CONTAINER

Robert E. Read, Watertown, N. Y.

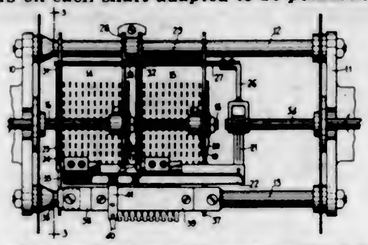
Application July 6, 1934, Serial No. 733,947

Renewed May 21, 1937

7 Claims. (Cl. 229—29)

1. A fragile article container of the character described comprising in combination, a member formed with a row of cavities to provide a row of article receiving cells, a reinforcing rib extending through said row of cells and forming webs between adjacent cells, the top of said rib being substantially concave throughout its length, a rib extending transversely across said container and through said first mentioned rib, said transversely extending rib cutting through said reinforcing rib, the top thereof being in a plane below the plane of said reinforcing rib whereby to impart rigidity to said container across its shorter diameter.

2,100,517



AUTOMATIC TELEPHONE SWITCH

Rodney G. Richardson, Chicago, Ill., assignor, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

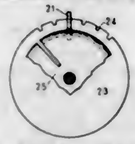
Application May 1, 1936, Serial No. 77,361

15 Claims. (Cl. 179—27.52)

1. In combination, two vertical and rotary motion switches positioned with their shafts in alignment, a set of arcuate banks positioned concentric with the axis of said shafts, and wipers on each shaft adapted to be positioned on

any set of contacts in said banks without interfering with the wipers on the other shaft.

2,100,518



IMPULSE SENDER MECHANISM

Otto Rinkow, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany

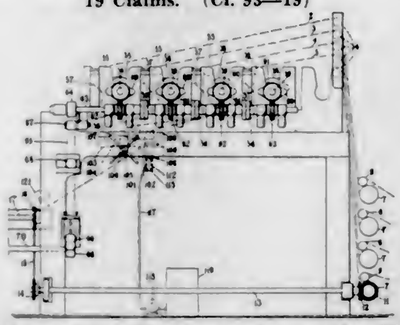
Application March 6, 1935, Serial No. 9,564

In Germany March 13, 1934

4 Claims. (Cl. 179—90)

4. A rotatable disc for the automatic transmission of code designations, said disc having a plurality of spaced notches cut in its periphery, a plurality of riders disposed around the edge of said disc in accordance with a particular code designation, a pair of extensions formed on each rider engaging opposite sides of said disc in one of said notches, one of said extensions having a projection formed thereon, and a common flexible disc on one side of said rotatable disc having a bent portion on its periphery for engaging the projection on all of said riders for removably supporting the same on said disc.

2,100,519



BAG AND LIKE TUBING MACHINE

Foster Gotch Robinson, Bristol, England, assignor of one-half to Paper Sacks Limited, Bristol, England

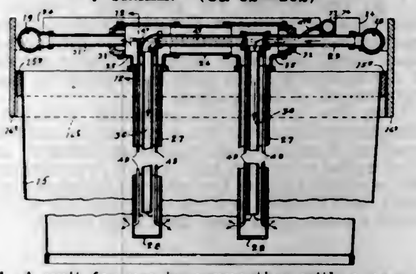
Application August 10, 1936, Serial No. 95,242

In Great Britain August 14, 1935

19 Claims. (Cl. 93—19)

10. A machine for the manufacture of multiply paper bag tubes comprising in combination, a

plurality of perforating devices mounted in spaced relation, each perforating device comprising a rectilinear dead knife provided with a series of spaced oblique cutting edges and a rotary knife cooperating with the dead knife, one of said knives being interrupted at spaced intervals to provide non-cutting portions, means for rotating the rotary knives of said perforating devices, means for feeding a plurality of webs of paper one between each of the cooperating knives of said perforating devices for perforation transversely by said knives, tension controlling means associated with the webs for individually tensioning the webs, means for assembling the webs of paper in superposed relation after perforation by said perforating devices, tube forming mechanism to which the superposed webs are led for forming into a multiply tube, and means for dividing the formed tube into lengths by rupturing along the lines of perforations.



2,100,520

EQUIPMENT FOR MAKING ARTIFICIAL ICE

William R. Robinson, Niles, Ohio

Application November 8, 1934, Serial No. 752,097

7 Claims. (Cl. 62—162)

1. A unit for use in connection with a can of ice block making equipment, said unit having one or more depending legs with provision for the circulation of brine therethrough, each leg having an air tube extending lengthwise therethrough for discharging air to agitate the water in the can.

2,100,521

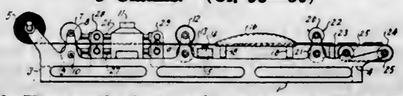
ICE CAN WITH INTEGRAL AIR TUBE

William R. Robinson, Niles, Ohio

Application January 31, 1936, Serial No. 61,799

2 Claims. (Cl. 62—159)

1. A freezing can for use in the manufacture of ice, having a vertical seam formed of two overlapping elements only joined together adjacent a corner of the can, the inner overlapping element being bent sharply inward between the seam and the corner of the can and then curved backwardly and outwardly into a tubular member filling the corner bend of the can and constituting an air conduit extending from the top to the bottom of the can, the free edge of the inner element being concealed and protected and lying adjacent the said sharp bend a seal between the outer wall of the tubular member and the adjacent wall of the can, and a reinforcing band secured to the can at the upper edge thereof extending over said vertical seam.



2,100,522

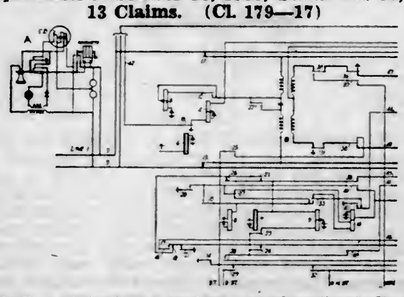
MANUFACTURE OF PRINTED PAPER ARTICLES

Harlow M. Russell, Chelsea, and Melvin H. Sidebotham, West Newton, Mass., assignors to Specialty Automatic Machine Company, Medford, Mass., a corporation

Application June 24, 1936, Serial No. 86,916

9 Claims. (Cl. 93—36)

1. The method of making paper articles by a sequence of operations, consisting of feeding a web of paper, printing the web, applying heat to dry the printing, adding moisture to the web in an amount sufficient to compensate for the moisture extracted from the paper during the drying operation, creasing the web, applying adhesive to a portion of the web, folding and then cutting the web to predetermined lengths.



2,100,523

AUTOMATIC TELEPHONE SYSTEM

Norman H. Saunders and Pier Bakker, Chicago, Ill., assignors, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

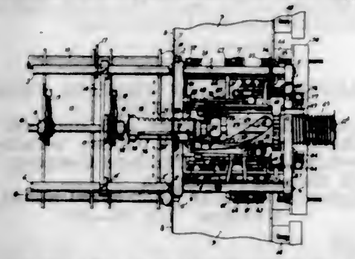
Application December 16, 1935, Serial No. 54,637

13 Claims. (Cl. 179—17)

1. In a telephone system, a subscriber's line, a relay connector individual to said line, a chain of counting relays in said connector controlled by digit impulses received over said line, contacts on each counting relay for selecting two other lines, and means controlled in accordance with the value of the digit received for making a selection between the two lines selected by any counting relay.

2,100,524

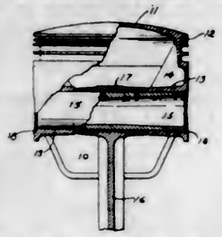
SWITCH MECHANISM



Hans Sengebusch, Villa Park, Ill., assignor to Associated Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware

Original application July 29, 1935, Serial No. 33,705. Divided and this application June 17, 1936, Serial No. 85,685

8 Claims. (Cl. 179—27.52)



1. In a switch mounting arrangement comprising an upright, switchbanks mounted on said

upright, a key-hole slot and rectangular opening in said upright for each switch mounting space, switches each including a wiper shaft and wipers for cooperation with said switchbanks, a locking lug on each switch, shoulders on said lugs co-

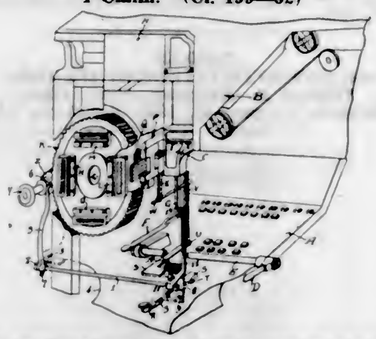
operating with said slots for centering and locking said switches on said upright, and a plate on each switch frame having a tongue section for cooperating with said rectangular openings to assist in centering and locking said switches in place.

2,100,525
PISTON
Charles E. Sorensen, Detroit, Mich., assignor to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application March 22, 1935, Serial No. 12,392
4 Claims. (Cl. 309—19)

1. In combination, a piston, a piston pin, and a connecting rod, the intermediate portion of said piston pin being rotatably mounted in said connecting rod while the end portions of said pin are rotatably mounted in suitable bearing bosses in said piston, and said combination being characterized by having two pairs of ears formed from the material of said piston, each pair of said ears extending inwardly toward the axis of said pin from diametrically opposite points thereabout over the respective ends of said piston pin, for the purpose described.

2,100,526
BUCKLE
Albert P. J. Voigt and Lawrence M. Still, Galveston, Tex., assignors to Galveston Buckle Company, a corporation
Original application March 29, 1932, Serial No. 601,738. Divided and this application July 27, 1936, Serial No. 92,806
3 Claims. (Cl. 24—26)

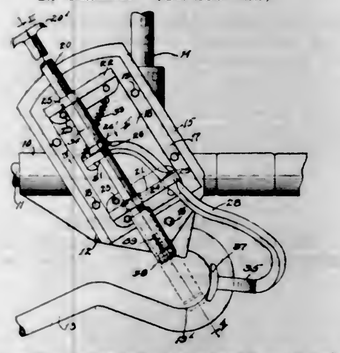
1. A bale tie buckle comprising a wire bent to a four-sided figure having two sides and two ends, a substantially right angle bend at one corner so that one end and one side lie in the same plane, a hook formed in the wire of said end, said hook extending in a plane transversely of the side and end, a hump in said end to throw said hook out of the plane of said side and end, a substantial right angle bend at a second corner to form the second end in substantially the same plane as said first side and



end, and an acute angle bend in the wire at a third corner to form a second side, the wire of said second side extending across said first end inside of said hook.

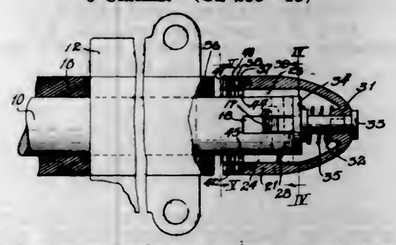
2,100,527
PREPARATION OF AMINO-HALOGEN ANTHRAQUINONES
Myron S. Whelen, Milwaukee, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 24, 1936, Serial No. 87,120
3 Claims. (Cl. 260—60)

1. In the process for preparing 1-amino-6-halogen-anthraquinone, the step which comprises reacting 6-halogen-1-anthraquinonesulfonic acid alkali metal salts with ammonia under pressure at a temperature not sufficiently high to cause replacement of the halogen atom.



3. In the process for preparing 1-amino-6-chloroanthraquinone, the step which comprises reacting 6-chloro-1-anthraquinonesulfonic acid alkali metal salts with ammonia of approximately 25% concentration in the presence of an oxidizing agent, at a temperature not to exceed 170° C., and under a pressure of from 200 to 300 pounds.

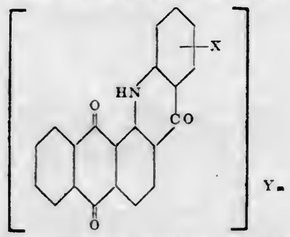
2,100,528
ATTACHMENT FOR TYPE CASTING MACHINES
Joe V. Whitmer, Los Angeles, Calif.
Application March 9, 1934, Serial No. 714,785
1 Claim. (Cl. 199—52)



In combination with a type casting machine having an assembling elevator in which a plurality of matrices are assembled and having molding apparatus for molding lines of type when said matrices are started into operation by delivery of said matrices from said assembling elevator and having a pinion manually operable by the operator for moving said mold disk to select different ones of said molding blocks and having ejector means for ejecting molded lines of type from said molding blocks, an ejector adjusting lever for adjusting said ejector to correspond to the selected molding blocks, an attachment for said machine including a shaft extending across said machine below said pinion and said assembling elevator, a locking lever secured to said shaft and disposed at the rear of said assembling elevator for movement between a position engaging said assembling elevator and to a position disengaging said assembling elevator, a pinion lever secured to said shaft and extending upwardly into engagement with said pinion, whereby movement of said pinion to make a selection of molding blocks will rotate said shaft and move said locking lever into engagement with said assembling elevator, spring means normally urging said locking means out of engagement with said assembling elevator, latch means for holding said locking means into engaged position when so moved, and means actuated by movement of said ejector adjusting lever for releasing said latch means.

2,100,529
MAIL POUCH CATCHER
Ernest L. Woolsey, Council Bluffs, Iowa
Application November 18, 1936, Serial No. 111,337
12 Claims. (Cl. 258—22)

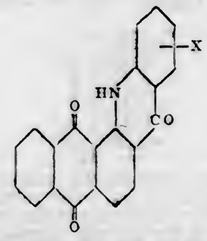
1. Retention means for a railway mail catcher comprising a retention bar shiftable axially toward the bottom of the mail pouch receiving crook of the catcher arm by spring means, and trigger mechanism normally set to withhold the movement of said bar by said spring means and located to be in the path of a caught pouch for actuation thereby to release said bar for shift by said spring means to retain the caught pouch in the catcher arm crook.



2,100,530
LOCK FOR MAIL CATCHER ARM SUPPORTING BAR
Ernest L. Woolsey, Council Bluffs, Iowa
Application December 10, 1936, Serial No. 115,061
6 Claims. (Cl. 258—15)

1. Lock structure for the supporting bar of a mail catcher, said lock structure comprising projections on the bar end, a lock housing in the form of a cap applicable to the bar end and having guideways receiving said projections for guiding the axial movement of said cap, said cap having lock notches intermediate said guideways and having inclines effective upon rotation of said cap to bring said lock notches into alignment with said projections, and spring means within the cap for engaging the bar end to be compressed when the cap is applied axially to the bar end whereby to resist such rotary movement and to be effective to shift said cap for reception of said projections in said lock notches whereby to lock said cap to said bar end.

2,100,531
MIXED CHLORO-FLUORO ANTHRAQUINONE ACRIDONES
Alexander J. Wuertz, Carrollville, and William Dettwyler, Milwaukee, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 16, 1935, Serial No. 11,417
4 Claims. (Cl. 260—37)

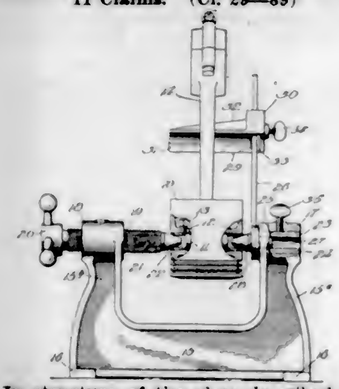


1. Mixed halogen-anthraquinone-2,1-benzacridones of the following general formula:

wherein X stands for substituents of the class consisting of F_n and CF_3 wherein n stands for a number not greater than 2, Y stands for a halogen of the class consisting of bromine and chlorine and m stands for a number not greater than 4.

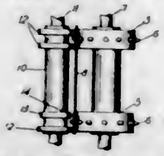
2,100,532
FLUORO COMPOUNDS OF ANTHRAQUINONE-2,1-BENZACRIDONE
Alexander J. Wuertz, Carrollville, and William Dettwyler, Milwaukee, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 16, 1935, Serial No. 11,418
4 Claims. (Cl. 260—37)

1. Compounds having the following general formula



wherein X stands for substituents of the class consisting of F_n and CF_3 wherein n stands for a number not greater than 2.

2,100,533
CONDENSATION PRODUCTS OF 1-AMINO-ANTHRAQUINONE 2-PHENYL AZOMETHINE
Alexander J. Wuertz, Carrollville, Wis., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application February 23, 1937, Serial No. 127,201
3 Claims. (Cl. 260—60)



2. Compounds obtainable by the condensation of an amino-substituted halogen-anthraquinone with 1-aminoanthraquinone-2-phenylazomethine.

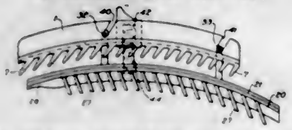
2,100,534
PISTON FIXTURE
Herman W. Zimmerman, North Chicago, Ill., assignor to Automotive Maintenance Machinery Co., North Chicago, Ill., a corporation of Illinois
Application June 6, 1936, Serial No. 83,925
11 Claims. (Cl. 29—89)

1. In structure of the class described, a self-contained unit comprising a frame, adjustable means carried by said frame for engaging and supporting a part of the piston structure, and separate means adjustably carried by said frame and movable relatively to said means and to a connecting rod assembled with the piston for independently supporting the connecting rod at any desired position relative to the piston.

2,100,535
MOVING PICTURE MACHINE
Wilber Smith Boggs, Las Animas, Colo.
Refiled for abandoned application Serial No. 721,348, April 19, 1934. This application July 6, 1936, Serial No. 89,113
7 Claims. (Cl. 271—2.3)

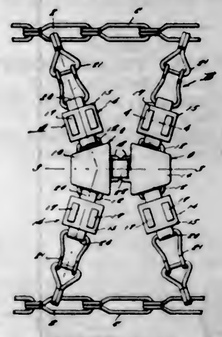
5. In an apparatus for the projection of motion pictures with sound, an idler roller having two pairs of flanges projecting radially from the roller to hold a film in contact with a film-driving roller, one of the said flanges being of lesser diameter than others to normally clear the sound-track of the film.

2,100,536
REED HOOK
George T. Buchanan, Detroit, Mich.
Application March 14, 1934, Serial No. 715,445
1 Claim. (Cl. 28—45)



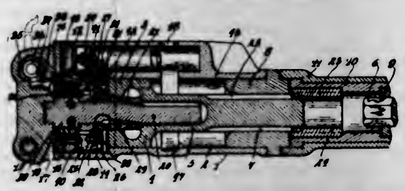
In a reed hook of the class described, a transferring mechanism comprising a pair of resilient legs engageable with each other, adjacent one of their ends, the opposite ends thereof being spaced apart; and a threaded member projecting through the spaced apart ends of said legs and adapted upon threaded movement for adjusting the tension of said legs at their engaging ends.

2,100,537
FERROUS METAL
Martin J. Conway, Coatesville, Pa.
Application August 26, 1935, Serial No. 37,811
13 Claims. (Cl. 75—22)



4. That method of making ferrous metal articles which includes the steps of applying to the surfaces of solid steel, iron, or steel and iron material, a coating comprising an oxide adapted to confer corrosion resistance on the finished article, and hot working at a welding temperature a mass composed of a plurality of pieces of such coated material and integrally welding said pieces into a consolidated, unitary and mechanically strong article having said oxide retained therein as a wrought iron-like structure and in an amount imparting corrosion resistance to the article.

2,100,538
HAIR WAVING APPARATUS
John B. Copenhefer, Louisville, Ky.
Application September 10, 1936, Serial No. 100,138
19 Claims. (Cl. 132—38)

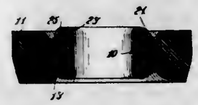


1. Hair waving apparatus comprising in combination, an elongated channel member having comb-like teeth disposed along the sides thereof and inclined in one direction, a wave forming member journalled in the channel member and having teeth inclined in another direction, means holding the members together for sliding engagement during the wave forming operation and means for automatically disengaging the members when the wave is formed.

2,100,539
ANTISKID DEVICE
Howard S. Fritts, Washington, N. J., assignor of one-half to Helen S. Bowers, Washington, N. J.
Application March 16, 1937, Serial No. 131,248
5 Claims. (Cl. 152—14)

2. In an anti-skid device for automobile wheels and tires, a twin section unit substantially H-shaped in top plan view, said unit being composed of duplicate sections, said sections being provided at their outer ends with flexible adapter and anchoring chains, being provided at their central portions with hingedly connected rubber cushioning and anti-skid blocks, provided on opposite sides of said blocks and between said adapter chains with calk-equipped members, and means hingedly and separably joining the rubber central blocks in the manner and for the purposes described.

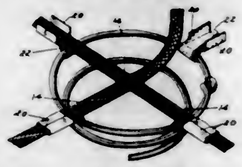
2,100,540
PRESSURE FLUID MOTOR
Elmer G. Gartin, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application November 1, 1934, Serial No. 751,010
12 Claims. (Cl. 121—12)



1. In a pressure fluid motor, a cylinder having a bore, a piston reciprocable therein, fluid distribution means for effecting reciprocation of said piston including a valve box having a valve chamber, a valve box cover, a fluid actuated fluid distributing valve reciprocable in said valve chamber, valve throwing means, and means associated with the fluid distribution means for varying the piston blow including said valve box cover, the latter being adjustable relative to the valve box to effect such piston blow variations.

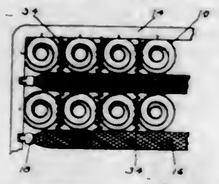
2,100,541
PRESSURE FLUID MOTOR
Elmer G. Gartin, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application November 1, 1934, Serial No. 751,014
13 Claims. (Cl. 121—12)

1. In a pressure fluid motor, a cylinder having a bore, a hammer piston reciprocable therein, a fluid actuated fluid distributing valve having a throwing area, a valve chest having cooperating parts providing a valve chamber in which said valve is arranged, passages controlled by said valve for conducting pressure fluid to said cylinder bore, a plurality of throwing passages communicating with the cylinder bore, respectively, through ports spaced longitudinally of the cylinder, and adjustable means including at least a part of said valve chest adjustable relative to said cylinder for selectively connecting said throwing passages in communication with said valve throwing area to effect throwing of the valve at different points in the piston stroke thereby to vary the valve actuation and the blow of the piston.



2,100,542
WHEEL WITH RUBBER-LIKE TREAD
Edward A. Grange and Erwin J. Schmidt, Chicago, Ill., assignors to Allied Engineering Company, Chicago, Ill., a corporation of Illinois
Application November 15, 1935, Serial No. 49,880
8 Claims. (Cl. 301—5.3)

3. In a wheel of the type described for roller skates and the like; the combination of an uninterrupted tread member of soft rubber-like material having a centrally located opening therethrough; a sleeve of substantially greater external size than the size of said opening, when said member and sleeve are dissociated, positioned in said opening and serving to hold the tread member in stretched and expanded condition; and flanges, having their inner faces convergently disposed outwardly with respect to each other, at opposite sides of said tread member, held in position by the sleeve and adapted by engagement with side face portions of the stretched and expanded tread member to hold it

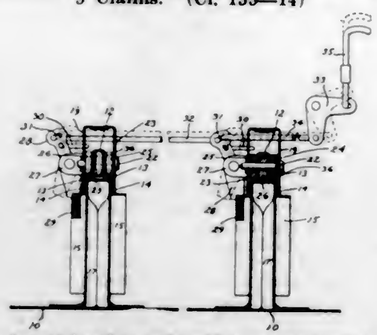


permanently in substantially compressed condition axially and in operative position on the sleeve.

2,100,543
SPRING STRUCTURE
Lawrence H. Hamilton, Niles, Mich., assignor to National Standard Company, Niles, Mich., a corporation of Michigan
Application August 31, 1935, Serial No. 38,689
3 Claims. (Cl. 5—263)

1. A yielding supporting structure comprising a plurality of coil springs, and devices each supporting a plurality of said springs and each of which includes a considerable number of metal wires extending entirely across the structure and which are braided together to form a wide and flat spring support of great strength and resilience, and means for attaching the wires to the springs including means for embracing and holding substantially the entire width of said support, said means including attaching clips each having a portion underlying its supporting device at one side of the bottom coil of one of the springs and provided at its end with a relatively long lug bent around said bottom coil and into the space between said portion and said device and provided at its sides with lugs bent inwardly over said supporting device and holding the supporting device and the end lug gripped in place.

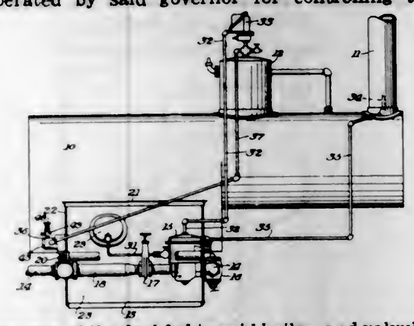
2,100,544
SPRING STRUCTURE
Lawrence H. Hamilton, Niles, Mich., assignor to National Standard Company, Niles, Mich., a corporation of Michigan
Application November 9, 1936, Serial No. 109,841
4 Claims. (Cl. 5—267)



2. A spring structure comprising a plurality of rows of vertically-arranged coil springs and upper and lower frames surrounding said springs and the lower of which is provided with means supporting the lower ends of said springs, lengthwise-yieldable parallel wide supports each connected at its ends to the upper frame and arranged between each two rows of springs in one direction of said structure substantially in the plane of the upper ends of said springs, and horizontally-arranged tensioned coil springs arranged at right angles to said supports between said vertically-arranged springs and which encircle and secure together the top coils of adjacent pairs of vertically-arranged springs and which engage and support said parallel wide supports between said rows of vertically-arranged springs.

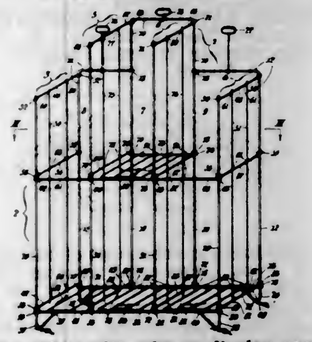
2,100,545
WELDING ELECTRODE
Hugo W. Hiemke, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York
No Drawing. Application August 16, 1934, Serial No. 740,117
2 Claims. (Cl. 219—8)

1. A covered electrode for metallic arc welding consisting of a metal rod of nickel or nickel alloy, and a heavy covering thereon comprising about 12 parts of titanium oxide, about 13 parts of wood flour, about 6 parts of ferro-manganese all by weight, and an additional amount of silica bearing compound to protect the wood flour from premature decomposition and to enter into the slag.



2,100,546
AUTOMOBILE SEAT TRACK CONSTRUCTION
Clarence F. Kramer, Detroit, Mich., assignor to Ford Motor Company, Dearborn, Mich., a corporation of Delaware
Application August 15, 1936, Serial No. 96,235
5 Claims. (Cl. 155—14)

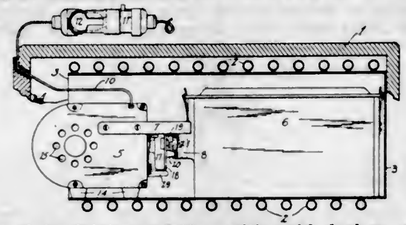
5. A seat track construction comprising, a pair of inverted channel-shaped members, a pair of lower tracks extending outwardly from the bottom edges of the channel arms of said members, each of said channel arms having a longitudinally extending slot therethrough, a pair of ribs extending downwardly from the outer edges of each of said tracks, supporting brackets, fixed to each of said tracks at opposite ends thereof, said brackets extending upwardly between said ribs and abutting the undersides of said tracks, an inverted channel-shaped carriage member adapted to reciprocate along each of said track channels, the arms of said carriage members extending down over said ribs, a pin extending transversely through the arms of said carriage members and through the slots in the first-mentioned channel, a pair of rollers disposed on each pin within said carriage channel member so as to roll against the top edges of each of said construction tracks, and a roller mounted upon each pin between the arms of said first-mentioned channel member so as to roll against the underside of said first-mentioned channel web, and means for locking said carriage members in various positions along said track members.



2,100,547
SUPPLEMENTARY CONTROLLED DRAFT FOR FUEL BURNERS
Clarence Verne Martin, Toledo, Ohio, assignor to The National Supply Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 3, 1934, Serial No. 751,371
2 Claims. (Cl. 236—26)

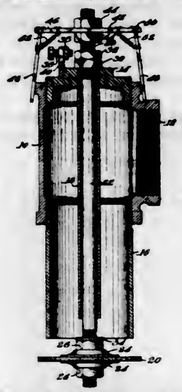
1. In apparatus for controlling a draft inducing stack jet in a fluid fuel fed boiler, the combination of a boiler governor actuated in response to the steam demand on said boiler, a regulator operated by said governor for controlling the

pressure of the fuel fed to said boiler, and valvular means operated by the pressure of the fuel for controlling the amount of steam fed to the stack jet.



2,100,548
DISPLAY RACK
David J. Maxin, Philadelphia, Pa., assignor to Smith, Kline & French, Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application December 27, 1935, Serial No. 56,332
1 Claim. (Cl. 211—85)

A collapsible multi-column display rack comprising a back component with vertical end bars, vertical intermediate bars and connecting cross bars at different levels; a front component with vertical end and intermediate cross bars corresponding to those of the back component; end components and intervening partitioning components having spaced vertical bars, and connecting cross bars at different levels having pivot ears at opposite ends engaging the corresponding end and intermediate vertical bars of the back and the front components, and shelves in the several columns of the rack, each shelf being pivotally connected to a cross bar of the back component and adapted to rest with its swinging edge resting on a corresponding bar of the front component.

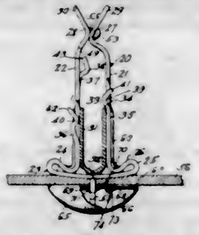


2,100,549
MOTOR DRIVEN FOOD CHURNING DEVICE
John B. McFerran, Jr., Louisville, Ky., assignor to Louisville Electric Manufacturing Co., Louisville, Ky., a corporation of Kentucky
Application December 1, 1932, Serial No. 645,153
4 Claims. (Cl. 259—110)

1. In a food churning device of the class described, the combination with a churning vessel having a dasher and adapted for insertion into the freezing compartment of a mechanical refrigerator, of a motor arranged adjacent to said

vessel in driving relation with said dasher, and connecting means securing the motor to the vessel, said means including portions of low heat conductivity which substantially limit the direct transfer of heat from the motor to the vessel.

2,100,550
EMERGENCY SHUT-OFF VALVE
Wesley W. Moore, Hobbs, N. Mex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application November 20, 1934, Serial No. 753,815
4 Claims. (Cl. 137—153)

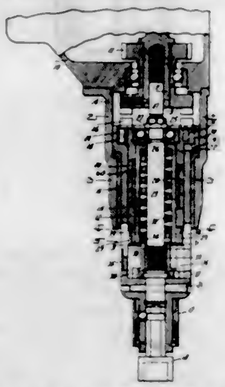


1. A shut-off valve for an internal combustion engine comprising a housing having an inlet opening and an outlet opening adapted to be attached to the air intake of said engine, a vertically movable valve adapted to seat upon said housing around said inlet opening when said valve is in its closed position, a valve stem attached at its lower end to said valve and extending upwardly through said housing, said valve being held normally in its open position by gravity, and latch means attached to the upper end of said valve stem for holding said valve in its closed position when said valve has been raised due to a sudden rush of air around the valve and through said housing produced by an abnormal increase in the suction of said engine.

2,100,551
RADIATOR COVER CLIP
Daniel I. Reiter, New York, N. Y.
Application October 18, 1935, Serial No. 45,565
14 Claims. (Cl. 24—73)

1. In a spring clip for use in holding an automobile-radiator-cover to the grill bar of an automobile radiator, a spring head, a pair of sides

spaced transversely for part of the length thereof extending from the head, and a plurality of bent parts of said sides for engaging the edges of grill bars of different widths, said parts being arranged in longitudinally spaced relation, each of said parts being bent integrally from the mate-



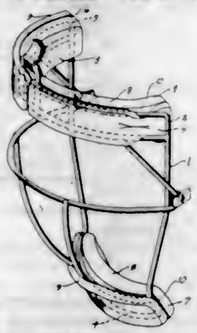
rial of one of the sides and being each provided with an inwardly and transversely directed bend in the shape of a reverse curve, the innermost points of the bends being at different distances from the head and extending inwardly different distances, and interengaging cooperating locking means on said sides.

2,100,552

CLUTCH MECHANISM FOR POWER OPERATED PORTABLE TOOLS

Charles W. Ripsch and Bernard H. Wuebben, Dayton, Ohio, assignors to The Buckeye Portable Tool Company, Dayton, Ohio, a corporation of Ohio

Application January 12, 1934, Serial No. 706,416
3 Claims. (Cl. 192—56)



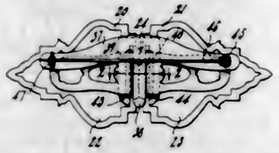
1. In a power operated portable tool, a rear driving member, means for rotating the same, a tubular front driving member having parts extending inwardly from the wall thereof and spaced one from the other to form longitudinal slots, a supporting member adapted to be inserted in said front driving member from one end thereof and having integral lugs extending into said slots, a spring acting on said supporting member to move the same rearwardly, a driving spring arranged within said front driving member and connected with said rear driving member for rotation thereby, and a spring seat mounted about said supporting member, supported by said lugs and connected with said driving spring for rotation thereby, said spring seat and said lugs having opposed cam surfaces to form a slip connection between the same.

2,100,553

FACE MASK AND BUTTON TYPE PAD

William A. Schutt, Litchfield, Ill.

Application June 18, 1936, Serial No. 85,860
3 Claims. (Cl. 2—9)



1. As a new product of manufacture a face mask for sports and shaped to define spaced button engaging openings therein, resilient pad members for the mask and each shaped to define a detachable button type pad having a peripheral slot around it to detachably engage said button engaging openings of the mask.

2,100,554

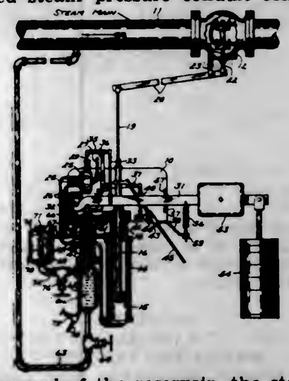
BROOCH AND CLIPS COMBINATION

Gennaro Tavani, Brooklyn, N. Y.

Application October 17, 1936, Serial No. 106,072
8 Claims. (Cl. 63—1)

1. A mounting for dress clips of the type comprising a front ornamental member having a ridge rearwardly projecting from its rear surface along its inner edge, a spring clasp, and a pivotal support for said clasp having its base made integral with said ridge and projecting beyond the inner side thereof so as to leave a clearance between said base and the rear surface of said front ornamental member, said mounting comprising two latch tongues spaced from each other a distance corresponding to the distance between the inner surfaces of their ridges when two clips are arranged with their inner edges in abutting relation to each other, each tongue being insertable endwise under the projecting portion of the base of the pivotal support of the corresponding clip and having its outer end adapted to engage and interlock with the outer end of said support so as to form with said clip a composite brooch assemblage.

2,100,555



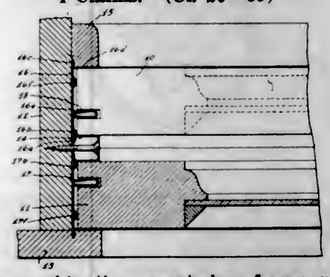
STEAM PRESSURE REGULATOR

Charles M. Terry, Decatur, Ill., assignor to A. W. Cash Company, Decatur, Ill., a corporation of Delaware

Application February 11, 1935, Serial No. 5,991
2 Claims. (Cl. 60—54.5)

1. A control mechanism for a steam pressure regulator comprising a cylinder, a piston slidable in the cylinder, loading means biasing the pis-

ton in one direction, a reservoir connected at its upper end to the cylinder, a body of oil in the reservoir and in contact with the piston, and a U-shaped steam pressure conduit connected to



the lower end of the reservoir, the steam pressure conduit serving to retain a confined body of water beneath the oil and in direct contact therewith.

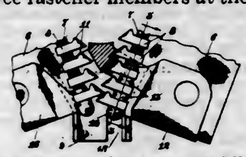
2,100,556

WEATHER STRIP

Vincent E. Van Fleet, Detroit, Mich.

Application October 10, 1936, Serial No. 104,921
4 Claims. (Cl. 20—69)

3. In combination, a window frame member having flat sides, a pair of stops each secured directly on a flat side of said frame member and forming therewith a channel for the edge of a window sash, one of said stops having a metallic surface and the other a wooden lateral surface facing said metallic surface, and a metal weather strip lying in said channel, said weather strip having portions extending outwardly of said channel and covered by said stops and having a flange covering a part of said wooden lateral surface.



2,100,557

SEPARABLE FASTENER

George Wintritz, Springdale, Conn., assignor to Hookless Fastener Company, a corporation of Pennsylvania

Application July 27, 1933, Serial No. 682,480
6 Claims. (Cl. 24—205)

1. A separable interlocking fastener comprising a pair of flexible tapes, rows of fastener members secured in spaced relation along the edges of said tapes, said fastener members having cooperating recesses and projections for interlocking engagement, and means for preventing separation of the fastener members from the initially connected end while permitting separation by a tearing action from the other end, which comprises a sheet metal piece bent around one stringer and having portions filling the spaces between at least three fastener members at the end where-

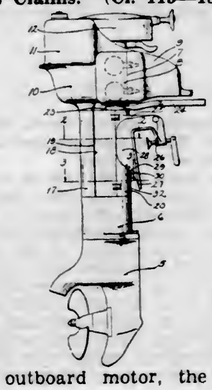
by said fastener members are rigidly supported against flexing relative to one another whereby said fastener members themselves may prevent unintentional separation while the fastener is closed.

2,100,558

AIRTIGHT COVER RELEASER FOR CONTAINERS

Dimitrije M. Zivanow, New York, N. Y.

Application February 2, 1937, Serial No. 123,593
3 Claims. (Cl. 220—43)

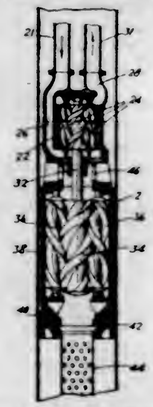


1. An airtight cover releasing attachment for a container having a removable cover provided with a side wall having an opening therethrough, comprising a sleeve mounted on said side wall and projecting therethrough, an L-shaped opening extending through said sleeve, a bell crank pivotally mounted in said sleeve and extending through said sleeve opening, said bell crank having a handle on one end outside said cover and a lug on the other end inside said cover, said lug resting on the lip of the body of the container when the can is closed by said cover, rotation of said handle toward said cover causing said lug to force said lip away from said cover to release the latter, the walls of said L-shaped opening lying flush against and frictionally engaging said bell crank, said sleeve having a peripheral groove intermediate its length, the periphery of said cover opening registering in said groove to lock said sleeve on said cover.

2,100,559

OUTBOARD MOTOR

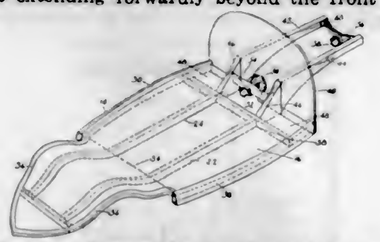
Finn T. Irgens, Wauwatosa, Wis., assignor to Outboard Motors Corporation, Milwaukee, Wis., a corporation of Michigan



Application June 14, 1934, Serial No. 730,545
8 Claims. (Cl. 115—18)

1. In an outboard motor, the combination

with a lower unit and power head, of means interposed between said lower unit and power head which are relatively movable in the dirigible movement of said lower unit, said means being together provided with complementary exposed surfaces each of which comprises an extension of the other in the normal position of the parts and with complementary forward and rearward surfaces laterally movable with respect to each other upon the dirigible movement of the lower unit, one of said means being connected with said lower unit to turn therewith.



2,100,560
DEEP WELL PUMP
Frank W. Kennedy, Trenton, N. J., assignor to De Laval Steam Turbine Company, Trenton, N. J., a corporation of New Jersey
Application December 2, 1933, Serial No. 700,660
1 Claim. (Cl. 103—118)

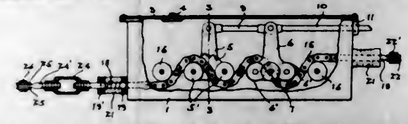
In combination with a well casing, a well pump unit including a hydraulic motor, a pump mounted in a housing adjacent the motor, and driving connections between the motor and pump; a conduit arranged within the casing to lead liquid from the surface to drive the motor; and another conduit arranged within the casing to return the motor driving liquid to the surface separately from the liquid being pumped; said casing being provided with a seat engageable by a portion of said housing below the pump, whereby, when the unit is in operative position, communication, except through the pump, is cut off between the portions of the casing above and below said seat.

2,100,561
VEHICLE
Victor W. Kliesrath, South Bend, Ind., assignor to The Steel Wheel Corporation, Chicago, Ill., a corporation of New York
Application April 4, 1934, Serial No. 718,929
16 Claims. (Cl. 280—106)

1. An automobile chassis base or frame comprising a floor board, longitudinally-extending structural members secured to the bottom face of the floor board, a bottom plate secured to the lower surfaces of said members and secured at their side edges to the side edges of the floor board, said bottom plate and said floor board being provided with reinforcing and strengthening means extending along the sides of the frame, a rear power-plant support mounted on the frame adjacent the front end of the floor board, and continuations of said structural members extending forwardly beyond the front end

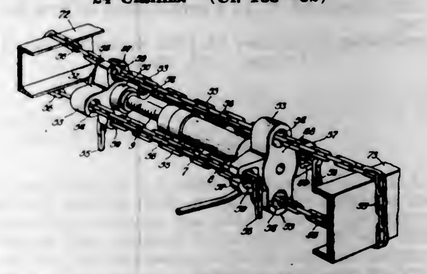
of the floor board and spaced apart to permit a power plant to be arranged between them and having a front power-plant support alined with said rear support.

2,100,562
OVERLOAD CLUTCH
Adolph J. Lippold, Milwaukee, Wis., assignor to Cherry-Burrell Corporation, Chicago, Ill., a corporation
Application July 11, 1936, Serial No. 90,100
9 Claims. (Cl. 192—56)



4. In a device of the character described, the combination with driving and driven members rotatable substantially upon a common axis, one of said members having a coupling lever pivotally mounted adjacent its periphery and extending substantially radially thereof but slightly offset at its free end from said axis, a part carried by the other of said members and interlockingly engaged with said coupling lever in the aforesaid position thereof, said coupling lever being adapted to release said part upon movement of its free end across said axis, a latch lever pivoted to the member carrying the coupling lever and having its fulcrum at one side of said axis, said latch lever being yieldably engageable with the coupling lever to retain it yieldably in its normal position of engagement with said part, and a spring acting on the free end of said latch lever for yieldably maintaining it pressed toward the end of said coupling lever.

2,100,563
BRAKE APPLYING AND EQUALIZING MECHANISM FOR MOTOR CARS
John Mitchell Macpherson and James Alexander Stodgell, North Bay, Ontario, Canada
Application March 18, 1936, Serial No. 69,500
7 Claims. (Cl. 188—204)

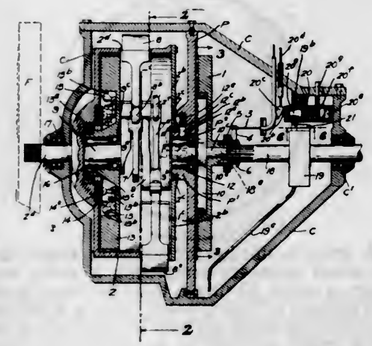


1. A brake-applying mechanism comprising the combination with the brakes to be applied and a flexible operating element interposed therebetween, of a plurality of lever members mounted

with their axes spaced parallelly apart in the direction of the length of said flexible operating element, means carried by said plurality of levers for effecting the lateral distortion of said flexible member at a plurality of points in the length thereof on the swinging of said levers, and

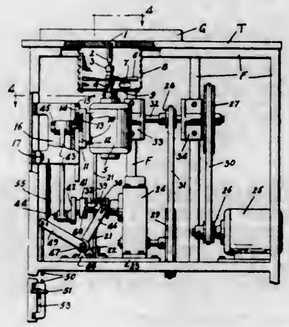
means for swinging said plurality of levers in unison including an operating connection between said respective levers, whereby an amplified brake-applying force is obtained with a slight displacement only of said levers and with the minimum lateral distortion of said flexible element at any one point.

2,100,564
METHOD OF PRODUCING A PULLING STRESS AND HYDRAULIC PULLING MECHANISM
Siegmund Mandl and Edward M. Pfauser, Milwaukee, Wis., assignors to Blackhawk Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin
Application March 16, 1935, Serial No. 11,514
24 Claims. (Cl. 153—32)



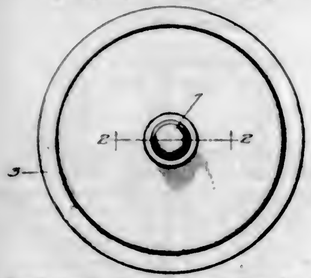
1. In a mechanism of the class described comprising a power unit including an axially movable plunger, separate means carried by said plunger and at the opposite end of said unit for receiving separate chain members, each of said means including means for guiding the movement of the chain member secured to the other of said means, and a flexible conduit connected to said unit for supplying liquid under pressure thereto to move said plunger outwardly of said unit.

13. The method of producing a pulling stress between two spaced members which comprises securing tension means to said members, extending the ends of said means into the space between said members in overlapping relation, connecting the extending portions of said means to opposite ends of a power unit so that the tension means from one of said spaced members extends alongside said power unit and is connected to the far end thereof, the other tension means extending from the other spaced member alongside said power unit and being connected with the opposite end of the latter, and hydraulically expanding said unit to separate said ends and pull the portions of said tension means engaging said members toward each other.



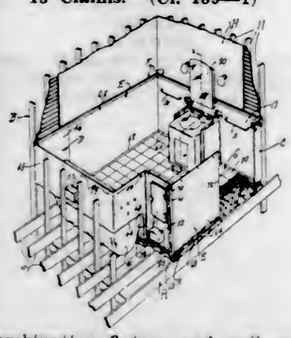
2,100,565
AUTOMATIC CHANGE SPEED TRANSMISSION
Albert F. Marcott, San Diego, Calif.
Application July 14, 1934, Serial No. 735,219
19 Claims. (Cl. 74—64)

1. In an automatic change speed transmission, a revolubly mounted drum, a crank shaft revoluble relatively to said drum, weights positioned in oppositely disposed relation to each other on separate crank portions of said crank shaft, each of said weights provided with laterally extending rigidly connected arms, and connecting rods connecting each of said arms with said drum on the opposite side of said drum from



said weights, an arm member secured to the one end of said crank shaft provided with oppositely disposed arm portions, a fly wheel mounted in connection with said arm member revoluble relatively thereto, and springs connecting the extended ends of said arms with said fly wheel whereby said fly wheel is turned by said crank shaft through said arms and springs.

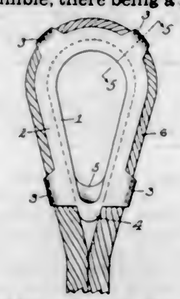
2,100,566
ROUTER
Oscar L. Munding, Glendale, Calif.
Application September 29, 1936, Serial No. 103,175
4 Claims. (Cl. 144—136)



1. In a machine of the character described, a frame, a work support thereon, a rotary cutting tool, a motor for rotating said tool, and power actuated means for moving said tool both horizontally and vertically against and relative to the the work supported on said work support, said means including a continuously operating means for moving the tool horizontally and means manually controlled for effecting the vertical movement of the tool at will.

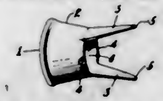
2,100,567
KNOB ATTACHING MEANS
Andrew W. Nelson, Terre Haute, Ind., assignor to Columbian Enameling & Stamping Co., Inc., Terre Haute, Ind., a corporation of Indiana
Application May 18, 1936, Serial No. 80,380
2 Claims. (Cl. 16—121)

2. A knob mounting for securing knobs upon sheet metal members comprising a sheet metal member, a screw having a bevelled head welded to the surface of the member, and a knob having a screw threaded opening for said screw, said opening being bevelled at its mouth to receive the head of the screw, the surface of said member having a plurality of coats of enamel thereon and said screw having one coating of enamel thereon.



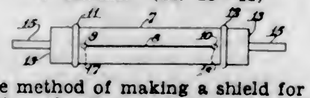
2,100,568
COMBINATION FIXTURE AND WALL UNIT WITH JOINTS AND TRIMS THEREFOR
Jabez Herbert Norris, Covington, Ky.
Application November 27, 1936, Serial No. 113,081
13 Claims. (Cl. 189—1)

1. A combination fixture and wall unit comprising a fixture including a supporting skirt and a wainscot integral with the fixture and including fixture-supporting portions extending upwardly from and laterally of the fixture and defining an opening at the rear of the fixture.



2,100,569
THIMBLE FOR ROPE SLINGS
William C. Russell, Kenosha, Wis., assignor to Macwhyte Company, Kenosha, Wis., a corporation of Wisconsin
Application October 7, 1935, Serial No. 43,847
2 Claims. (Cl. 114—115)

1. As an article of manufacture, a rope thimble comprising a rigid thimble body, outwardly directed rigid flanges formed integrally therewith, and a plurality of outwardly directed, flexible lugs formed integrally with said flanges, said lugs adapted to be bent over a rope which is to lie within the space bounded by said flanges, said thimble shaped with sides converging toward one end of the thimble, there being a section integrally

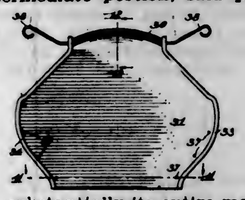


joining said sides, adjacent the narrower end of said thimble, said section provided on its outer face with an outwardly directed projection rounded in the plane of the thimble as a whole.

2,100,570
ANCHORING DEVICE
Gabriel E. Rohmer Saleh, New York, N. Y., assignor to Diamond Expansion Bolt Company, Inc., Garwood, N. J., a corporation of New Jersey
Application September 23, 1936, Serial No. 102,111
12 Claims. (Cl. 72—105)

1. In an anchoring device the combination of two separate expanding members, each having protruding wings, which are adapted to contact with the other expanding member, and an expansible binding member, holding the two expanding members together.

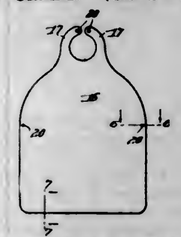
2,100,571
METHOD OF AND APPARATUS FOR MAKING RUBBER OR LATEX ARTICLES
Abraham N. Spánel, Rochester, N. Y.
Application August 10, 1933, Serial No. 684,547
Renewed June 18, 1936
8 Claims. (Cl. 18—41)



1. The method of making a shield for a sanitary pad or the like which comprises dipping a progressively moving form into liquid rubber or the like to deposit a layer of the rubber thereon, providing an opening in each end of the deposited layer, and forming an elongated opening in one side wall of said deposited layer during its progressive movement.

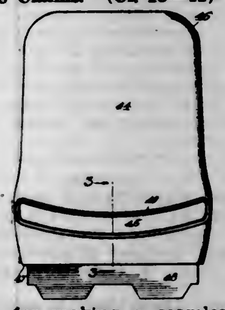
7. The method of making a latex article which comprises providing a form of approximately the desired outline of said article, depositing a layer of latex on said form, simultaneously accumulating spaced reinforcing masses of latex in said layer, and parting said layer from one of said masses to the other.

2,100,572
FORM FOR MAKING LATEX ARTICLES
Abraham N. Spánel, Rochester, N. Y.
Application August 11, 1934, Serial No. 739,469
5 Claims. (Cl. 18—41)



1. A form for making latex pants or the like

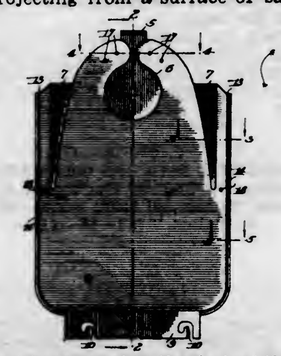
by dipping, comprising a panel having a constricted intermediate portion, said panel being



bounded at substantially its entire margin by an abrupt edge.

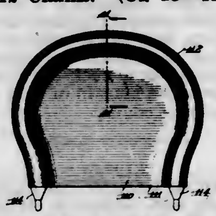
2,100,573
FLAT SHEET LATEX ARTICLE
Abraham N. Spánel, Rochester, N. Y.
Application August 16, 1934, Serial No. 740,141
12 Claims. (Cl. 2—49)

1. A seamless deposited latex sheet-like article having its entire margin reinforced by an accretion of latex integral therewith.



2,100,574
FORM FOR MAKING POUCHES
Abraham N. Spánel, Rochester, N. Y.
Application August 31, 1934, Serial No. 742,294
8 Claims. (Cl. 18—41)

1. A form for making a seamless deposited latex pouch, one end of said form terminating in an abrupt edge substantially in the plane of a main surface of the form, one of the surfaces only of said form being provided with a recess remotely located with respect to said edge and having its long axis substantially parallel to said edge, the surface of the form between said recess and said edge being free of recesses.



2,100,575
FORM FOR MAKING RUBBER ARTICLES
Abraham N. Spánel, Rochester, N. Y.
Application December 19, 1935, Serial No. 55,214
13 Claims. (Cl. 18—41)

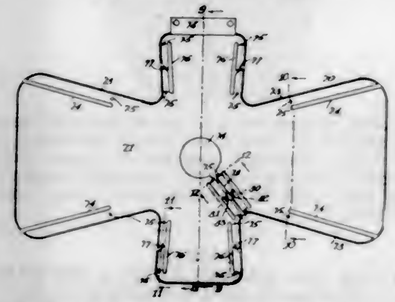
1. A dipping form for making a thin rubber article having a reinforced edge, said form comprising a plate of sheet material to which a layer of liquid rubber will adhere, said plate being cut to approximately the outline of the desired article, and a flange attached to a substantial portion of the margin of said plate, said flange projecting from a surface of said form a

distance at least equal to the desired thickness of the reinforced edge of the article whereby a rubber article having a reinforced margin can be deposited on said form, and means for supporting said form with its principal plane in an upright position.

2,100,576
FORM FOR MAKING RUBBER ARTICLES
Abraham N. Spánel, Rochester, N. Y.
Application December 23, 1935, Serial No. 55,771
12 Claims. (Cl. 18—41)

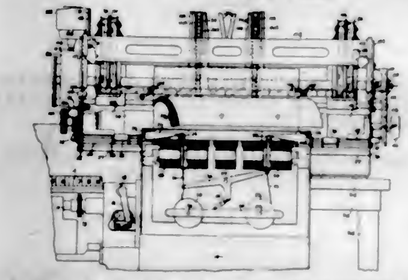
7. A form for making deposited rubber articles which comprises a relatively thin plate and a rounded border on a substantial portion of the margin of said plate, said border being substantially thicker than said plate.

2,100,577
METHOD AND APPARATUS FOR MAKING RELATIVELY LONG LENGTHS OF LATEX SHEETING
Abraham N. Spánel, Rochester, N. Y.
Application March 9, 1936, Serial No. 67,947
23 Claims. (Cl. 18—41)



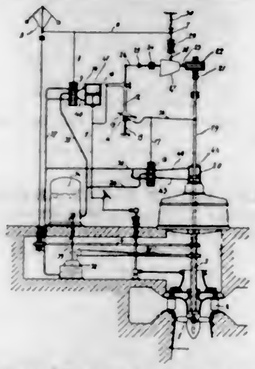
1. The method of making latex sheeting which comprises providing a relatively long band folded back and forth upon itself in spaced relation to

reduce its overall length, dipping the band edgewise into a bath of latex, inverting the band and dipping the same edgewise into a bath of latex to deposit a layer of latex thereon, drying the latex, parting the layer of latex at each edge of the band, and removing the resulting portions of the layer from the band.



16. A form for making deposited latex strips comprising a relatively long winding band having a raised border on each of its long margins for developing thickened margins on the deposited latex strip.

2,100,578
FORM FOR MAKING GARMENTS
Abraham N. Spánel, Rochester, N. Y.
Application March 30, 1936, Serial No. 71,661
9 Claims. (Cl. 18—41)



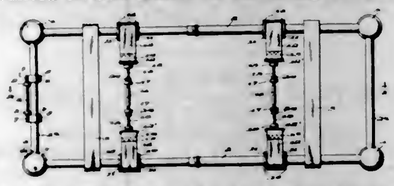
1. A form on which latex articles can be deposited, said form comprising a panel having a central shoulder-generating part and body-generating portions and sleeve-generating portions extending from said part, and means on said panel for generating a neck opening in the resulting garment, the margin of said panel terminating in an abrupt edge.

2,100,579
MANIFOLDING DEVICE
Milton C. Stern and William C. Pfeiffer, Dayton, Ohio, assignors to The Egry Register Company, Dayton, Ohio, a corporation of Ohio
Application January 14, 1936, Serial No. 59,114
42 Claims. (Cl. 197—126)

1. In combination, a machine arranged to print a record, printing means on said machine, a plurality of ribbons interleaved between record sheets, means for moving the record sheets, means for moving the ribbons, and means for causing the ribbons to commence their motion before the record sheets begin to move and to continue to move while said record sheets are moving.

2,100,580
DOUBLE GOVERNOR FOR TURBINES
Dieter Thoma, Munich, Germany
Application January 25, 1936, Serial No. 60,787
In Germany January 31, 1935
14 Claims. (Cl. 253—143)

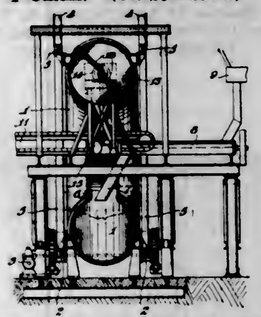
1. A turbine of the kind in which the equalization of load after a decrease of load is effected, during the first phase of the governing process, preponderantly by closing the guide vanes, while the runner blades are closed only to a small extent, and during the second phase of the governing process, by closing the runner blades and readjusting the guide vanes correspondingly, and vice versa, said turbine comprising in combination an adjustable runner blade mechanism, an adjustable guide vane mechanism associated therewith, a control member operatively connected with said runner mechanism, another control member operatively connected with said guide mechanism, means responsive to speed changes such as a centrifugal governor, means associated with said governor for actuating at least one of said control members, a restoring mechanism operatively connecting said latter means with said governor, and a transmission arranged to be influenced by both said control members and adapted to influence said restoring mechanism so as to maintain constant the speed of the turbine during the second phase of the governing process.



2,100,581
SPINNERET TREATMENT IN THE MANUFACTURE OF ARTIFICIAL SILK
Johannes Gerardus Weeldenburg, Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C., a corporation of Delaware
No Drawing. Application September 8, 1936, Serial No. 99,819. In the Netherlands October 18, 1935
10 Claims. (Cl. 18—54)

1. In the manufacture of artificial silk a process of treating spinnerets which comprises covering the spinnerets with a wax-like material and retaining the same thereon to inhibit the formation of deposits around the orifices of the spinnerets during the spinning operation.

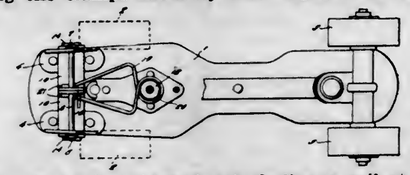
2,100,582
CASKET PLACER
Shepp A. Williams, Bristol, Va.
Application January 22, 1936, Serial No. 60,318
17 Claims. (Cl. 27—32)



1. In combination, a casket lowering mechanism, including a plurality of rotatable shafts,

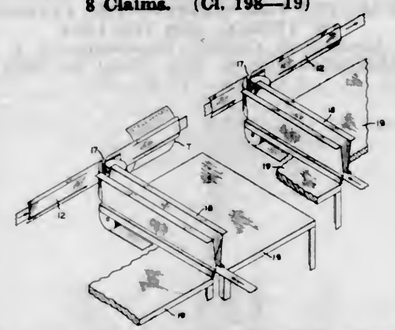
belts mounted on said shafts for lowering the coffin to its final resting place, placer belts mounted on said shafts for assuming the load of

the coffin as it is moved into position for lowering, and means for unwinding said placer belts at a faster speed when said shafts are rotated during the lowering operation.



2,100,583
APPARATUS FOR PREPARING SUPERPHOSPHATE
Arthur Wilson, Silloth, England, assignor to J. & W. Maxwell Limited, Carlisle, England
Application January 13, 1936, Serial No. 58,956
In Great Britain January 30, 1935
1 Claim. (Cl. 23—259.2)

A machine for the manufacture of superphosphate and like products comprising a reaction chamber in the form of a hollow ring of substantially circular cross section, vertically disposed and rotatable about its central longitudinal axis, said chamber having end walls rigid with each other and also having an inner opening coextensive circumferential therewith, means for rotating said chamber, means for feeding solidifiable material to said chamber through the said inner opening thereof, said inner opening being of lesser width than the maximum width of the reaction chamber whereby the latter is effective to support the solidified material as it is carried with said chamber to the top thereof, means within said chamber at the top thereof for comminuting the solidified material as it is advanced by said chamber, and a conveyor disposed beneath said comminuting means and near the axis of rotation of the chamber to receive comminuted material falling from said comminuting means through said inner opening.

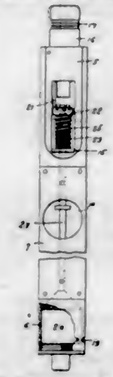


2,100,584
ROLLER SKATE
Robert Wylie, Corvallis, Oreg.
Application June 9, 1936, Serial No. 84,379
1 Claim. (Cl. 280—11.31)

In a roller skate of the type including a foot plate and a tubular truck member depending from said foot plate, a pair of guides mounted on the foot plate, clamps slidably mounted in said guides and engageable with the sole of a shoe, downturned ears on one end of the clamps, and a spring engaged with said ears for yieldingly urging the clamps inwardly into engagement with

the shoe sole, said spring including a coil at an intermediate point encircling the truck member, said spring further including a pair of forwardly converging arms engaged with the ears.

2,100,585
BELT CONVEYER
Bruce Beardsley, Brooklyn, N. Y., and Michael V. Creedon, Westfield, N. J., assignors to The Western Union Telegraph Company, New York, N. Y., a corporation of New York
Original application December 31, 1931, Serial No. 584,204. Divided and this application February 4, 1935, Serial No. 4,976
8 Claims. (Cl. 198—19)

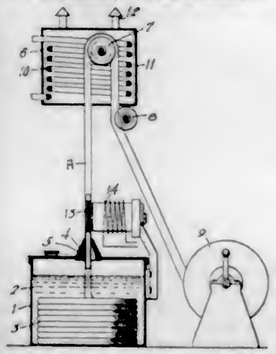


5. In a conveyer system, in which sheets of material are collected from various sources and conveyed to a central point for sorting and distribution, the combination of a plurality of work tables from which the sheets are to be collected, a plurality of collecting conveyers disposed along said work tables to receive the sheets of material therefrom and arranged to deliver the sheets at one end of said work tables in a substantially on-edge position, a common drag conveyer disposed in an on-edge position across the discharge end of the collecting conveyers, said drag conveyer comprising a channel member embodying a slot in the back thereof corresponding to each collecting conveyer, and arranged to admit sheets of material as they are discharged from the collecting conveyers, a belt arranged to travel along the face of said channel and across said slots, and means independent of said channel member for holding the belt in a position to engage said channel face.

2,100,586
WELL CEMENTING DEVICE
Harry G. Campbell, Charleston, W. Va., assignor to United Pipe & Supply Corporation, Charleston, W. Va.
Application September 1, 1936, Serial No. 98,963
4 Claims. (Cl. 166—19)

1. A cementing device for wells comprising an elongated barrel, the barrel being provided with

discharge ports at the lower portion thereof, a valve in the barrel normally closing the ports, a rod extending from the valve, spring means asso-



ciated with the rod for urging the rod in a direction removing the valve from the ports, and trip means for the rod.

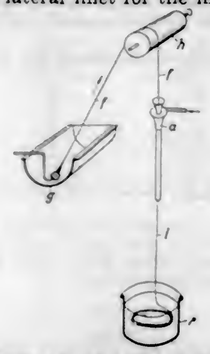
2,100,587

APPARATUS FOR COATING THE INTERIOR OF TUBING AND THE LIKE

Kenneth M. Chalker, Woodbridge, N. J.

Application July 6, 1936, Serial No. 89,097
4 Claims. (Cl. 91—32)

1. Apparatus for coating the interior walls of tubing and the like comprising means for applying a coating material to the interior of the tubing, a wiping element to be arranged within the tubing being coated, a holding means for said wiping element to be located outside said tubing and magnetically coupled to said wiping element, and means for causing relative movement of the tubing and said wiping element to smooth and wipe said coating material over the interior walls of the tubing.



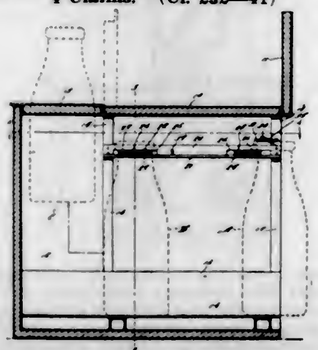
2,100,588

MANUFACTURE OF WOOL-LIKE ARTIFICIAL FIBERS

Walter Claus, Mannheim-Waldhof, Germany, assignor to Zellstofffabrik Waldhof, Mannheim-Waldhof, Germany

Application July 18, 1935, Serial No. 32,113
In Germany January 30, 1935
8 Claims. (Cl. 18—8)

1. Apparatus for imparting a curled form to artificial threads during their manufacture, comprising a tube adapted for the carrying through of a freshly coagulated and still plastic artificial thread, provided with an ejector-like opening at one end, a lateral inlet for the introduction of a



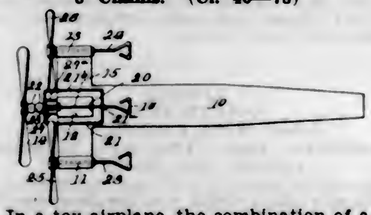
current of gaseous medium and an internal helically-shaped guide piece adapted to impart a rotary motion to the gaseous current.

2,100,589

MILK BOTTLE HOLDER

Horton D. Cole, Scotia, N. Y.

Application February 16, 1937, Serial No. 126,086
4 Claims. (Cl. 232—41)



1. In a structure of the class described, a casing, a bottle slideway in said casing, a pair of opposed pivotally mounted horizontally arranged star-wheels supported at a predetermined point above said slideway, pivoted trip members for said star-wheels, additional star-wheels for operating the trip members, and bottle actuated release means for the additional star-wheels.

2,100,590

TOY AIRPLANE

Sylvester Clark Grady, Chester, N. J.

Application May 25, 1937, Serial No. 144,745
8 Claims. (Cl. 46—78)

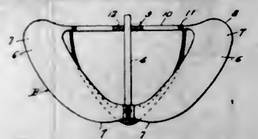
1. In a toy airplane, the combination of a plurality of propelling units, an independent spring motor for each of said propelling units, and means engageable with one of said propelling units for preventing rotation thereof until the substantial expenditure of power in a motor for another of said propelling units.

2,100,591

COMBINED LOCKING AND SUPPORTING MEANS FOR DOORS

Alfred Haberstump, Detroit, Mich.

Application March 11, 1935, Serial No. 10,555
7 Claims. (Cl. 292—302)



1. In a combined locking and supporting means for doors, the combination with door and door frame members, of a latch bolt and spaced metallic jaws mounted on one of said members, together with means for resiliently opposing separation of said jaws, and a single element positioned on the other member and adapted to be engaged by said jaws and latch bolt when the door is closed, said element having a recess for the reception of the end of the latch bolt which recess opens only toward the latch bolt.

2,100,592

PROPELLER

John C. Hasbrouck, Detroit, Mich., assignor of one-half to Fred Weidman, Detroit, Mich.

Application January 15, 1936, Serial No. 59,287
6 Claims. (Cl. 170—156)

1. An airship propeller comprising a propeller shaft, a conical shell surrounding said shaft, rearwardly curved propelling blades having their front ends extending radially through said shell and fastened to said shaft and having their rear ends fastened to the rear portion of said shell, and a frame including a web in the shell and supporting said shell on said shaft.

2,100,593

PROCESS OF PREPARING A SUBSTANCE INCREASING THE BLOOD PRESSURE

Georg Hessel and Hans Maier, Frankfort-on-the-Main, Germany

No Drawing. Application August 10, 1935, Serial No. 35,673. In Germany August 14, 1934
6 Claims. (Cl. 167—74)

1. The process of preparing a substance increasing the blood pressure from kidneys or spleens which comprises extracting the organic material with an aqueous solution of an electrolyte removing the substance reducing the blood pressure from the extract by dialysis with distilled water, precipitating the substance increasing the blood pressure by saturating the solution with a salt usual for the precipitation of albumen at a pH of 3–5, extracting the substance increasing the blood pressure from the precipitate with water, precipitating the pigments contained in the solution by acidifying the solution, treating the solution with an adsorbing agent and extracting the substance increasing the blood pressure from the adsorbing agent by means of an aqueous solution of an alkaline substance.

2,100,594

COLOR PHOTOGRAPHY

Gerd Heymer, Dessau-in-Anhalt, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y., a corporation of New York

No Drawing. Application October 21, 1933, Serial No. 694,689. In Great Britain May 5, 1932
6 Claims. (Cl. 95—88)

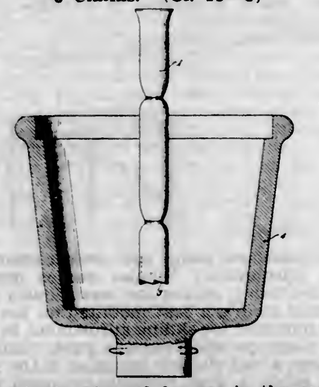
1. A solution for discharging dye in the presence of silver and dissolving a silver image in color photography which comprises equal parts of

Solution I

Water	cc.	6250
Iodine	grams	17
Potassium iodide	grams	33
Concentrated sulfuric acid	cc.	525

and

Solution II



Water	cc.	6250
Sodium sulfite	grams	330
Thiourea	grams	330

2,100,595

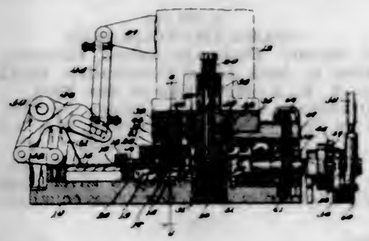
MANUFACTURE OF ARTIFICIAL SILK

Cornelis Gerrit Jansen, Arnhem, Netherlands, assignor to American Enka Corporation, Enka, N. C., a corporation of Delaware

Application October 9, 1936, Serial No. 104,888
In Germany October 31, 1935
6 Claims. (Cl. 18—8)

1. A spinning funnel for use in the manufacture of artificial silk according to the centrifugal process comprising a hollow body portion having a series of projections and depressions surrounding the mouth thereof over which the thread is caused to ride as it emerges and is laid up to form a cake within a pot.

2,100,596



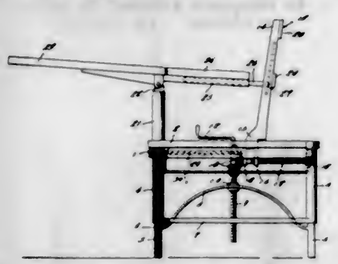
MACHINE FOR ASSEMBLING CAP VALVES FOR CONTAINERS

Alfred L. Kronquest, Syracuse, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Application May 8, 1936, Serial No. 78,727
13 Claims. (Cl. 113—1)

1. In a machine of the class described, the combination with a reciprocable ram, of means

for feeding metal cap blanks beneath the ram, each blank being previously formed with an offset portion within the rim and spaced from the face of the blank, means operable by the ram to place an elastic valve disk within the rim of each successive blank against the offset por-



tion, and means for subsequently shaping the blank to secure the disk in that position and at the same time to form one or more radial channels in the rim of the blank to permit the escape of gases from beneath the valve disk when the latter is applied to the perforated end of a metal container.

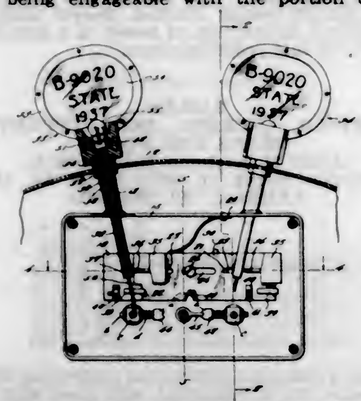
2,100,597

COMBINED CHAIR AND DESK

Marion McDonald Pickle and Daniel E. Parsons, Knoxville, Tenn.

Application September 12, 1935, Serial No. 40,334
3 Claims. (Cl. 155—92)

1. A combined chair and desk comprising a frame, substantially tubular guides depending from said frame, supporting legs slidably mounted in said guides, a seat mounted on the frame, a back mounted for sliding adjustment in a horizontal plane on said frame, a guide rising from the frame, a post slidably mounted in the second-named guide, a desk rockably mounted on said post, means adjustably connecting the desk to the back, and common means for adjusting the seat on the legs and for adjusting the desk relative to said seat and for adjusting the back simultaneously.



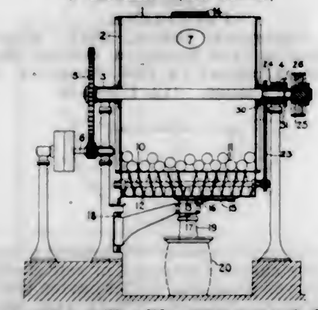
2,100,598

IDENTIFICATION DEVICE FOR AUTOMOBILES

Joseph Rentler, Columbus, Ohio

Application February 2, 1937, Serial No. 123,676
3 Claims. (Cl. 40—2.2)

1. In combination, an ignition lock including a movable latch member, a box structure having a closure with which the latch member is engageable to hold the closure in closed position, a license tag assembly, said assembly provided with a portion projecting into the box, said latch member being engageable with the portion of the



assembly projecting into the box to prevent detachment of the assembly from the box.

2,100,599

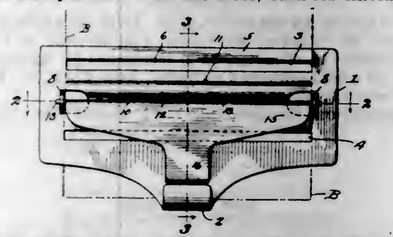
MIXING AND GRINDING MILL

Oskar Schulthess and Casimir Theiler, Basel, Switzerland, assignors to the firm of Society of Chemical Industry in Basle, Basel, Switzerland

Application July 24, 1934, Serial No. 736,753
In Switzerland August 4, 1933
3 Claims. (Cl. 83—9)

1. A mixing mill with arrangement for dust-free discharge of the mixed material, comprising a rotary mixing drum having an aperture for the exit of the goods in its peripheral wall, a trough located outside the periphery of said drum, and rigidly connected to said drum wall opposite said exit aperture, said trough extending longitudinally of the axis of said drum, said trough having a discharge opening in the wall thereof, a rotary conveyer within said trough to convey the material to said discharge opening, freely movable mixing and grinding bodies within said drum of larger dimension than said aperture thereby being prevented from entering said trough, driving means for rotating said drum together with said trough around the axis of said drum and independent driving means for rotating said conveyer about its own axis when the drum is at rest.

2,100,600



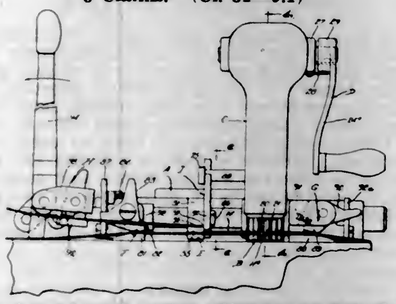
BACK-BAND BUCKLE

Charles Smallwood, Washington, N. C.

Application June 24, 1937, Serial No. 150,168
3 Claims. (Cl. 24—189)

3. A buckle including a base having parallel

slots, ears extending from the base between the ends of the slots, one of said slots having a lip constituting a rounded wall of the slot and folded back on the base, said slots constituting means for receiving a band overlying that portion of the base between the ears and between the slots, a stiffening rib struck from the base between the ears and parallel with the slots, said rib having a



substantially perpendicular abutment shoulder merging into a rounded ridge constituting a bearing for the band, and a clamping plate fulcrumed in and extending between the ears, said clamping plate having a flange cooperating with the base to bind upon the adjacent portion of the band and grip said band against the shoulder, said plate having a tongue inturned against the base.

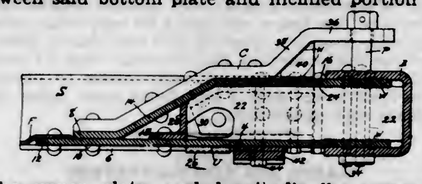
2,100,601

TYING MACHINE

Herbert Harvey, Los Angeles, Calif., assignor to Leo M. Harvey, Los Angeles, Calif.

Application March 22, 1933, Serial No. 662,064
Renewed April 26, 1937
3 Claims. (Cl. 81—9.1)

1. A machine for tying adjoining parts including a frame, guiding the parts, cooperating tie forming members operable along the parts to tie them, a cutter mounted on the frame to be shiftable into and out of position to cut one of the parts, and a carriage for said members mounted on the frame for movement longitudinally of said parts and laterally of said parts, the cutter and carriage being related so that the cutter is actuated by the lateral movement of the carriage and is shifted by longitudinal movement of the carriage.



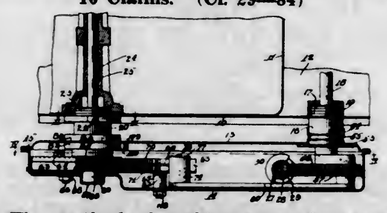
2,100,602

END CONSTRUCTION FOR MINE CARS

Warren V. Johnson and Robert C. Kepner, Bloomsburg, Pa., assignors to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey

Application September 12, 1935, Serial No. 40,223
14 Claims. (Cl. 105—364)

1. An end construction for low-floor mine or similar cars having side sills and comprising, a substantially horizontal lower plate secured to the side sills and floor, an upper plate secured to said lower plate and side sills, said upper plate being formed with an upwardly inclined portion, transverse bracing means interposed between said bottom plate and inclined portion of



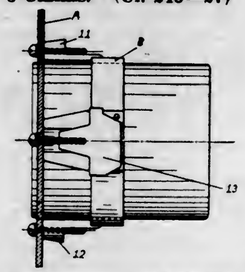
the upper plate, and longitudinally arranged bracing means connecting said upper and lower plates and spaced relative to the side sills, said bracing means forming with said plates and side sills pockets for the reception of bumper means.

2,100,603

CRANKCASE ASSEMBLY AND METHOD OF MAKING THE SAME

Leland G. Knapp, Chicago, Ill.

Application September 16, 1935, Serial No. 40,729
10 Claims. (Cl. 29—84)



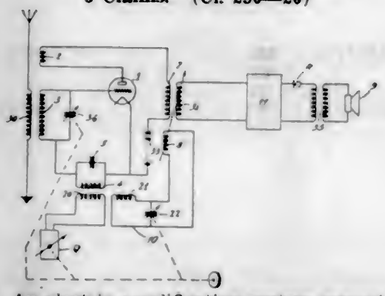
9. The method of making a crank case and transmission assembly for washing machines and the like comprising stamping a cover from sheet metal, stamping a bottom from sheet metal, assembling transmission mechanism into the cover, assembling transmission mechanism into the bottom, assembling an operating shaft in its bearing and then assembling the bearing with the shaft contained therein into the bottom, and bringing the top and bottom together to enclose the transmission mechanism in a crank case and to engage several different elements of the transmission mechanism with one another by the act of bringing the top and bottom together, and connecting engaging portions of the cover and bottom.

2,100,604

INSTRUMENT MOUNTING

Paul Kollsman, New York, N. Y.

Application March 5, 1935, Serial No. 9,399
8 Claims. (Cl. 248—27)



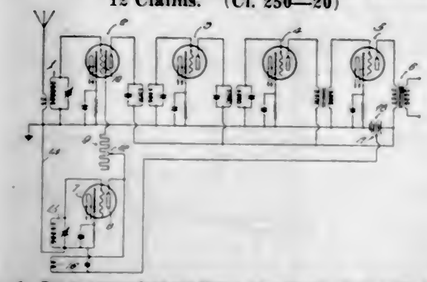
1. In a device for mounting an instrument upon an instrument board which is provided with a

cut-out to expose the instrument, a split collar for embracing the instrument and adapted to be mounted about said cut-out on the rear of said instrument board, and means wholly external to the space embraced by said collar and operable from the front of said instrument board for positively forcing the terminal ends of said split collar both towards each other to clamp the instrument and away from each other to release the instrument.

2,100,605
RADIO RECEIVING SYSTEM

Alfred Aubyn Linsell, London, England, assignor to Radio Corporation of America, a corporation of Delaware

Application July 5, 1934, Serial No. 733,816
In Great Britain July 21, 1933
3 Claims. (Cl. 250—20)

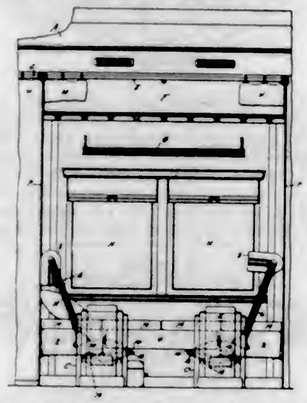


1. An electric amplification system comprising a regenerative circuit embodying an electron discharge device, having coupled input and output circuits, said regenerative circuit being adjusted near the point of oscillation, a source of oscillations, means coupling the source of oscillations and said regenerative circuit for periodically varying the conductance of the electron discharge device and thereby periodically start and stop the oscillations in the regenerative circuit, whereby super-regenerative action is obtained, means comprising a source of oscillations coupled to the regenerative circuit for producing a beat frequency which is a product of the output of the regenerative circuit and the oscillations from said means, a beat frequency utilizing circuit and means for coupling the output circuit of said electron discharge device to said utilizing circuit.

2,100,606
SUPERHETERODYNE RECEIVING SYSTEM

Percival D. Lowell, Chevy Chase, Md., assignor to Radio Corporation of America, New York, N. Y., a corporation of Delaware

Application July 25, 1933, Serial No. 682,130
12 Claims. (Cl. 250—20)

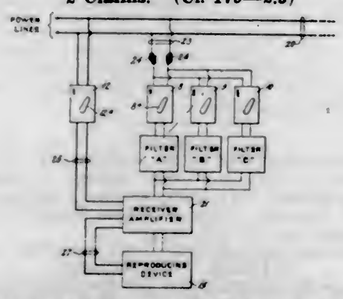


1. In a superheterodyne receiver, an oscillator circuit including a plate electrode, a first detector circuit including a screen grid, a resistance connected directly between the oscillator plate and the screen grid of the first detector for providing a coupling path between the oscillator and first detector circuits.

2,100,607
CONVERTIBLE COACH AND SLEEPER

Louis W. Martin, St. Louis, and Arthur E. Lehmann, St. Charles, Mo., assignors to American Car and Foundry Company, New York, N., Y., a corporation of New Jersey

Application October 15, 1935, Serial No. 45,072
17 Claims. (Cl. 105—314)

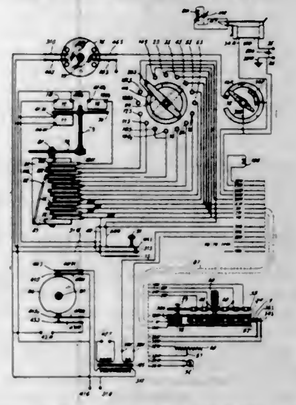


1. In a railway car, the interior of which resembles the conventional railway passenger car, seats within said car, the majority of said seats being capable of facing in either direction, removable partitions extending substantially from car floor to ceiling for dividing said car into compartments with at least two seats in each compartment, curtains extending between the partitions to close the compartments, said seats being so constructed as to cooperate with said partitions to form berths and provide dressing space between the sides of the berths and said curtains.

2,100,608
COIN SELECTION PROGRAM SYSTEM

William A. McCutcheon, East Williston, N. Y., assignor to Muzak Corporation, New York, N. Y., a corporation of Ohio

Application November 6, 1936, Serial No. 109,492
2 Claims. (Cl. 179—2.5)

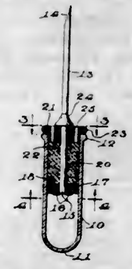


1. A coin selection program system comprising, an amplifier, a reproducing device associated therewith, wire lines for supplying commercial power to said amplifier, a coin controlled time switch in said wire lines for controlling the energization of said amplifier and associated reproducing device, means for delivering a plurality of different program channels to said amplifier, including a coin controlled time switch for controlling, subordinate to the control exercised by said time switch controlled energization of said amplifier, each of said channels to selectively connect any one of said program channels to said amplifier and reproducing device for reproducing a program from a selected program channel for a time interval equal to a fraction only of the time interval during which said amplifier is energized by a single operation of the time switch controlling said amplifier.

2,100,609
CONTROL MEANS

Frank Allen Mitchell, London, England, assignor to Electric and Musical Industries Limited, Hayes, Middlesex, England, a company of Great Britain

Application March 13, 1934, Serial No. 715,266
In Great Britain March 14, 1933
9 Claims. (Cl. 250—20)



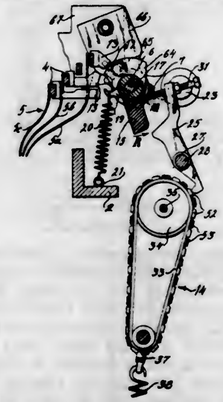
5. In combination, a radio receiver comprising a tunable circuit including a coil and a variable rotary condenser, an electric motor connected to said condenser, a circuit for energizing said motor including a switch located at a point remote from said receiver and means located at said remote point connected to short circuit a portion of said coil said means being operatively connected with said switch.

2,100,610
GAS FILTER

Ellwood S. Paisley and Allen F. Peters, Philadelphia, Pa., assignors to The National Drug Company, Philadelphia, Pa., a corporation of Pennsylvania

Application June 15, 1936, Serial No. 85,253
5 Claims. (Cl. 183—49)

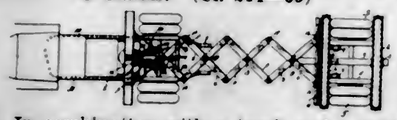
3. A filtering device, comprising a hollow chamber closed at one end, a tube extending into the opposite end of said chamber, a porous filtering medium surrounding said tube and closing the space between said tube and the walls of said chamber, an apertured gasket surrounding said tube and preventing said medium from shifting inwardly of said chamber beyond the limit of said tube, and a second apertured gasket spaced with respect to the first, and operative to prevent said medium from shifting outwardly from said chamber beyond the limit of said chamber, said last-named gasket having a radially enlarged portion abutting against the



walls of said chamber and operative to prevent said last-mentioned gasket from shifting inwardly of said chamber, the aggregate area of the apertures in said first gasket being less than the area of the bore of said tube.

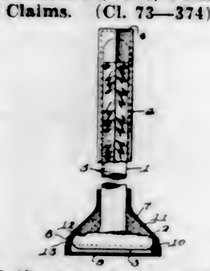
2,100,611
MECHANISM FOR THE AUTOMATIC SELECTION AND OPERATION OF FLAT KNITTING MACHINE THREAD CARRIER BARS

Joseph Phillips, Philadelphia, Pa., asignor to Nickels & Lauber, Philadelphia, Pa.



Application March 11, 1936, Serial No. 68,224
13 Claims. (Cl. 66—127)

1. A thread selecting and feeding mechanism for flat knitting machines comprising in combination with a plurality of thread carrier bars: a friction rod mounted on the machine for arcuate rotating and rectilinear sliding movements; a friction box carried by said friction rod to follow the movements thereof; a carrier bar selecting element fixed on said box and extending therefrom for selective engagement with any one of the carrier bars, to establish a driving connection between said box and the selected carrier bar, whereby the latter may be moved longitudinally of the knitting machine by the friction rod in its rectilinear movement; a stop plate mounted fixedly in relation to the rectilinear movement of said rod but connected to the latter for arcuate rotation therewith; pivoted levers each having means respectively adapted to contact with said plate to stop the arcuate rotation of the rod upon reaching its different positions required to bring said selecting element in engagement with the

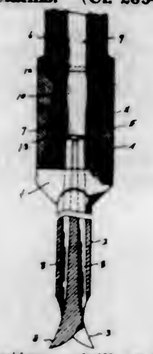


carrier bar to be selected; and a pattern device acting upon said levers to alternatively operate the same.

2,100,612
TRAILER
Charles R. Potts, Klamath Falls, Oreg.
Application April 11, 1936, Serial No. 73,910
8 Claims. (Cl. 214—65)

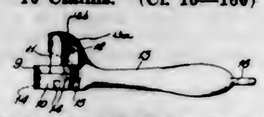
1. In combination with a truck and a trailer, a pivotal mounting upon the truck, a transverse slide upon the trailer, a reach comprising a plurality of pivotally connected links forming a lazy tongs, a slidable connection between the rear end of the reach and the aforesaid slide, a stub reach slidably carried by the trailer having one end pivotally connected to a pivotal connection between the links at one end of the reach, and power means to which is connected the opposite end of the reach operable to contract and expand such reach.

2,100,613
CLINICAL SURFACE THERMOMETER
Leonard G. Rowntree, Philadelphia, Pa.
Application November 21, 1936, Serial No. 112,092
5 Claims. (Cl. 73—374)



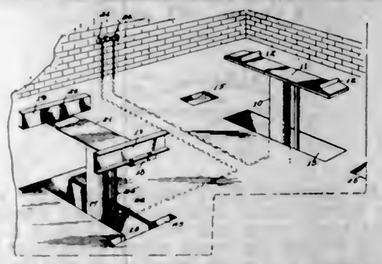
4. A clinical thermometer, comprising a bulb having a substantially planular contact surface, a casing surrounding and normally fixed against longitudinal movement with respect to said bulb, heat-insulating material between said casing and the rear portion of said bulb, and said casing terminating in a plane having a free edge portion, which lies in a plane spaced beyond the plane of said surface, and a vent in said casing to relieve the pressure of air caused by said bulb being pressed into uniform engagement of said contact surface with the skin or membrane of a patient.

2,100,614
FORM TIE
Tamis C. Schenk, Brooklyn, N. Y., assignor to Richmond Screw Anchor Co., Inc., Brooklyn, N. Y., a corporation of New York
Application January 14, 1937, Serial No. 120,589
1 Claim. (Cl. 72—105)



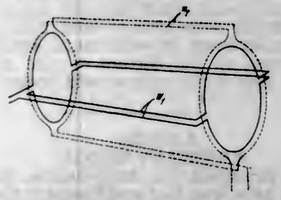
A form tie comprising, an anchorage member consisting of a helix formed of spirally-wound rod adapted to be embedded in a poured concrete structure close to a face thereof, a pair of parallel loop members of substantially U-shape attached to said helix and extending rearwardly of the inner end of the same in side-by-side relationship with the loop portions of said members in substantial alignment, said members entering into the concrete and embracing the same, the helix being attached between the legs of said loop members.

2,100,615
DRILL
Owens C. Snell, Houston, Tex., assignor of one-half to L. H. Kennon, Houston, Tex.
Application April 30, 1936, Serial No. 77,228
3 Claims. (Cl. 285—146)



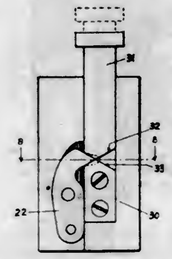
1. In combination a drill and a driving member, one having an externally threaded pin and the other having an internally threaded box to receive the pin, the assembly having a channel for the passage of drilling fluid therethrough to the drill cutters, a sleeve like packing in the box through which the channel extends, the box having an annular wall groove to receive one end of the packing and the pin abutting the other end of the packing, said pin having an end socket and the abutting end of the packing being reduced and fitted into said socket.

2,100,616
SASH MOUNTING
Charles H. Talbot and Andrew Peters, Coscob, Conn.
Application May 31, 1935, Serial No. 24,344
10 Claims. (Cl. 16—160)



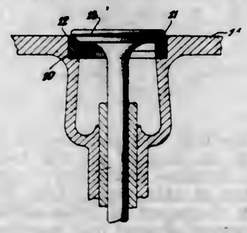
6. In a device of the class described and adapted for use on a window sash mounted for vertical and swinging movement relatively to a frame, a fixed hinge portion fixed to the frame and having a fixed hinge pivot pin, a movable hinge portion slidably and rotatably mounted on said pin and secured for movement with the window sash, said movable hinge portion being in the form of a disk with an extension, a lever handle, means pivoting said handle on said movable hinge portion extension, said handle having a cam portion bearing downwardly on said fixed hinge pin, whereby upward swinging of said lever handle on its pivot in the direction of the lifting of said window sash will cause said cam to impart upward movement to said sash in the axis of said fixed hinge pin.

2,100,617
AUTOMOBILE LIFT
Elmer B. Thompson, Des Moines, Iowa, assignor to Globe Machinery & Supply Company, Des Moines, Iowa, a corporation of Iowa
Application December 28, 1936, Serial No. 117,680
1 Claim. (Cl. 254—89)



In an automobile lift, the combination of a lifting member, a transverse beam mounted thereon, two automobile axle engaging beams fixed to the transverse beam and arranged longitudinally and having wide, flat upper surfaces to serve as floor members when in a lowered position, a floor plate mounted upon said transverse beam and extending from one of said axle engaging beams to the other and movable vertically relative to the transverse beam, said plate being formed with vertical notches in its ends, vertical ribs on the inner side of said axle engaging beams to enter said notches for guiding the floor plate in its vertical movement, portions of said floor plate being projected laterally beyond the transverse beam, and a floor formed with openings to receive the beams with the top surfaces of the axle engaging beams flush with the top of the floor, said floor being also formed with shoulders positioned to engage the side edges of the floor plate and support it in position with its top surface flush with the floor.

2,100,618
CATHODE RAY APPARATUS
Rudolf Urtel, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany
Application December 14, 1934, Serial No. 757,436
In Germany December 7, 1933
4 Claims. (Cl. 250—27.5)

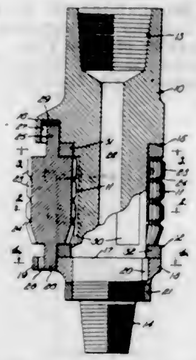


4. In combination, a cathode ray tube comprising an envelope, said envelope having a cylindrical neck portion through which a developed electron beam passes, means for magnetically deflecting said electron beam, said means comprising a winding having one of its peripheries in a plane perpendicular to the axis of the tube and certain portions of the said winding being in magnetic opposition to certain other portions of said winding for neutralizing the magnetic fields set up in said portions during operation of said tube.

2,100,619
METHOD FOR MAKING PAWL OR DETENT MEANS
Floyd D. Wenn, Binghamton, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a corporation of New York
Application March 1, 1935, Serial No. 8,930
4 Claims. (Cl. 29—148)

1. The method of producing a stamped article from sheet metal stock and reshaping the edges thereof, and which method consists in stamping up a blank from said stock of which the sheared perimeter includes an initially blunt nose region, then by a coining step flattening opposite perimetric edge regions of such nose to initiate a wedge shaped toe having a jutting tip appendage, and finally by a continuation of said coining step, snipping to sever said appendage and thereby leaving a smoothly finished wedge shaped toe that is rendered sharp at the severed extremity thereof.

2,100,620
VALVE INSERT
Gottfried Wirrer and William E. Day, Jr., Plainfield, N. J., assignors to Mack Manufacturing Corporation, Long Island City, N. Y., a corporation of Delaware
Application March 25, 1937, Serial No. 132,898
4 Claims. (Cl. 75—124)



1. An alloy particularly adapted for valve insert material comprising approximately 39.0–41.0% nickel, 1.5–2.0% carbon, 0.3–0.6% manganese, 0.5–1.0% silicon, 0.75–1.25% aluminum, and the remainder iron.

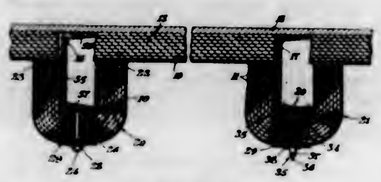
2,100,621
REAMER
Walter A. Abegg, Los Angeles, Calif., assignor to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California
Application November 14, 1936, Serial No. 110,822
9 Claims. (Cl. 255—73)

1. A well reamer including, a shank, parts on the shank having openings elongated radially with respect to the longitudinal axis of the shank, a cutter between said parts having trunnions

extending into said openings, the trunnions being adjustable in the said openings, and bearing

members on the shank cooperating with the trunnions to support the cutter against inward forces.

2,100,622
SURFACE BOLT
George R. Adams, Los Angeles, Calif.
Application January 27, 1936, Serial No. 61,048
1 Claim. (Cl. 292—145)

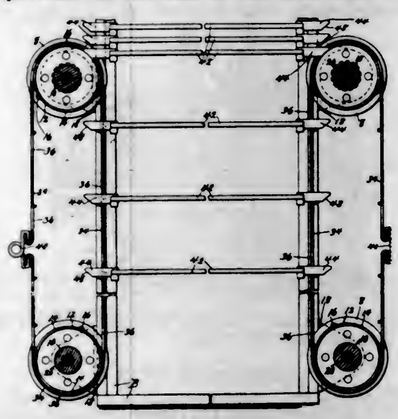


In a surface bolt, the combination with a pair of guides, a rib formed on the front face of each guide, flanges projecting laterally from the free edge of said rib so that the same is substantially T-shaped in cross section, a substantially channel-shaped bolt mounted for sliding movement on said guides, flanges projecting inwardly from the side edges of said bolt for engagement behind the laterally projecting portions of the T-shaped ribs on said guides, the front face of each rib being provided with a longitudinally disposed groove, a resilient member positioned in the groove in one of said ribs and bearing against the inner face of said bolt, a knob secured to one end of said bolt, the inner end of which knob provides a shoulder to engage the adjacent guide and limit the movement of the bolt in one direction on said guides and portions of the flanges at the end of the bolt opposite the end that carries the knob being pressed forwardly toward the front wall of the bolt to provide stops for engagement with the adjacent guide to limit the movement of the bolt in another direction.

2,100,623
DECOY
George A. Bates, Cambridge, Mass., assignor of forty percent to Charles V. Lally, Cambridge, Mass., and twenty percent to Herman Albert, Cambridge, Mass.
Application April 10, 1936, Serial No. 73,628
6 Claims. (Cl. 43—3)

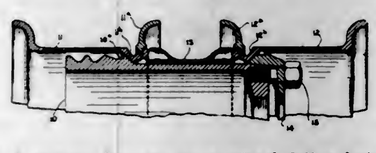
1. An improved decoy comprising upper and lower fabric casing members stitched together around their edges and contracted at a point midway around the breast edges, a diamond insert located in the top member of said casing for the purpose of raising and giving contour to that portion, and a stuffed head and neck portion removably and pivotally mounted on the front portion of the top of said casing.

2,100,624
INSULATING CONSTRUCTION
Charles J. Beckwith, Brooklyn, N. Y., assignor to Keasbey & Mattison Company, Ambler, Pa., a corporation of Pennsylvania
Application October 30, 1935, Serial No. 47,358
5 Claims. (Cl. 20—4)



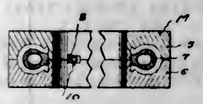
1. Means for heat insulating a partition supported by a channel beam, which comprises a sheet of heat insulating substance covering said partition adjacent said beam, a molded U-shaped heat insulating form covering said beam, said U-shaped form having a side the end of which abuts and supports said sheet, and a fastener for fastening the base of said U-shaped form to a flange of said channel beam, said fastener comprising a spring hook for attaching to said flange and a stem which extends through said base, and a collar fastened to the bottom of said stem, for supporting said form against said beam.

2,100,625
VENETIAN BLIND
George K. Bradfield, Jr., Hackensack, N. J., assignor to American Car and Foundry Company, New York, N. Y., a corporation of New Jersey
Application June 15, 1937, Serial No. 148,250
7 Claims. (Cl. 156—17)



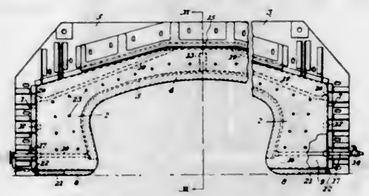
1. A Venetian blind comprising a plurality of belts each formed with a plurality of elongated openings, a plurality of slats, projections on the ends of the slats located in the openings of the belts when in an operative position, and pulleys supporting the belts whereby when said belts are moved over the pulleys in one direction they disengage themselves from the slat projections and the slats are piled in an inoperative position above

the pulleys, certain of said belts engaging spaced projections on one end of the slats and being



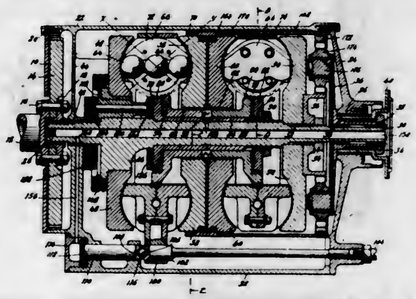
shiftable relative to each other to thereby permit tilting of the slats.

2,100,626
SPACER
Winfield S. Brink, Akron, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a corporation of Ohio
Application December 24, 1934, Serial No. 758,964
5 Claims. (Cl. 301—13)



1. A spacer for use on a wheel felloe between dual tire rims thereon, said spacer consisting of a metal band having its marginal portions deformed radially outwardly and laterally directed so that its lateral edges abut the respective tire rims outwardly of the medial region of the band and receive the lateral thrust of said rims.

2,100,627
TIRE VULCANIZING CORE
Floyd L. Bucy and Vela A. La Rock, Eau Claire, Wis.
Application March 4, 1935, Serial No. 9,234
2 Claims. (Cl. 18—45)

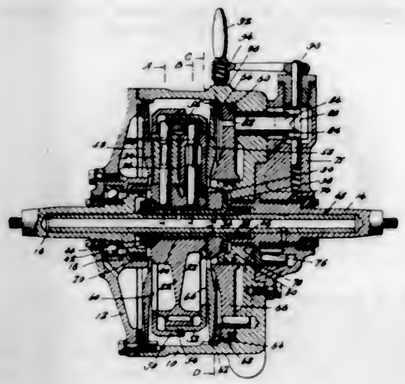


1. A tire-vulcanizing core comprising a distensible bag, an air outlet conduit mounted in and sealed to a wall of the bag, a valve in said conduit opening toward the interior of the bag, yielding means urging the valve toward its open position and adapted to be overcome only by differential pressure of fluid passing through the valve, and a conduit for conducting a distending fluid into the bag, the two conduits being in a single core-stem.

2,100,628
FURNACE COOLER
Willard P. Chandler, Jr., Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey
Application April 24, 1937, Serial No. 138,796
6 Claims. (Cl. 122—499)

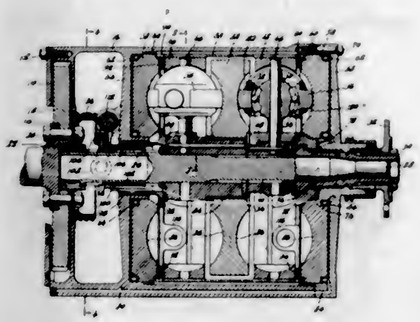
1. A furnace cooler comprising a frame formed to provide a circulation chamber therein, a substantially U-shaped header connected with said frame and extending about the furnace opening, said frame having at least one opening communicating with the circulation chamber therein, means adjacent the top of the frame providing communication between the circulation chamber and said header, and conduits communicating with the lower ends of the legs of said U-shaped header and opening through a wall of the frame, whereby cooling fluid entering the cooler is circulated through the circulation chamber and the header.

2,100,629
TRANSMISSION
Roland Chilton, Ridgewood, N. J.
Application July 18, 1936, Serial No. 91,262
13 Claims. (Cl. 74—200)



1. A transmission including, in combination, opposed toroidal discs, a driving connection between said discs comprising end balls contacting respective discs and a central ball contacting the first said balls, and means to roll said end balls radially across said discs to change the driving ratio of the transmission.

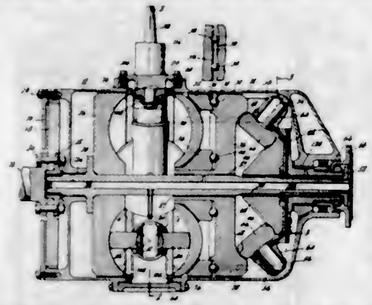
2,100,630
TRANSMISSION
Roland Chilton, Ridgewood, N. J.
Application August 13, 1936, Serial No. 95,732
10 Claims. (Cl. 74—281)



1. In a transmission, in combination, a disc, planetary power transmitting rollers contacting

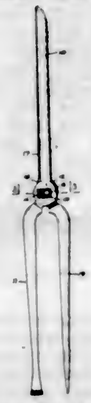
said disc and subject to centrifugal thrust, and anti-friction thrust means for said rollers com-

prising sphericalized roller ends, and thrust rings having conical raceways contacting said ends.



2,100,631
TRANSMISSION
Roland Chilton, Ridgewood, N. J.
Application February 27, 1936, Serial No. 65,974
18 Claims. (Cl. 74—281)

1. In a transmission, in combination, coaxial toroidal discs, rollers to be controllably tilted to initiate precession across said discs, roller control arms having heads offset from the axes of tilting and precession, said arms being extended at right angles to the respective roller axes, and a member controllably rotatable on the co-axis and having bores within which said heads are slidably articulated.

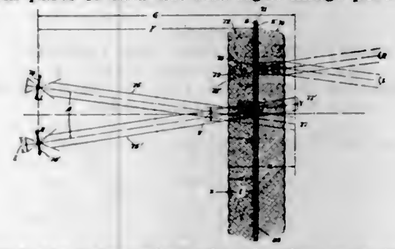


2,100,632
TRANSMISSION
Roland Chilton, Ridgewood, N. J.
Application February 27, 1936, Serial No. 65,975
14 Claims. (Cl. 74—281)

1. In a transmission, in combination, an annular disc elastically distortable for slight relative axial movement of its inner and outer peripheries, a roller shiftably contactable between large and small disc radii, and inner and outer torque-

responsive contact loading devices effective on the disc at respective radii.

2,100,633
MARCEL IRON
Elias Clein, Brooklyn, N. Y.
Application April 21, 1936, Serial No. 75,643
3 Claims. (Cl. 132—37)

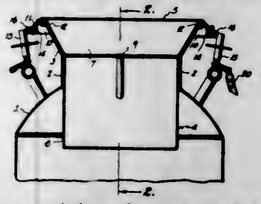


1. In a curling iron, the combination of a mandrel having a transversely slotted mid-portion and a clamping member having its mid-portion embracing the slotted mid-portion of the mandrel, a pivot pin carried by the clamping member and projecting through said slot, and a spring in the slot to exert yieldable pressure against the pin.

2,100,634
APPARATUS FOR PROJECTING PICTURES IN RELIEF
Douglas Fredwill Winnek Coffey, New York, N. Y., assignor to Winnek Stereoscopic Processes, Incorporated, Wilmington, Del., a corporation of Delaware
Application November 27, 1931, Serial No. 577,519
2 Claims. (Cl. 88—24)

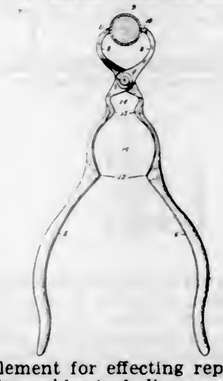
1. A composite viewing screen for viewing projected left and right stereoscopic views of a picture in stereoscopic relief which comprises the combination of a flat translucent image screen disposed in a single plane, a resolving screen of lenticular construction on one side of said image screen adapted to form on said image screen a multiplicity of small independent left and right image portions having parts thereof independent

of each other, and a selective screen on the other side of said image screen adapted to direct light from parts of said left and right image portions



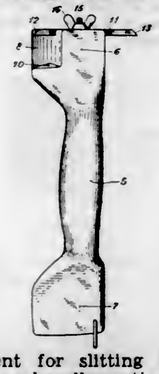
which are independent of each other so as to be viewed by both the left and right eyes exclusively and respectively of an observer.

2,100,635
SNAP FASTENER
Abraham de Vries, Amsterdam, Netherlands
Application September 29, 1936, Serial No. 103,143
In Great Britain September 12, 1935
4 Claims. (Cl. 24—217)



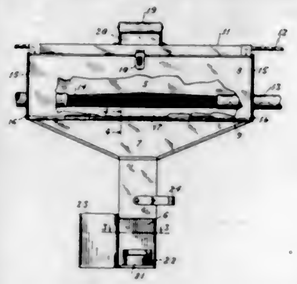
1. In an expanding fastener in combination, a first fastening member comprising a sleeve of flexible material, a plurality of axially extending converging tongues formed at one end of said sleeve and teeth at the free ends of and extending radially outwards substantially at right angles to said tongues, a second fastening member formed to tightly fit the other end of said sleeve, means on the adjoining parts of said two members for holding same in mutual engagement, and an expander of a diameter equalling the inner diameter of said sleeve near the inner ends of said tongues.

2,100,636
CONTAINER
Josef Domershausen, Kansas City, Mo.
Application September 4, 1936, Serial No. 99,394
1 Claim. (Cl. 220—55)



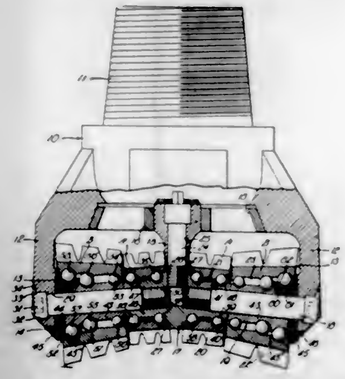
A shipping container for cream and the like, comprising a body, a cover receptacle projecting down into the body to such an extent as to substantially reduce the free surface area of the contained cream, said receptacle having an opening at a point above the center thereof and above the normal level of the cream and communicating with the interior of the container to afford restricted access of products of fermentation to the interior of the receptacle, the cover receptacle being closed below said opening to constitute a catch receptacle for non-gaseous products entering therein through said opening and being vented to permit escape of gaseous products, and means for maintaining the body and cover receptacle in assembly.

2,100,637
COMBINATION IMPLEMENT
John Boulware Doolittle, Kansas City, Mo.
Application January 6, 1937, Serial No. 119,338
1 Claim. (Cl. 81—5.1)



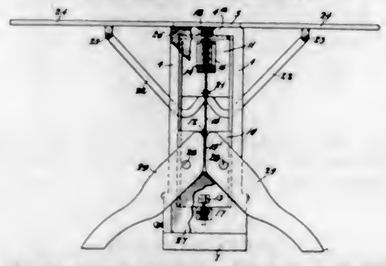
An implement for effecting repairs in electric transmission cables including a pair of pivotally connected levers, cable engaging elements at one end thereof comprising a jaw having a dull edge engaging the cable sheath as a fulcrum and a jaw having a sharpened edge for engaging a slit in the cable sheath diametrically opposite the fulcrum to pull the sheath apart upon the rotation of the implement about said fulcrum.

2,100,638
IMPLEMENT FOR CUTTING CABLE SHEATHS
John Boulware Doolittle, Kansas City, Mo.
Application January 6, 1937, Serial No. 119,339
1 Claim. (Cl. 30—91)



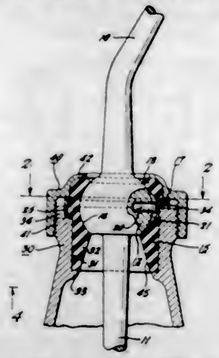
An implement for slitting lead sheaths of cables including a handle portion, shoulder members at the ends of and extending transversely from the axis of the handle to space the handle from the cable sheath, said shoulder members forming stops tending to prevent the slipping of the hand in the operation of the implement, said shoulder members also having alined grooves therein for slidably engaging the cable sheath in the movement of the implement along its surface, and a knife member adjustably mounted on the end of one of the shoulder members for slitting the cable sheath in a longitudinal direction.

2,100,639
PORTABLE OVEN FOR DRYING CABLE CONDUCTORS
John Boulware Doolittle and Charles Eastman Morrison, Kansas City, Mo.
Application January 6, 1937, Serial No. 119,340
2 Claims. (Cl. 34—18)



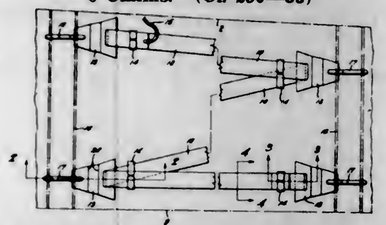
1. In a device for drying the insulation of conductors of a cable from which the sheath has been removed, a casing having two interconnected chambers disposed in perpendicular relation with respect to each other, means for holding insulated conductors in one of said chambers, said conductors having their sheath portions extending through the ends of the casing, a source of heat in the other chamber for heating the first-mentioned chamber and drying the moisture from the insulated conductors therein, and means pivotally associated with the ends of the casing and encircling the sheath portions of the cable for confining the heat within the casing.

2,100,640
CUTTER MOUNTING
Philip C. Efromson, Los Angeles County, Calif., assignor to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California
Application February 23, 1937, Serial No. 126,987
15 Claims. (Cl. 255—71)



1. A cutter assembly for a well drill comprising, a support, adjacent cutters surrounding the support, a race member on the support and within one cutter, the race member and said cutter having opposing annular grooves, balls in the grooves, a race member on the support within the other cutter, and a part on the second mentioned race member preventing displacement of said balls.

2,100,641
CONVERTIBLE TABLE AND CABINET
John Fanarjian, Union City, N. J.
Application January 16, 1936, Serial No. 59,378
3 Claims. (Cl. 311—60)



3. A convertible table and cabinet comprising a supporting frame, a stationary table-top member supported on said frame, foldable table-top leaves hinged at opposite edges of said stationary member and movable into horizontally-disposed extended position and into parallel vertically-disposed folded position, two pairs of slide members supported in said frame, the members of a pair being mounted to have counter-movement relative to each other, a pair of legs pivotally mounted on one member of each of the pairs of slides and movable thereby into extended and folded positions, said legs in extended position projecting outwardly from said frame and in folded position being foldable within the confines of said supporting frame, and means connected with the other members of said pairs of slides for moving said legs alternately into extended and folded positions.

2,100,642
GEAR SHIFT LEVER AND RESILIENT MOUNT THEREFOR
Harvey D. Geyer, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 2, 1935, Serial No. 19,354
4 Claims. (Cl. 74—473)

1. In combination, an actuating lever having an intermediate ball thereon and a handle portion and actuating portion projecting from opposite sides of said ball, an annular resilient rubber bushing supporting said lever, said resilient bushing having two opposed open ends thru which said handle portion and actuating portion respectively project and a spherical socket sliding bearing for said ball, said socket enclosing said ball to such extent as to resiliently retain said ball against endwise movement of said lever in either longitudinal direction, the rubber material of said resilient support being sufficiently expandable to permit said ball to be initially forced endwise into place within said socket while said support is detached from other parts, a reinforcing metal annulus surrounding the central portion of said socket and serving to substantially limit the lateral movement of said ball in said rubber socket, and a rigid retaining member for said resilient support.

2,100,643
RADIO ANTENNA FOR AUTOMOBILES
Harvey D. Geyer, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 9, 1935, Serial No. 39,712
6 Claims. (Cl. 250—33)

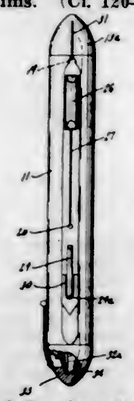
1. A radio receiving antenna for automobiles mounted thereon near the road surface, said antenna comprising: a flexible harness-like structure having end attachment insulators and a flexible rubber-coated flat metal strip looped back and forth between said attachment insulators and forming a plurality of substantially longitudinally-extending laterally-spaced reaches and providing open spaces between said reaches to minimize the retention of water, mud, or other foreign matter upon said antenna and the harmful capacity effect of such retention.

2,100,644
HINGED CARTON
Frederick H. Groves, Dormont, Pa.
Application March 9, 1935, Serial No. 10,220
7 Claims. (Cl. 229—47)

1. In an erectable paper carton formed of a single blank cut, creased, and bent to form bottom, top, side, rear, and front walls together with a reinforcing front wall formed as an extension of the bottom, male and female locking elements one mounted on an inner surface of the carton top and the other mounted on the reinforcing front wall in aligned position with respect to each other in the carton structure interiorly of the carton as erected; said female element and said male element comprising interengageable means adapted to be brought into locking interengagement as the carton is brought into fully erected and closed condition to provide an inaccessible lock for the carton.

2,100,645
CORDED TAPE FOR SLIDE FASTENERS AND THE LIKE
James A. Hendley, Middletown, Conn., assignor to The Russell Manufacturing Company, Middletown, Conn., a corporation
Application January 14, 1935, Serial No. 1,670
1 Claim. (Cl. 139—384)

A concavo-convex curved woven slide-fastener tape for the reception of clamped-on fastener-elements, comprising: a relatively-thin flap-like curved body including warp and weft strands having a curved tubular pocket woven along the edge thereof which is of lesser radius; and a plurality of strands of hard twisted yarn located in the aforesaid pocket and characterized by a degree of longitudinal extensibility greater than the said warp strands in the major portion of the said flap-like body, the tubular pocket of the flap-like body and the twisted yarn strands therein providing a longitudinally-extensible thickened edge which becomes longitudinally extended upon the clamping thereto of slide-fastener elements.



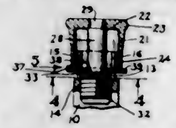
2,100,646
TUBE THICKENER
Gerald O. Hillier, Berkeley, Calif., assignor, by mesne assignments, to Oliver United Filters Incorporated, San Francisco, Calif., a corporation of Nevada
Application May 23, 1934, Serial No. 727,101
3 Claims. (Cl. 210—153)

1. A thickener comprising a tank; a conical guide member supported within the lower part

of the tank; a tapered fitting secured to the upper part of the tank, a tubular filtering element having a hollow core, a filtrate pipe extending through said core and communicating with said filtering element, the upper end of said filtrate pipe being provided with a depending tapered fitting adapted to engage the tapered fitting secured to the upper part of the tank while the lower end of the filtrate pipe is adapted to be accommodated within said conical guide member.

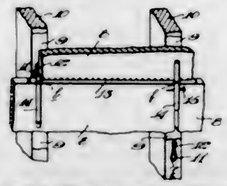
2,100,647
PEN
Edward W. Karl and Jesse H. White, Painesville, Ohio
Application June 5, 1937, Serial No. 146,653
7 Claims. (Cl. 120—42)

1. In a device of the class described, a barrel, a plurality of fountain pens housed in said barrel and rotatable as a unit relative thereto, means for advancing and retracting each of said pens endwise of said barrel to and from writing position, said means including an actuator carried by said barrel, and a part on each pen selectively movable into position for coaction with said actuator by rotation of said pens in said barrel.



2,100,648
FASTENER
Gottfrid C. Lawson and Carl Lindquist, Cleveland, Ohio
Application December 21, 1935, Serial No. 55,540
19 Claims. (Cl. 156—17)

1. In a slat for a Venetian blind comprising a section of sheet metal bent in the form of a channel and having oppositely disposed inwardly extending free edges, a cover plate for closing the gap between said edges comprising a flat strip of metal formed to provide grooves on its edge adapted to be slidably engaged with said free channel edges.

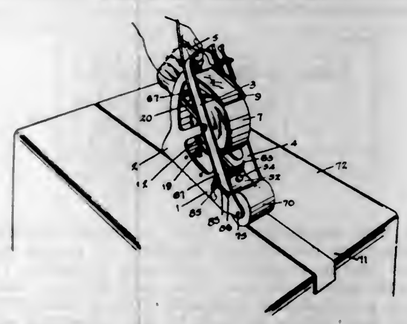


2,100,649
AUDIBLE INDICATING ADJUSTING DEVICE
Harold F. Mossberg, New Haven, Conn., assignor to O. F. Mossberg & Sons, Inc., New Haven, Conn., a corporation of Connecticut
Application March 23, 1937, Serial No. 132,561
11 Claims. (Cl. 33—50)

1. An audible indicating adjusting device including a cylindrically ended member having notches formed in its end edge, a stud secured to said member and extending axially therethrough and having an enlarged head portion provided with screw threads extended below said notches and edge, a catch bar rotatably mounted on said stud between the notched edge and said

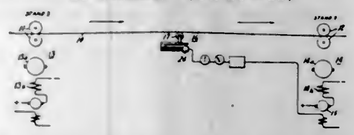
head portion and extending diametrically across said end edge, said bar having a raised portion to engage in said notches, and a spring coiled about said stud and reacting between said bar and said head portion to press said bar against this notched end edge whereby audible snaps will be produced when said bar and said member are relatively rotated.

2,100,650
STRUCTURE FOR SUPPORTING PLASTER COATING
Roy Phillips, Dallas, Tex.
Application December 20, 1934, Serial No. 758,481
9 Claims. (Cl. 72—118)



4. A wall and ceiling construction in combination with stationary supports, a plaster receiving structure including rods forming a continuous line of reinforcing throughout said wall and ceiling, looped members for securing said rods to said stationary supports having sliding and rotating connection with said supports whereby to be movable relative thereto, and means for insulating said rods from said supports.

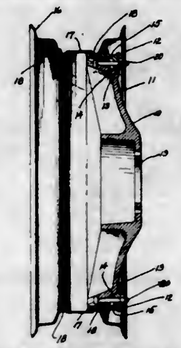
2,100,651
MANUFACTURE OF CURVIFORM HOLLOW ARTICLES FROM BINDER-IMPREGNATED WATER-LAID FELTS
Milton O. Schur, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a corporation of Maine
Application August 6, 1935, Serial No. 34,891
3 Claims. (Cl. 2—194)



1. A hat having a cup-shaped portion, said hat comprising binder-impregnated waterlaid felt of cellulose fibres capable of undergoing limited stretch in the presence of moisture and of setting in stretched condition, the cup-shaped portion of said hat comprising originally flat paper web material, as said binder-impregnated waterlaid felt, stretched in the presence of moisture into cup-shaped form and set in such form, said hat being of soft, cloth-like feel and pliancy.

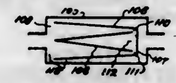
2,100,652
TAPE MACHINE
Calvin J. Shimer, Toledo, Ohio
Application February 19, 1934, Serial No. 711,841
6 Claims. (Cl. 216—23)

2. A tape machine having a frame, a pressure exerting tape applying member mounted on the frame, a handle connected to the frame for manipulating the machine, and means for supporting a supply of tape so that its center of mass is located approximately on a line between the points of connection of the handle and the tape applying member to the frame whereby the tape applying member may bear the weight of the supply of tape when the frame is moved into a tape applying position.



2,100,653
CONTROL SYSTEM
Leonid A. Umansky, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 27, 1935, Serial No. 42,439
14 Claims. (Cl. 80—35)

1. In combination with means for performing an operation on a length of material, a dynamoelectric machine and means operatively connected therewith for producing a tension in said material, an electrical device having a pair of relatively movable elements separated by an air gap, means responsive to relative movement of said elements for controlling said dynamoelectric machine to vary the tension in said material, and means responsive to variations in the tension of said material for effecting relative movement of said elements thereby to control said dynamoelectric machine to maintain said tension substantially constant.

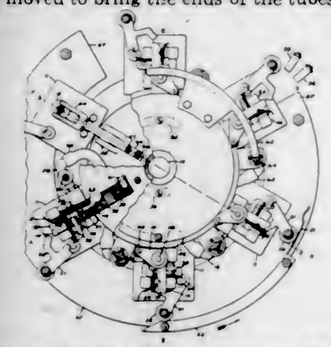


2,100,654
WHEEL AND RIM MOUNTING
Joseph G. Swain, Akron, and Alva W. Woodward, Kent, Ohio, assignors to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
Application January 24, 1936, Serial No. 60,598
6 Claims. (Cl. 301—12)

1. A wheel and rim assembly comprising a wheel having a portion adapted to be attached to an axle at a given position on said axle, a rim support arranged peripherally of said wheel, a rim on said rim support, cooperating interlocking means on said rim and support to prevent axial movement of said rim relative to said wheel, said interlocking means being spaced axially from that portion of said wheel which is to be attached to said axle at the said position thereon, whereby

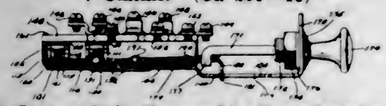
upon reversal of the position of said wheel on said axle said rim will occupy a different axial position relative to said axle than when said wheel was in its first-mentioned position, and additional interlocking means for adjustably interlocking said rim with said wheel at different spaced axial positions with respect to each other.

2,100,655
SOUND ATTENUATING DEVICE
Roland B. Bourne, Hartford, Conn., assignor to The Maxim Silencer Company, Hartford, Conn., a corporation of Connecticut
Original application August 9, 1935, Serial No. 35,428. Divided and this application October 26, 1935, Serial No. 46,846
14 Claims. (Cl. 181—59)



1. An acoustic sidebranch in the form of a complete closed cone with open base nested within a truncated conical member closed at its smaller end, the apex of the cone being positioned toward the large end of said truncated conical member and the open base of said cone being in adjacency to the small end of said truncated conical member.

2,100,656
TUBULATING MACHINE
John F. Donovan, East Cleveland, and Frank J. Malloy, Cleveland Heights, Ohio, assignors to General Electric Company, a corporation of New York
Application September 6, 1935, Serial No. 39,434
7 Claims. (Cl. 49—2)



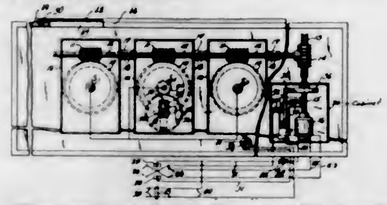
1. In a tubulating machine, the combination of a movable carrier, a plurality of heads thereon each comprising a tube holder having tube gripping members and a holder for the lamp part to which said tube is to be sealed and a gauge arm located between said holders for spacing the end of said tube from said lamp part, means for clamping said lamp part in its holder, burners on said heads for heating said lamp parts and said tubes, means for moving said carrier and causing said gauge arm to move away from its position between said holders, and cam means for suc-

cessively moving said tube holders as said carrier is moved to bring the ends of the tubes there-

in against the said lamp parts to seal them thereto.

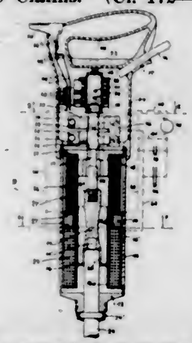
2,100,657
SWITCH
William Correll Edwards, Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application March 9, 1934, Serial No. 714,789
7 Claims. (Cl. 200—16)

1. In a switch, the combination of stationary contacts, a plurality of contact plates, movable contacts provided by each contact plate, a carriage providing individual guiding means for each contact plate, said guiding means comprising fingers integral with the carriage and struck out from slots therein to extend substantially parallel therefrom and received by notched portions of the contact plates.



2,100,658
BUILDING-BLOCK
Stanley W. Finch, Washington, D. C.
Application March 11, 1936, Serial No. 68,343
6 Claims. (Cl. 46—26)

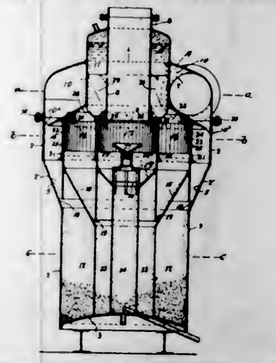
1. In combination, a plurality of toy building-blocks, each having a recess therein for the reception of a connector; and a connector having a body portion tube-like in form, and having a longitudinally-disposed slot or kerf extending through the wall thereof, there being within such body portion a resilient, longitudinally-disposed expander tending to restore the walls of such body portion to a normally expanded condition when the connector is withdrawn from the recess in a block.



2,100,659
RADIO APPARATUS
Leslie A. Gould, Bridgeport, Conn., assignor, by direct and mesne assignments, to Columbia Phonograph Company, Inc., Bridgeport, Conn., a corporation of New York
Application April 23, 1925, Serial No. 25,253
8 Claims. (Cl. 250—40)

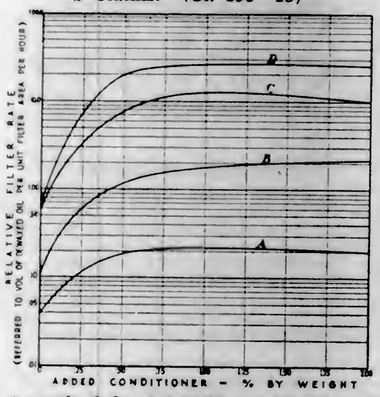
5. In combination with a radio receiving mechanism including a tuning device having a movable element, a panel having a translucent window, means for throwing a beam of light on said window and connected to move in certain timed relation with said element, and means for adjusting said element.

6. The combination with a radio receiving mechanism including a plurality of tuning devices having rotatable adjustable elements, rotatable means for operating said devices, there being a detachable rotatable driving connection from said means to each of the respective elements, a motor for driving said means and means remote from said receiving mechanism for controlling the operation of the motor.



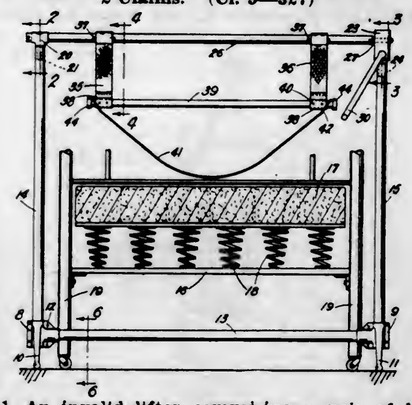
2,100,660
ELECTROMAGNETIC TOOL OF THE PERCUSSION TYPE
Max Greiner, Berlin-Charlottenburg, Germany
Application October 31, 1935, Serial No. 47,713
In Germany April 18, 1934
19 Claims. (Cl. 172—126)

19. Electromagnetic tool of the percussion type comprising frame elements and a reciprocatory armature guided therein constituting two substantially closed magnetic flux circuits, two coils each associated with one of said circuits to induce a flux therein, the first coil having a larger number of turns and a smaller conductor cross-section than the second coil, a resilient buffer means for said armature arranged adjacent to said first coil, a tool shank adapted to be struck by said armature and arranged adjacent to said second coil, a source of current, and an interrupter adapted to be operated by said armature and to alternately connect said coils to said source of current.



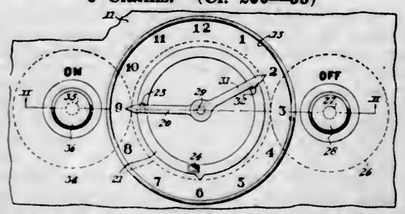
2,100,661
LIQUID PURIFIER
Charles Gilbert Hawley, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a corporation of Ohio
Application November 16, 1934, Serial No. 753,383
4 Claims. (Cl. 209—211)

1. The herein described process for the purification of flowing liquid which consists in organizing the moving liquid into coaxial vortices, one within the other, feeding the liquid into the vortex of large diameter and permitting its outflow to and through the vortex of less diameter, and in each said vortex compelling the liquid to move downward in cylindrical sheet form and to substantially exhaust its downward whirling



force before then reversing the direction of liquid flow to permit its outflow at a level above that of such reversal outflow therefrom, discharging centrifugally separated solids at such levels of exhaustion and reversal, and, into bodies of liquid sufficiently quiet to permit sedimentation therein, and discharging sedimented matters from the bottoms of such bodies.

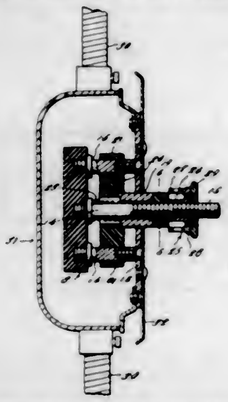
2,100,662
DEWAXING PETROLEUM OILS
Arthur L. Lyman and Melvin M. Holm, Berkeley, Calif., assignors to Standard Oil Company of California, San Francisco, Calif., a corporation of Delaware
Application March 12, 1935, Serial No. 10,594
2 Claims. (Cl. 196—18)



1. A method for separating wax from oil by continuous filtration at a rapid rate with a high yield of dewaxed oil and production of a wax filter cake having low oil content, comprising the steps of dissolving together the oil, a wax crystal conditioner, and a hydrocarbon solvent of which the major portion is liquid at normal temperature and pressure and the A. S. T. M. 50% point is below 250° F., and chilling the solution to a point at which wax solidifies by directing the solution through cooling means in non-turbulent flow and in such manner as to prevent shock chilling and temperature mixing of any minor portions of the solution to thereby insure the obtaining of a high filter rate during prolonged continuous filtration.

2,100,663
INVALID LIFTER
Robert D. Maddox, Cincinnati, Ohio
Application August 15, 1935, Serial No. 36,366
2 Claims. (Cl. 5—327)

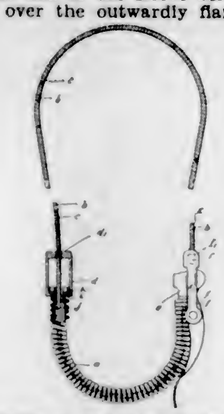
1. An invalid lifter comprising a pair of leg members, a horizontal tubing connecting the leg members, a pair of standards positioned on the leg members, a sleeve bearing removably seated upon one standard, a gear housing removably seated upon the other standard, a horizontal rotatable bar receivable in the sleeve housing and rotatably held in the gear housing, a helical gear positioned on the bar within the gear housing, a crank, a worm gear controlled by the crank and irreversibly engaging the helical gear, two canvas straps fastened intermediate the ends of, and adapted to be wound on the rotatable bar, a horizontal rod fastened intermediate its ends to the depending ends of the canvas straps, a canvas lifting sling adapted to normally remain under the invalid, and D-rings fastened to the ends of the canvas sling and removably held by the rod outside the canvas straps whereby the sling is held in extended position when it is raised.



2,100,664
CLOCK CONTROLLED CONTACT MECHANISM
Robert E. McClure, Warren, Ohio, assignor, by mesne assignments, to The Wean Engineering Co., Inc., Warren, Ohio, a corporation of Ohio
Application August 8, 1936, Serial No. 94,922
6 Claims. (Cl. 200—35)

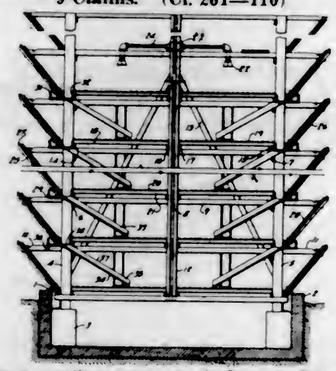
1. In a clock-controlled contact mechanism, a clock hand, a contact hand insulated from the

clock hand but engageable therewith to close a circuit, and means adjustable about the path of the clock hand to cause the clock hand to separate from the contact hand.



2,100,665
TEMPERATURE CONTROLLED SAFETY ELECTRIC SWITCH
John Francis McCormack, New Haven, and John Richard Leonard, Gales Ferry, Conn.
Application November 16, 1936, Serial No. 111,100
2 Claims. (Cl. 200—142)

1. In a circuit maker and breaker, a plate of conductive material, a pair of posts extending therefrom, a block of insulating material mounted on the free ends of said posts, a second block of insulating material slidably mounted on said posts, intermediate the first mentioned block and said plate for movement towards and from the first mentioned block, and tensioned against movement in the former direction, complemental contacts on said blocks, respectively, adapted to be engaged by movement of the second block toward the first block, a sleeve mounted at one end in the second block to slidably extend through said plate, a stud extending from the first block through and beyond said sleeve, a sleeve-like nut threaded on to the outer end of said stud to telescope into the outer end of said sleeve, and a plug of fusable material in the outer end of said sleeve blocking telescopic movement of said nut into the latter.

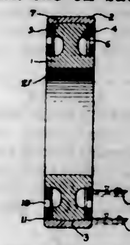


2,100,666
SKIBINDING
Alfred Müller, Munich, Germany
Application March 3, 1936, Serial No. 66,861
In Germany July 24, 1935
3 Claims. (Cl. 280—11.35)

1. A ski-binding, comprising in combination a tightener in the form of a spiral spring, a cable extending through this tightener spring and projecting from one end thereof, a clamping lever at one end of said tightener one end of said cable fixed in this clamping lever, a device on this clamping lever for securely but detachably holding the other end of said cable, a spiral spring encasing the projecting portion of said cable, and a turnable sleeve attached to the other end of said tightener spring and screwed on said table and adapted to shorten and lengthen the effective portion of said cable in accordance with the direction in which said device is turned, the inner open end of the sleeve bent inwards and engaging over the outwardly flanged end of a

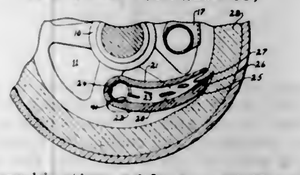
sleeve inserted in the corresponding end of the tightener spring.

2,100,667
COOLING TOWER
Robert R. Pabodie, Kansas City, Mo., assignor to J. F. Pritchard & Company, Kansas City, Mo., a corporation of Missouri
Application November 16, 1936, Serial No. 111,030
9 Claims. (Cl. 261—110)



1. In a cooling tower including decks, means supporting the decks in superimposed relation, means for delivering the liquid to be cooled to the uppermost deck for gravitation to the lower decks, troughs on the deck supporting means below the edges of the decks to collect any liquid that drifts laterally between the decks, and ducts connected with the troughs to return the liquid toward the opposite side of a lower deck.

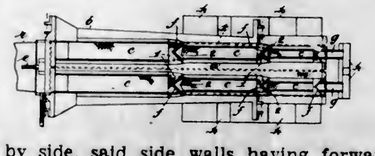
2,100,668
RADIAL PLAIN BEARING
Nils Arvid Palmgren, Goteborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Goteborg, Sweden, a corporation of Sweden
Application December 7, 1934, Serial No. 756,540
In Sweden January 29, 1934
5 Claims. (Cl. 308—170)



1. In a plain bearing, adapted to be mounted in a housing formed at its lower part with a reservoir capable of holding an oil bath, the combination with an inner bearing member adapted

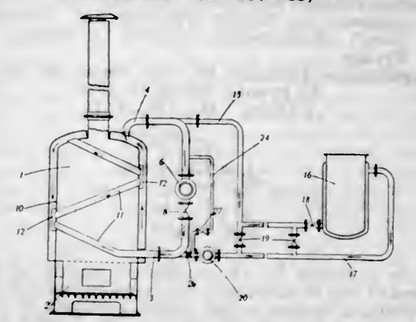
to be fixed to a rotary shaft and provided with annular thrust taking bearing surfaces lying in a radial plane, of a stationary outer bearing ring member, and a stationary ring member bearing against the thrust taking surfaces of the said inner bearing member and being adapted to be interposed between the oil bath and the rotary

bearing part, the inner diameter of the said stationary ring member being substantially smaller than the inner diameter of the annular thrust taking surfaces of said inner bearing member, the said stationary ring member having an aperture for putting the oil bath into communication with the interior of the bearing.



2,100,669
CENTRIFUGAL SEPARATING MACHINE AND METHOD OF TREATING SLUDGES
Joseph S. Pecker, Philadelphia, Pa., assignor to American Centrifugal Corporation, New York, N. Y., a corporation of Delaware
Application March 9, 1934, Serial No. 714,850
13 Claims. (Cl. 210—63)

1. In combination with a centrifugal separating machine including a rotary centrifugal basket and means for rotating the basket to separate liquids from solids and build up a wall of solids in the basket, of a seepage means at the top of the basket including channels open at their inner and outer ends and having communication with the interior of the basket substantially throughout the lengths thereof for the continuous discharge of separated liquids through the channels during separation of the liquids from the solids incident to rotation of the basket, and a single means operatively connected with the machine and having communication with the interior of the basket for drawing liquids away from the inner surface of the built up wall of solids subsequent to the aforesaid separation of liquids from solids and also operable for withdrawing the solids from the basket subsequent to the separation of the liquids from the solids and discharge of the separated liquids from the basket.



2,100,670
APPARATUS FOR THE SEPARATION OF SOLID MATERIALS OF DIFFERENT SPECIFIC GRAVITIES
George Raw, Ravenswood, Low Fell, England
Application November 18, 1932, Serial No. 643,258
In Great Britain November 18, 1931
5 Claims. (Cl. 209—468)

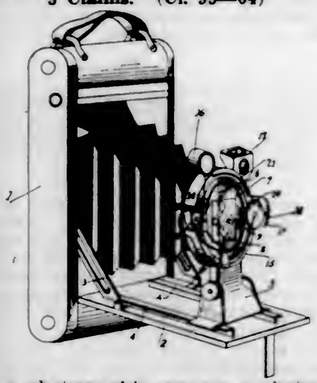
1. Apparatus for the separation of materials of different specific gravities comprising a permeable table or deck unit having a single frame or chassis, means for jigging said unit, a blower, control means for supplying sharp pneumatic pressure variations to said unit, said control means including sealing pieces for providing alternate periods of fully interrupted supply of pneumatic pressure to increase the rate of stratification of the materials and minimize the necessary length of travel of the materials on the deck unit, means for removing the flotant stratum of material from the unit substantially at the rate said stratum is formed, said removing means comprising a plurality of pairs of generally forwardly converging side walls dividing the deck unit into a plurality of decks disposed

side by side, said side walls having forwardly spaced contracted portions and substantially parallel portions, and means at the contracted portions for guiding the flotant stratum over the side walls, the total amount of contraction of all the side walls being sufficient to compensate for the discharge of the flotant stratum of material from the deck as formed and preserve uniformity of depth of the bed of material, the said total amount of contraction of the unit being divided among the side walls so that the degree of contraction of each wall is sufficiently low so as not to interfere with the forward movement of the material on the decks, and said decks being free of projections extending into the path of the material.

2,100,671
LIQUID CIRCULATION HEATING SYSTEM
James Arthur Reavell, Westminster, London, England, assignor to Parks-Cramer Company, Fitchburg, Mass., a corporation of Massachusetts
Application November 12, 1936, Serial No. 110,462
In Great Britain November 23, 1935
1 Claim. (Cl. 237—63)

A liquid circulation heating system of the character described comprising the combination of an absorber, means for heating the absorber, means interconnecting the absorber with two correlated and intercommunicating circulatory systems, a circulating pump in each system so that one serves for the circulation of the oil through the absorber whilst the other pump serves for the circulation of the heated oil through a heating circuit including means to be

heated, and a valve controlled bye-pass permitting the outlet from the heating circuit pump to be connected with the inlet of the absorber pump.



2,100,672

PHOTOGRAPHIC CAMERA

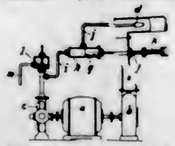
Ödön Riszdorfer, Budapest, Hungary

Original application September 12, 1932, Serial No. 632,816. Divided and this application August 6, 1935, Serial No. 34,966. In Hungary September 12, 1931

5 Claims. (Cl. 95—64)

1. In a photographic camera, a photographic object lens, a device for the control of light entering the camera through said object lens, a photo-electric cell, a rotary spool instrument deriving current from the photo-electric cell, means whereby the said device is controlled by the rotary spool instrument, and a magnet for the production of a magnetic field for the rotary spool instrument, the said magnet embracing the photographic object lens.

2,100,673



DEVICE FOR THE COMBINED CONTROL OF THE ADMISSION OF AIR AND OF FUEL IN AUTOMATIC HEAVY-OIL FURNACES

Erwin Frédéric Schwander, Reichshoffen, France, assignor to Societe d'Etudes des Vehicules "Sev", Reichshoffen, France, a society of France

Application February 19, 1936, Serial No. 64,798

In France March 20, 1935

1 Claim. (Cl. 158—42.1)

In a device for the combined control of air and of fuel in automatic heavy-oil furnaces comprising a burner, a fuel pump, a blower, a motor for simultaneously driving the blower and the fuel pump, conduits connecting the blower and the fuel pump to the burner, a regulating member for controlling the flow of air in said air conduit and a single means for controlling the flow of fuel in said fuel conduit and for controlling said regulating member comprising: a cylinder and a piston therein, said cylinder being inserted in said fuel conduit in such a manner that the portion of the fuel conduit leading from the pump is in communication with the cylinder adjacent one end of the piston stroke and the portion of the fuel conduit leading to the burner is in communication with the first conduit portion only when the piston is at the other end of its stroke, means biasing said piston toward the first mentioned end and means connecting the piston to said regulating member in such a manner that the regulating member is in full open position in the air conduit when the piston is at said other end of its stroke.

2,100,674

CONVERTIBLE HOIST

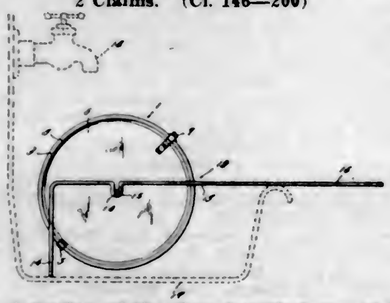
Frank E. Stahl, Tonawanda, N. Y., assignor to Columbus McKinnon Chain Corporation, Tonawanda, N. Y., a corporation of New York

Application July 6, 1935, Serial No. 30,181

1 Claim. (Cl. 254—169)

A convertible hoist, comprising a casing, a single load chain having a load hook permanently secured to the end thereof, a chain engaging member carried by the casing for detachably receiving a part of the chain near the load hook thereof, whereby, when so engaged, a depending loop is formed in the chain, and a movable load engaging block engageable with the loop, comprising a frame, a load engaging hook carried by the frame, a pin carried by the frame, spring-pressed means for retaining the pin in detachable position, and a chain wheel pivotally mounted on the pin.

2,100,675



FRUIT AND VEGETABLE WASHER

Robert M. J. Traynor, Summit, N. J.

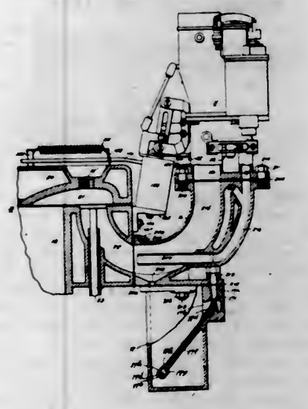
Application June 25, 1935, Serial No. 28,343

Renewed June 9, 1937

2 Claims. (Cl. 146—200)

1. A washer of the class described comprising a stand, and a foraminous container rotatably

mounted on the stand, said stand being formed from a single length of resilient wire and including a frame for the reception of the container, said frame comprising a downturned end portion constituting a support, and a substantially U-shaped handle projecting longitudinally from the other end of the frame, the container being substantially cylindrical and including trunnions on its ends, an actuating handle on one of said trunnions, the frame further including depending loops for the reception of the trunnions and constituting bearings therefor.



2,100,676

FUEL SYSTEM FOR COMBUSTION ENGINES

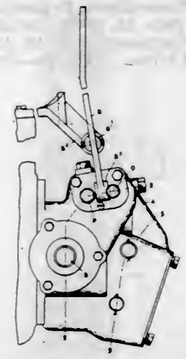
Homer A. Trussell, Detroit, Mich.

Application March 23, 1933, Serial No. 662,399

34 Claims. (Cl. 123—119)

1. In a fuel system for a combustion engine, downdraft feeding of the working fluid in a plurality of portions, updraft induction of the working fluid to the combustion chamber inlet, and conduits for said portions, said conduits being united adjacent the point at which said updraft induction begins, and a throttle valve adapted to control delivery of fuel and air to one of said conduits from an upright passageway below the point of initial vaporization of said fuel.

2,100,677



POWER TAKE-OFF ATTACHMENT FOR MOTOR VEHICLES

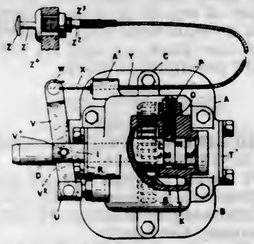
Robert W. Wagner, Detroit, Mich., assignor to Detroit Harvester Company, Detroit, Mich., a corporation of Michigan

Application October 28, 1935, Serial No. 47,165

15 Claims. (Cl. 74—11)

1. A self-contained power take-off unit having a housing for attachment to a motor vehicle transmission casing, a power take-off shaft journaled in the housing, a pair of gears mounted on said shaft within said housing and respectively splined to said shaft and freely revoluble thereon, said freely revoluble gear being adapted to constantly mesh with a cooperating constantly driven gear in the transmission mechanism, and said splined gear being shiftable into and out of mesh with a constantly driven gear in said transmission mechanism, and a reversing train within said housing in constant mesh with said freely

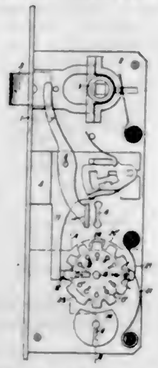
revoluble gear and engageable with said splined gear in one position of adjustment thereof.



2,100,678

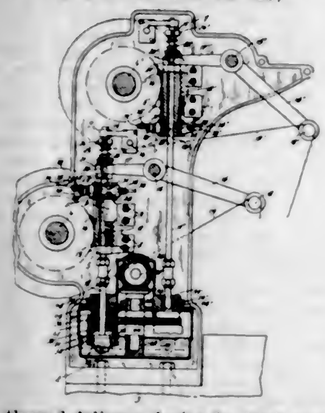
POWER TAKE-OFF ATTACHMENT FOR MOTOR VEHICLES

Robert W. Wagner, Detroit, Mich., assignor to Detroit Harvester Company, Detroit, Mich., a corporation of Michigan



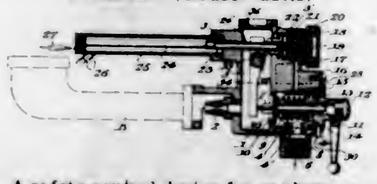
Application October 28, 1935, Serial No. 47,166

2 Claims. (Cl. 74—11)



1. In a power take-off attachment for motor vehicles, the combination with a casing attachable to a transmission housing of a motor vehicle, a power take-off shaft journaled within said casing and projecting laterally therefrom, and a power take-off gear splined on said shaft and engageable with a gear of the transmission of the motor vehicle, of means for actuating said power take-off gear including a shaft slidably mounted within said casing substantially in parallel relation to said power take-off shaft and projecting laterally outwardly from said casing, said slidable shaft having an enlarged portion transversely slotted to embrace the periphery of the power take-off gear, a fulcrum bracket mounted on the casing below the slidable shaft, a lever pivoted at its lower end upon said bracket and pivotally connected intermediate its ends to the outer end of the slidable shaft, a tubular bearing attachable to an instrument panel of the motor vehicle, a boss on said casing substantially in horizontal alignment with the upper free end of the lever, a flexible conduit terminally mounted in said tubular bearing and boss, a plunger slidably engaging said tubular bearing, a knob attached to said plunger, and a wire extending through said flexible conduit and terminally connected to said plunger and to the upper free end of said pivoted lever.

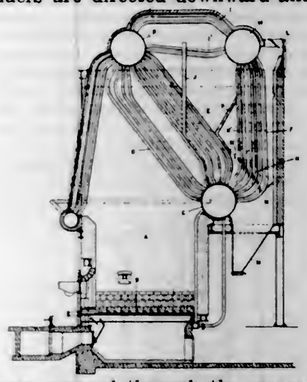
2,100,679
LOCK
Antoine Wassenhove, Brussels, Belgium
Application July 23, 1936, Serial No. 92,129
In Germany July 19, 1935
3 Claims. (Cl. 70—307)



1. A door lock, comprising in combination a lock case having a front and rear plate, each plate having two key holes, a bolt slidable in said case, two permutation discs in said case, locking two discs one for each permutation disc, means for coupling one locking disc with one permutation disc to lock said bolt in shot position, a single reversible bitted key adapted to adjust said permutation discs and shoot said bolt, stops on the inner side of one of said case plates, the key being guided by said stops and by the inner side of the other case plate, so that its bit only acts on one of said permutation discs.

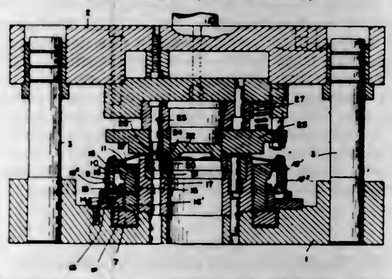
2,100,680
THREAD DELIVERY DEVICE FOR WARP KNITTING MACHINES
Emil Herbert Wirth, Hartmannsdorf, near Chemnitz, Germany, assignor to the Firma Emil Wirth Wirkmaschinenfabrik, Hartmannsdorf, near Chemnitz, Germany
Application December 10, 1936, Serial No. 115,217
In Germany December 11, 1935
4 Claims. (Cl. 66—86)

1. A thread delivery device for high speed warp knitting machines, comprising a bracket fixed to the frame of the warp knitting machine, warp beam shafts journalled in said bracket, axially displaceable shafts rotatably mounted in bearings fixed to said bracket, means for shifting said axially displaceable shafts by the warp threads supplied to the machine, a worm wheel connected to each of said warp beam shafts, worms engaging with said worm wheels mounted upon said axially displaceable shafts, wedges slideably connecting said worms to said axially displaceable shafts, a brake mechanism mounted upon a hub portion of each worm extending beyond the bearing member, a casing fixed to said bracket, and a clamp roller coupling arrangement provided in said casing and adapted to transmit motion from the cam shaft of the warp knitting machine to said warp beam shafts.



2,100,681
SAFETY GAS-BURNER
Hans Arquint, Sursee, Switzerland
Application June 12, 1935, Serial No. 26,284
In Germany June 15, 1934
5 Claims. (Cl. 158—117.1)

1. A safety control device for gas burners, comprising a valve chest having a gas inlet and divided into a valve chamber and a thermostat-lever chamber, said valve chamber communicating with said gas inlet and said lever chamber, a gas outlet nozzle for the flow of gas from said lever chamber to a gas burner, a manually-actuated plug valve in said valve chamber and provided with communicating radial and axially extending ports for the flow of gas into said valve chamber when the radial port is in register with the gas inlet, a poppet valve for closing communication between the valve chamber and said lever chamber, said poppet valve having a stem axially slidably mounted with said plug, resilient means urging said poppet valve to a closed position, a thermostat having a pilot light associated therewith, said valve chest having passageways therein for supplying gas from said inlet to said pilot light, said plug valve having passageways cooperating with those in the valve chest to control the flow of gas to the pilot, a lever pivotally mounted in said lever chamber, means carried by said thermostat for actuating said lever, and adjustable contact means carried by said poppet valve for engaging one end of said lever to transmit displacement of said lever to said valve to open the same.



2,100,682
CINDER AND ASH REMOVER
Royce L. Beers, Birmingham, Mich., assignor to Detroit Stoker Company, Monroe, Mich., a corporation of Michigan
Application July 1, 1935, Serial No. 29,410
4 Claims. (Cl. 122—301)

1. The combination with a tubular boiler and a setting therefor including a bank of tubes arranged in spaced rows and a baffle for directing the hot gases in a downward direction into said bank and thence upward through said bank, of a cinder and ash separator comprising a series of plates arranged between adjacent rows of tubes and spaced apart for passage of gases therebetween and together forming a downward continuation of said baffle across the bank whereby the cinders are directed downward and the hot

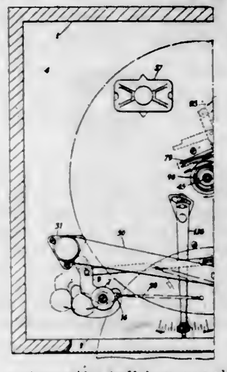
gases pass upward through the spaces between the plates and tubes in each row.

2,100,683
DIE CONSTRUCTION
Edwin A. Bierwirth, Detroit, Mich., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware
Application August 3, 1936, Serial No. 94,107
7 Claims. (Cl. 164—86)

5. In a die construction for piercing the web of a brake drum having an annular brake flange with an internal braking surface, the combination with a base having a central pilot, a transversely split resilient ring within the brake drum and engageable with the braking surface, a tapered member supported upon said base and extending within said ring and engageable with an edge portion thereof, said tapered member being concentric with said pilot, a member fixed with respect to said base and engageable with an end of the brake flange to support the brake drum, a second tapered member guided by said pilot and engageable with the other edge portion of said ring, means for axially moving said second mentioned tapered member with respect to said first mentioned tapered member, die means upon said pilot and engageable with the web, and punch means cooperable with said die means for piercing the web.

2,100,684
WELL BRIDGING, CEMENTING, WHIPSTOCK, AND MILLING APPARATUS
Monroe W. Carroll, Beaumont, Tex.
Application March 28, 1936, Serial No. 71,474
7 Claims. (Cl. 255—1)

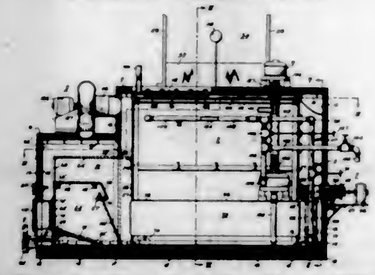
1. A cylindrical housing, an inclined whipstock in said housing, a lower cylindrical head on said whipstock, a packer on said head and means responsive to the flow of fluid past said whipstock



to move said whipstock, set said packer and anchor same in the well casing.

2,100,685
LUBRICATING COMPOSITION
George S. Cavanaugh, Los Angeles, Calif.
No Drawing. Application April 27, 1936, Serial No. 76,613
5 Claims. (Cl. 87—9)

1. A lubricating composition comprising mineral oil containing at least .05% diethylene oxide, the proportion of diethylene oxide present being insufficient to materially alter the flash and fire and the viscosity characteristics of the mineral oil.



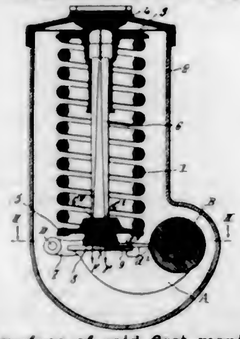
2,100,686
TALKING MACHINE
Christopher Collaro, London, and Desmond George Lewin, Hawdenbury, Tunbridge Wells, England
Application August 16, 1933, Serial No. 685,452
In Great Britain August 19, 1932
16 Claims. (Cl. 274—10)

11. In an automatic talking machine mechanism the combination of a carrier arm arranged to swing in a horizontal plane and fixed against vertical movement, a plunger carried by said carrier arm, means for causing said plunger to sink into a central hole of a record to be played by the machine, means for causing said carrier arm to swing a record engaged by said plunger to a central position on the turntable, a pick-up arm and mechanism interconnecting the pick-up arm

and carrier arm so that, as the latter centralizes the record on the turntable, the pick-up arm is simultaneously moved to a position such that the edge of the record lies beneath the needle in the pick-up or sound box when the record is disposed centrally on the turntable.

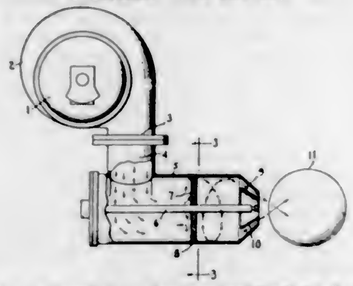
2,100,687
HEATING APPARATUS
Frank H. Cornelius, Swissvale, Pa.
Application February 16, 1931, Serial No. 515,977
9 Claims. (Cl. 126—343.5)

1. In a heating apparatus, the combination with means for producing heated gas, of means for containing a meltable material, means for conducting said gas in heat-transferring relation to said material, means for recirculating at least a portion of said gas to said conducting means to vary the temperature of the gas therein, means for exhausting any remaining portion of said gas, means for circulating said material, when melted, on top of and past said gas-conducting means, and means responsive to the temperature of said gas at a predetermined point for controlling the circulation of said material.



2,100,688
LOOM SHUTTLE
Fredric E. Douglas, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application August 12, 1937, Serial No. 157,776
5 Claims. (Cl. 139—207)

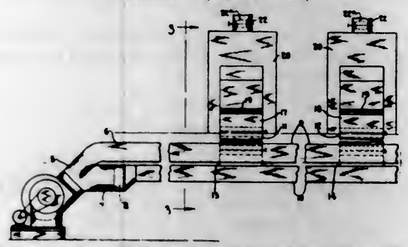
1. A loom shuttle comprising a shuttle body having a bobbin-receiving cavity and a recess at one end of said cavity, opposed bobbin gripping jaws each pivoted at one end in said recess and projecting into said cavity, and a separate spring comprising an open sided loop of spring material extending around the pivoted ends of said jaws, the ends of said spring loop engaging said jaws and yieldingly urging the same together.



2,100,689
ELASTIC SUSPENSION SYSTEM
André Dubonnet, Neuilly-sur-Seine, France
Application June 21, 1935, Serial No. 27,800
In Belgium June 23, 1934
10 Claims. (Cl. 267—20)

1. A device of the type described for supporting a variable load which comprises, in combination, a lever arranged to support the action of said load, a spring for balancing the action of said load, a second lever pivoted about an axis located on the other side of said spring with respect to said first mentioned lever a system for transmitting through said second mentioned lever the action of said spring to said first mentioned lever, said levers occupying a predetermined intermediate position and said spring undergoing a certain intermediate deflection when the load has an intermediate value, said system including a plate forming an abutment for one end of said spring, a member rotatable with respect to said plate and pivoted about an axis fixed in position on said second mentioned lever adapted to move

along the surface of said first mentioned lever, whereby the leverage of the force transmitted by said spring to said first mentioned lever, with reference to the fulcrum of said first mentioned lever is caused to increase when the deflection of said spring rises above said intermediate value, and cooperating contact surfaces on said two levers respectively adapted to come into contact when the deflection of said spring drops below said intermediate value, said surfaces being so shaped as to cause the flexibility of the device to increase when the deflection of said spring is decreasing below said intermediate value.

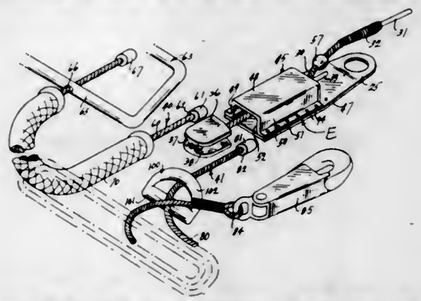


2,100,690
MECHANICAL ADVERTISING DEVICE
Robert F. Andler, Rutherford, N. J., assignor to Electrol Incorporated, Clifton, N. J., a corporation of Delaware
Application December 29, 1936, Serial No. 118,082
3 Claims. (Cl. 35—49)

1. An advertising device designed to hold an air filled balloon adjacent the end of a cylindrical sleeve, a source of air supply, means to direct said air into said cylindrical sleeve, a disc mounted in said sleeve having a plurality of peripheral orifices inclined to cause the air currents to gyrate in said sleeve on the side of the disc away from the entrance of the air current, the end of said cylindrical sleeve being formed

by a truncated conoidal portion, a smaller truncated conoidal cone mounted inside of the end of said sleeve, forming an annular conoidal space intermediate the two, whereby the air escaping therefrom will be wound up into a vortex which operates to support the air filled balloon adjacent the end of said cylindrical sleeve.

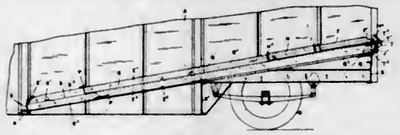
2,100,691
METHOD FOR THE CONDITIONING OF FLOUR
Waldo E. Foster, Minneapolis, Minn.
Application July 17, 1935, Serial No. 31,886
2 Claims. (Cl. 83—42)



1. In a method of conditioning flour, consisting of the steps of processing grain of variable humidity content progressively by stages, and having a variable moisture content in the various stages, comprising treating the grain in each of the various stages within closed receptacles as follows: conditioning air remote from said grain processing stages to substantial saturation, dividing said air into a plurality of streams; treating one of said streams by heating it to change its relative humidity, whereby one stream contains air substantially saturated with moisture and the other contains air of a less degree of saturation; moving both streams of air to a processing stage; regulating the relative humidity of the air before admission to said stage according to the moisture content of the grain in said receptacle by mixing the streams in various amounts so that there is no free moisture in the mixed air, and conducting the mixture to at least one of said closed receptacles.

2,100,692
PROCESS OF VULCANIZING RUBBER AND PRODUCT PRODUCED THEREBY
Marion W. Harman, Nitro, W. Va., assignor, by mesne assignments, to Monsanto Chemical Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 11, 1933, Serial No. 665,568
12 Claims. (Cl. 18—53)

1. The process of producing vulcanized rubber which comprises heating rubber and sulfur in the presence of a vulcanization accelerator comprising a reaction product of a saturated aromatic primary amine and a thiazyl disulfide.

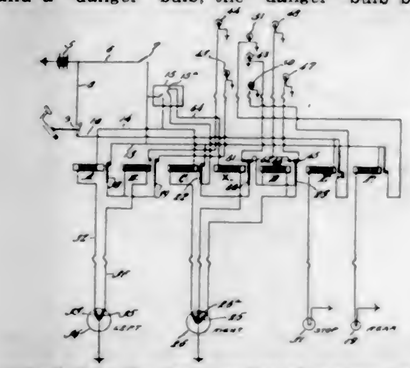


2,100,693
PARACHUTE PACK FASTENING AND RELEASING MECHANISM
Leslie L. Irvin, Letchworth, England, assignor to Irving Air Chute Company, Inc., Buffalo, N. Y., a corporation
Application April 8, 1935, Serial No. 15,300
10 Claims. (Cl. 244—148)

1. In a parachute pack the combination of a container having a closure, fastening means for the closure, independent manual and automatic rip cords both releasably connected to said fastening means in order to effect a release of the fastening means, and means for retaining the

connection of both of said rip cords with said fastening means only until the latter is moved to a position for the release opening of the container closure.

2,100,694
SKID CARRIER FOR MOTOR VEHICLE TRANSPORTS
Irving H. Judd, Dearborn, Mich., assignor to Whitehead & Kales Company, River Rouge, Mich., a corporation of Michigan
Application April 27, 1936, Serial No. 76,716
22 Claims. (Cl. 214—85)



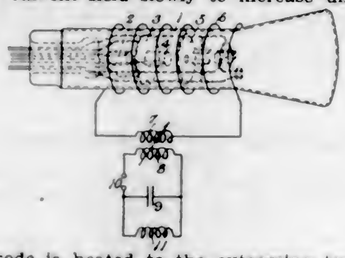
1. A collapsible skid for motor vehicle transports comprising a track member attachable at its forward end to the rear end of the track on the transport, a leg member hingedly secured to the rear end of said track member and having a foldable extension, said leg and extension being selectively engageable with the ground to support the track member and a separate track member detachably connected at its forward end to said first track member and leg and extending therefrom to the ground or pavement.

2,100,695
AUTOMATIC SAFETY LIGHTING SYSTEM
John William Lackey, North Creek, N. Y.
Application August 15, 1934, Serial No. 739,990
1 Claim. (Cl. 177—311)

In combination with a bulb having a high and a low beam filament, a source of current, a relay including a coil and an armature, a dimmer switch, a connection from the battery to one side of the relay coil and having the dimmer switch therein, a connection between the other side of the coil and the high filament, a back contact adjacent the armature connected to the battery connection on the battery side of the dimmer switch, a second relay including a coil and armature, the first-mentioned armature being connected to the second-mentioned armature and to one side of the second-mentioned coil, a connection between the remaining side of the second-mentioned coil and the low filament, a pair of stationary contacts between which the second-mentioned armature operates, and against one of which contacts said second-men-

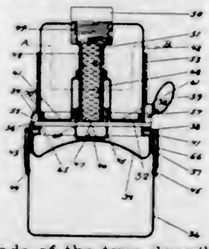
tioned armature normally engages, a "caution" and a "danger" bulb, the "danger" bulb being

connected to the last-mentioned contact, while the "caution" bulb is connected to the remaining of the last two mentioned contacts.



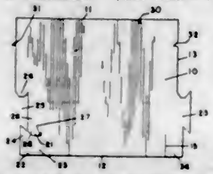
2,100,696
NECKTIE
Joseph B. Loeb, Brookline, Mass.
Application July 2, 1935, Serial No. 29,486
2 Claims. (Cl. 2—146)

1. A four-in-hand necktie comprising a cover of ordinary construction and capable of longitudinal resiliency combined with a lining composed of two separate and individual plies of pliable material superposed upon each other and of the same character with respect to the tendency to curl longitudinally, in each of which plies the warp and weft threads extend diagonally to the longitudinal axis of the tie, and in one of which plies the warp threads extend in a direction substantially at right angles to that of the warp threads in the other ply, whereby the tendency to curl in one ply counteracts the tendency to curl in the other ply, said plies having their longitudinal edge portions free from each other.



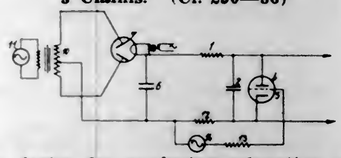
2,100,697
BRAUN TUBE AND METHOD OF PRODUCING BRAUN TUBES
Siegmund Loewe, Berlin, Germany
Application August 24, 1933, Serial No. 686,514
In Germany August 29, 1932
1 Claim. (Cl. 250—27.5)

In the process of degasifying electrodes consisting of magnetic material for Braun tubes the steps of arranging the electrode within the area of action of a high frequency coil, causing an eddy current field slowly to increase until the



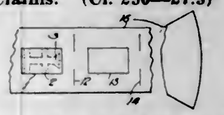
electrode is heated to the outgassing temperature and causing said eddy current field hereupon slowly to decrease.

2,100,698
GRENADE
Eric Göran Mörner, Stockholm, Sweden
Application May 24, 1934, Serial No. 727,331
In Sweden May 26, 1933
8 Claims. (Cl. 102—29)



1. A grenade of the type described comprising two hollow bodies containing the complete explosive charge and each of them being open at one end, flanges formed around each of said open ends for uniting said ends in such a way that they may be rockable in all directions in relation to each other, and an ignition device being influenced by the relative movements of said hollow bodies in order to explode the charge on impact against any point of the surface of said bodies.

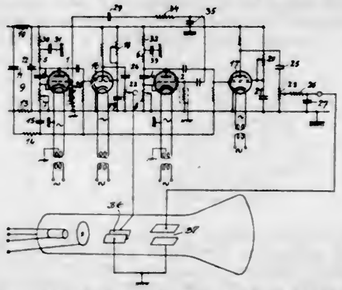
2,100,699
SHINGLE
James H. Norrid, Detroit, Mich.
Substitute for abandoned application Serial No. 595,179, February 25, 1932. This application April 13, 1936, Serial No. 74,207
5 Claims. (Cl. 108—7)



1. A roof covering comprising a plurality of similarly shaped shingles having their adjacent edges in overlapping relation, each of said shingles comprising a substantially flat rectangular body having a cut in its bottom parallel to and adjacent one vertical side thereof to form a tongue, the shingle also having a recess in its opposite side, each shingle having a slit extending inwardly of the shingle from one end of said recess to receive the tongue of an adjacent shingle, said recess and said slit forming a stepped edge along said opposite side.

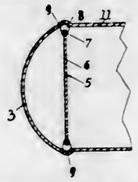
2,100,700
RELAXATION OSCILLATION GENERATOR
Kurt Schlesinger, Berlin, Germany
Application September 29, 1933, Serial No. 691,562
In Germany October 1, 1932
3 Claims. (Cl. 250—36)

1. A device for producing relaxation oscillations comprising a charging condenser having terminals, a circuit for charging said condenser comprising a variable direct potential source having a positive and a negative pole and a charging resistance connected in series across said condenser, a second resistor connected in said charging circuit between said negative pole and a condenser terminal, a gas filled discharge valve for discharging said condenser having a grid, a cathode, and an anode, a synchronizing potential source, means for connecting said anode and cathode across said condenser and means for connecting said second resistor and said synchronizing potential source in series between said cathode and grid, whereby constant frequency relaxation oscillations occur despite variations in said source.



2,100,701
BRAUN TUBE
Kurt Schlesinger, Berlin, Germany
Application October 18, 1933, Serial No. 694,134
In Germany October 21, 1932
8 Claims. (Cl. 250—27.5)

1. In a Braun tube in combination with a picture receiving screen and an electro-static electron optical system having an aperture angle of at least 10 degrees: a structural unit producing a bundle of cathode rays, the angle of inclination of which with respect to the tube axis does not exceed 10 degrees for the purpose of causing the electron optical system to collect all of the electrons produced by said unit for forming one sharp image on the image screen, said structural unit comprising an indirectly heated cathode body, a highly emissive surface covering a partial area of the surface of the cathode body facing the electron optical system, said structural unit further comprising a control electrode, said highly emissive surface being disposed symmetrically with respect to said control electrode.

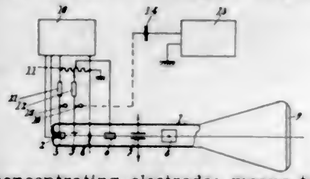


2,100,702
ARRANGEMENT FOR PRODUCING RELAXATION OSCILLATIONS
Kurt Schlesinger, Berlin, Germany
Application October 31, 1933, Serial No. 696,065
In Germany November 4, 1932
3 Claims. (Cl. 250—36)

1. In a television arrangement comprising a relaxation oscillation generator for producing the line deflecting voltage, a mains supply apparatus for supplying said relaxation oscillation generator from the commercial mains, said generator including a gas-filled discharge tube having hot cathode, grid and anode, an impedance

being connected between said grid and said cathode, said impedance having a low apparent resistance with respect to the frequency of said commercial mains and a great apparent resistance with respect to the frequency of said line deflecting voltage.

2,100,703
BRAUN TUBE AND METHOD OF PRODUCING THE SAME
Kurt Schlesinger, Berlin, Germany
Application July 6, 1934, Serial No. 733,996
In Germany July 10, 1933
11 Claims. (Cl. 250—27.5)



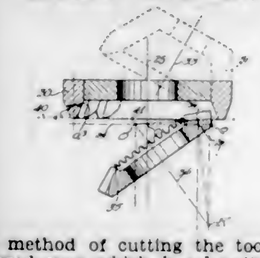
1. A cathode ray tube for television purposes comprising an image receiving screen, said image receiving screen having an area of at least fifteen times fifteen cm., an envelope having a curved end portion and wherein the radius of curvature of the end portion of the envelope is substantially constant throughout the curved end portion, and means for securing said image receiving screen within said envelope, said means including a metal ring pressed against the inner wall of said envelope, and means for firmly connecting said image receiving screen with said metal ring.

2,100,704
TELEVISION RECEPTION ARRANGEMENT WITH BRAUN TUBES
Manfred von Ardenne, Berlin, Germany, assignor to Radioaktiengesellschaft D. S. Loewe, Berlin-Steglitz, Germany, a company of Germany
Application December 23, 1931, Serial No. 582,740
In Germany December 23, 1930
20 Claims. (Cl. 178—7.5)

1. In a television reception arrangement in combination a Braun tube comprising a cathode and a plate-shaped anode furnished with a small aperture arranged in operative relationship thereto, at least one deflecting electrode arranged between said cathode and said anode in operative relationship to said aperture of said

anode, a picture receiving screen, deflecting means arranged between said picture receiving screen and said anode and means for maintaining constant the direction as well as the position of the path along which the cathode ray enters the space wherein it is deflected, said means being arranged between said anode and said deflecting means and including a cylindrically

shaped concentrating electrode; means to supply said deflecting electrode with a bias and with a control voltage; means to supply said anode with a high positive potential in relation to said cathode; and means to supply said concentrating electrode with a potential which is lower than that of said anode but higher than that of said cathode.



2,100,705

METHOD OF PRODUCING TAPERED GEARS

Ernest Wildhaber and Allan H. Candee, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a corporation of New York

Application May 8, 1934, Serial No. 724,504

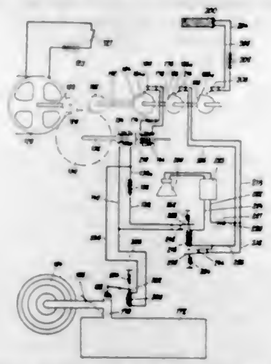
14 Claims. (Cl. 51—278)

2. The method of cutting the tooth surfaces of a tapered gear which has longitudinally inclined teeth which comprises positioning a cutting tool and a gear blank in engagement with the axis of the gear blank inclined to the cutting plane of the tip of the tool at other than the root angle of the blank and with the apex of the blank offset from said cutting plane and so that the mean point of contact between the tool and blank is offset from a plane containing the axis of the blank and perpendicular to said cutting plane, and imparting a cutting movement to the tool while producing a relative feed movement between the tool and blank in a direction perpendicular to the plane of cut of the tip of the tool.

2,100,706

ALTITUDE MEASURING APPARATUS

Guido Wünsch, Berlin-Steglitz, Germany, assignor to Askania-Werke A. G. vormals Centralwerkstatt-Dessau und Carl Bamberg-Friedenau, a corporation of Germany



Application November 27, 1933, Serial No. 699,941

In Germany November 26, 1932

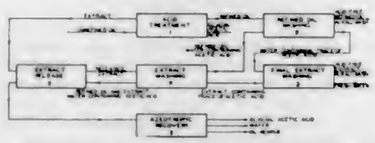
7 Claims. (Cl. 73—4)

(Granted under the provisions of sec. 14, act of March 2, 1927; 357 O. G. 5)

1. Apparatus of the class described comprising an aneroid diaphragm having a valve controlling communication with the atmosphere; indicating means; a consfant speed rotor; motion transmission means, including a clutch mechanism selectively to connect said aneroid diaphragm and said constant speed rotor with said indicating means; means to emit a wave train; means simultaneously operable at the time of emission of the wave train to control said clutch mechanism to

connect said indicating means with said constant speed rotor; means responsive to the return wave train to control said clutch mechanism to disconnect said indicating means from said constant speed rotor and connect said means with said aneroid diaphragm, said responsive means also controlling said valve to shut off communication of said aneroid diaphragm with the atmosphere.

2,100,707



REFINING OF MINERAL OILS

Shanti Swarupa Bhatnagar, Lahore, India, assignor to Steel Brothers & Company Limited, London, England

Application June 15, 1936, Serial No. 85,409

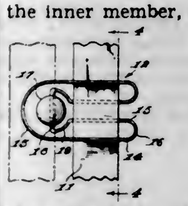
In Great Britain August 19, 1935

9 Claims. (Cl. 196—13)

1. A process for refining liquid petroleum oil fractions which comprises subjecting the fraction to extraction with a quantity of acetic acid of at least 97 per cent. strength amounting to at least about half the volume of the fraction and separating from one another the layers of refined oil and extract thus formed.

2,100,708

SHOULDER STRAP DEVICE



Vincent A. Blakley and Arlington N. Lindenmuth, Allentown, Pa.

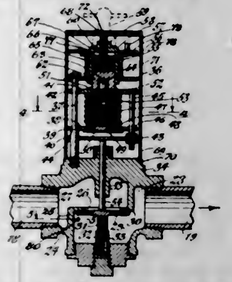
Application July 27, 1937, Serial No. 156,012

1 Claim. (Cl. 24—261)

A clasp for shoulder straps comprising an outer U-shaped member, an inner U-shaped member disposed between the parallel legs of said outer member with the bight of said inner member disposed adjacent the bight of said outer member, means connecting the legs of the outer member

with the legs of the inner member, and a bead

rotatably mounted on the bight of said inner member.



2,100,709

THERMOSTATIC REGULATOR FOR GAS HEATING

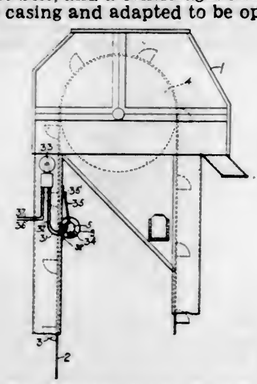
Francis G. Crone, Buffalo, N. Y.

Application September 15, 1936, Serial No. 100,910

2 Claims. (Cl. 236—99)

1. A gas regulating mechanism comprising a valve body having a port, a valve closure for controlling said port, and thermostatically responsive means for controlling said valve closure including a shifting rod guided on said body and engaging its inner end with said valve closure, a frame mounted on said body and having upright guide posts, a lower stationary supporting plate mounted on said posts, a floating cage having a lower plate guided on said posts below said lower supporting plate, an upper plate guided on said posts above said lower supporting plate and tie rods connecting said lower and upper plates, a bellows interposed between said stationary supporting plate and said upper cage plate and containing a thermostatic liquid, spring means for resisting the expansion of said bellows, including an adjusting tube mounted on said frame, an adjustable follower connected by a screw joint with said tube, a spring arranged in said follower and bearing at one end against said bellows, and an adjusting screw arranged on said follower and bearing against the other end of said spring.

2,100,710



GRAIN ELEVATOR ALARM SWITCH

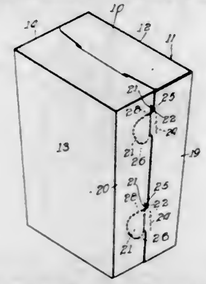
Lloyd P. Dendel, Lansing, Mich.

Application September 19, 1933, Serial No. 690,165

1 Claim. (Cl. 200—52)

In a conveyor alarm mechanism, the conbination with a support, of a belt arranged to move vertically on one side of the support, an arm having one end pivotally attached to said support, a casing secured to the free end of said arm, a revoluble axis projecting from the casing, a wheel secured to the axis externally with respect to the casing, said wheel being constructed and arranged to be held by reason of the weight of the wheel and casing in contact with said belt whereby the wheel is revolved by the movement of the belt, and a centrifugal switch located within the casing and adapted to be operated and

controlled by the revolution of said wheel and axis.



2,100,711

CONTAINER

Ronald I. Drake, Appleton, Wis., assignor to Beatrice Creamery Company, Chicago, Ill., a corporation of Delaware

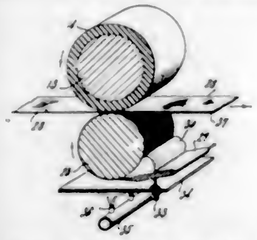
Application June 14, 1933, Serial No. 675,755

10 Claims. (Cl. 229—23)

7. As an article of manufacture, an elongated sheet of flexible, creasable material provided on one of its marginal terminals with a plurality of spaced-apart integral hook-like projections and within the body portion thereof at the other extremity of the sheet, a plurality of similarly spaced, co-operable, integrally formed, flexible tongues each extending transversely of its corresponding projection and partially severed from the body of the sheet by a plurality of intersecting kerfs, the kerfs forming slots of greater length than the width of the neck of the projections at the positions where they are inserted to hook into interlocking engagement with the ends of the slots and the ends of the tongues being movable in the slots and into re-engagement with the adjacent ends of their own slots for interlocking engagement with said projections.

2,100,712

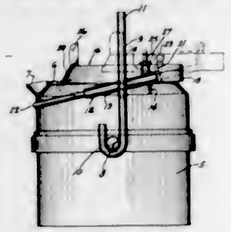
METHOD OF, APPARATUS FOR COATING TEXTILE MATERIAL AND A PRODUCT THEREOF



Charles Emmey, New York, N. Y.

Application April 13, 1936, Serial No. 74,178

6 Claims. (Cl. 91—70)

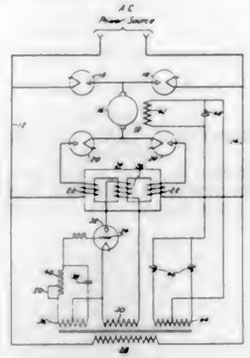


1. An article of manufacture for union with textile material and the like, comprising a base

material containing a plurality of cementitious streaks of thermo-fusible composition containing a vinyl resin disposed in spaced apart relation forming bounded free areas therebetween and

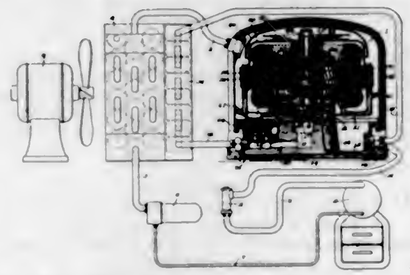
exposing parts of the said surface of the base, said composition upon the use of heat and pressure being adapted to penetrate and spread onto and thru a receptive textile material to form an integral part thereof.

2,100,713
COVERED LADLE
Max W. Goldberg and Wallace W. Drissen, Port Washington, Wis., assignors to Modern Equipment Company, Port Washington, Wis., a corporation of Wisconsin
Application April 11, 1936, Serial No. 73,829
11 Claims. (Cl. 22—81)



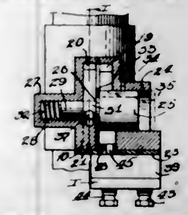
3. In combination, a ladle, a cover therefor, guiding tubes secured to opposite exterior side portions of the ladle and extending rearwardly therefrom, and rods projecting from opposite exterior side portions of the cover and slidable in said guiding tubes to provide for slidable opening of the cover by a rearward pull thereon.

2,100,714
RUBBER COMPOSITION AND METHOD OF MAKING THE SAME
Glen S. Hiers, Bala-Cynwyd, Pa., assignor to Collins & Aikman Corporation, Philadelphia, Pa., a corporation of Delaware
No Drawing. Original application November 2, 1933, Serial No. 696,386. Divided and this application July 31, 1934, Serial No. 737,768
9 Claims. (Cl. 18—50)



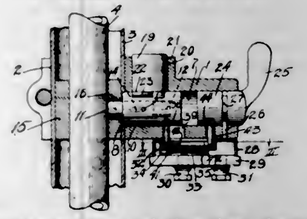
1. In the manufacture of an unvulcanized rubber product having a non-tacky surface, the steps which consist in dispersing directly a sufficient quantity of liquid waxy material as a dispersed phase in the water of an aqueous dispersion of rubber to form a bloom on the surface of the rubber coagulated therefrom neutralizing the inherent tackiness of the rubber constituent, said waxy material forming with the rubber dispersion a liquid mix having wax as a dispersed phase requiring further treatment for the coagulation of rubber therefrom.

2,100,715
ENERGIZING SYSTEM
Harold C. Jenks, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 17, 1936, Serial No. 85,636
6 Claims. (Cl. 172—179)



3. In a system comprising an alternating-current power circuit, a direct-current load device, means for supplying a unidirectional current from said power circuit to said device comprising two pairs of rectifying devices connected across said alternating-current power circuit to effect full-wave rectification, a saturable core reactor having two alternating-current windings connected in series circuit relation with and on opposite sides of one pair of rectifying devices and a saturating winding for controlling said reactor.

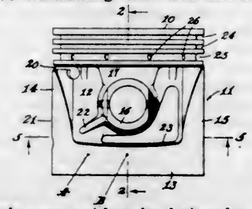
2,100,716
MOTOR-COMPRESSOR UNIT FOR REFRIGERATING APPARATUS
Carl E. L. Lipman, Chicago, Ill., assignor to Lipman Patents Corporation, Chicago, Ill., a corporation of Delaware
Application April 3, 1933, Serial No. 664,123
11 Claims. (Cl. 230—207)



1. An apparatus comprising a casing, a pump within said casing, an electric motor within said casing, a driving connection between said motor and pump, means for delivering oil through certain of said pump and motor bearings and into heat absorbing contact with the stator of said motor, and means for delivering oil through other of the pump and motor bearings and into heat absorbing contact with the rotor of said motor.

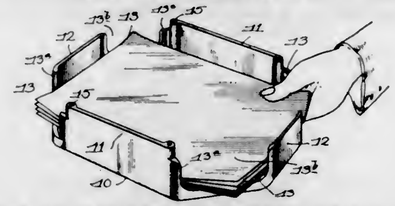
2,100,717
AUTOMOBILE LOCK
Alexander C. Mabee, Villa Park, Ill., assignor to Oakes Products Corporation, North Chicago, Ill., a corporation of Michigan
Application May 18, 1936, Serial No. 80,385
11 Claims. (Cl. 70—252)

1. A lock of the class described comprising a locking bolt rotatable in either of two parallel planes, a single means for rotating said bolt in either plane, said bolt when rotated by said means in one plane being moved to locking or unlocking position, means for shifting said bolt into the other plane after it has been moved to unlocking position, and control means operated during rotation of said bolt by said operating means in said other plane.



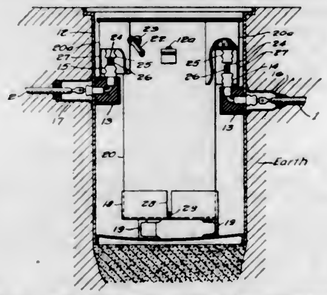
2,100,718
AUTOMOBILE LOCK
Alexander C. Mabee, Villa Park, Ill., assignor to Oakes Products Corporation, North Chicago, Ill., a corporation of Michigan
Original application July 29, 1936, Serial No. 93,156. Divided and this application December 30, 1936, Serial No. 118,200
8 Claims. (Cl. 200—44)

1. In lock structure of the class described, a locking bolt, a switch comprising movable structure and stationary structure, a switch actuating element freely movable at all times in a fixed path, a connection between said actuating element and the movable switch structure, and means effective upon movement of said locking bolt to locking position for moving said movable switch structure to a position where actuation thereof by said actuating element cannot effect circuit controlling cooperation of the switch structure, said means being effective upon movement of the locking bolt to unlocking position to move the movable switch member to a position where actuation thereof by said actuating element will permit cooperation of the switch structures for circuit control.



2,100,719
PISTON
Adolph L. Nelson, Detroit, Mich.
Application December 5, 1933, Serial No. 700,358
12 Claims. (Cl. 309—11)

1. A piston comprising a head, pin bosses connected to the head, a skirt having a lower annular part and oppositely arranged thrust faces, one of the thrust faces being separated from the head by a slot and having a slot extending downwardly from the top of the thrust face, chordal webs extending between the slotted face



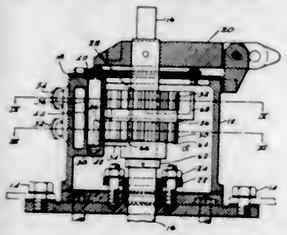
and the pin bosses said webs being homogeneous with the slotted face and the pin bosses and a tapered rib extending from each pin boss along the outside of each of said webs at a downward angle between the vertical and the horizontal, and toward the slotted thrust face.

2,100,720
LETTER TRAY
John H. Page, Muskegon, Mich., assignor to The Shaw-Walker Company, Muskegon, Mich., a corporation of Michigan
Application January 11, 1937, Serial No. 120,031
9 Claims. (Cl. 206—72)

1. A paper tray having a bottom wall and upright side and end walls, a side wall and an end wall being less in length, respectively, than the length and width of the tray to leave a space between their proximate ends, said bottom wall terminating in said space, and a low upright rib rising from said bottom wall, bridging said space and being connected to said proximate wall ends.

2,100,721
BURIED TYPE DISTRIBUTION TRANSFORMER
John S. Parsons, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application June 26, 1936, Serial No. 87,372
6 Claims. (Cl. 247—4)

1. In an underground alternating-current distribution system having buried cables, a trans-



former unit comprising a metal housing buried in the soil, said housing having a manhole opening in the top thereof communicating with the atmosphere, an inner metal casing adapted for mounting in said housing in spaced relationship therefrom, said casing having an overhanging portion, and having induction apparatus and a cooling fluid enclosed therein, transformer terminals secured to the under side of said overhanging portion in a position substantially inaccessible manually from said manhole opening, and cable terminals electrically connected to said cables and secured in insulated relationship to said housing to extend therewithin below said overhanging portion in a position substantially inaccessible manually from said manhole opening, said transformer terminals and cable terminals having exposed contact surfaces for mating engagement upon vertical lowering movement of said casing into operative position in said housing, whereby the likelihood of accidental shock from manual engagement with said terminals is minimized.

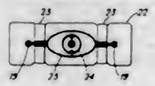
2,100,722

SWITCH OPERATING MECHANISM

Kristian Paulson, Farrell, and Robert O. Hurst, Sharon, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application August 7, 1936, Serial No. 94,826
7 Claims. (Cl. 74—483)

1. In an operating mechanism for effecting the movement of a transformer grounding switch from an open position, through a transformer position to a ground position, in combination, a housing for the operating mechanism, a shaft rotatably mounted in the housing for actuating the grounding switch, a ratchet wheel carried by the shaft, a plurality of pawls associated with the ratchet wheel for preventing movement of the shaft to actuate the grounding switch to the ground position, means disposed for manual operation to actuate the pawls to release the ratchet wheel and permit movement of the shaft to actuate the grounding switch to the ground position, and means for preventing the manual operation of the pawl actuating means for effecting the release of the ratchet wheel unless the shaft is first moved to actuate the grounding switch to transformer position.



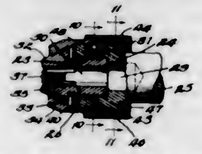
2,100,723

ELECTRON DISCHARGE DEVICE

Bernard Salzberg, East Orange, N. J., assignor, by mesne assignments, to Radio Corporation of America, a corporation of Delaware

Original application September 22, 1933, Serial No. 690,504. Divided and this application October 4, 1935, Serial No. 43,465
3 Claims. (Cl. 250—27.5)

1. An electron discharge device having a straight cylindrical cathode, a tubular grid electrode surrounding and coaxial with said cathode and having side rods parallel to said cathode, a tubular plate electrode surrounding said grid



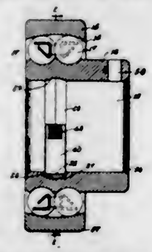
electrode and coaxial with said cathode, said plate electrode being elliptical in cross section, the spacing between said electrodes being at a minimum at said side rods.

2,100,724

SCREW THREADING DIE

Max A. Slotta, Chicago, Ill.

Application June 6, 1936, Serial No. 83,849
1 Claim. (Cl. 10—111)



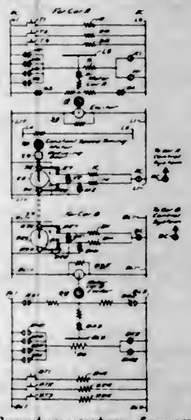
A threading die composed of a plurality of similar independent longitudinal sections, each section including an elongated segmento-cylindrical base member provided with a plane inner end and having a prong integrally connected to the outer end thereof by a reduced portion permitting lateral flexing of said prong relative to said base member, said sections being constructed and adapted to be grouped with their base members in contiguous relation to provide a cylindrical base having a plane inner end, the prongs of said sections being constructed so as to be spaced apart when the sections are so grouped and being provided with a cutting thread whose axis is coincident with the axis of said base.

2,100,725

LOCKING DEVICE FOR ATTACHING A PART HAVING A BORE TO A SHAFT

Haakon Styri, Philadelphia, Pa., assignor to S K F Industries, Incorporated, Philadelphia, Pa., a corporation of Delaware

Application February 18, 1936, Serial No. 64,471
12 Claims. (Cl. 308—236)



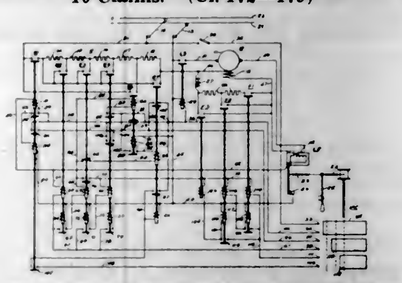
1. A bearing inner member having a shaft receiving bore, outwardly of the bore there being two thin portions disposed upon the opposite sides of a thicker portion, and a groove being formed in the bore face having its bottom disposed eccentrically in relation thereto and located inwardly of the said thicker portion, and a lock shoe fitting the said groove and formed with shaft biting portions.

2,100,726

TIMING SYSTEM

Kenneth M. White, Tenafly, N. J., assignor to Westinghouse Electric Elevator Company, Chicago, Ill., a corporation of Illinois

Application February 27, 1937, Serial No. 128,233
16 Claims. (Cl. 172—152)



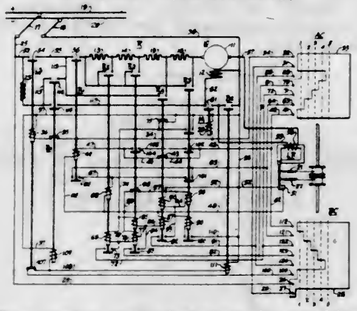
16. In an elevator system for operating a plurality of cars in a hatchway, a motor generator set for each car, a control means for each car for causing the motor generator set associated with that car to operate it, a driving motor for each generator, a plurality of relays associated with each car, individual means responsive to operation of a control means to stop its car for preparing the relays associated with that car for energization, a single timing motor, means associated with each car and responsive to operation of the timing motor for successively energizing at predetermined intervals the relays associated with that car after they have been prepared for energization, and means responsive to energization of a predetermined number of the relays associated with a car for stopping the driving motor for the generator for that car.

2,100,727

MOTOR CONTROL SYSTEM

Norman H. Willby, Irwin, and Graham L. Moses, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application February 5, 1937, Serial No. 124,262
10 Claims. (Cl. 172—179)



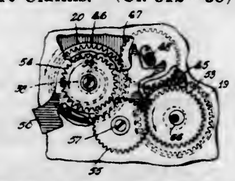
1. In a motor control system, in combination, a motor, a source of power for the motor, means for connecting the motor to the power source, a plurality of resistors for controlling the motor current, a plurality of switches for controlling the resistor connections, control means for initiating the operation of said switches, and interlocking means on said switches for causing them to be operated first in one sequence and then in another sequence to increase the number of accelerating steps.

2,100,728

MOTOR CONTROL SYSTEM

Norman H. Willby, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application February 5, 1937, Serial No. 124,263
7 Claims. (Cl. 172—179)



1. In a motor control system, in combination, a motor for propelling a vehicle, a source of power for the motor, switching means for connecting the motor to the power source to accelerate the vehicle, switching means for establishing dynamic braking connections for the motor to decelerate the vehicle, a plurality of resistors for controlling the motor current during acceleration and deceleration of the vehicle, a plurality of switches for controlling the resistor connections, control means for initiating the operation of said switches, and interlocking means on said switches for causing them to be operated first in one sequence and then in a different sequence to increase the number of accelerating and decelerating steps.

2,100,729

TOWEL DISPENSING APPARATUS

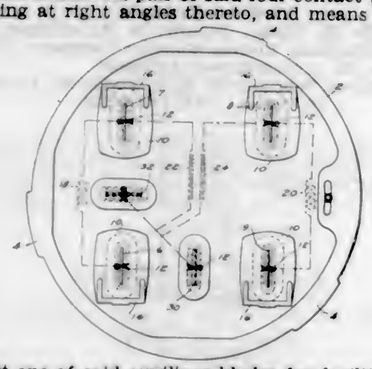
Rudolph G. Birr, Lombard, and Albert C. Grunwald, River Forest, Ill., assignors to Steiner Sales Company, Salt Lake City, Utah, a corporation of Utah

Application February 11, 1933, Serial No. 656,283
10 Claims. (Cl. 312—38)

7. A towel dispensing cabinet having a clean towel measuring roll and a soiled toweling take-up roll, means interconnecting the rolls whereby dispensing of a length of clean toweling will simultaneously wind up a substantially equal length of soiled toweling, energy storing mechanism in driving connection with said take-up roll, means by which repeated dispensing movements of said measuring roll operates said mechanism to in-

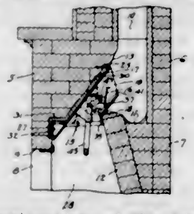
crementally store energy sufficient to operate the take-up roll for take-up action independently of operation of the measuring roll, and means operating said energy storing mechanism to release energy.

9. A towel dispensing apparatus comprising, a measuring roll, a soiled take-up roll, energy storing mechanism in driving connection with the take-up roll, means by which the measuring roll drives the take-up roll and operates said energy storing means to store energy including a part movable from driving position to disconnect the drive of the take-up roll by the measuring roll and to obtain release of the said stored energy, said energy storing mechanism requiring repeated dispensing operations to obtain storage of sufficient energy for take-up roll operation, and towel controlled means for moving said part from driving position.



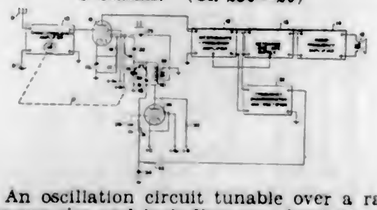
2,100,730
ANIMAL CLAMP
Frank Black, Christmas, Ariz.
Application June 6, 1936, Serial No. 84,004
Renewed September 30, 1937
9 Claims. (Cl. 128—346)

1. A clamp of the character described, comprising two semi-circular, hingedly connected portions shaped and dimensioned to embrace the neck and paws of an animal to be operated upon, handles projecting from said portions, and a flattened holding portion for the reception of the knee of the operator, at the extremity of one of said handles, said flattened portion lying substantially parallel with the axes of the semicircular portions.



2,100,731
POLYPHASE METER CASING
William M. Bradshaw, Summit, N. J., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application September 19, 1936, Serial No. 101,571
4 Claims. (Cl. 171—34)

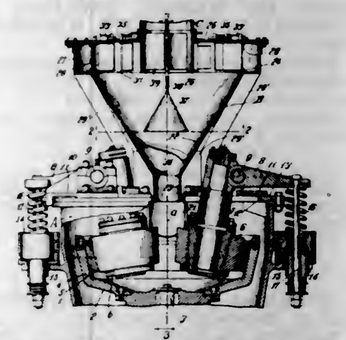
3. In a meter of the type having four contact blades secured to and projecting from the base thereof, the longitudinal axes of which define a square and all of which face in the same direction; an auxiliary contact blade secured to said base between a pair of said four contact blades and facing parallel thereto, an additional auxiliary contact blade secured to said base between a different pair of said four contact blades facing at right angles thereto, and means on at



least one of said auxiliary blades for facilitating breakage thereof at a point adjacent to said base.

2,100,732
DRAFT CONTROL MEANS FOR FIREPLACES
Darcy L. Cage, Los Angeles, Calif.
Application August 29, 1936, Serial No. 98,543
8 Claims. (Cl. 126—288)

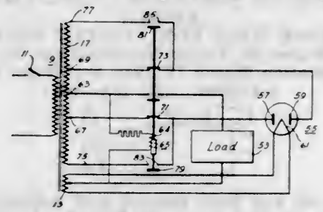
1. In a construction of the kind described, a sheet metal form adapted to line a portion of the flue of a fireplace, said form having a front wall made of a sheet metal plate which has a backwardly bent flange extending along an edge thereof, and a bracing strip uniting said flange with the body portion of the metal, said strip having a projecting end portion adapted to extend into the fire place wall and thereby aid in supporting the aforesaid sheet metal form.



2,100,733
AUTOMATIC FREQUENCY CONTROL
Nelson P. Case, Great Neck, N. Y., assignor to Hazeltine Corporation, a corporation of Delaware
Application July 22, 1936, Serial No. 91,864
6 Claims. (Cl. 250—20)

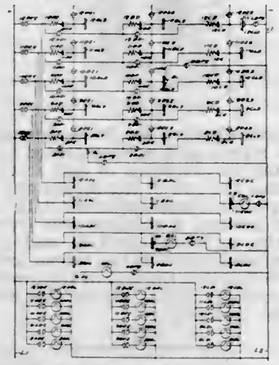
1. An oscillation circuit tunable over a range of frequencies and including an adjustable condenser for tuning said circuit to a selected frequency of said range and means, independent of said tuning condenser, for adjusting the resonant frequency of said circuit relative to said selected frequency over a small fraction of said range,

comprising an auxiliary condenser connected in series with said adjustable condenser, a vacuum tube having a phase-shifting input circuit coupled to said oscillation circuit and an output circuit connected across said auxiliary condenser, said tube having such characteristics relative to the constants of said circuits with which it is associated and being so connected to said oscillation circuit that its output circuit simulates an impedance having a capacitive component and that equal variations of the mutual conductance thereof effect substantially equal adjustments of the resonant frequency of said oscillation circuit for all frequencies of said range, and means for adjusting the mutual conductance of said tube.



2,100,734
MILL AND CLASSIFIER
Joe Crites, Evanston, Ill., assignor, by mesne assignments, to Combustion Engineering Company, Inc., a corporation of Delaware
Application February 5, 1936, Serial No. 62,450
8 Claims. (Cl. 83—45)

1. In combination with a mill comprising a closed housing and means therein for pulverizing material, a classifier including an open conduit for directing solid material in suspension in an air stream from the mill into the upper portion of the classifier, an upper outlet opening through which the air stream carries the lighter solid material in suspension, and a lower normally open discharge opening through which heavier solid material gravitates back into the mill and through which a central air stream is drawn upwardly from the mill, spiral vanes positioned along the lower inner walls of the classifier adjacent the open lower outlet and a cooperating deflector positioned centrally above the lower opening for preventing the upward carrying of heavier material through the upper outlet in suspension in the air stream flowing upwardly from the mill through the open lower discharge opening.



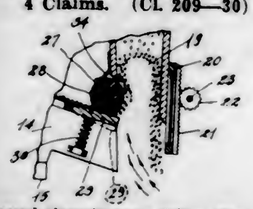
2,100,735
ELECTRIC DISCHARGE APPARATUS
John W. Dawson, East McKeesport, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 12, 1936, Serial No. 68,475
1 Claim. (Cl. 175—363)

In combination, a discharge device having a cathode, a second electrode to cooperate with said cathode and a third electrode to cooperate with said cathode, said second and third electrodes being so arranged with regard to said cathode that the discharge device operates as a full-wave rectifier and said cathode being of the type which is heated to emit electrons and which becomes deteriorated if a potential of magnitude greater than a predetermined value is applied between it and said other electrodes when its temperature has a magnitude below a predetermined value, a source of energy for heating said cathode, two first current paths each including a source of potential of magnitude smaller than said predetermined value, two second current paths each including a source of potential of magnitude

greater than said predetermined value, said two first current paths and said two second current paths being symmetrically arranged about an electrical center, means for connecting said source of energy to supply heating energy to said cathode, means for connecting said two first current paths to said cathode and said other electrodes, and means responsive to the current in said two first current paths for connecting said two second current paths to said cathode and said other electrodes after the temperature of said cathode rises above said predetermined value.

2,100,736
ELEVATOR SIGNALING SYSTEM
William F. Eames, Pittsburgh, Pa., assignor to Westinghouse Electric Elevator Company, Chicago, Ill., a corporation of Illinois
Application July 16, 1935, Serial No. 31,617
2 Claims. (Cl. 177—336)

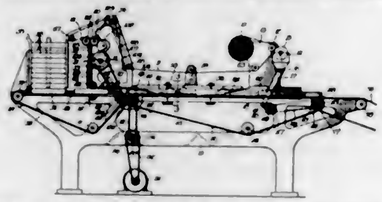
1. In an elevator system in which a plurality of elevator cars are operable past a plurality of floors, in combination, a call button individual to each floor, a call storing relay individual to each call button and disposed to be energized on operation thereof, a hall lantern at each floor individual to each elevator car, a hall lantern relay individual to each hall lantern, energizing circuits for the lantern relays, means responsive to operation of a call button and the position of the cars for operating the hall lantern relay individual to the floor of the operated button and to the elevator car disposed to answer the call, and means responsive to said operated lan-



tern relay for operating the corresponding hall lantern for indicating the car to stop in answer to the operated button, and interlocking contact members in the lantern relay circuits responsive to operation of said lantern relays for preventing the energization of more than one floor lantern relay at any one time to prevent the lighting of more than one floor lantern at any one time in answer to said operated button.

2,100,737
KNEE REST FOR VEHICLE SEATS
Walter W. Foster, Wichita Falls, Tex.
Application March 18, 1935, Serial No. 11,642
3 Claims. (Cl. 155—165)

3. A leg and knee rest for seat cushions comprising a resilient element of greater length than width having its length extending transversely of the cushion and, whose upper portion is provided with a side surface upwardly inclined toward its center to support the knee, a removable cover thereon, a base plate of the same shape secured to the bottom of said element, and means transversely embracing said seat cushion for retaining said base plate in flush and longitudinal sliding relationship thereof transversely with respect to said seat cushion.

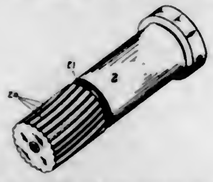


2,100,738
SEED CLEANING MACHINE
Albert A. Frevert, Alma, Mich.
Application November 5, 1934, Serial No. 751,517
4 Claims. (Cl. 209—30)

1. In a seed cleaning machine, the combination with a flat screen, of a nonperforated hinged section forming an extension of said screen, an air flue adjacent the end of the screen and provided with an opening communicating with said nonperforated section, a resilient roll journaled on said machine and positioned in said opening to form an air seal between the screen and the flue without interrupting the flow of the product to the flue, and resilient means urging said hinged section against said roll.

2,100,739
CONTAINER MACHINE
Paul M. Gilfillan, Chicago, Ill., assignor to Shellmar Products Company, Mount Vernon, Ohio, a corporation of Delaware
Application March 20, 1936, Serial No. 69,801
8 Claims. (Cl. 93—51.1)

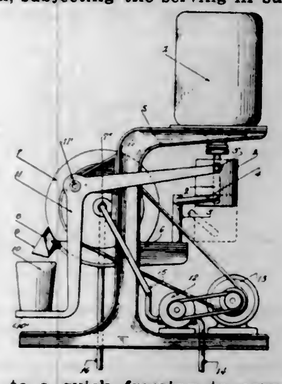
1. A container-forming machine, comprising means for applying limited lines of a quick-setting thermoplastic adhesive along the edges of a web of container material, means for severing container blanks from said web, means for folding said blanks about a mandrel to form continuous front, bottom and rear walls, means spaced from said adhesive-applying means sufficiently to permit said lines of adhesive to set up for folding the edges of said walls in overlapped relation against the sides of said mandrel to form side walls having contacting lines of thermoplastic adhesive of



substantially T-shape, means for momentarily applying heat and pressure to the cross portions of said lines of adhesive, and means for applying heat and pressure along the remainder of said adhesive lines.

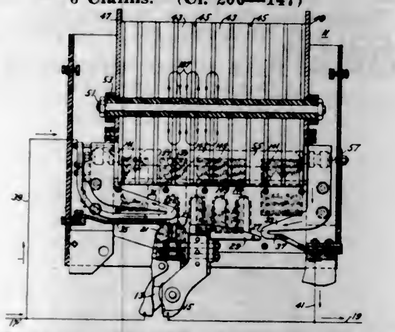
2,100,740
METHOD OF MAKING VARIABLE AREA SOUND FILM WITH LOW BACKGROUND NOISE
Rolf Görisch, Berlin-Lichtenberg, Germany, assignor to Klangfilm G. m. b. H., Berlin, Germany, a corporation of Germany
No Drawing. Application February 6, 1935, Serial No. 5,259. In Germany May 8, 1934
6 Claims. (Cl. 274—46)

1. The method of making variable area sound film comprising the step of subjecting the positive film after development to the action of a reducing agent.



2,100,741
MATERIAL FEEDING MECHANISM
Clifford E. Harrison, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 16, 1935, Serial No. 2,034
7 Claims. (Cl. 198—226)

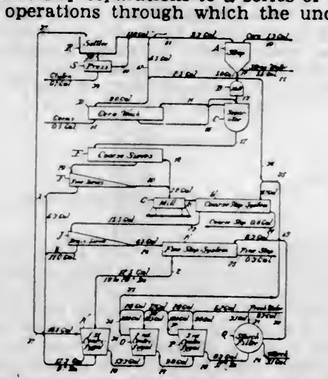
1. A feeding ram of substantially cylindrical construction, having a material engaging face provided at one end thereof, and a series of spaced, approximately longitudinally extending flutes provided around the periphery of said ram.



2,100,742
PROCESS AND APPARATUS FOR BEVERAGE DISPENSING
Thomas L. Hartman, Pittsburgh, Pa., assignor, by direct and mesne assignments, of one-third to E. J. W. Keagy, one-third to Harold M. Young, both of Pittsburgh, Pa., and one-third to Reymer & Brothers, Inc., Pittsburgh, Pa., a corporation of Pennsylvania
Application September 1, 1934, Serial No. 742,507
6 Claims. (Cl. 225—21)

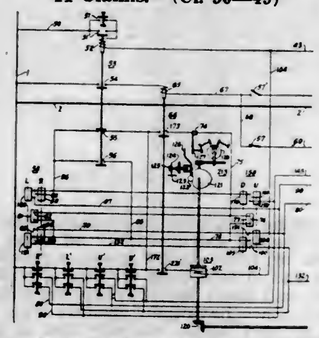
6. The process of preparing a serving from a main body of beverage material in bulk capable of being frozen into soft flakes which comprises segregating a serving of predetermined quantity from the main body while agitating such main body to ensure that the serving is of average composition, subjecting the serving in successive

increments to a quick freezing to convert the same into a mixture of chilled liquid and soft frozen flakes and transferring such liquid and flakes substantially as the latter are formed to a suitable receptacle.



2,100,743
CIRCUIT BREAKER
Frederick B. Johnson, Murrysville, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania
Original application January 24, 1931, Serial No. 510,981. Patent No. 2,037,418, April 14, 1936. Divided and this application March 17, 1936, Serial No. 69,325
6 Claims. (Cl. 200—147)

1. In an arc extinguisher, a plurality of spaced plates each providing a path about which the arc may be rotated, an opening through said plates in which the arc may play, means for moving the arc from said opening into said path, and means for guiding the arc past said opening as it rotates and preventing it from moving into the opening.

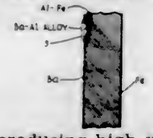


2,100,744
MANUFACTURE OF STARCH
Alfred H. Kelling, Chicago, Ill., assignor to International Patents Development Company, Wilmington, Del., a corporation of Delaware
Application June 5, 1933, Serial No. 674,365
13 Claims. (Cl. 127—68)

11. In the manufacture of starch from corn in which the corn is steeped and subjected in a comminuted state to separating operations in water for removal of the germ, coarse slop and fine slop, yielding separate streams of starch, gluten and water and in which substantially all process waters except steep water and water absorbed in the discharged solids are reused in the process on subsequently treated corn material: the improvement which consists in subjecting the starch, gluten and water streams from the germ and coarse slop separations to a series of centrifuging operations through which the underflow

carrying the starch moves in one direction and the overflow carrying the gluten in the other direction; using the stream from the fine slop separation as a wash water in the first of said centrifuging operations; using fresh water as a wash water in the last of said centrifuging operations; utilizing water from the overflow from the first centrifuging operation for steeping corn as the operations are continued on such material; and using the overflow from another of said centrifuging operations in the separating operations on the comminuted corn.

2,100,745
MOTOR OPERATED FEED CONTROL
George E. King, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application April 24, 1934, Serial No. 722,097
11 Claims. (Cl. 90—49)



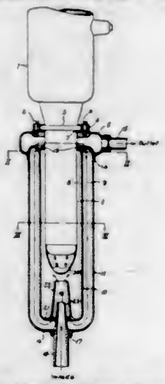
1. In a system of control for controlling the distance of travel of a motor-operated machine element operating on a work piece, a motor for driving the machine element, a coupling for mechanically connecting said machine element to said motor, switching means for starting and stopping the motor, a second coupling interconnecting the

motor and the switching means, and measuring means for preselecting the stopping position for said switching means to interrupt the energizing circuit for said motor and disconnect said machine element from said motor the instant said motor has rotated through a predetermined angle.

2,100,746
GETTERING VACUUM TUBE

Henry J. Miller, Maplewood, N. J., and Elwood W. Schafer, New York, N. Y., assignors, by mesne assignments, to Radio Corporation of America, a corporation of Delaware

Application November 7, 1935, Serial No. 48,658
7 Claims. (Cl. 250—27.5)

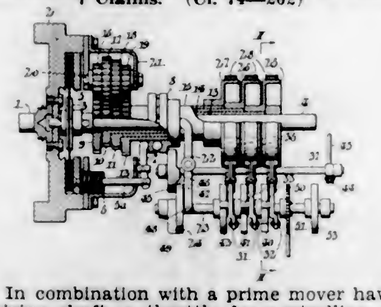


4. Process of producing high vacua in an iron envelope which comprises placing in good thermal conductive relation to a portion of the wall a powdered friable alloy of barium and aluminum in intimate contact with a layer of aluminum interposed between said alloy and said wall and in good contact with said portion of said wall, mechanically evacuating said envelope, calorizing the iron with aluminum of said layer, and heating said alloy to liberate free barium from said alloy.

2,100,747
RECIRCULATING WATER JACKET

Ilia E. Mouromtseff, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application January 4, 1936, Serial No. 57,581
7 Claims. (Cl. 250—27.5)

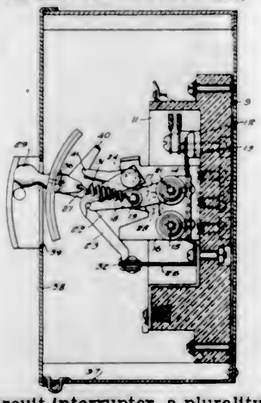


1. A cooling jacket for an elongated body comprising a double wall providing an inner jacket space and an outer jacket space, a nozzle adjacent one end of said body directly providing for flow into said inner jacket space and said inner and outer space having an opening from one to another at said nozzle whereby flow is induced from said outer jacket space into said inner jacket space, said jacket having a passageway adjacent the other end of said elongated body through which flow may occur from said inner jacket space into said outer jacket space and means adjacent said passageway for permitting emergence from said jacket.

2,100,748
POWER TRANSMISSION

David C. Prince, Swarthmore, Pa.

Application May 18, 1935, Serial No. 22,132
7 Claims. (Cl. 74—262)



1. In combination with a prime mover having a driving shaft, a throttle for controlling said prime mover, a driven shaft, and means for transmitting power from said driving shaft to said driven shaft in different speed ratios; means for selecting the speed ratio to be effected between said shafts; and a circulating fluid means including a piston directly in the fluid stream for automatically controlling such selection including a contact making device operated by the pressure effect of a fluid velocity, the velocity and pressure effect varying in accordance with the speed of one of said shafts as modified by a linkage with said throttle governed by the degree of throttle opening, which directly modifies the effective pressure of the flow of fluid.

2,100,749
CIRCUIT BREAKER

Karl C. Randall, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application March 15, 1933, Serial No. 660,936
14 Claims. (Cl. 200—116)

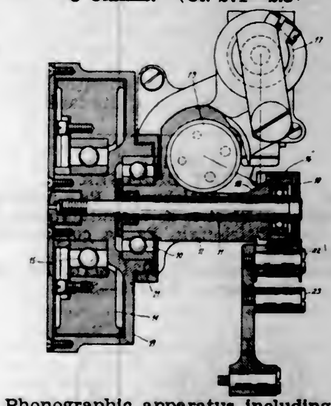
1. In a circuit interrupter, a plurality of switch means movable to open and close a circuit, a single operating member for normally moving a plurality of said switch means simultaneously to both open and closed position, spring means between said single operating member and said plurality of switch means for causing said simultaneous movement of the switch means to take place with a snap action when moving to both open and closed position, a plurality of trip members each

responsive to current flow through one of said switch means, each of said trip members being movable to tripped position independently of movement of the other of said trip members to tripped position and thereby causing movement of one of said switch means movable to both open and closed position with a snap action to open position, each of a plurality of said switch means movable to both open and colsed position with a snap action being movable to open position upon movement of one of said trip members independently of movement of the other of said switch means to open position and independently of the position of said single operating member.

2,100,750
FOLDABLE BOX AND BLANK THEREFOR

William A. Ringler, Wayne, Pa., assignor to Carton Container Company, Philadelphia, Pa., a corporation of Delaware

Application November 25, 1932, Serial No. 644,335
4 Claims. (Cl. 229—34)

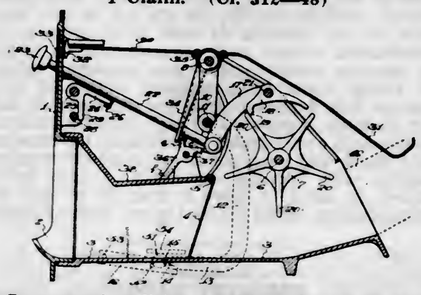


1. A collapsible box including a bottom wall, side walls connected with the bottom wall, end walls connected with the bottom wall, side locking tabs connected with the side walls, end flaps connected with the end walls and foldable inwardly, and a bottom flap connected with one of said end flaps, said side locking tabs having creased lines to provide for the collapsing of the side locking tabs, said bottom flap when positioned to overlie said bottom wall extending beneath the juxtaposed end flap.

2,100,751
RECORD MOVING MECHANISM

Frank E. Runge, Oaklyn, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application November 12, 1935, Serial No. 49,342
3 Claims. (Cl. 271—2.3)

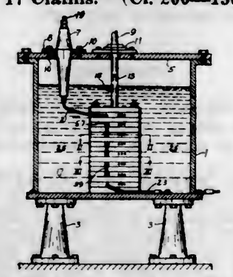


1. Phonographic apparatus including a bearing support, a shaft mounted in said bearing support on ball bearings, a rotatable record support mounted on said shaft, a rotatable casing fixed to said shaft and mounted on ball bearings on said bearing support independently of said shaft and a damping wheel rotatably supported within and by said casing.

2,100,752
MERCHANDISING MACHINE AND APPARATUS

Paul P. Scheurer, Wichita Falls, Tex., assignor to Will McKemie, Sr., Wichita Falls, Tex.

Application January 2, 1934, Serial No. 704,950
1 Claim. (Cl. 312—48)



In a merchandising machine, the combination comprising a housing having inclined passages normally closed against entry through their discharge ends and merchandise magazines from which articles of merchandise are gravitationally fed into said passages, a shaft mounted above the inlet ends of said passages, a series of peripherally recessed wheels rotatably mounted on said shaft and extending into the path of movement of said articles to singly admit them into said passages, a discharge receptacle common to each of said passages, an escapement means provided to control each of said wheels, each of said escapement means comprising an actuating plunger and an arcuately shaped arm pivotally connected to said plunger at one end and at its other end to a shaft disposed above and parallel to said first shaft, an anchor member rigidly affixed to said arcuate arm having on its forward edge a downwardly extending projection and on its rear edge a depending lip, whereby said projection will engage a recess of said wheel in the inner position of said plunger to prevent rotation thereof and be released from said recess with the simultaneous positioning of said lip into the path of said recess in the outward position of said plunger.

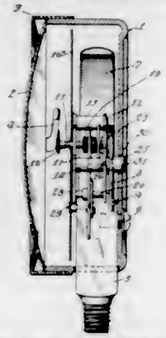
2,100,753
CIRCUIT INTERRUPTER

Stanley T. Schofield, Wilkinsburg, and Samuel H. Boden, Turtle Creek, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application December 24, 1935, Serial No. 56,072
17 Claims. (Cl. 200—150)

1. In a circuit interrupter, means, at least partially of insulating material, for defining the walls of an arc chamber which is substantially

cylindrical in form, a rotatable shaft extending through said arc chamber in such manner that the axis of rotation thereof substantially coincides with the axis of said arc chamber, a quantity of arc extinguishing liquid contained within said arc chamber, means for opening and for closing the electrical circuit through said interrupter, said means causing the arc or arcs incident to the opening of said interrupter to be established within said arc chamber, a piston or impeller member, the cross sectional outline of which comprises a circular section of only slightly less diameter than the diameter of said arc chamber, supported on said shaft for rotation within said arc chamber, and means for rotating said shaft and said piston or impeller member during each opening operation of said interrupter, in order to move a quantity of said arc extinguishing liquid across the arc path or paths.



2,100,754

PRESSURE GAUGE

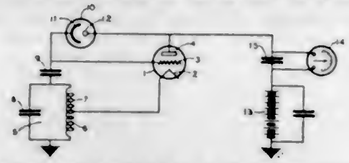
Hans Seegers, Chicago, Ill., assignor to Jas. P. Marsh Corporation, Chicago, Ill., a corporation of Illinois

Application October 4, 1934, Serial No. 746,802

12 Claims. (Cl. 73—109)

1. A pressure gauge of the character described, comprising a pressure responsive element, a graduated dial, a pointer arranged to move over said dial in response to said pressure element, a support, a transmission mechanism between said pressure element and said pointer, said transmission mechanism being mounted in a frame and said frame being pivotally mounted upon said support at the axis of said pointer, and a rotatable adjusting member mounted on said support and having an eccentric portion cooperating with said frame to move said frame and thereby adjust said pointer by rotary movement of said adjusting member.

2,100,755



PHOTOMETER

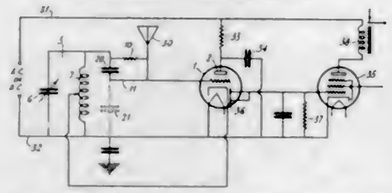
Francis H. Shepard, Jr., Rutherford, N. J., assignor, by mesne assignments, to Radio Corporation of America, a corporation of Delaware

Application May 10, 1935, Serial No. 20,706

2 Claims. (Cl. 250—41.5)

1. In a photometer, a relaxation oscillator with a control electrode cathode, and anode, an oscillatory tank circuit comprising a parallel condenser and inductance with an intermediate point of the inductance connected to said cathode, one end coupled to said anode and the other end of said inductance coupled through a condenser to said electrode, a light controlled impedance connected to the control electrode of said oscillator for controlling the frequency of

relaxation, and means in said output circuit for quantitatively translating said frequency of relaxation to indicate the conductivity of said impedance.



2,100,756

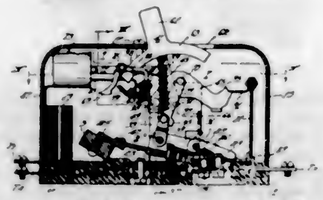
ALTERNATING CURRENT CONTROL

Francis H. Shepard, Jr., Rutherford, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware

Application November 29, 1935, Serial No. 52,015

2 Claims. (Cl. 250—36)

1. In combination an oscillator for generating alternating current comprising a tube with an anode, grid cathode, and a heating element in said cathode, an oscillatory tank circuit coupled at one end to ground and to said anode and connected at its electrical center to said cathode, an anode voltage source connected between said anode and said heater, the heater and one side of said source being grounded to alternating current and means for modulating the generated alternating current comprising a condenser potentiometer, including at least one variable capacitor, connected between the terminals of said tank circuit and a connection from said grid to a point intermediate the ends of said condenser potentiometer, said variable capacitor being connected to the grounded end of the tank circuit.



2,100,757

CIRCUIT BREAKER

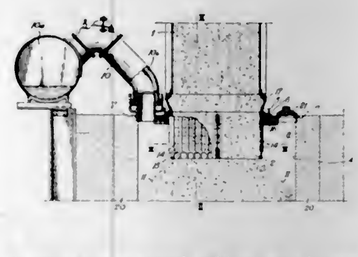
Ralph H. Swingle, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application September 29, 1934, Serial No. 746,255

22 Claims. (Cl. 175—294)

1. In a circuit interrupter, separable contacts for opening and for closing the electrical circuit through said interrupter, actuating means for said separable contacts including an operating member movable to normally cause said contacts to move either to the open or to the closed-circuit position, electro-responsive means operable upon the occurrence of predetermined conditions in the circuit to cause said actuating means to move said contacts to the open circuit position, and means operable only after said contacts have been moved to the open-circuit position as a result of the actuation of said electro-responsive means, for causing said actuating means to return said interrupter automatically to the closed-circuit position upon the removal of the cause of said predetermined conditions in the circuit.

2,100,758



CONTINUOUS-VERTICAL COKING RETORT OVEN

Paul Van Ackeren, Essen, Germany, assignor, by mesne assignments, to Koppers Company, Pittsburgh, Pa., a corporation of Delaware

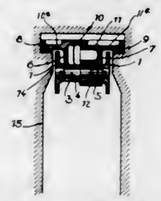
Application April 8, 1936, Serial No. 73,238

In Germany February 3, 1934

2 Claims. (Cl. 202—251)

1. Continuous-vertical coking retort oven comprising a retort chamber adapted to be fed continuously at its top with coal to be coked and having refractory heating walls external thereto for externally applying coking heat to coal in said chamber through the heating walls therefor: a metal cover forming a suspension frame arranged to cover the top of said chamber between the same and the atmosphere and having distillate gas offtake means in the same and a metallic coal feeder chute suspended from said frame so as to extend down from the metal cover into the top of the chamber in spaced relation to the refractory walls therefor for delivering the coal to be coked into a high temperature zone at a distance from the top of the chamber leaving a gas collecting and off-flow space around the coal feeder so that the distillation gases produced in the chamber may be drawn off from the top of the coking charge to the distillate offtake through a free space between the coal feeder and the walls of the top of the chamber; the outer surfaces of the sides of said coal feeder and the inner surface of the metallic cover being covered with a lining of heat insulating porous refractory material on the inside of the chamber and so as to prevent heat from being conducted through the sides of the coal feeder for absorption by coal therein and through the metallic cover for radiation into the atmosphere and thereby maintain the temperature of gas in the gas collecting and off-flow space and the walls forming the same always higher than the dew point of the distillation gases with regard to condensable hydrocarbons.

2,100,759



LEVELING BEAM FOR HORIZONTAL CHAMBER OVENS

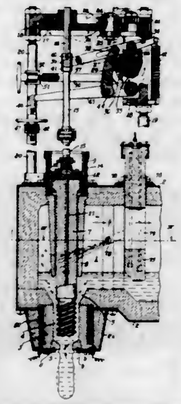
Paul Van Ackeren, Essen, Germany, assignor, by mesne assigments, to Koppers Company, Pittsburgh, Pa., a corporation of Delaware

Application May 13, 1936, Serial No. 79,481

In Germany May 3, 1935

6 Claims. (Cl. 214—23)

6. A leveling beam for horizontal chamber ovens having longitudinal grooves or projections in the upper part of the coking chambers for supporting the front part of the leveling beam when pushed into the chamber, said leveling beam having elements for sliding over the longitudinal grooves or projections to sustain the beam from sagging during leveling in the chamber, said elements being movably connected with the beam so as to be capable of giving way to obstructions they may encounter on the grooves or projections during movement of the leveling beam in the chamber, and means for normally urging the elements outwardly from the beam into position for seating relationship with the grooves or projections.



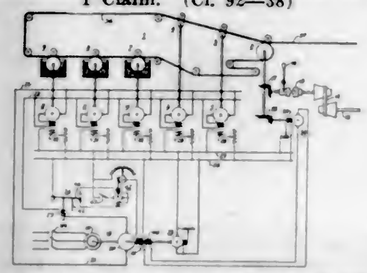
2,100,760

METHOD AND APPARATUS FOR FEEDING THERMOPLASTIC MATERIAL

Frank L. O. Wadsworth, Pittsburgh, Pa., assignor to Ball Brothers Company, Muncie, Ind., a corporation of Indiana

Application April 9, 1935, Serial No. 15,416

23 Claims. (Cl. 49—55)



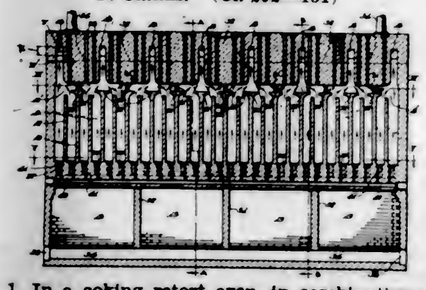
1. A method of shaping mold charges of molten glass, which consists in severing such a charge from a moving stream of molten glass, and predeterminedly controlling the application of the severing forces transversely of such stream and predeterminedly varying the point of application of such forces relatively to movement of said stream at the point of severance throughout the entire severing operation.

2,100,761

SYSTEM OF CONTROL FOR DYNAMO-ELECTRIC MACHINES

Rest R. Baker, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application April 13, 1935, Serial No. 16,176
1 Claim. (Cl. 92—38)



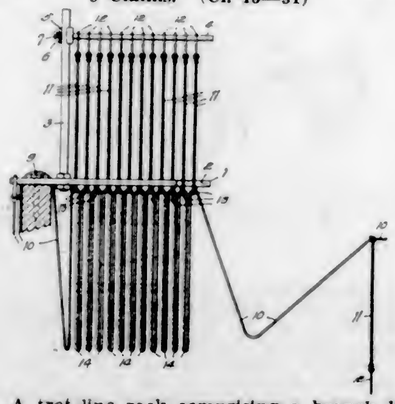
In a system of control for a machine making sheet material, the combination of, a press section coupled to be driven through mechanical control means from the line shaft operating a plurality of machines, an exciter coupled to be driven from the shaft of the press section and adapted to generate a voltage substantially proportional to the speed of the shaft of the press section, a motor generator set, an exciter coupled to be driven from the motor of the motor generator set, a plurality of section motors connected to be excited at a substantially constant value from the last named exciter, said first named exciter being also connected to be energized at a substantially constant value from said second named exciter, a field winding for the generator of the motor generator set connected to the last named exciter and adjusted so that the voltage of the generator is of a value sufficient to supply the losses of the section motors, and a second field winding for the generator connected to be energized directly from the first named exciter.

2,100,762

COKING RETORT OVEN

Joseph Becker, Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, a corporation of Delaware

Application January 19, 1935, Serial No. 2,564
In Great Britain October 25, 1933
12 Claims. (Cl. 202—151)



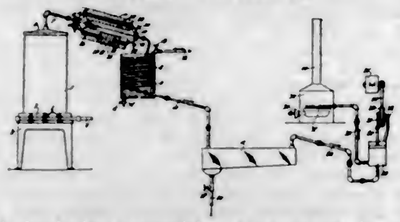
1. In a coking retort oven, in combination: a series of side-by-side horizontal coking-chambers and intermediate heating-walls comprising vertical flame-flues for laterally heating said coking-chambers, cross-over ducts for conducting combustion-products from up-burning vertical flues on one side of each coking-chamber to down-flowing vertical flues on the other side of such coking-chamber, horizontal passages over the tops of the vertical flues and each connecting a group of the vertical flues with the cross-over duct centrally connected with the top of such horizontal passage, and inlet means at the base of the vertical flues for controlling the inflow of combustion media into such flues, said inlet means being substantially the sole regulating means for individually regulating the vertical flame flues, the inlet means comprising ports of restricted and graduated cross-sectional areas, and the tops of the vertical flues, the horizontal passages communicating therewith, and the cross-over ducts therefor, each being throughout of greatly larger cross-sectional area than the aggregate of the inlet ports of the vertical flues served by such parts, so that resistance to the initially graduated gas-flow in the circuits around the coking-chambers is diminished and pressure differences are reduced.

2,100,763

TROTLINE RACK

William J. Kersenbrock, Brentwood, Mo.

Application October 7, 1935, Serial No. 43,873
9 Claims. (Cl. 43—31)



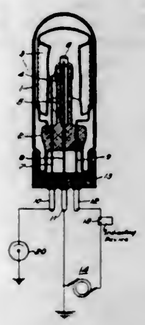
1. A trot-line rack comprising a branch line guide member having a slot open at one end, a fishhook supporting member, and a connection between one end of said members for holding the said members in desired spaced relation relative to each other.

2,100,764

DEODORIZER

Earl A. Kleb and Joseph C. Metzger, St. Louis, Mo.

Application November 30, 1936, Serial No. 113,360
1 Claim. (Cl. 183—34)



A deodorizer comprising a receptacle for substances being processed, a pipe opening into the upper end of said receptacle and having a portion extending upwardly therefrom and another portion inclining downwardly and laterally from said first named portion, a valve in said inclined pipe portion, a by-pass pipe opening into said inclined pipe portion at the influent side of said valve, another by-pass pipe opening into said inclined pipe portion beyond the effluent side of said valve, a valve in each of said by-pass pipes, a detachable separator forming communication between said two by-pass pipes, a condensing coil opening into said inclined pipe portion beyond said second by-pass pipe, a tank enclosing said condensing coil for containing water immersing said coil, a pipe opening into the effluent end of said condensing coil, a settling tank into which said last named pipe opens, a combustion device, mechanism for withdrawing obnoxious gases and vapors from said settling tank and conducting them to said combustion device, and means for withdrawing condensate from said settling tank.

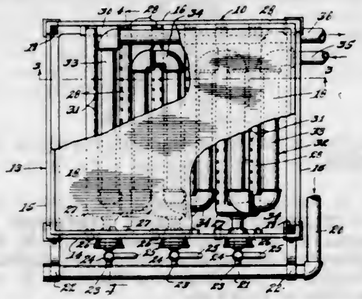
2,100,765

PHOTO-SENSITIVE APPARATUS

Dewey D. Knowles, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a corporation of Pennsylvania

Original application November 19, 1926, Serial No. 149,290. Divided and this application June 21, 1933, Serial No. 676,903
2 Claims. (Cl. 250—41.5)

1. In combination, a device comprising an evacuated envelope containing a cathode, a normally completely insulated electrostatic control member, an anode and an inert gas at a pressure sufficient to support an arc-like discharge at the impressed voltage, a source of alternating current for impressing potentials between said anode and cathode, a load circuit connected between said anode and cathode and means for connecting said electrostatic control member in such manner that the charge accumulated thereon while insulated may leak off to energize said device.



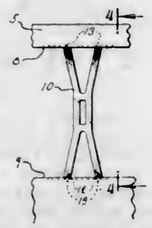
2,100,766

HEATER

Konstantinos S. Papoutsis, Chicago, Ill.

Application October 1, 1936, Serial No. 103,494
1 Claim. (Cl. 126—54)

The combination with a griddle having a heating element of means to utilize surplus heat thereof, said means including a plurality of spaced elongated burners and a plurality of heat absorbing tubes arranged parallel to and supported by said burners and over said spaces.



2,100,767

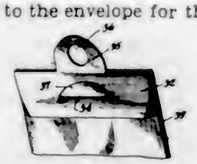
GRILLE STRUCTURE

Charles T. Perkins, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a corporation of Wisconsin

Application March 13, 1936, Serial No. 68,643
1 Claim. (Cl. 189—84)

A grilled front for convector enclosures and the like, comprising a sheet metal wall having a transverse opening therein with its top and bottom marginal edges parallel, a plurality of individual grille sctions of different shapes and configurations all of which have a height to span the vertical distance between the upper and lower marginal edges of said transverse opening, and cooperating means on said upper and lower edges of the opening and the upper and lower extremities of the individual grille sections for readily detachably securing the grille sections to said marginal edge portions at different points along their length so that said sections collectively form a grille across said opening, which grille has any one of a wide variety of designs depending upon the selection of the different sections and their arrangement across the opening, and said cooperating means by which the individual grille sections are secured to the marginal edges of the opening allowing removal and insertion of any section independently of the other sections.

2,100,768



ENVELOPE CLOSURE

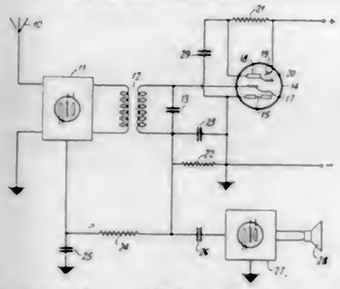
Julius Schuknecht, Middle Village, N. Y.

Application April 21, 1937, Serial No. 138,092
2 Claims. (Cl. 229—68)

2. A closure for envelopes comprising a flap formed with said envelope slitted to provide a closing tongue, a handle formed with said flap and having an opening and normally located at the front of the envelope, a card having an oval

slot attached to the envelope for the reception of

said closing tongue in the closed position of the envelope.



2,100,769

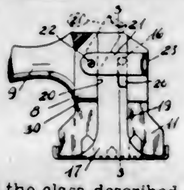
TUNING INDICATOR CIRCUITS

Rudolph H. Siemens, Richmond Hill, N. Y., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware

Application August 26, 1936, Serial No. 98,006

6 Claims. (Cl. 250—20)

1. A circuit for rectifying alternating currents and visually indicating the amplitude of the rectified currents and resulting voltages and including a thermionic device having a cathode, a grid and anode surrounding one portion of the cathode and a fluorescent anode and control electrode adjacent another portion of the cathode, said control electrode being electrically connected to the first anode, means for impressing alternating voltages upon said thermionic device, said means including a circuit connected between the grid and cathode of said thermionic device for rectifying alternating currents and producing rectified voltages and a condenser connected between the first anode and cathode of said thermionic device.



2,100,770

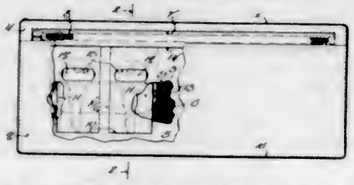
STEAK TENDERIZING AND DICING TOOL

George A. Wachowski, Flint, Mich., assignor of one-half to Phillip Koffman, Bay City, Mich.

Application April 26, 1937, Serial No. 139,069

3 Claims. (Cl. 17—30)

1. A tool of the class described and comprising a head provided with a handle, a wear plate on the lower face thereof, a plurality of blades, loosely and removably mounted in the head and bearing against said plate, a stripper slidably mounted on said head and provided with slots to accommodate the cutting edges of the blades, and a transversely disposed pin removably mounted in said head and extending through said blades for securing them in assembled relation.



2,100,771

COMBINED BILLFOLD AND KEY HOLDER

Herman B. Welch, West Bend, Wis., assignor to Amity Leather Products Co., West Bend, Wis., a corporation of Wisconsin

Application February 8, 1937, Serial No. 124,703

2 Claims. (Cl. 150—40)

2. In a carrying case provided with a partition forming a pair of pockets and a slide fastener for closing one of the pockets, a scabbard secured to said partition within the closed pocket for holding a key with its head exposed, and a loose flap for covering the exposed head of the key, said partition being provided with a vision opening alined with the head of the key.

2,100,772

HEATER

Vernon S. Beck, St. Louis, Mo.

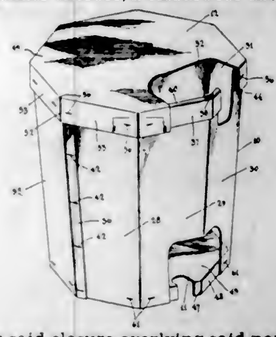
Application May 29, 1936, Serial No. 82,501

4 Claims. (Cl. 122—223)

1. A boiler, comprising a plurality of substantially identical water sections therein, each section consisting of oppositely disposed containing walls having lozenge shapes, header rings at the acute corners of the lozenge shapes, a corrugated area in each containing wall, oppositely corrugated areas being shaped to provide tubular forms pitched from one header toward the other, said tubular forms having communicating slots, the corrugated area being unsymmetrically located with respect to the header in said ring, whereby adjacent sections are related at 180° provide a tortuous passage therebetween, and said corrugations being angular in form.

2,100,773

CONTAINER



Paul F. Boeye, St. Paul, Minn., assignor to Waldorf Paper Products Company, St. Paul, Minn., a corporation of Minnesota

Application October 28, 1935, Serial No. 47,088

11 Claims. (Cl. 229—47)

1. A container having a wall structure open at one end, a narrow member extending about said wall structure and overlying the wall structure upon the exterior thereof, said member being

secured to the wall structure at one of its edges and being free from the wall structure throughout the remainder thereof, a closure for the container,

means on said closure overlying said narrow member and means for securing said last-named means and said narrow member together.

2,100,774

GUARD FOR CHILDREN'S TOILET SEATS

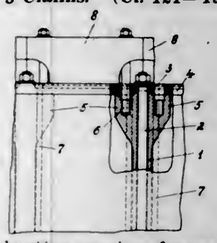
Charles T. De Puy and William C. Baxter, Rochester, N. Y., assignors to Trimble Nurseryland Furniture, Inc., Rochester, N. Y., a corporation of New York

Application November 25, 1936, Serial No. 112,733

5 Claims. (Cl. 4—237)

1. A guard for a toilet seat comprising a sheet of flexible material having lateral extensions at its side edges between its ends adapted to be folded upon themselves to afford attaching lugs, the folding of said extensions causing the sheet to assume a curved formation vertically.

2,100,775



WELDED BOX FRAME FOR VERTICAL INTERNAL COMBUSTION ENGINES

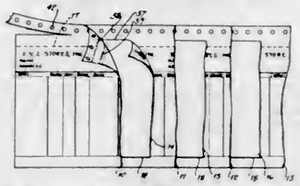
Friedrich Fohrer, Augsburg, Germany, assignor to Maschinenfabrik Augsburg-Nurnberg A. G., Augsburg, Germany, a corporation of Germany

Application February 27, 1935, Serial No. 8,535

In Germany March 28, 1934

3 Claims. (Cl. 121—194)

1. A combustion engine frame comprising a series of cylinders each having a cylinder head, a connecting plate separate from said cylinders and extending transversely of the said series of cylinders for supporting the cylinder heads and with the upper side of said plate in direct supporting contact with said heads, columns extending downwardly from and welded to said plate and adapted to assume compression forces, said columns having lateral projections integral therewith and in contact with the lower side of said plate, and means extending through said plate and connecting said projections directly to said cylinder heads.



2,100,776

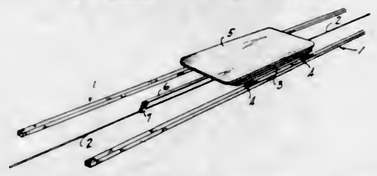
MACHINE AND METHOD FOR MAKING MANIFOLD FORMS

George L. Fulk, Berkeley, Calif., assignor to Carbon Interleaved Forms Corporation, Norwalk, Ohio, a corporation of Ohio

Application February 10, 1936, Serial No. 63,282

9 Claims. (Cl. 270—52)

1. A method of making a manifold pack in which transfer strips are interleaved between record strips, comprising feeding long continuous strips of record and transfer material into interleaved relationship, securing the strips together along one edge, utilizing a row of perforations along the connected edges for maintaining the strips in registration, and then cutting off the perforated strips.



2,100,777

CABLE CLAMP

Harry A. Green, Portland, Oreg.

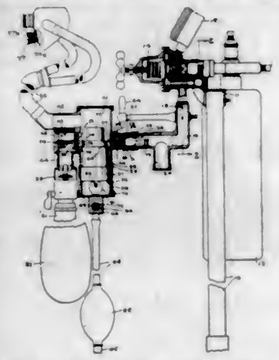
Application December 2, 1935, Serial No. 52,461

4 Claims. (Cl. 104—223)

1. A clamp comprising a body member adapted at one of its ends to embrace a cable, locking means adjustably mounted for movement through said body member and into locking engagement at one of its ends with said cable and the opposite end of said locking means serving as a pivotal connection for a draw-bar.

2,100,778

GAS ADMINISTERING MACHINE



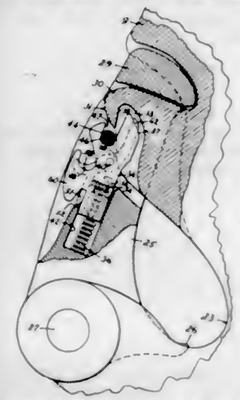
Jay A. Heidbrink, Minneapolis, Minn.

Application August 23, 1935, Serial No. 37,498

11 Claims. (Cl. 128—203)

5. An anaesthetizing machine comprising means for producing a mixture of anaesthetizing gases in desired proportions, a conduit for conducting said gases to the patient, a cylinder chamber in the conduit, valve mechanism associated with said chamber for normally blocking the flow of gas mixture therethrough, a piston in said chamber having means thereon adapted to cooperate with said valve mechanism to open the

same to permit flow of gas mixture to the patient, an air bulb adapted to be held in the hand of



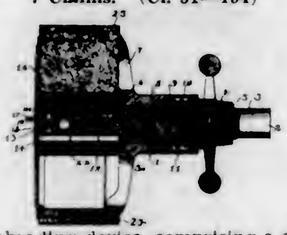
the operator, and an air conduit therefrom to below the piston whereby the patient may effect operation of said piston.

2,100,779

LATCH FOR SAFETY HOOKS

Richard K. Hertel, Vernon, Calif., assignor to Byron Jackson Co., Huntington Park, Calif., a corporation of Delaware

Application May 6, 1936, Serial No. 78,185
5 Claims. (Cl. 294—83)



1. In a safety hook having a body with a forwardly extending bill forming a bail-receiving notch, and a latch arm pivoted to said bill and adapted to close the entrance to said notch, a latch bolt slidably mounted on said latch arm and having its upper end adapted to engage the hook body in camming relation thereto to retract said bolt upon closing movement of said latch arm, a spring yieldably supporting said latch bolt, a latch lock comprising a lever pivotally mounted on said latch bolt and having upper and lower lever arms, said upper lever arm protruding slightly beyond the upper end of said latch bolt and being adapted to engage the hook body in camming relation thereto in advance of said latch bolt, said lower lever arm being adapted to be shiftably supported upon a shoulder on said latch arm, a spring normally urging said lower lever arm into shoulder engaging relation, and manual means for moving said latch bolt and lever to the unlocked position.

2,100,780

ABRADING DEVICE

Paul J. Huhn, St. Paul, Minn.

Application December 24, 1934, Serial No. 758,892
7 Claims. (Cl. 51—194)

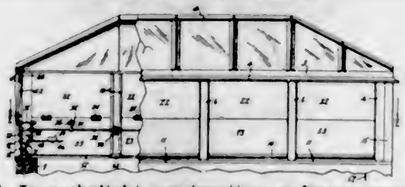
1. An abrading device, comprising a spindle, a wheel having a slotted opening in the periphery thereof mounted freely rotatable thereon, a strip of abrasive material rolled on said spindle and rotatable therewith, the free end of said strip passing outwardly through said slot and around the periphery of said wheel and then inwardly through said wheel to said spindle, said strip constituting a driving connection between said spindle and wheel, and means interposed between said spindle and said wheel for elastically controlling the relative rotation of said wheel and said spindle during an abrading operation.

2,100,781

ANTISEPTIC FOR THE TREATMENT OF GENITOURINARY INFECTIONS

Raymond T. Kaupp, Portland, Oreg.

No Drawing. Application May 4, 1936, Serial No. 77,763
7 Claims. (Cl. 167—58)



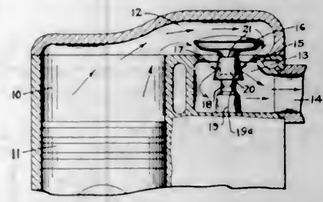
1. An antiseptic preparation for the treatment of genito-urinary infections consisting of a basic anilin dye selected for its affinity for, and capacity to stain the bacteria of said infections, and a soluble inorganic salt of silver, said ingredients being commingled in dry comminuted form in predetermined relative proportions, and forming with water a stable aqueous solution of desired strength.

2,100,782

SKYLIGHT

Alfred A. Kellogg, Troy, N. Y., assignor to James Ackroyd and Sons, Albany, N. Y., a corporation of New York

Application April 3, 1937, Serial No. 136,055
7 Claims. (Cl. 108—16)



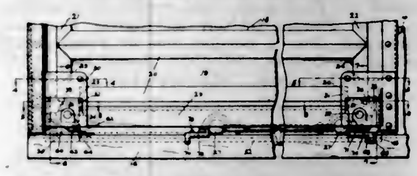
1. In a skylight construction, a frame providing a plurality of windows, shutters pivoted in said windows biased toward open positions, a shaft, bearings for the shaft, means normally holding said shaft from turning, an arm on the shaft for each shutter, a bracket attached to each shutter and engaging its corresponding arm to hold the shutter closed, means for adjusting the connection between each bracket and its arm whereby each shutter may be adjusted individually, and means for releasing the shaft holding means to permit the shutters to open.

2,100,783

EXHAUST VALVE FOR INTERNAL COMBUSTION ENGINES

Wladyslaw Kozlowski, Torrington, Conn.

Application May 6, 1936, Serial No. 78,175
2 Claims. (Cl. 123—188)



1. In an exhaust valve, a valve head having a depending stem, a guide in which said stem reciprocates, said guide having a beveled top, a valve seat to receive said head when the valve is closed, and a frusto-conical downwardly diverging thick metal deflecting member tightly embracing said stem and having its upper small diameter end below and spaced from said head, said deflecting member having a short conical countersink in its base to loosely fit over the beveled top of said guide only at the bottom of the stroke of said valve head.

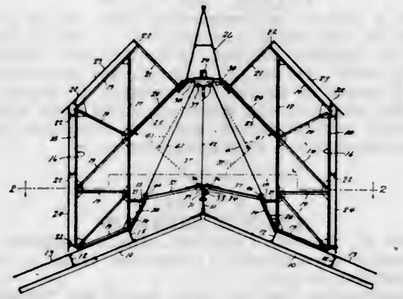
2,100,784

CAR DOOR SUPPORT

Carl Lute, Hammond, Ind., assignor, by mesne assignments, to The Youngstown Steel Door Company, Cleveland, Ohio, a corporation of Ohio

Application February 3, 1934, Serial No. 709,562
17 Claims. (Cl. 16—99)

1. In a railway house car having a track and a sliding door, a ball runway for said door, a plurality of balls adapted to have rolling engagement with said runway and said track for supporting said door for antifrictional movement, a spacer adapted to be seated upon said track and associated with and maintain said balls in spaced relationship, means for elevating and frictionally supporting said door in the open and closed positions, thereby transferring the weight of said door from said balls to said means, and means engageable with said spacer in said door positions for preventing shifting of said balls along said track.



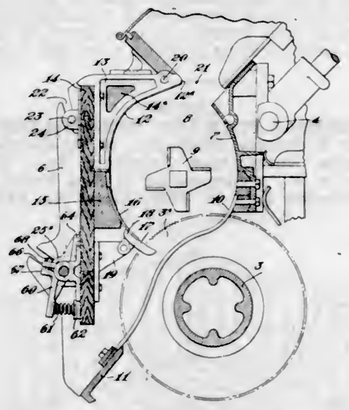
2,100,785

RIDGE VENTILATOR

James H. McDerment, Cleveland, Ohio, assignor to The Swartwout Company, Cleveland, Ohio, a corporation of Ohio

Application February 9, 1937, Serial No. 124,867
4 Claims. (Cl. 98—42)

1. In combination with a roof having an opening therein, trusses at each side of said opening and spaced therealong, said trusses extending upwardly and inwardly whereby to have a portion overlying said opening, means securing the trusses at one side of said opening to those at the other side thereof, a ridge roll having terminal edge portions extending along the upper portion of the inner edges of said trusses, said ridge roll overlying and extending laterally beyond said opening, baffle walls covering the outer edges of said trusses and terminating above said roof, damper means adapted to close said opening and comprising a pair of closures, each being pivoted about an axis extending longitudinally of said opening, and means for operating said closures.

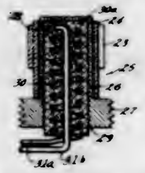


2,100,786

GIN

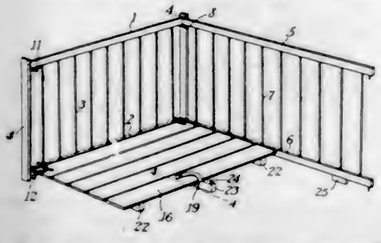
Robert W. McLean, Bridgewater, Mass., assignor to Carver Cotton Gin Company, East Bridgewater, Mass., a corporation of Massachusetts

Application April 17, 1935, Serial No. 16,782
28 Claims. (Cl. 19—55)



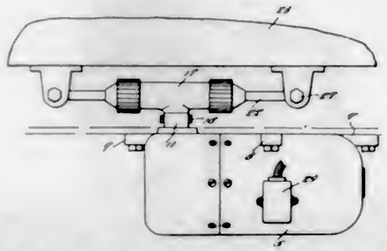
1. A gin comprising a frame, a saw cylinder supported thereby, a breast structure comprising a grate-fall, a rake-head and seed-board, means rigidly uniting the rake-head to the seed-board, means supporting the seed-board to swing about a horizontal axis adjacent to its upper edge, adjusting devices adjacent to each side of the gin respectively for adjustably holding the seed-board and rake-head in operative position, common means for simultaneously actuating the adjusting devices at both sides of the gin, and means operative to vary the adjustment at one side of the gin without affecting the adjustment at the other side of the gin.

2,100,787
PROCESS FOR FIREPROOFING WOOD, AND PRODUCTS THEREFROM
Daniel F. Moore, North Bend, and Max A. Wicks, Seattle, Wash.
No Drawing. Application August 24, 1936, Serial No. 97,594
2 Claims. (Cl. 21—20)



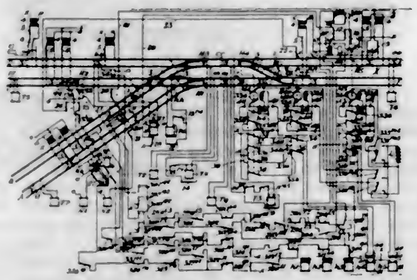
1. A process of fireproofing wood which consists in immersing the wood in a heated bath of an aqueous solution of ammonium chloride and acetic acid in the approximate proportions of 1 pound of ammonium chloride, 2 ounces of acetic acid and one gallon of water, and maintaining said immersion until the wood has been impregnated to a substantial depth.

2,100,788
CIRCUIT BREAKER
Estel C. Raney, Columbus, Ohio, assignor to Ranco Incorporated, Columbus, Ohio, a corporation of Ohio
Application May 22, 1934, Serial No. 726,984
9 Claims. (Cl. 200—124)



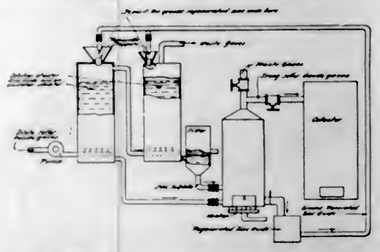
1. In a fusible control unit for automatic circuit breakers, a bearing member formed with a chamber, an electric heating element, a solid heat transmitting dielectric substance removably positioned in said chamber and in which said heating element is embedded, a releasing member carried by said bearing, and a body of solder uniting said releasing member with said bearing.

2,100,789
PORTABLE PLAY PEN FOR CHILDREN
Edward S. Swazey, Rochester, N. Y., assignor to Trimble Nurseryland Furniture, Inc., Rochester, N. Y., a corporation of New York
Application July 25, 1936, Serial No. 92,523
7 Claims. (Cl. 5—99)



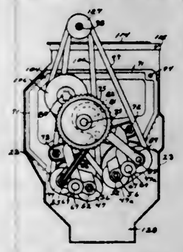
1. A portable play pen comprising two sections separable from each other by relative vertical movement, each of said sections including two sides hinged together and foldable one upon the other, floor portions foldably hinged to one side of each section, each floor portion and one side of the section separable therefrom including means on one engageble with the other and cooperating when the floor portions are lowered to hold the sections against relative vertical movement when in operative position.

2,100,790
MACHINE GUN MOUNT
Don Allen Taylor, Wadsworth, Ohio, assignor of one-half to F. Walter Boyer, Wadsworth, Ohio
Application April 18, 1936, Serial No. 75,177
4 Claims. (Cl. 89—37)



1. In a device of the character described, an electric motor including a casing having a gear box at one end thereof, a shaft journaled in said gear box and having an end projecting outwardly from the gear box, a pair of opposed spaced gear segments on said shaft, said motor having a shaft terminating within the gear box, and a gear segment on the motor shaft successively engaging the first mentioned gear segments for imparting oscillatory movement to said first named shaft, and means on the outer end of said first named shaft for mounting a machine gun thereon, said means comprising a cylinder attached intermediate its ends to the first named shaft and a gun supporting rod reciprocably mounted in said cylinder.

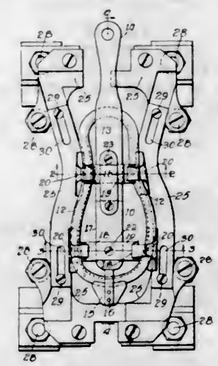
2,100,791
MULTIPLE CONTROL APPARATUS
Howard A. Thompson, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application October 20, 1928, Serial No. 313,772
117 Claims. (Cl. 246—134)



1. In combination with a plurality of devices each of which is capable of responding in a given manner to current of one polarity and in a given different manner to current of the opposite polarity, a polarized relay for each of said devices, means for supplying each of said devices with said current of one polarity or the other according as the contacts of the respective said polarized relay are closed in their normal or their reverse direction, a neutral relay for each of said polarized relays, means for energizing each of said polarized relays in its normal or its reverse direction according as its neutral relay is energized or de-energized, a plurality of control relays, a manually operable contact for each of said control relays, means including the respective manually operable contact for energizing each of said control relays while certain others of said control relays are de-energized, and means for energizing each of said neutral relays while any one of a respective group of said control relays is energized.

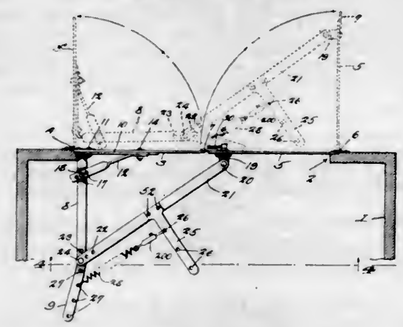
2,100,792
SULPHUR DIOXIDE RECOVERY PROCESS
Frank E. Townsend, Bartlesville, Okla.
Application November 29, 1933, Serial No. 700,368
11 Claims. (Cl. 23—178)

4. The process for recovering sulphur dioxide from dilute sulphur dioxide gases which consists in treating said gases with a mixture of water, zinc oxide and distillate from the destructive distillation of wood to produce zinc sulphite, then removing the zinc sulphite from the solution and subjecting it to heat to drive off the sulphur dioxide and to regenerate the zinc oxide.



2,100,793
VEGETABLE PEELER
William E. Urschel, Valparaiso, Ind.
Application May 21, 1934, Serial No. 726,693
14 Claims. (Cl. 146—49)

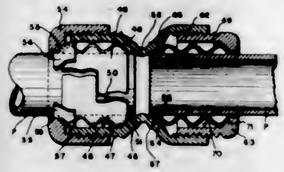
2. In combination, a plurality of pairs of parallel peeling rollers, pivoted support means for each pair of rollers eccentric to the axes of the pairs, a prime mover, means intermediate said prime mover and each pair of rollers for conjointly rotating all of said rollers, and an eccentric actuated by said prime mover and connected to all of said support means for oscillating all of said rollers about their supports for changing the contour of the bed of rollers while said rollers are rotating.



2,100,794
MANUFACTURE OF SHOES
Joseph W. Barna, Chicago, Ill.
Application September 11, 1936, Serial No. 101,259
5 Claims. (Cl. 12—107)

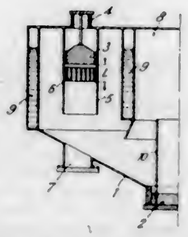
1. A device to clamp a pre-welt upper on a last consisting of a bar having a fulcrum near its toe-end and a welt-engaging member at its toe-end constructed and arranged to turn the welt away from the upper and clamp the work onto the toe of the last when the bar swings on its fulcrum toward the sole of the last, and clamps on the sides of the bar constructed and arranged

to hold the free edge of the welt away from the upper and to sustain the work upon the edge of the sole of the last when the bar swings to position thereon.



2,100,795
DOOR CONTROLLING MECHANISM
Harold A. Baumgarten, Loganville, Wis.
Application March 3, 1937, Serial No. 128,843
5 Claims. (Cl. 268—62)

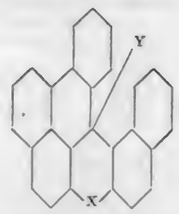
1. In a device of the class described, a support, first and second doors, hinges connecting the doors to the support, a backwardly extended arm rigidly connected to the first door at a place near the outer edge of the first door, a backwardly extended bracket on the second door, near to the inner edge of the second door, a backwardly inclined and outwardly extended link, a pivot element connecting the inner end of the link with the bracket, means for pivotally connecting the outer end of the link to the arm at a place intermediate the ends of the arm, a finger rigidly mounted on the intermediate portion of the link and extended backwardly with respect to the link, and a resilient actuating means connected at its inner end to the finger, and at its outer end to the arm, at a place behind the link, the pivot element being located behind a line connecting the hinges, when the doors are closed, whereby the resilient actuating means will oper-



ate to hold the doors closed, the pivot element being located in front of said line, when the doors are opened a little, whereby the resilient actuating means will operate to open the doors further.

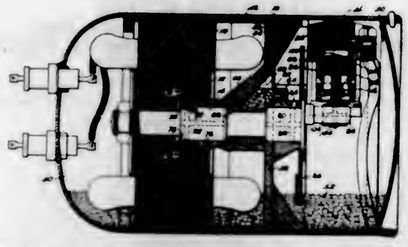
2,100,796
PIPE COUPLER
Lewis H. Church, Westfield, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a corporation of New Jersey
Application April 2, 1936, Serial No. 72,253
3 Claims. (Cl. 285—122)

1. A pipe coupler comprising a threaded coupler member having a bore therein to receive a pipe; clamping and sealing means having one end thereof engaging the coupler member including a contractile sleeve to embrace the pipe, and a continuous ring of thin material engaging one end of the contractile sleeve; an operating member engaging the other end of the clamping and sealing means and having a pipe receiving bore; and threads upon the operating member engaging the threads on the coupler member to move the former axially with respect to the coupler member to contract the sleeve; the continuous ring having a part engaging the end of the flexible sleeve for axial movement therewith upon tightening of the operating member and also having a cylindrical part at least the edge of which is forced into the space between the pipe and the pipe receiving bore in one of the members.



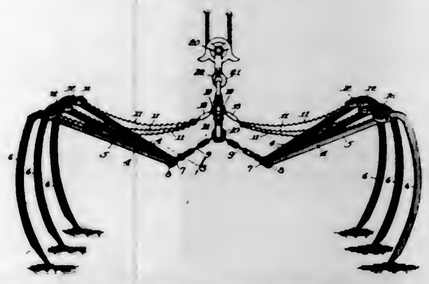
2,100,797
ELECTRIC DISCHARGE APPARATUS
Walter Dallenbach, Berlin-Charlottenburg, Germany
Application July 3, 1935, Serial No. 29,744
In Germany July 24, 1934
4 Claims. (Cl. 250—27.5)

1. An electric discharge vessel comprising a mercury cathode, at least one anode, an anode protecting tube surrounding each anode, a multichannel baffle disposed within each protecting tube in the path of the discharge and terminating at its outer extremity 30 mm. from the corresponding anode and a mercury vapour atmosphere at a pressure lying in the range between 0.1–0.15 mm. of mercury.



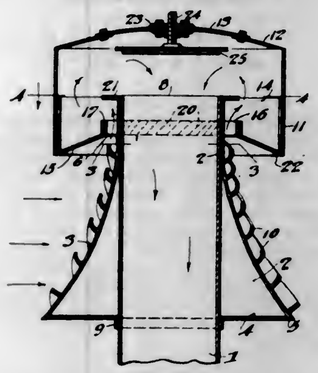
2,100,798
CONDENSATION PRODUCTS OF CARBENIUM COMPOUNDS AND PROCESS OF PREPARING THE SAME
Walther Dilthey and Ferdinand Quint, Bonn-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application April 27, 1934, Serial No. 722,814. In Germany May 2, 1933
15 Claims. (Cl. 260—54)

15. The compounds of the general formula:



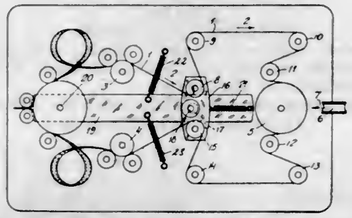
wherein X represents a member of the group consisting of oxygen, sulfur, imino and arylimino and Y represents a member of the group consisting of hydrogen, hydroxyl and the radical of an acid.

2,100,799
MOTOR COMPRESSOR
William D. Drysdale, Mount Clemens, Mich., assignor to Walter J. Sugden, Boston, Mass.
Application November 1, 1934, Serial No. 750,983
3 Claims. (Cl. 230—206)



1. A compressor unit comprising, in combination, a horizontally disposed motor, a compressor comprising a vertically disposed cylinder, a piston therein, said cylinder being provided with one or more lateral, downwardly inclined ports constituting a reservoir or reservoirs for the maintenance of a body or bodies of oil, a wrist pin having a chamber which communicates with and receives oil from said port or ports as said piston reciprocates, a connecting rod about and receiving oil from said chamber, a shaft which drives said connecting rod, a bearing for said shaft between said motor and said compressor, said bearing presenting about and extraneous to said shaft the entire means for the maintenance of a body of oil above and about said shaft for the lubrication of the bearing surfaces of said shaft and said bearing, a housing which completely houses said motor, said compressor, said shaft, and said bearing, said housing presenting a chamber having a portion constituting a main reservoir for the maintenance of a body of oil below said shaft and said compressor, said chamber having a portion about said cylinder for oil from said body to reach said port or ports, and a rotary element carried by said shaft, partially immersed in the oil in said main reservoir and adapted to supply oil directly to said port or ports and separately to said means.

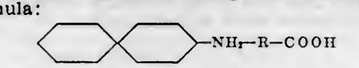
2,100,800
GRAPPLE-FORK
Robert G. Ferris, Harvard, Ill., assignor to Starline, Inc., Harvard, Ill., a corporation of Illinois
Application April 1, 1936, Serial No. 72,171
7 Claims. (Cl. 294—107)



2. In a grapple-fork, a plurality of individually separate tines, a plurality of means flexibly connecting together said tines in separate groups, respectively, each comprising a substantially rigid link member having an opening therethrough, said tines having openings at which they are strung as groups on said members adapting said tines for swinging movement on said members independently of each other, and flexible means connecting said rigid members together.

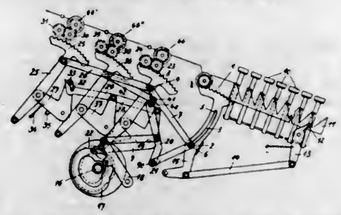
2,100,801
AIR-FLOW VENTILATOR
Burton M. Green, Brooklyn, N. Y.
Application February 28, 1935, Serial No. 8,744
14 Claims. (Cl. 98—64)

1. An air flow ventilator comprising, with a tubular stack, vanes carried around the outside of the stack adjacent to the open end thereof and formed to catch transversely moving air currents and change the direction of movement thereof to cause the currents to flow substantially parallel with the axis of the stack, and deflector vanes disposed in a path of direct communication to the open end of the stack.



2,100,802
FILM STRETCHING DEVICE
Sven Severin Hansen and Terrence Max Emil Wendt, Rasunda, Sweden
Application October 18, 1935, Serial No. 45,676
In Sweden October 22, 1934
10 Claims. (Cl. 271—2.3)

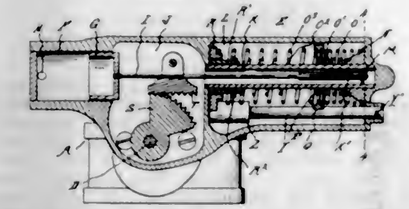
1. In a stretching device for films, particularly sound films or such films in combination with picture films, means defining a light aperture, means to move the film past said aperture, stretching members at both sides of said aperture, and means to equalize film tension variations caused by oscillations of the stretching members, said equalizing means including means connecting the stretching member at one side of the aperture to the stretching member at the other side thereof.



2,100,803
4-AMINODIPHENYL COMPOUNDS
Morton Harris, Anniston, Ala., assignor, by mesne assignments, to Monsanto Chemical Company, a corporation of Delaware
No Drawing. Application January 24, 1935, Serial No. 3,266
7 Claims. (Cl. 260—111)

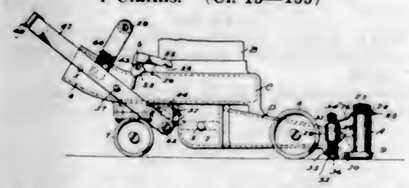
6. A new chemical compound having the formula:

in which R—COOH represents an aromatic carboxylic acid selected from the group consisting of benzoic acid and salicylic acid.



2,100,804
DRIVE FOR CALCULATING MACHINES, BOOKKEEPING MACHINES, AND THE LIKE
Karl Reinhold Heinitz, Dresden, Germany
Application October 6, 1933, Serial No. 692,544
In Germany October 24, 1932
6 Claims. (Cl. 235—60)

1. In a calculating machine, a set of digit keys, a setting lever having guide means, connections between the keys and lever for imparting differential settings to the said lever and guide means, a differential actuator, a numeral wheel operated thereby, a connecting rod jointed at one end to the actuator and having its other end movable in

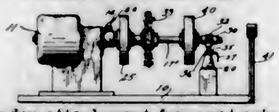


the guide means of the setting lever to operate the actuator correspondingly to the setting of said means, and shaft operated drive means positively connected to the connecting rod to move its said other end in the guide means.

2,100,805
ENGINE GOVERNOR
Raymond Hufford, Detroit, Mich., assignor to Monarch Governor Company, Detroit, Mich., a corporation of Michigan
Application May 27, 1929, Serial No. 366,459
11 Claims. (Cl. 137—153)

1. A governor for internal combustion engines comprising an engine inlet conduit, an unbalanced throttle therein adapted to be actuated by the gaseous stream towards closed position, a rock shaft on which said throttle is mounted, a cylinder in communicating connection with said inlet on the engine side of the throttle, a piston in said cylinder movable therein in a rectilinear direction, a constant ratio transmission between the throttle rock shaft and said piston whereby the movement of one is communicated to the other, and resilient means acting in the rectilinear direction of movement of said piston and operating the same to open the throttle, said resilient means having a characteristic substantially that of the combined closing forces.

2,100,806
CARPET AND FLOOR CLEANER
Bernard Kern, Syracuse, N. Y.
Application October 18, 1933, Serial No. 694,151
4 Claims. (Cl. 15—155)

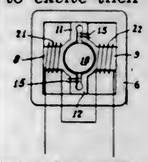


1. A machine of the character described including a nozzle formed with a chamber adjacent one edge of the mouth portion thereof, a pad positioned in the chamber, a second pad positioned adjacent the opposite edge of the mouth portion, means for normally urging the second mentioned pad towards and into contact with the surface being cleaned, and common adjusting means for the two pads, said means when in one position of adjustment moving the first mentioned pad to a midway position in the chamber while raising the second mentioned pad out of contact with the surface being cleaned, and when in a final position of adjustment lowering the first mentioned pad into contact with the surface being cleaned and raising the nozzle to a position above the surface.

2,100,807
APPARATUS FOR CLEANING THE SCREEN IN A WELL
Myron Macy Kinley, Tulsa, Okla.
Application February 20, 1935, Serial No. 7,368
13 Claims. (Cl. 166—20)

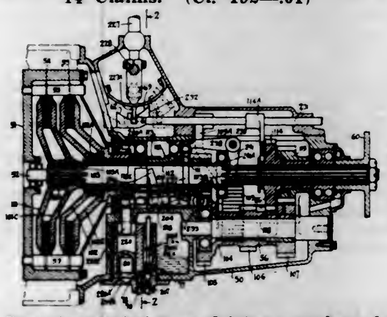
1. An apparatus for cleaning the inlets in a well tubing of accumulations tending to block flow of fluid including means for lowering an explosive charge through the tubing into proximity of the inlets, means for exploding said charge, means for confining a body of fluid, a piston movable in said confining means under force of the explosion to discharge said fluid, means for directing streams of the fluid under movement of the piston in opposition to the natural flow of fluid through the inlets, and means for checking movement of the piston after discharge of the fluid.

2,100,808
GRINDER AND SHARPENER ATTACHMENT FOR MEAT GRINDERS
Andrew J. Kirkland, West Palm Beach, Fla.
Application December 14, 1936, Serial No. 115,826
4 Claims. (Cl. 51—241)



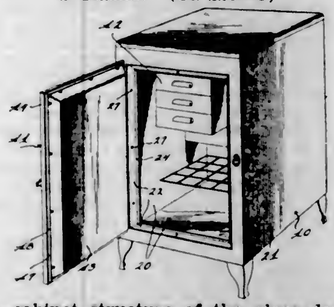
4. A grinder attachment for meat grinders and the like comprising in combination, a motor having a shaft, a second shaft, detachable coupling means between the shafts for end to end connection, a grinding disk on the motor shaft, a buffer and grinding disk on the second named shaft, an adjustable support means for the second named shaft, said last named shaft having pivotal connection with the support means whereby said shaft may be swung to a position clear of the motor shaft upon uncoupling of the shafts and a support for the second named shaft when in the latter position.

2,100,809
SELF-STARTING SINGLE PHASE ALTERNATING CURRENT INDUCTION MOTOR
James Larocca, Chicago, Ill., assignor to Speedway Manufacturing Company, Cicero, Ill., a corporation of Illinois
Application September 12, 1934, Serial No. 743,681
6 Claims. (Cl. 172—278)



6. An electric motor comprising a rotor, a cruciform magnetic field structure providing

alternately unshaded main and auxiliary poles magnetically connected in series, a magnetic frame structure completing the magnetic circuit between adjacent poles, windings on the main poles arranged to excite their adjacent ends to

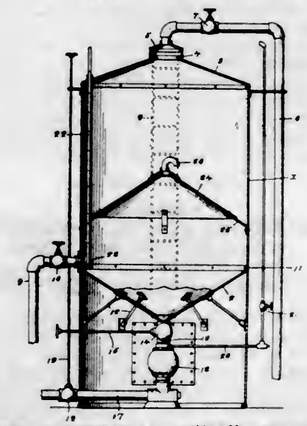


opposite polarities, said auxiliary poles being provided with longitudinal slots extending outwardly from their innermost ends, and shading windings extending through said slots and surrounding parts of said auxiliary poles.

2,100,810
TRANSMISSION
William T. Livermore, Westfield, N. J.
Application January 5, 1932, Serial No. 584,812
14 Claims. (Cl. 192—.01)

1. In a transmission, a driving member, drive shafts, clutches for operatively connecting said member and shafts, means for actuating the clutches including members having expansible chambers, a source of fluid pressure, means for admitting the fluid under pressure to the expansible chambers to actuate the clutches including a single control member, and a choke for controlling the rate of application of the fluid to the expansible chambers.

2,100,811
REFRIGERATOR CABINET
William Marshall, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application October 19, 1931, Serial No. 569,797
2 Claims. (Cl. 220—9)



1. A cabinet structure of the class described having inner and outer metallic panels which terminate in spaced longitudinal edges at the door opening of the cabinet, a door for said opening, an air sealing gasket disposed between the door opening of said cabinet and the said door when the door is in closed position, a finish plate overlapping the spaced edges of said panels, an auxiliary air sealing gasket clamped between the overlapping portions of one of said panels and the finish plate and constituting a second air sealing gasket between said door and said cabinet when the door is in closed position.

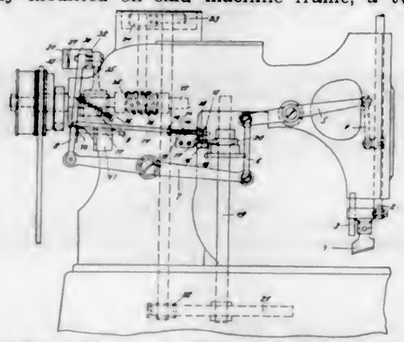
2,100,812
TRIM PANEL ASSEMBLY
William Marshall, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan
Original application September 29, 1933, Serial No. 691,441, now Patent No. 2,026,585, dated January 7, 1936. Divided and this application October 28, 1935, Serial No. 47,025
4 Claims. (Cl. 45—138)

1. A trim panel for a vehicle body comprising a relatively stiff foundation sheet adapted to be covered at the outer face thereof with a finish material, a reinforcing strip secured along the edge of said sheet at the rear face thereof, a spacer strip interposed between said reinforcing strip and foundation sheet, said strips having alined apertures, the aperture in the spacer together with adjacent portions of the reinforcing strip and said foundation sheet forming undercut recesses adapted to detachably receive parts of a fastener device.

2,100,813
TANK CLEANER
Andrew Lee Morgan, Houston, Tex.
Application August 10, 1936, Serial No. 95,247
1 Claim. (Cl. 210—58)

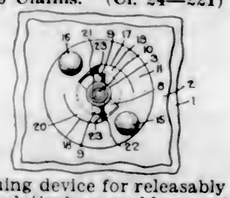
A cleaner comprising a vertically arranged tank having an inlet at its upper end, means for con-

necting the inlet to a liquid supply, an inverted conical-shaped bottom located in and secured to said tank and arranged a distance above the lower end of said tank, an outlet pipe connected to the tank slightly above the upper edge of the bottom, a fitting connected to the bottom, a sediment basin connected to said fitting, a control valve in said fitting, an outlet means connected to the basin and extending through a wall of the tank, a vent means connected to said fitting and extending exteriorly of the tank, a conical-shaped deflector located in the tank and spaced therefrom and arranged above the bottom with its apex in alignment with the inlet, and a goose neck shaped vent pipe connected on the apex of the deflector and arranged above the latter.



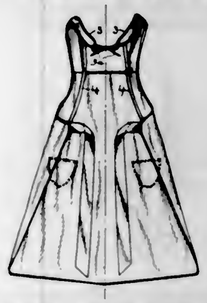
2,100,814
MANIFOLDING BOOK
John R. Morrison, Newport News, Va., assignor, by mesne assignments, to J. Stuart Fleming, Niagara Falls, N. Y.
Application December 14, 1931, Serial No. 580,786
9 Claims. (Cl. 282—23)

1. A manifolding book comprising a backing member, a pack of manifolding sets mounted on the backing member, each set comprising record leaves and interposed transfer leaves, edge portions of the leaves of each set being bound together at an edge portion of the pack, the edges of the record and transfer leaves of each set being offset at the opposite edge portion of the pack and certain of the leaves having readily breakable connection with the bound edge portions to permit separation of the record and transfer leaves, one intermediate leaf of each set being a binding leaf and having its edge portion opposite the bound edge portion projecting past the other leaves of the set and having binding attachment to the backing member, the latter leaf being weakened adjacent the edge portion attached to the backing member to permit detachment of the set from the backing member, leaves of each said set above and below the said binding leaf thereof having their edge portions, which are remote from said bound edge portions, terminating short of said binding attachment and being free of attachment directly thereto, leaves attached at one edge portion to the backing member and positioned for interleaving with the leaves of bound sets, and a stop sheet flexibly attached to the backing member and adapted to be interposed beneath the manifolding set at the top of the pack.



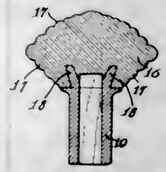
2,100,815
CUTTING DEVICE FOR BUTTONHOLE- OR OTHER SEWING MACHINES
Hermann Pudelko, Bielefeld, Germany, assignor to Dürkoppwerke Aktiengesellschaft, Bielefeld, Germany
Application September 24, 1934, Serial No. 745,183
In Germany September 30, 1933
2 Claims. (Cl. 112—68)

1. A cutting device on button hole and similar sewing machines, comprising in combination with the machine frame, a knife vertically reciprocable in said frame, a lever system connected with said knife, a main driving shaft journalled in said frame, a cam on said shaft, a crank actuated by said cam, a strap pivotally mounted on said frame and oscillatable by said crank, a counter shaft driven by said main shaft, a second cam rotated by said counter shaft, said strap having a bore, a coupling lever pivotally connected at one end with said lever system, a nose on the other end of said coupling lever adapted to engage the bore in said strap, a guide rod slidably mounted on said machine frame, a two-



armed lever bearing with one arm against said second cam and engaging with its other arm said guide rod, said guide rod adapted to be longitudinally shifted to the right by said cam, a spring on said guide rod, adapted to press said guide rod against said coupling lever and to oscillate said lever to cause said nose to engage said bore when the cam releases said rod, and a locking device on said strap adapted to prevent premature engagement of said nose in said bore.

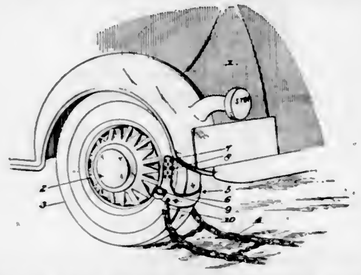
2,100,816
FASTENING DEVICE FOR LOCKING JUXTAPOSED MEMBERS TOGETHER
Forrest G. Purinton, Waterbury, Conn., assignor to The Patent Button Company, Waterbury, Conn., a corporation of Connecticut
Application April 15, 1936, Serial No. 74,493
6 Claims. (Cl. 24—221)



3. A fastening device for releasably holding together two relatively movable members, one of which is provided with an aperture having a stud rotatably fitting therein and having at one end a relatively large head and adjacent the other end lateral projections, the other member having a relatively large aperture therein through which said stud and extensions may be inserted, and a locking plate of resilient material secured to said other member partially overlying the aperture in said other member and provided with a central aperture fitting said stud and laterally extending recesses through which the lateral projections of the stud may be inserted, spring sections partially severed from said resilient plate on lines extending rearwardly from opposite edges of said recesses and bent outwardly from the plane of said plate and having upturned free ends forming sockets adapted to arrest the rotation of said stud when engaged by the lateral extensions thereof.

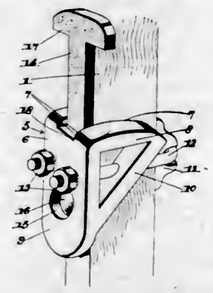
2,100,817
APRON
Ada Quinn, Ogden, Utah
Application July 6, 1935, Serial No. 30,106
2 Claims. (Cl. 2—48)

1. In an apron, the combination of a front portion adapted to cover parts of the front and sides of the wearer, a pair of tie strings secured to the side edges of the front portion and adapted to be knotted in the center of the wearer's back, a back yoke connected to the front portion and adapted to extend across the back of the wearer adjacent the neckline, said yoke being divided into two sections and including means for detachably and adjustably connecting said sections together so constructed and arranged as to provide a yoke of variable length, and a pair of straps secured at their upper ends to said yoke sections and at their lower ends to the side edges of said front portion.



2,100,818
GLASS DOORKNOB
Allen Bryce Redman, Millville, N. J., assignor to T. C. Wheaton Co., Millville, N. J., a corporation of New Jersey
Application February 16, 1937, Serial No. 125,971
3 Claims. (Cl. 16—121)

3. A door knob socket having spreading projections adapted to fit within the body of the knob and which hold the knob in place, in combination with a glass knob shrunk upon the projections and having throughout its surface between the socket and the axial end of the knob a succession of outwardly convex ring surfaces acting as diffraction surfaces to prevent view of the projections through the knob.

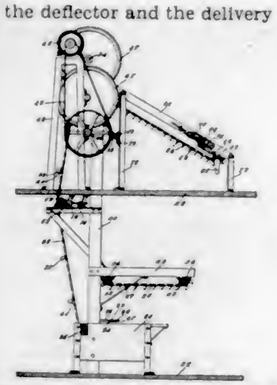


2,100,819
SKID CHAIN APPLYING DEVICE
Thomas P. Salley, Roselle, N. J.
Application March 12, 1936, Serial No. 68,520
Renewed August 24, 1937
2 Claims. (Cl. 152—14)

1. A skid chain attaching device comprising a bow of resilient material to be applied crosswise of the tread of a tire, the ends of the bow having integral, substantially parallel internally roughened leaves, and said ends of the bow also having heels adapted to rest on the margins of a wheel carrying the tire, and means at which to hook on the ends of a skid chain, said means being carried by the bow adjacent to the heels so that

the pull of the chain will convert the heels into fulcrums serving to jam the roughened leaves against the side walls and prevent twisting of the bow out of position.

2,100,820
LUG STRAP HOLDER
Heyward Shealy, Hendersonville, N. C.
Application July 28, 1936, Serial No. 93,084
2 Claims. (Cl. 139—154)



2. In a picker stick, a lug strap holder comprising a forked clamp which is fitted upon the picker stick, said clamp having a hole in its face portion, a buffer strap of which a part is interposed between the face portion of the clamp and the adjacent face of the picker stick, and means going around the picker stick and through the clamp, drawing the clamp tightly against the buffer strap so that a portion of said strap is made to bulge into the hole thereby forming a key which aids in keeping said strap from slipping.

2,100,821
MACARONI TRIMMING AND DRYING APPARATUS
La Sim, New Orleans, La.
Application October 15, 1935, Serial No. 45,159
7 Claims. (Cl. 198—20)

1. Apparatus for handling and drying dough strings looped in spaced relation over rods, comprising an endless carrier for feeding the rods, an endless elevator receiving the rods from the endless carrier, an endless carrier for delivering the rods from the elevator, a deflector in the path of the rods on the elevator adapted to deflect the strings thereof away from the strings of the rods on the delivery carrier, and a kicker

between the deflector and the delivery carrier for

transferring the rods from the elevator to the delivery carrier.

2,100,822

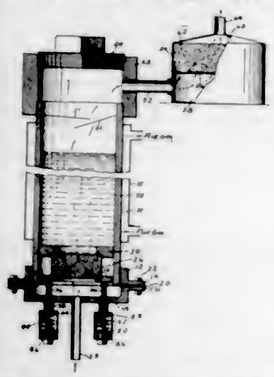
CONTINUOUS PROCESS FOR PRODUCTION OF ARALKYL HALIDES

Harold M. Spurlin, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application August 21, 1935, Serial No. 37,174

17 Claims. (Cl. 260—160)

1. The method of producing an aralkyl halide which includes reacting a di-aralkyl ether with a hydrogen halide in the presence of an aqueous solution of a heavy metal halide at a temperature not in excess of about 120° C. and continuously removing aralkyl halide from the reaction as formed.



2,100,823

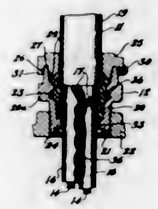
METHOD AND APPARATUS FOR PERFORMING PYROGENETIC REACTIONS

Charles A. Thomas, Dayton, Ohio, assignor, by mesne assignments, to Monsanto Chemical Company, a corporation of Delaware

Application May 6, 1935, Serial No. 19,980

13 Claims. (Cl. 196—70)

1. A method of conducting pyrogenetic reactions which comprises forcing a vaporous organic material to be pyrolyzed through a porous refractory body directly into a relatively non-volatile inert bath of molten material heated to the temperature required for the pyrolysis.



2,100,824

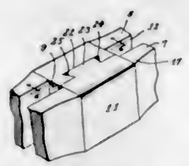
ELECTRIC CABLE CONNECTER

Albert J. Wayman, Youngstown, Ohio, assignor of one-half to Ernest H. McClure, East Palestine, Ohio

Application December 30, 1935, Serial No. 56,597

4 Claims. (Cl. 247—18)

1. Cable connecter construction including an integral sleeve having a screw-thread thereon at one end for screwing into a threaded socket, an integral partition wall in said sleeve member, a cable passing through said sleeve member and said partition wall, plastic adhesive weatherproof sealing material located between said sleeve and said cable, a cap member around the cable detachably secured to the other end of said sleeve for compressing said sealing material against said partition wall and cable, said partition wall having separate apertures through which the several conductors of said cable pass whereby said conductors lock said sleeve against removal from its socket.



2,100,825

CLOTHESPIN

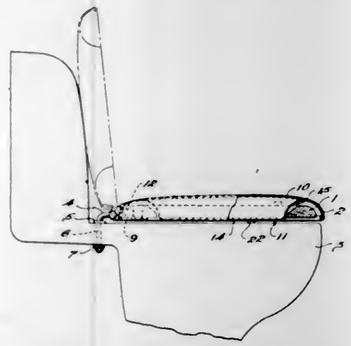
Oscar H. Wehry, Rockford, Ill.

Application January 8, 1936, Serial No. 58,053

3 Claims. (Cl. 24—138)

1. A clothespin comprising, in combination, two parallelly disposed strips of wood having opposed faces which are substantially plane through the major portion of their length and are outwardly flared at their ends, a short spacing block interposed between said strips substantially at the center thereof, and a metal band having interfitting dovetailed ends, the band encircling said strips and said block being seated in the outer faces of said strips flush with the surface thereof to clamp the strips and the block firmly together, the points of said dovetail being pressed inward for engagement with the wood of the pin.

2,100,826



WATER CLOSET

Clarence E. Wexelberg, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a corporation of Michigan

Application November 4, 1935, Serial No. 48,115

7 Claims. (Cl. 4—234)

1. A cover for a water closet comprising a top member having a depending edge adapted to enclose a toilet seat, and a hollow back rest portion nested within said cover engaging said depending

edge and adapted to project into the opening of said seat.

2,100,827

PROCESS FOR THE PRODUCTION OF POTASSIUM FORMATE

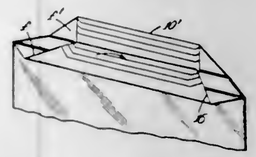
Erich Wiedbrauck, Essen-Ruhr, Germany, assignor to Chemische Fabrik Buckau, Ammendorf, (Saalkreis) Germany

No Drawing. Application January 29, 1936, Serial No. 61,427. In Germany January 31, 1935

18 Claims. (Cl. 260—118)

1. In the process of manufacturing potassium formate wherein calcium formate is reacted in aqueous solution with potassium sulphate at elevated temperatures not substantially below 180° C. and under corresponding superatmospheric pressures, the step which comprises maintaining the concentration of the potassium sulphate in the reaction mixture as low as possible at the moment of reaction by adding the potassium sulphate substantially as it is converted.

2,100,828



MULTI-PLY PAPER SACK

John William Winskill, Widecombe, Barming Woods, Maidstone, England

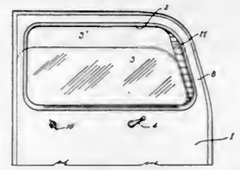
Application February 27, 1937, Serial No. 128,257

In Great Britain February 3, 1936

3 Claims. (Cl. 229—55)

1. A multi-ply paper sack comprising a series of nested flattened tubes having a diamond fold end closure comprising side and end flaps joined by diagonal folds, each of said side flaps being cut stepwise in reversed order to the other side flap along lines generally parallel to the ends of the plies over most of the length of said side flaps and then obliquely to the ends of the plies across the said diagonal folds.

2,100,829



DRAFTLESS VENTILATING WINDOW

Leonard A. Young, Detroit, Mich., assignor, by mesne assignments, to Automobile Ventilation, Inc., Detroit, Mich., a corporation of Michigan

Application January 9, 1933, Serial No. 650,795

Renewed May 11, 1936

11 Claims. (Cl. 296—44)

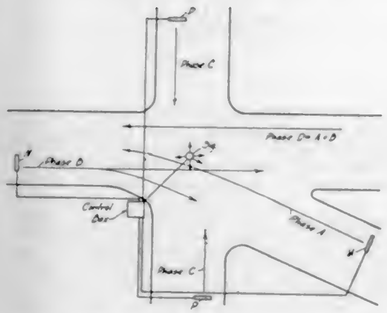
4. In a vehicle body, the combination of a window formed from a piece of glass, a frame for said window constructed so as to maintain a substantially tight joint between the front edge of the window and the front upright member of the frame, the window being adapted to be moved vertically or substantially so, means for moving said window in its plane longitudinally of the vehicle to produce a ventilating opening adjacent to the front edge of same through which air is sucked from the interior of the body by the natural vacuum produced on said ventilating opening by external air currents, when the vehicle is moving forwardly, and means for moving said window in its plane longitudinally of the vehicle to cut off the escape of air from the body through said ventilating opening.

2,100,830

SURFACE COVERING

Harry F. Altheide, Chicago, Ill., assignor to The Barrett Company, New York, N. Y., a corporation of New Jersey

Application July 21, 1936, Serial No. 91,712



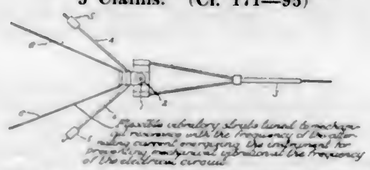
5 Claims. (Cl. 108—7)

1. A felt base strip shingle comprising a body portion having widely spaced tabs along one longitudinal edge thereof, said shingle being coated on its upper surface with waterproofing material and surfaced with granular material, the surfacing material applied to said tabs and to a band of said body portion adjacent the lower edge thereof of a width slightly less than the depth of said tabs being of relatively light color and the portion of said shingle above said light colored portion being surfaced with darker colored surfacing material, said shingle being adapted to be laid in overlapping courses with other like shingles with the forward edges of the tabs of each course aligned with the upper edges of the spaces between the tabs of the preceding course, whereby the dark colored portion of each course is entirely covered by the succeeding course except narrow bands adjacent the upper edges of the spaces of said succeeding course, said exposed dark colored bands cooperating with the upper edges of the spaces between the tabs of the succeeding course and with the butt edges of the tabs

of a third course to lend to the butt edges of the tabs of said third course an appearance of thickness.

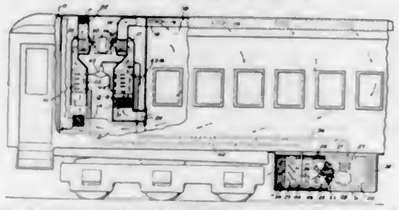
2,100,831
TRAFFIC CONTROL SYSTEM
John L. Barker, White Plains, N. Y., assignor to Automatic Signal Corporation, East Norwalk, Conn., a corporation of Delaware
Application February 4, 1937, Serial No. 124,074
14 Claims. (Cl. 177—337)

1. In a traffic control apparatus having stop, go and caution signals for each of more than two intersecting traffic lanes, traffic actuated means in the respective lanes and a time controlled mechanism for operating the signals to display the signals successively in the several lanes for the control of traffic in accordance with traffic actuation in such lanes, said mechanism including a switching device having a plurality of positions through which it is adapted to be operated for time periods to cause display of the go signal successively to the several lanes and stop signals to be concurrently displayed to the other lanes and intervening positions in which the caution signal for any one lane is displayed, means forming a part of said mechanism and, when said mechanism is in position displaying caution signal to one lane following display of a go signal therein and in absence of actuation of the traffic actuated means in the next following lane in the successive operation, operated to reduce substantially the time periods of the positions corresponding to the go signal and caution signal for said next following lane and to prevent display of said go and caution signals and to cause display of the stop signal instead during such reduced time periods.



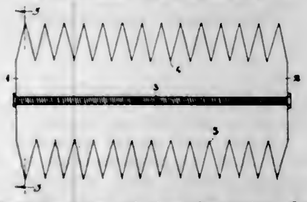
2,100,832
MOLD FOR MAKING HOLLOW ARTICLES FROM PLASTIC MATERIALS
Kurt Bratring, Berlin-Charlottenburg, Germany
Application November 30, 1932, Serial No. 644,941
In Germany March 18, 1932
2 Claims. (Cl. 18—41)

1. In a mold, a hollow body member having connection to a source of fluid under pressure, an enlarged aperture at one end of said body provided with a bordering valve seat, a valve member engaging said seat providing a form sustaining member for an object to be molded and to release the same bodily upon opening outwardly, a partition in said body provided with a plurality of apertures, a valve stem connected to said valve member, and yieldingly resistant means engaging



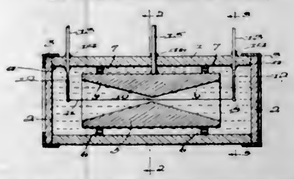
said stem for retaining said valve member on its seat.

2,100,833
DAMPING DEVICE FOR INDICATING INSTRUMENTS
Waldemar Brückel, Berlin-Wilmersdorf, and Karl Haas, Berlin-Britz, Germany, assignors to General Electric Company, a corporation of New York
Application February 17, 1936, Serial No. 64,418
In Germany February 28, 1935
5 Claims. (Cl. 171—95)



1. In an electrical instrument for alternating-current circuits of a given frequency, a movable element and connected thereto a flexible strut adapted to vibrate at the frequency of the alternating-current circuit.

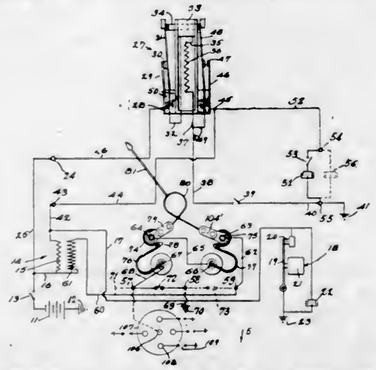
2,100,834
AIR CONDITIONING SYSTEM
Robert L. Chapman, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application July 31, 1936, Serial No. 93,645
10 Claims. (Cl. 62—117)



10. A system for conditioning the air within the passenger space of a vehicle including a refrigerating machine having a compressor and a condenser and an evaporator connected in the refrigerant circuit thereof, said compressor and said condenser being arranged outside said passenger space and on the underside of said vehicle, means including a housing and a fan for circulating air over said compressor and said condenser, means circulating air over said evaporator for cooling the air within said passenger space, means including a passage and utilizing said fan for discharging air from said passenger space, and means including a heat exchange element connected in said refrigerant circuit between said condenser and said evaporator and arranged in said passage for cooling refrigerant liquefied in said condenser.

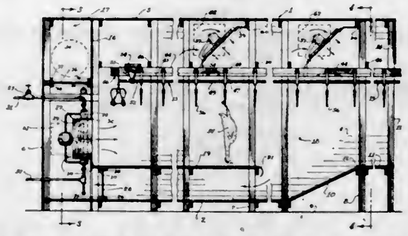
2,100,835
FLEXIBLE TUBE
Ugo Ciamberlini, Rome, Italy
Application September 20, 1935, Serial No. 41,404
In Italy September 27, 1934
2 Claims. (Cl. 138—49)

1. A flexible tube of the character described, comprising a plurality of truncated conical ring sections secured together in alternate positions to constitute a bellows member, end plate members having open portions respectively secured to the conical rings constituting the opposite ends of said bellows member, and a flexible inextensible cable within said tube secured at its opposite ends to said end plate members, causing the internal volume of the tube to remain constant when bent and ensuring flexing of the tube when the pressure therein exceeds the pressure on the exterior of said tube.



2,100,836
LIGHT MODULATING CELL
Stewart L. Clothier, Hasbrouck Heights, and Harold C. Hogencamp, Fairlawn, N. J., assignors to Kolorama Laboratories, Inc., Newark, N. J., a corporation of New Jersey
Application June 4, 1936, Serial No. 83,588
13 Claims. (Cl. 88—61)

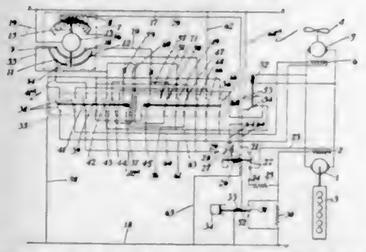
1. A light modulating cell comprising a body of birefringent fluid, an elongated hollow electrode immersed in said fluid, a filament electrode extending coaxially within said hollow electrode and separated from the hollow electrode by said birefringent fluid, and means for passing a beam of light longitudinally through said hollow electrode.



2,100,837
SPARK METER
Irven E. Coffey, Playa del Rey, Calif.
Application October 22, 1931, Serial No. 570,447
12 Claims. (Cl. 175—183)

10. A spark coil testing device comprising a casing, a bimetallic thermostat having one end fixed with respect to said casing and the other end free, a second bimetallic thermostat having one end attached to the free end of the first thermostat and its other end free, a scale, a pointer connected to the free end of the second thermostat and cooperating with said scale, said thermostats being oppositely connected and arranged to eliminate variations in the position of said pointer due to variations in ambient temperature, an electric terminal connected to the first of said thermostats, and an electrode mounted adjacent one of said thermostats in such relation as to form a spark gap between the thermostat and said electrode.

11. A test set comprising a heat responsive device shaped in the arc of a circle, a pointer connected thereto, an electrode centrally mounted within and closely adjacent to said heat responsive device, said heat responsive device being of the bimetallic type, whereby said sparks may jump with equal facility between said electrode and different parts of the thermostatic device.

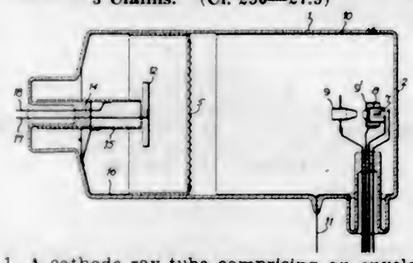


2,100,838
DRYING TUNNEL
Anson W. De Vout, La Grange Park, Ill., assignor to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware
Application December 11, 1935, Serial No. 53,881
4 Claims. (Cl. 34—12)

1. In a poultry treating apparatus including an enclosure having a vertical partition spaced from one end thereof providing a temperature control chamber and a product treating chamber, an opening through said partition and means for admitting air to said temperature control chamber, a heat exchange unit mounted in said temperature control chamber at said opening, means for forcing air currents from said temperature control chamber and through said product treating chamber, a conveying means in said product treating chamber for the carriage of product in the path of said forced air currents and fan means angularly suspended above the conveying

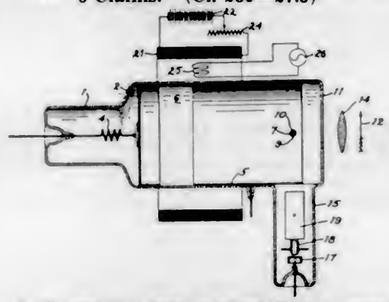
means for causing a portion of said forced air currents to be recirculated in a direction downwardly against the product carried on said conveying means.

2,100,839
ELECTRIC SHIP PROPULSION SYSTEM
George Ellis, Sudbury, England, assignor to The General Electric Company Limited, London, England
Application June 18, 1935, Serial No. 27,205
In Great Britain June 18, 1934
7 Claims. (Cl. 172—8)



7. An electric ship propulsion system comprising a direct current generator in closed circuit with a propulsion motor, field coils for the generator and motor respectively, a controller, contactors arranged to be operated by the controller for directing an energizing current through the motor field coil in one direction for ahead and the other direction for astern rotation of the motor, contacts operated by the respective contactors for establishing a circuit for energizing the field coil of the generator by current flowing in the same direction for both ahead and astern rotation of the motor, controller operated means for deenergizing the generator field coil in advance of operation of said contactors for effecting a reversal of the current in the motor field coil and a voltage relay operated by said generator-motor circuit for preventing operation of said contactors for effecting reversal of the current in the motor field coil until the voltage in the generator-motor circuit drops below a prearranged minimum.

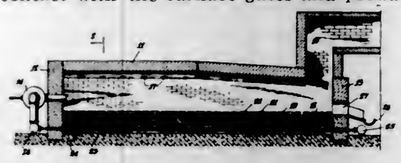
2,100,840
MOTOR VEHICLE LICENSING SYSTEM AND TAG THEREFOR
Charles E. Elmore, Chicago, Ill.
Application January 18, 1936, Serial No. 59,747
3 Claims. (Cl. 40—2.2)



1. A vehicle license sticker, comprising a decalcomania film having the license identifying indicia perforated therein, a background strip overlying the back of the perforated portion of said film, and means having an adhesive coating by which it is pasted to the back of said film for securing said strip in place, the face of the perforated portion of the film and the surface of the background strip covering the rear of said perforated portion being in contrasting colors.

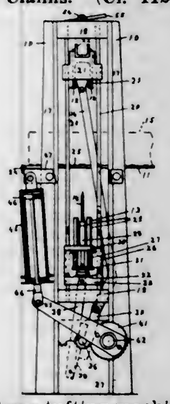
2,100,841
IMAGE ANALYSIS TUBE
Philo T. Farnsworth, San Francisco, Calif., assignor to Farnsworth Television Incorporated, San Francisco, Calif., a corporation of California
Application September 7, 1935, Serial No. 39,605
3 Claims. (Cl. 250—27.5)

1. A cathode ray tube comprising an envelope containing an apertured control electrode having a photosensitive face and an opposite insulating face, a cathode and anode cooperating when energized to direct an electron beam of elemental cross section against said photoelectric face, and a collecting anode adjacent said insulating face.



2,100,842
CHARGE STORAGE TUBE
Philo T. Farnsworth, San Francisco, Calif., assignor to Farnsworth Television Incorporated, San Francisco, Calif., a corporation of California
Application September 14, 1935, Serial No. 40,563
6 Claims. (Cl. 250—27.5)

1. A thermionic tube comprising an envelope containing a photoelectric cathode having a surface of picture area capable of emitting electrons when illuminated, a single linear electrode having a complete covering of insulating material and extending across one major dimension of said surface and spaced therefrom, a cathode and anode cooperating to produce an electron beam defined to an elemental dimension in the direction of extent of said linear electrode, and a pair of deflection plates positioned to deflect said beam along said linear electrode when energized.

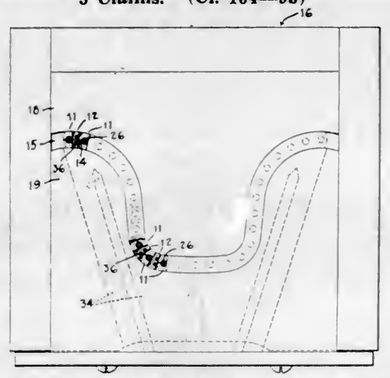


2,100,843
FURNACE FOR TREATING PHOSPHATE MATERIAL
Samuel Fischer, New York, N. Y., assignor to The American Agricultural Chemical Company, Newark, N. J., a corporation of Delaware
Application July 28, 1936, Serial No. 92,985
1 Claim. (Cl. 263—15)

A furnace for the thermal treatment of phosphate material, having bottom and side walls of refractory material and having means for delivering phosphate material into the furnace at the sides thereof to form side piles of the charge with a slag and alloy trough therebetween, air preheating piping extending through the refractory bottom wall of the furnace and wholly out of contact with the furnace gases and products

of combustion but exposed to heat passing from slag and alloy in said trough by conduction through said refractory bottom wall, means for supplying air to said piping, a burner for projecting a flame of burning fuel longitudinally of said trough, and means for delivering preheated air from said piping to the burner.

2,100,844
MATTRESS TUFTING MACHINE
William B. Foster, Utica, N. Y., assignor to Foster Brothers Manufacturing Company, Utica, N. Y., a corporation of New York
Application February 5, 1936, Serial No. 62,500
7 Claims. (Cl. 112—3)

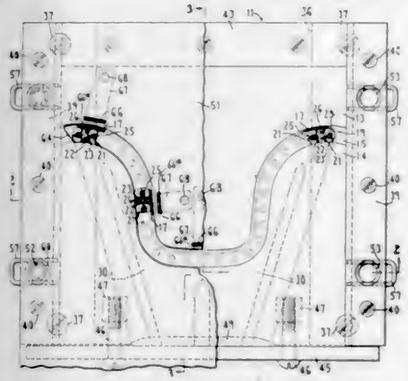


1. In a mattress tufting machine, the combination of a frame having two spaced vertical standards, a numerously-perforated mattress-supporting platform mounted horizontally between said standards, a compressor above said platform and slidingly mounted in said standards for vertical movement, a needle-carrying bar located below said platform and slidingly mounted in said standards for vertical movement, needles upstanding in said needle bar, means for lowering said compressor to compress the portion of a mattress therebelow on the platform, means for raising said needle bar and thereby pushing its needles through the apertured platform and their points through the compressed portion of the mattress and a non-automatic compressed-air operated mechanism operatively connected to said means for moving the needle-bar, said compressed air mechanism including a cylinder, a piston reciprocatingly mounted therein and air valves for passing compressed air selectively to the opposite ends of said cylinder, said valves being manually controlled for each separate reciprocation of the piston whereby the needles are raised with a yielding pressure derived from only one, separate, manually initiated and controlled stroke of the piston.

2,100,845
PRODUCT FOR INCREASING THE SLIP OF TEXTILE MATERIALS
Ehrhart Franz, Leipzig, and Max Hardtmann, Naunhof, near Leipzig, Germany
No Drawing. Application April 14, 1934, Serial No. 726,656. In Germany April 18, 1933
3 Claims. (Cl. 87—9)

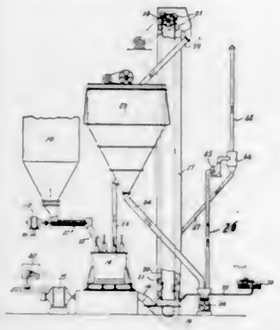
1. A new product for increasing the facility of slip of textile material, consisting of an emulsion of paraffin, said paraffin having hydrophobic and slip producing properties and further being insoluble in water; a hydrophilic polar substance insoluble in water having an alkyl radical of at least 10 carbon atoms and a hydrophilic group chosen from the group of radicals which consists of the hydroxyl, the acid amide, the sulphamide and the carbamide radicals; and a hydrophilic water soluble polar compound comprising a salt of an organic acid having emulsifying properties and carrying an alkyl group having at least 10 carbon atoms as paraffinlike pole and an acid group characterized by solubility in water.

2,100,846
CUTTER FOR SHEET MATERIAL
Merle E. Halstead, Owego, N. Y.
Application September 24, 1936, Serial No. 102,383
5 Claims. (Cl. 164—93)



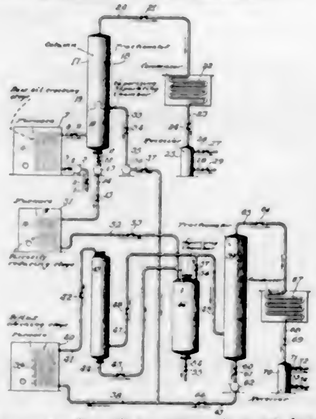
4. Punching apparatus including in combination a plurality of blocks each of which has widely spaced lugs extending from one side, and less widely spaced lugs extending from the other side, the difference in spacing of said lugs being such that the less widely spaced lugs on each block fit between the other lugs of the adjacent block, a pin extending through the overlapping lugs and pivotally connecting the blocks together into a flexible chain, separate tubular cutters extending through the top faces of individual blocks of the chain, and passages in said blocks in position to receive the punchings from the tubular punches, said passages opening through the side faces of the blocks so that the chain can be supported on a solid base plate.

2,100,847
DIE STRUCTURE
Merle E. Halstead, Owego, N. Y.
Application September 24, 1936, Serial No. 102,384
12 Claims. (Cl. 164—29)



12. A cutting die comprising a flexible cutter, a base supporting the flexible cutter, members on

the base on opposite sides of the cutter and forming a channel of a given shape for holding the flexible cutter to the desired contour to be cut, means detachably securing the holding members in position so that said members are readily interchangeable with others of different contour, a stripper plate above the base and having a slot with a contour corresponding to that of the channel which holds the flexible cutter, studs ex-



tending downward from the stripper plate, a bushing around each stud, a stop at the lower end of each stud to limit its upward movement through the bushing, a spring compressed between the stripper plate and each of the bushings for yieldably holding the stripper plate above the base and cutter, and clips extending through the base and into the bushings for detachably connecting the bushings and the base.

2,100,848
FEEDER CONTROL MECHANISM
Ralph M. Hardgrove, Westfield, N. J., assignor to The Babcock & Wilcox Company, Newark, N. J., a corporation of New Jersey
Application April 3, 1934, Serial No. 718,756
8 Claims. (Cl. 83—44)

7. In combination, a casing, an endless bucket elevator in said casing, means for supplying material to said casing to be raised therein by said elevator, and means responsive to variations in the air pressure in said casing effected by changes in the amount of material falling from said elevator during operation for controlling the operation of said material supplying means.

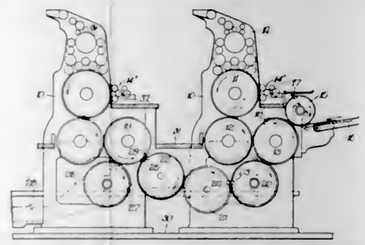
2,100,849
CONVERSION OF HYDROCARBON OILS
Jacob B. Heid, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware
Application August 17, 1935, Serial No. 36,616
5 Claims. (Cl. 196—49)

1. A process for the conversion of hydrocarbon oils which comprises subjecting hydrocarbon oil charging stock containing intermediate and residual portions of petroleum to conversion conditions of cracking temperature and superatmospheric pressure in a first cracking stage, separating the resulting vaporous and liquid conversion products, subjecting the vapors to fractionation whereby their insufficiently converted components are condensed as reflux condensate, recovering a desirable light distillate from the fractionated vapors by condensation, subjecting the reflux condensate to independently controlled conversion conditions of superatmospheric pressure and relatively higher temperature in a second cracking stage of the same system, separating the resulting vaporous and liquid conversion products, subjecting the latter to further vaporization at substantially reduced pressure relative to that at which they are produced, subjecting said liquid conversion products from the first cracking stage to further relatively mild conversion at cracking temperature and superatmospheric pressure for the purpose of materially reducing their viscosity, thereby forming additional vaporous and liquid conversion products, commingling the latter with the nonvaporous conversion products from said second cracking stage and recovering the commingled residual liquids, subjecting the vaporous products from said viscosity reducing operation and from said second cracking stage to fractionation for the formation of reflux condensate, returning the latter to said second cracking stage for further conversion, subjecting fractionated vapors of the desired end-boiling point from the last mentioned fractionating step to condensation, and recovering the resulting distillate.

2,100,850
HAIR CURLER
Walter H. Hermsdorf, Chicago, Ill., assignor to Chain Store Products Corporation, Chicago, Ill., a corporation of Delaware
Application October 24, 1935, Serial No. 46,545
12 Claims. (Cl. 132—33)

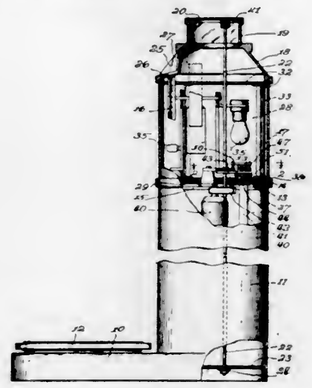
1. A hair curler including a tubular body composed of a pair of elongated, substantially semi-

circular members positioned one on another and having portions cut away to form a pair of diametrically opposed, open end elongated slots for receiving a strand of hair therein, preparatory to curling, and means associated with said



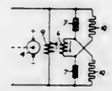
members for yieldingly urging one toward the other for causing the edges of said slots to exert slight frictional pressure on the strand of hair when it is first inserted in the slots to facilitate curling the hair around the body.

2,100,851
HAIR CURLER
Walter H. Hermsdorf, Chicago, Ill., assignor to Chain Store Products Corporation, Chicago, Ill., a corporation of Delaware
Application December 5, 1935, Serial No. 52,964
8 Claims. (Cl. 132—31)



1. A hair curler which comprises, a pair of elongated members of semi-tubular form pivotally associated with each other adjacent one end, a resilient tube circumscribing said members adjacent said pivot point to resiliently urge said members into longitudinal contact with each other to grip a strand of hair between their longitudinal edges, the edges of one of said members at the end opposite the pivot being tapered to form a mouth to facilitate the introduction of a strand of hair between said members.

2,100,852
PRINTING PRESS
Arthur G. Jacobson, Chicago, Ill., assignor to The Miehle Printing Press and Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application April 20, 1935, Serial No. 17,383
26 Claims. (Cl. 101—137)

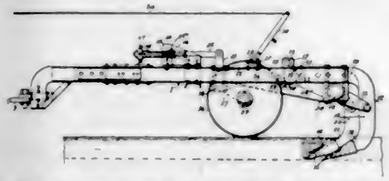


1. In a sheet fed rotary printing press, the combination of two or more substantially identical printing couples arranged for unit operation, and a plurality of rotary sheet transfer members between adjacent printing couples, each of said transfer members having an operative diameter substantially equal to that of the members constituting said printing couples, and being provided with sheet engaging elements to take a sheet from one couple and carry it past the printing member of said couple to the impression member of the succeeding couple.

2,100,853
DISPLAY DEVICE
Ode D. Jennings, Chicago, Ill., assignor to O. D. Jennings & Company, Chicago, Ill., a corporation of Illinois
Application March 4, 1937, Serial No. 128,905
3 Claims. (Cl. 40—33)

1. A display device including a column having a section consisting of a glass cylinder, a cylindrical display carriage rotatably mounted within said cylinder, illuminating means within the display carriage, means supporting said carriage for rotation, a motor and Geneva elements for rotating said carriage step by step, and a plurality of transparent or translucent displays mounted on said carriage.

2,100,854
GENERATOR REGULATION
Richard H. Kaufmann, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application August 27, 1935, Serial No. 38,041
3 Claims. (Cl. 171—229)



1. In combination, a variable speed driven main generator having a shunt-connected field winding the current in which is substantially affected by normal changes in voltage of said generator, an auxiliary direct current generator arranged to be driven directly from said main generator and having its armature connected in series opposition with the shunt field winding of said main generator, a field winding for said auxiliary generator connected to be energized from across the circuit of said main generator, and a two-terminal resistance element the resistance of which between said two terminals decreases substantially with increases in voltage applied between said two terminals connected in series with the field winding of said auxiliary generator so as to cause a percentage current change therein which is sufficiently greater than a percentage voltage change producing it to cause the voltage of said main generator to be substantially independent of its speed over a relatively wide range in normal operation.

2,100,855
OIL APPLICATOR
Norval Ray Kelly, Douglaston, Long Island, N. Y.
Application August 27, 1936, Serial No. 98,262
3 Claims. (Cl. 132—1)

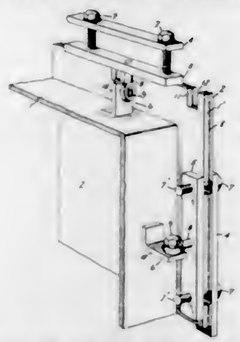
1. An oil applicator comprising a hollow shell having an open bottom side and a top side with a cap inlet for oil and other liquids, a sponge holding shell engaged a limited distance in the open bottom of said hollow shell, a sponge in the outer side of said hollow shell, the inner wall of said hollow shell being perforated for the passage of oil and liquids from the hollow shell to the sponge, and means for controlling the seepage of the oil and liquids through said perforations, comprising a perforated disc rotatively mounted upon said inner wall and having apertures adapted to align with or be out of alignment with said perforations, said disc having a projecting element engageable with a stationary member upon said hollow shell, whereby the hollow shell may be turned relative to the sponge holding shell for moving the disc relative to said inner wall.

2,100,856
REVOLVING RIPPER
Robert Killefer, Los Angeles, Calif., assignor, by mesne assignments, to Killefer Manufacturing Corporation, a corporation of California
Application July 5, 1935, Serial No. 29,897
10 Claims. (Cl. 97—103)

1. In an implement of the kind described, the combination of a frame adapted to be advanced over the ground, a plurality of arms mounted for rotation on the frame on a transverse axis and carrying tools respectively at their lower ends, each of said arms having two extensions substantially at right angles to each other with said axis of rotation located in the angle between said extensions, movable means in the path of the arms for normally holding the said arms in a position to maintain the tools at or about the ground level, said arms capable of being revolved on the axis in a rearward direction at their lower ends, to swing them over the axis, and means carried by the arms to engage said movable member to hold the arms in an inactive position with the tools held elevated.

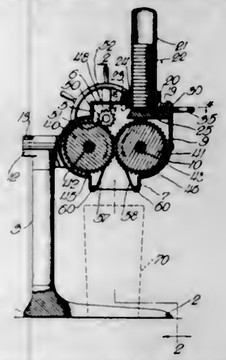
2,100,857
DEVICE AND METHOD FOR ACQUIRING RHYTHM IN STUDY OF MUSIC
Boris M. Lang, Fairfield, Conn.
Application May 1, 1935, Serial No. 19,204
7 Claims. (Cl. 84—484)

1. In a device of the character described, a series of blocks of which different individual blocks are of different relative lengths corresponding to the relative time values of different musical notes, a holder having means to hold a series of these blocks in end to end relation, said blocks having means to provide a break in the continuous surfaces of the blocks at the joints



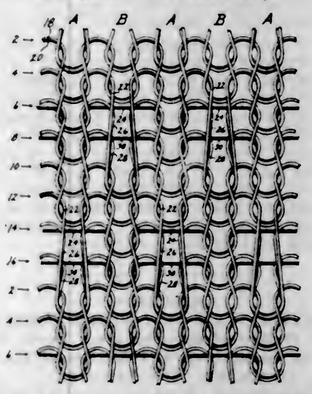
between them, and a sounding device to be moved over the blocks lengthwise thereof and adapted to sound a beat as it passes over a break.

2,100,858
CONTAINER
Ernest A. Lenk, Philadelphia, Pa., assignor of one-half to George H. Morningstar, Philadelphia, Pa.
Application September 23, 1935, Serial No. 41,672
5 Claims. (Cl. 206—44)



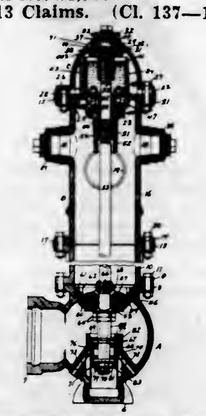
1. A container comprising a base, an upstanding band having means for securing same to said base, a closure extending across the top and over the outside of said band and the peripheral edge of said base, and a cylindrical ring having a preformed bead for engaging the closure and holding same securely against said base, said cylindrical ring being of substantial height and having its bottom portion continuous, and having diagonal scorings therein to enable the cylindrical edge to be turned inward to impinge the bottom of said base to hold same in position.

2,100,859
CLAMPING AND SEALING DEVICE
Leonard J. Linde, Aldan, Pa., assignor to General Electric Company, a corporation of New York
Application December 28, 1934, Serial No. 759,556
6 Claims. (Cl. 292—256)



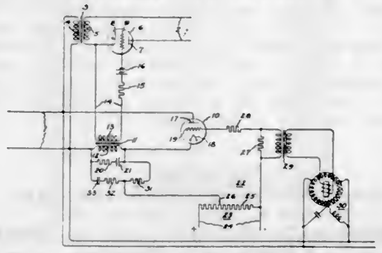
1. A clamping and sealing device for relatively movable members comprising a clamping strip mounted for lateral movement on one of said members, a second clamping strip movable with said first-named strip, said members positioned between said clamping strips in clamping position, and means for drawing together said strips for sealing said members.

2,100,860
TABLET CRUSHING AND DISPENSING DEVICE
Frederick A. Lobley, Elkhart, Ind., assignor to Dr. Miles Laboratories, Inc., Elkhart, Ind., a corporation of Indiana
Application February 25, 1933, Serial No. 658,514
13 Claims. (Cl. 83—12)



1. A portable dispensing and crushing machine adapted for counter use for preparing material in tablet form for drinks and the like comprising a substantially closed container comprising an inverted tubular bottle adapted for holding the tablets, a substantially closed casing having a short tubular socket with a resilient annular sealing and gripping ring mounted therein and into which the lower portion of said container extends and is resiliently held and sealed, means in said casing for crushing said material, and feeding means comprising a reciprocable slide operating within said casing for carrying and delivering given quantities of the material within the casing from the lower portion of said container laterally to said crushing means along a path of movement within said casing which is normally inaccessible to contamination and the like.

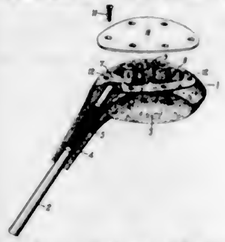
2,100,861
KNITTED FABRIC
Elmer C. Lochhead, Moberly, Mo., assignor of one-half to Charles R. Henderson, Moberly, Mo.
Application October 27, 1932, Serial No. 639,761
4 Claims. (Cl. 66—198)



1. A knitted run-resist fabric, at least a portion of substantial area of which includes two yarns and has in each wale a periodically recurring series of stitches including, in one course, a tuck stitch including both yarns, in the next course a tuck stitch including one yarn with the other yarn floating, in the next course a normal stitch of the first yarn with the second yarn floating and in a plurality of subsequent courses normal stitches including both yarns, the tucks and floats in alternate wales occurring in courses in which normal stitches of both yarns occur in intermediate wales.

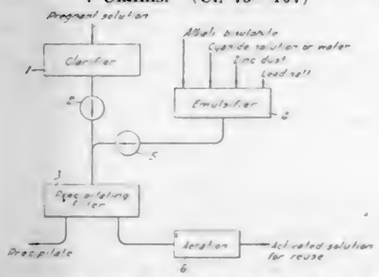
2,100,862
FIRE HYDRANT
Herbert M. Lofton, Chattanooga, Tenn.
Original application March 2, 1933, Serial No. 659,293. Divided and this application June 4, 1935, Serial No. 24,937
13 Claims. (Cl. 137—13)

1. In a fire hydrant having a bonnet, a main valve, a reciprocating valve rod, a rotatable nut for reciprocating the valve rod, and an oil reservoir surrounding a part of said valve rod, said valve rod when at its lowest position being adapted to entrap oil in said nut and when raised to distribute said entrapped oil to lubricate the valve operating mechanism.



2,100,863
ELECTRIC VALVE CIRCUIT
Harold W. Lord, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application October 31, 1936, Serial No. 108,645
11 Claims. (Cl. 250—27)

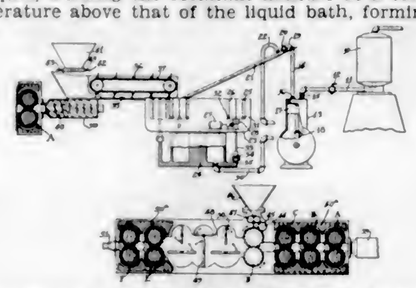
1. In combination, an alternating current circuit, an electric valve means connected therein, and means for rendering said electric valve means conductive at a predetermined time during a predetermined half cycle of voltage of a pre-



determined sign being responsive to an electrical condition of said electric valve means for advancing the time during successive half cycles of voltage of the same sign at which said electric valve means is rendered conductive.

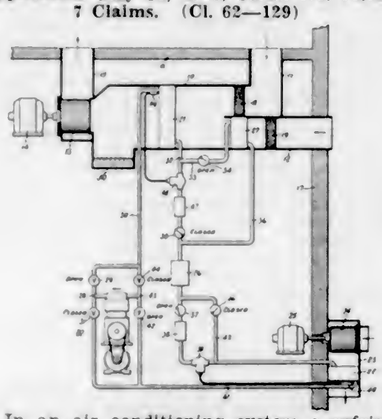
2,100,864
GOLF CLUB AND METHOD OF MAKING SAME
Clarence W. Mansur, Malden, Mass., assignor to General Electric Company, a corporation of New York
Application May 19, 1932, Serial No. 612,268
10 Claims. (Cl. 273—77)

1. A golf club comprising a hollow steel shaft and a head molded directly onto an end of the shaft, said head comprising relatively small pieces of woven textile material united and held in a highly compressed state by an artificial resin.



2,100,865
CYANIDE PROCESS
Louis D. Mills and Thomas B. Crowe, Palo Alto, and Joye C. Haun, San Francisco, Calif., assignors to The Merrill Company, San Francisco, Calif., a corporation of California
Application June 3, 1935, Serial No. 24,596
7 Claims. (Cl. 75—107)

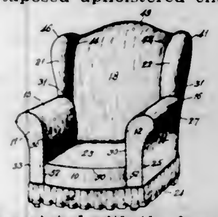
1. In a process for the treatment of alkaline cyanide solution containing dissolved precious metals, to effect precipitation of the same, mixing zinc dust with alkali bisulphite in aqueous solution, whereby only a part of the zinc reacts with alkali bisulphite to form hydrosulphite, and then introducing the resulting mixture into the cyanide solution to be precipitated.



2,100,866
MANUFACTURE OF OLEOMARGARINE
Howard A. Morris, Toledo, Ohio
Application March 27, 1935, Serial No. 13,291
2 Claims. (Cl. 99—122)

1. The method of continuously and uniformly producing margarine, which consists in spraying predetermined charges of emulsion into a cold liquid bath of maintained temperature to form granular particles, centrifuging said particles and liquid to remove a predetermined quantity of the liquid, working the resultant mixture at a temperature above that of the liquid bath, forming

depressions in said mixture, filling said depressions with milk to insure uniform charges of the latter to the mixture, and again working said mixture.

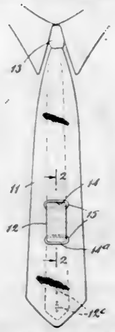


2,100,867
AIR CONDITIONING SYSTEM
Olaf M. Olson, Margate, N. J., assignor to General Electric Company, a corporation of New York
Application July 31, 1936, Serial No. 93,613
7 Claims. (Cl. 62—129)

1. In an air conditioning system a refrigerating machine including a condenser and an evaporator, means including a duct for circulating air over said condenser to heat said air, means for circulating cooling fluid over said evaporator, means including a heat exchange element arranged in front of said condenser for cooling refrigerant liquefied in said condenser and for heating air circulated through said duct prior to its passage over said condenser, means for reversing the refrigerant circuit of said refrigerating machine to cool the air passing through said duct, and means by-passing said heat exchange element for excluding said element from the circuit of said refrigerating machine when said circuit is reversed.

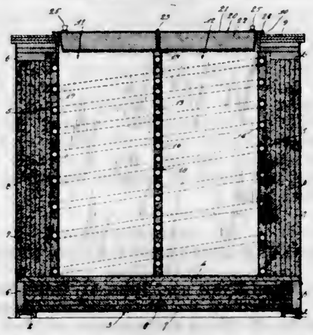
2,100,868
SLIP COVER FOR FURNITURE
Arthur Oppenheimer, Jr., New York, N. Y.
Application September 4, 1935, Serial No. 39,092
6 Claims. (Cl. 155—182)

6. An upholstered chair comprising a seat portion, a back portion and arms, a covering for said chair comprising a cover portion for the inner and outer surfaces of the back portion of the chair, compartment portions for both the inner and outer surfaces of said arm portions of the chair, and a covering portion for the top surface of the seat portion of the chair, said covering portions being connected, said covering comprising material inherently stretchable in both directions whereby the covering may be drawn over the chair under tension both in the direction of the width and the length of the chair, the portion of said cover overlying the top edge of the back portion being under tension and in close surface engagement with said top edge of the back portion, said cover including surplus material tucked between the lower front surface of the back portion and the rear surface of the seat portion and on both sides of the chair between the side surfaces of the seat portion and the lower portions of the chair arms, said tucked-in portions being retained in such tucked-in position by frictional engagement of said cover material and the juxtaposed upholstered chair material,



and means associated with the lower portions of the cover for securing the same relative to the bottom of the chair, the respective portions of said covering overlying the back, arm and seat portions of the chair being in frictional surface engagement with the said corresponding portions of said chair and tightly stretched over the said chair portions, the portions of the covering during the use of the said chair stretching to conform to the contour of such portions of the chair which are depressed from their normal configuration and resuming their normal condition when the depressed portions of the chair return to their normal contour, the frictional and tensional surface contact between the upholstering material and the stretchable material of said covering retaining said materials in substantially smooth, wrinkleless relation when said chair-back and seat are released from the depressive action resulting from the use of the chair.

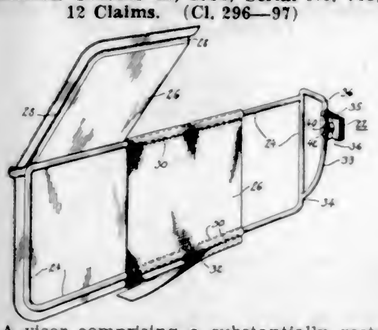
2,100,869
GARMENT
Robert S. Oscard, New York, N. Y., assignor to H. Loeb & Co., Inc., New York, N. Y.
Application June 30, 1936, Serial No. 88,105
3 Claims. (Cl. 2—90)



1. A garment comprising a top having the form of a shirt and a bottom in the form of a crotch-piece, the bottom of the front of the shirt having an arcuate-like opening, the marginal edges of the crotch-piece and the opening having a binding, elastics disposed in the binding of the crotch-piece and terminating at said opening, and means for fastening the crotch-piece to the edge of said opening.

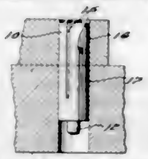
2,100,870
NECKTIE
Edward R. Petrie and Nellie M. Petrie, New York, N. Y.
Application May 9, 1936, Serial No. 78,764
14 Claims. (Cl. 2—145)

1. A necktie of the class described consisting of inner and outer end portions arranged one upon another when the tie is in use, the outer end portion of the tie having an opening extending therethrough, said opening forming a passage opening through both side surfaces of said outer end portion, and a part of the inner end portion of the tie being adapted to pass outwardly through said opening and be exposed at the outer surface of the outer end portion of the tie.



2,100,871
CABINET
Louis A. M. Phelan, Chicago, Ill., and Lawrence E. Koch, Beloit, Wis.
Application October 21, 1935, Serial No. 45,864
3 Claims. (Cl. 62—99)

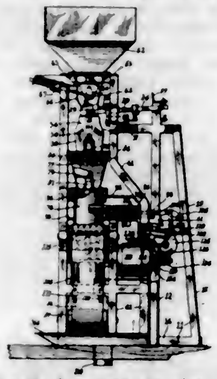
1. A cabinet of the character described comprising an insulated box having two elongated and closely adjacent unobstructed open top rectangular longitudinal chambers therein with a thin partition therebetween, a refrigerant conduit in said partition, a plurality of reversible pairs of freely removable transversely opening



doors covering said open top, each pair of doors being hinged together in the plane of said partition and having their outer ends supported by the side walls of said cabinet and their inner ends supported by said partition and cooperating therewith to seal said chambers.

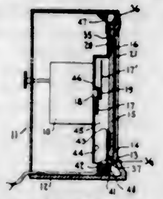
2,100,872
VISOR CONSTRUCTION
Meredith S. Randall, Detroit, Mich., assignor to Woodall Industries Incorporated, Detroit, Mich., a corporation of Michigan
Application October 12, 1934, Serial No. 748,049
12 Claims. (Cl. 296—97)

5. A visor comprising a substantially rectangular wire frame carrying a panel and having at one end a supporting arm extended transversely of and laterally offset from the frame of the visor and being rigid with said visor frame and a supporting bracket slidably and rotatably engaging said arm.



2,100,873
DOWEL STRUCTURE
Russell M. Roberts, Detroit, Mich.
Application December 28, 1935, Serial No. 56,444
3 Claims. (Cl. 85—2.8)

1. A dowel pin construction comprising an integral cylindrical body provided with a uniformly tapered bore and a plurality of slots extending completely through the cylinder wall and extending from each end to points beyond the center of said body, the slots extending from one end being circumferentially spaced relative to the slots extending from the other end, and a correspondingly tapered pin receivable in said bore, said pin being of greater length than said cylindrical body.

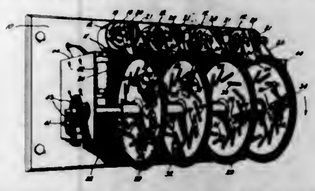


2,100,874
AUTOMATIC WEIGHING AND FEEDING MACHINE
William Miles Ryan and John W. Bold, Brooklyn, N. Y., assignors to Ryan Coffee Corporation, Brooklyn, N. Y., a corporation of New York
Application August 21, 1934, Serial No. 740,738
14 Claims. (Cl. 248—18)

1. Apparatus of the type described which comprises weighing mechanism having a series of independently actuated weighing buckets and discharge means therefor, individual supply means for each of said buckets, means to close said supply means when said buckets have a predetermined weight of material and timed means to actuate said discharge means simultaneously, means actuated by predetermined weight of material in said buckets to control said discharge

means, and means to move a series of containers corresponding to said series of weighing buckets into position to receive material from said buckets between each discharging interval in timed cyclic sequence.

2,100,875
ILLUMINATED MEASURING DEVICE
Francis H. Scantlebury, Brooklyn, N. Y.
Application July 18, 1935, Serial No. 32,069
3 Claims. (Cl. 240—2.1)

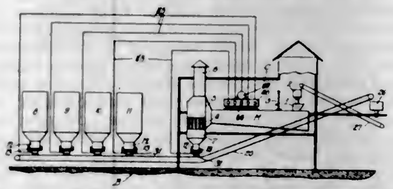


1. An illuminated measuring device, comprising a light-transmitting plate bearing configurations spaced over its outer face and having intermediate clear spaces, and individual separated light-refracting portions on its opposite face with opaque backing, said portions being located directly behind the corresponding configurations to afford individual illuminated fields for the respective configurations, an element movable in cooperative relation to the configurations and forming therewith a visible ensemble, and a source of light invisible from the front of the device and so located therein that part of the light rays therefrom pass into the configuration-bearing plate through an edge thereof to edge-illuminate the light-refracting field portions and from these the respective configurations, while other rays serve to illuminate the movable element.

2,100,876
CONTROL DEVICE
Elbert D. Schneider, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application August 27, 1936, Serial No. 98,199
12 Claims. (Cl. 74—70)

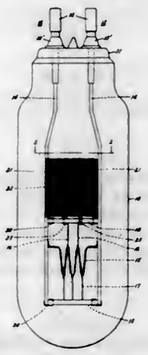
1. A time-cycle control device comprising control means including a movable element, a pair

of movable arms disposed in substantially parallell planes, means forming driving connections between each of said arms and said movable element, a rotatable disk disposed adjacent said arms, a plurality of cams secured to said disk for selectively engaging said arms as said disk



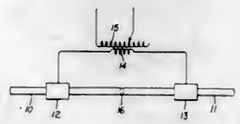
rotates, means for rotating said disk, and means for adjusting said cams relative to each other to vary the respective times at which said movement of said arms is initiated by said cams, and relative to said disk to vary the rate of movement of said arms by said cams and the amount of said movement.

2,100,877
MILK STOOL
Myron Severance, Rochester, Mich.
Application January 9, 1936, Serial No. 58,245
18 Claims. (Cl. 31—56)



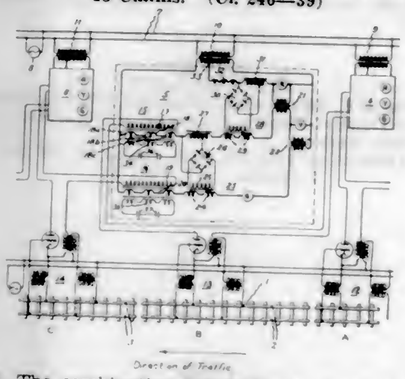
5. In a milk stool, the combination of a seat member having a well portion extended to form a hollow roll-over edge portion extending around the periphery of said seat member, said hollow roll-over edge portion being open at its inner side to facilitate use as a handle member for the milk stool, and leg members connected with inside surfaces of said hollow roll-over edge portion of said seat member.

2,100,878
SINTERING SYSTEM
Edward W. Shallock, Chicago, Ill., assignor to American Ore Reclamation Company, Chicago, Ill., a corporation of New York
Application May 8, 1935, Serial No. 20,319
7 Claims. (Cl. 221—122)



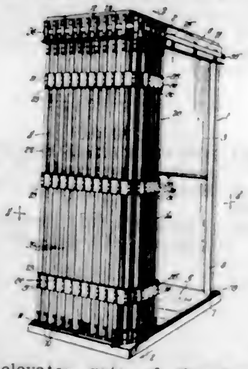
5. In a system for supplying granular-like materials having different rates of flow, for producing a mixture thereof in desired proportions, a plurality of bins containing the materials, a conveyor, and remotely controlled electrically actuated means comprising control rheostats and effective for delivering materials from said bins to said conveyor in predetermined proportionate amounts and selectively varying at will the rate of delivery of material from the individual bins during and independently of the rate of continued delivery of materials from the remainder of said bins.

2,100,879
ELECTRIC LAMP
Richard E. Smith, East Cleveland, Ohio, assignor to General Electric Company, a corporation of New York
Application July 29, 1936, Serial No. 93,236
4 Claims. (Cl. 176—16)



1. An electric lamp comprising a bulb having a gaseous atmosphere therein, a metallic light source in said bulb defining a substantially vertical plane and a flat screen located substantially in the plane of said light source and above said light source when the lamp is in use so as to extend along the path of particles vaporized from said light source.

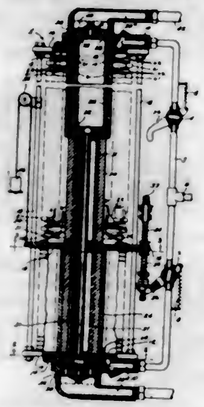
2,100,880
METHOD OF FLASH WELDING
Numan R. Stansel, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application January 2, 1936, Serial No. 57,131
5 Claims. (Cl. 219—10)



1. The method of flash welding steel which includes the step of storing heat in the end portions of the parts to be welded prior to the welding operation by passing current through said parts and an interposed element fusible at a temperature below the critical range of temperature of said parts until said element begins to fuse, the quantity of heat stored in the end portions of said parts being sufficient to lower the hardness of the resulting weld by effectively delaying the rate of cooling of the metal in the welding zone after the weld has been completed.

2,100,881
SIGNAL SYSTEM
Chauncey G. Suits, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application March 12, 1936, Serial No. 68,405
13 Claims. (Cl. 246—39)

1. The combination comprising a plurality of signals, means for de-energizing one of said signals by current supplied from the energizing circuit of a second of said signals, and additional means for de-energizing said second signal when the normal energizing circuit of said first signal is broken.



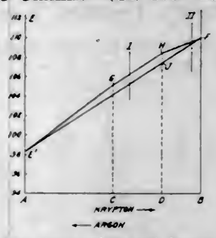
2,100,882
ELEVATOR GATE
Joseph C. Tamsitt, Aurora, Ill., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill., a corporation of Illinois
Application April 27, 1936, Serial No. 76,536
3 Claims. (Cl. 39—86)

1. In an elevator gate of the around-the-corner type, a plurality of vertically disposed bars spaced apart in the direction of gate travel, and a plurality of flexible non-metallic horizontal bands of sound deadening material connected to the bars and having sufficient thickness to maintain the bars in spaced apart relation and to prevent being kinked in operation.

2,100,883
APPARATUS FOR COOLING SYSTEMS
Edward Tauer, Bellerose, N. Y.
Application September 8, 1936, Serial No. 99,832
8 Claims. (Cl. 62—126)

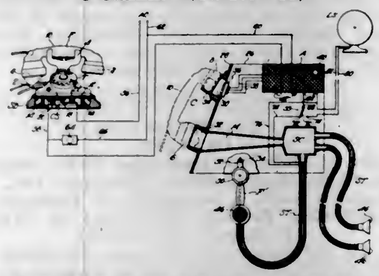
1. A device of the class described comprising a pair of expansible and collapsible compartments, and means for introducing a refrigerating medium into said compartments alternately.

2,100,884
APPARATUS FOR MAKING BRANCH CONNECTIONS
William W. Trickey, Verona, N. J., assignor to Lock Joint Pipe Company, East Orange, N. J., a corporation of New Jersey
Original application January 29, 1934, Serial No. 708,799, now Patent No. 2,050,985, dated August 11, 1936. Divided and this application November 21, 1935, Serial No. 50,927
7 Claims. (Cl. 285—108)



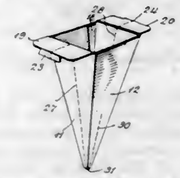
1. Apparatus for making a branch connection with a reinforced concrete pipe of the steel cylinder type having a concrete exterior, comprising in combination, a saddle for supporting the branch connection, said saddle having a bearing surface for contacting with the exterior wall of the concrete pipe with which connection is to be made, and an opening to frame an area of the exterior wall of the concrete pipe, a connector pipe carried by said saddle, means for supporting the saddle and connector pipe with the bearing surface of the saddle held against the exterior wall of the concrete pipe, said supporting means including bands adapted to be tensioned about the exterior of the concrete pipe, a tubular gland mounted within the opening in said saddle and adapted to extend beyond said opening and below the exterior surface of the concrete pipe against which the saddle is to rest, said gland and connector pipe together forming a conduit through the saddle for the conveyance of fluid between the interior of the concrete pipe and the connector pipe, and means carried by the connector pipe for maintaining the gland in sealing position against an interior portion of the wall of the concrete pipe to which connection is to be made.

2,100,885
METHOD FOR PRODUCING METALLIC WHEELS
John T. Trumble, Detroit, Mich.
Application September 10, 1932, Serial No. 632,505
15 Claims. (Cl. 29—159.03)



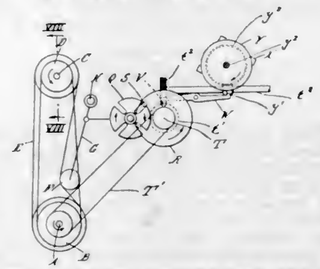
1. The method of producing a unitary spoke spider for vehicle wheels from a single strip of sheet metal which comprises die drawing the metal at spaced intervals to form a plurality of hollow elongated spoke members closed at their outer extremities, bending the strip into hoop form with the spoke members extending radially therefrom, and securing the adjacent ends of the strip of metal together whereby to preserve the hoop formation thereof.

2,100,886
ELECTRIC INCANDESCENT LAMP
Johannes A. M. van Liempt, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York
Application March 17, 1937, Serial No. 131,464
In Germany April 15, 1936
3 Claims. (Cl. 176—16)



1. An electric incandescent lamp having a gas filling consisting of krypton, argon and nitrogen, the amount of nitrogen being not more than twenty-five per cent by volume of the mixture, and the amount of krypton in the remaining krypton-argon mixture being between sixty per cent and ninety-five per cent by volume.

2,100,887
INTERIOR TELEPHONE EQUIPMENT
Richard Varley, St. George, Staten Island, N. Y., assignor to Inter-Outer Telephone Corporation, Dover, Del., a corporation of Delaware
Application August 31, 1935, Serial No. 38,691
6 Claims. (Cl. 179—81)



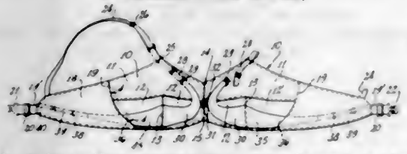
5. A unitary telephonic device adapted to be acoustically coupled to a French type telephone instrument of a public telephone system but electrically independent thereof, comprising in combination, a cabinet having openings in one of its walls so spaced as to correspond to the spacing of the transmitter and receiver of said French type telephone instrument, a microphone disposed adjacent one of said openings, a speaking tube having a mouthpiece at its free end and its other end terminating adjacent the other of said openings, an electronic amplifier connected to said microphone, an auxiliary receiver and a loud speaker, and selective means for connecting either said auxiliary receiver or said loud speaker to said electronic amplifier.

2,100,888
COLLAPSIBLE PAPER FUNNEL CONSTRUCTION
Oscar L. Vine, New York, N. Y.
Application January 27, 1936, Serial No. 60,974
10 Claims. (Cl. 226—38)

1. A collapsible paper funnel construction consisting of a plurality of triangular sections, one of which is provided with a flap extension to hold the funnel extended when it is being utilized, said triangular section and said flap extension being provided with a continuous crease enabling said triangular section and flap extension to be folded together and said paper funnel to be collapsed when the flap extension is in the same plane as said triangular section and said flap extension causing extension of said funnel when the flap extension is turned away from said triangular section.

2,100,889
SPEED CHANGING MECHANISM
Axel Charles Wickman, Coventry, England
Application April 12, 1935, Serial No. 15,992
In Great Britain April 13, 1934
10 Claims. (Cl. 74—217)

1. In speed changing mechanism, the combination of a driving shaft, a first group of belt pulleys carried thereby, a driven shaft, a second group of belt pulleys complementary to the first group of belt pulleys, undirectional means on said driven shaft supporting said second group of pulleys, belts for transmitting a drive from each belt pulley on the driving shaft to the corresponding opposite belt pulley on the drive shaft, said belts normally slack and inoperative, a complementary group of jockey pulleys, pivoted levers carrying said jockey pulleys, intermittent rotating



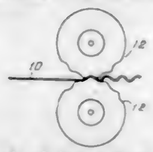
means to actuate each of said levers in a predetermined sequence to press one of said jockey pulleys against one of said belts to tension said belt so as to transmit rotation to said driven shaft, and power driven timing mechanism to control the movements of said intermittent rotating means, said timing mechanism including a clutch, a constantly rotating drum, and means operable by said drum to engage and disengage said clutch.

2,100,890

BRASSIÈRE

Max Witkower, Santa Monica, Calif.

Application May 28, 1937, Serial No. 145,282
5 Claims. (Cl. 2—42)



1. A brassière comprising: two breast pockets connected to each other; a band attached to each breast pocket adapted to pass around the body of the wearer; means for detachably connecting the free ends of the bands together; shoulder straps attached to the breast pockets and the bands; a supporting means on each breast pocket secured at one end to the central lower portion of the breast pocket and at its other end to the upper portion of the same breast pocket, the supporting means intermediate its ends extending toward the center of the brassière; and means on the brassière between the pockets for movably attaching said supporting means together.

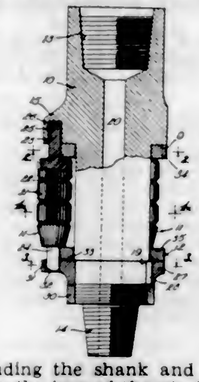
2,100,891

METHOD OF DRAWING FIBROUS THERMOPLASTIC SHEET MATERIAL

Paul R. Zinser, Detroit, Mich., assignor to Woodall Industries, Incorporated, Detroit, Mich., a corporation of Michigan

Application February 19, 1936, Serial No. 64,632
7 Claims. (Cl. 18—56)

1. That method of imparting a permanently deformed shape to a sheet of composition fibrous thermoplastic material which includes the preparatory step of subjecting the sheet to an operation which imparts progressively and successively a multiplicity of relatively small deformations thereto without appreciable stretching of the sheet and thereafter shaping said corrugated portion of the sheet flattening out said corrugations.



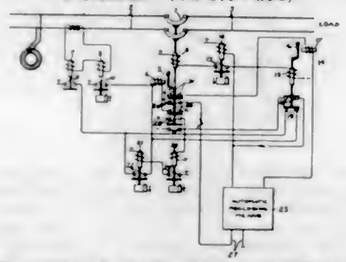
2,100,892

WELL REAMER

Walter A. Abegg, Los Angeles, Calif., assignor to Globe Oil Tools Company, Los Nietos, Calif., a corporation of California

Application October 2, 1936, Serial No. 103,625
14 Claims. (Cl. 255—73)

1. A well reamer including, a shank, roller cutters spaced about the shank, pins projecting from the opposite ends of the cutters, and rotatable



rings surrounding the shank and engaging the pins to receive the inward thrusts from the pins.

2,100,893

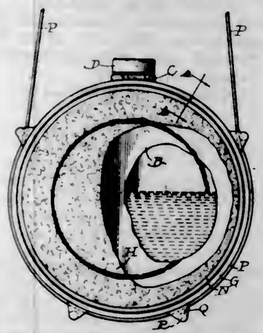
AUTOMATIC RECLOSING CIRCUIT BREAKER SYSTEM

Arvid E. Anderson, Drexel Hill, Pa., assignor to General Electric Company, a corporation of New York

Application September 11, 1936, Serial No. 100,289
6 Claims. (Cl. 175—294)

1. In combination, an electric circuit, a circuit breaker in said circuit, means responsive to a predetermined abnormal condition of said circuit, means for effecting the reclosing of said circuit breaker when it is open, and means controlled by said abnormal condition responsive means for effecting the opening of said circuit breaker in one predetermined manner prior to a predetermined opening of said circuit breaker and in a different manner after said predetermined opening and prior to a predetermined subsequent opening and in said first-mentioned predetermined manner after said subsequent opening when all of said circuit breaker openings occur within a predetermined time interval.

2,100,894



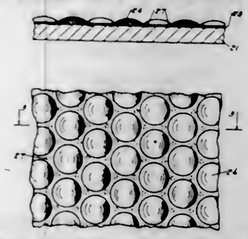
CANTEEN

Frank E. Anderson, Inglewood, Calif., assignor to Boyle Manufacturing Company, Inc., Los Angeles, Calif., a corporation of California

Application July 16, 1935, Serial No. 31,652
4 Claims. (Cl. 220—1)

1. In a structure of the class described, the combination of container having an annular wall and end walls joined by seams forming annular beads, projecting angularly beyond the corners formed by said walls, a fabric material covering the walls of said container and arranged with

margins overlapping said beads, and annular channeled members enclosing said beads and con-



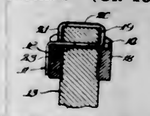
tracted into engagement with said seams and the margins of said fabric.

2,100,895

LINING FOR VESSELS

Harold R. Austin, South Norwalk, Conn., assignor to The M. W. Kellogg Co., New York, N. Y., a corporation of Delaware

Application October 9, 1935, Serial No. 44,136
5 Claims. (Cl. 196—133)



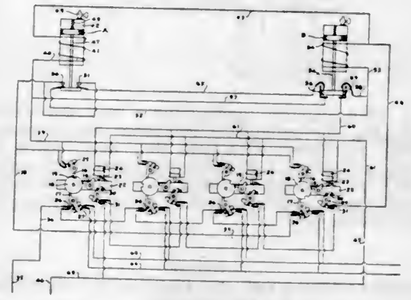
1. A vessel comprising a shell of comparatively low corrosion resistant material, a thin interior lining for said shell of comparatively high corrosion resistant material, said lining having portions thereof approaching the segmental spherical form and extending away from the vessel walls to provide stress relieving areas, said stress relieving areas being systematically distributed over the entire surface of said lining on a recurring parallelogram pattern with said areas centered on the corners of the said pattern, and means symmetrically positioned relative to said areas bonding said lining to said shell.

2,100,896

COTTER PIN

Bertram C. Behnke, Chicago, Ill.

Application June 1, 1937, Serial No. 145,776
9 Claims. (Cl. 151—5)



8. The combination of a threaded stud having a hole therethrough, and a slot at its end parallel to said hole, a nut screwed on the stud and having notches adapted to be alined with the hole, and a cotter pin having two legs, one extending from the junction of the legs through the hole, through a notch on the far side of the hole, and bent to extend along the nut parallel to the axis of the stud, and the other of the legs extending over the stud through the slot and along the stud in a direction parallel to the axis of the stud.

2,100,897

LOCKING SYSTEM

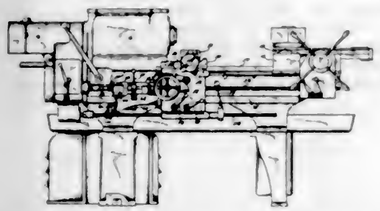
Maurice D. Bennett, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a corporation of Connecticut

Application April 3, 1935, Serial No. 14,426
38 Claims. (Cl. 70—263)

1. In a system of the class described, a structure to be locked, means for locking said structure against access, a time mechanism, a second time mechanism, means whereby said first time mechanism controls the operation of said structure locking means to permit the opening of the locked structure after the expiration of a predetermined time period, and means whereby said second time mechanism controls the said structure locking means to prevent opening of the locked structure regardless of the expiration of said predetermined time period.

2,100,898

LUNG EXERCISING TOY

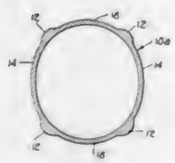


Willis J. Bernett, Kansas City, Mo.

Application March 11, 1936, Serial No. 68,279
8 Claims. (Cl. 273—95)

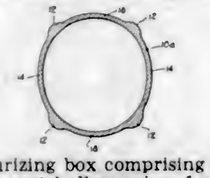
1. In a blow toy, a chamber having a transparent side wall portion and a bottom, a figure provided with a pocket within said chamber, a ball of light weight material adapted to seat in said pocket also mounted in said chamber, means for blowing a stream of air into said chamber through a discharge opening located in the bottom thereof, and means for confining said ball in said chamber.

2,100,899
MACHINE TOOL
William J. Burger, Shaker Heights, and Chrysanth M. Mirossay, Cleveland, Ohio, assignors to The Warner & Swasey Company, Cleveland, Ohio, a corporation of Ohio
Application September 18, 1936, Serial No. 101,454
12 Claims. (Cl. 82—5)



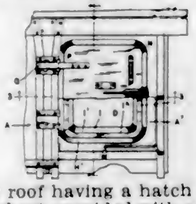
1. In a machine tool having a way and a slide movable therealong, a rotatable shaft operatively associated with said slide and having an integral splined non-threaded portion for operating the feed drive to said slide and an integral threaded non-splined portion for moving the slide for threading.

2,100,900
PRODUCTION OF INTERPOLYMERIZATION PRODUCTS
Hans Fikentscher, Ludwigshafen-on-the-Rhine, and Josef Hengstenberg, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application December 7, 1935, Serial No. 53,434. In Germany December 9, 1933
8 Claims. (Cl. 260—2)



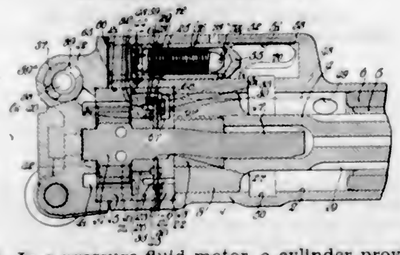
1. In the production of inter-polymerization products by polymerizing in an aqueous emulsion at least two polymerizable unsaturated organic compounds of different speeds of polymerization the step which comprises adding the compound having the higher speed of polymerization at about the rate at which it is used up to the compound having the lower speed of polymerization.

2,100,901
METHOD OF MAKING A CARBURIZING BOX WITH CENTRIFUGALLY CAST SIDE WALLS
Henry H. Harris, Champaign, Ill.
Application May 17, 1935, Serial No. 21,926
6 Claims. (Cl. 29—148.2)



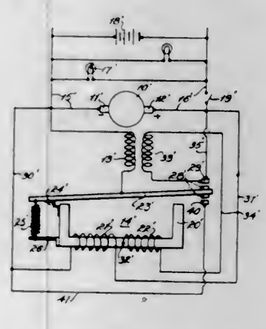
1. The process of making a carburizing box which comprises the steps of centrifugally casting a long generally cylindrical tubular member, deforming the cylindrical tube while still hot into substantially prismatic shape, cutting off sections equal in length to the side walls desired for said carburizing box, and forming a separate head member corresponding in shape to the said side walls member, and thereafter welding said head to said member to close one end of said box.

2,100,902
CARBURIZING BOX WITH CENTRIFUGALLY CAST SIDE WALLS
Henry H. Harris, Champaign, Ill.
Original application May 17, 1935, Serial No. 21,926. Divided and this application March 30, 1936, Serial No. 71,577
2 Claims. (Cl. 263—49)



1. A carburizing box comprising a many-sided centrifugally cast hollow prism forming the side walls portion of said box, said sides being substantially flat and having substantially integral thickened parts extending lengthwise thereof at the outside defining corners of the box and having a head member of similar shape welded thereto for closing an end thereof.

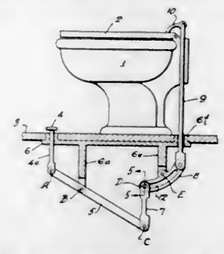
2,100,903
HATCH FRAME CONSTRUCTION FOR CAR ROOFS
David W. Hawksworth, Birmingham, Mich., assignor to Chicago-Hutchins Corporation, a corporation of Delaware
Application February 3, 1936, Serial No. 62,199
6 Claims. (Cl. 108—5)



1. In a car roof having a hatch opening therein, a roofing sheet provided with an upwardly extending continuous annular flange surrounding said opening, a hatch frame having a depending portion within said opening and an outwardly extending flange overlapping said annular flange, and securing means for said hatch frame outside of said depending portion passing downward through said roof and secured on the inner side thereof.

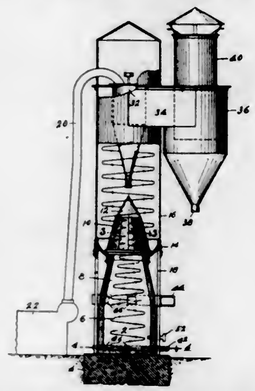
2,100,904
PRESSURE FLUID MOTOR
Mervin Chester Huffman, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application September 12, 1932, Serial No. 632,728
11 Claims. (Cl. 121—19)

1. In a pressure fluid motor, a cylinder providing a piston chamber, a piston reciprocable in said chamber, and fluid distribution means for effecting reciprocation of said piston including a valve chest having a valve chamber, an annular disc valve reciprocable in said valve chamber, a pair of concentric annular recesses formed in the valve chest at one side of the valve chamber, three concentric annular recesses formed in the valve chest at the opposite side of the valve chamber, annular seats surrounding certain of said annular recesses against which the opposite faces of the valve are adapted to seat, passage means connecting one of said pair of recesses with one end of the piston chamber, passage means connecting one of said three recesses with the opposite end of the piston chamber, and passage means for supplying pressure fluid to all of said other recesses at the opposite sides of the valve chamber, said fluid distribution means including means for conducting pressure fluid from one of said three concentric recesses to both of said recesses at the opposite sides of the valve chamber with which said first and second mentioned passage means communicate.



2,100,905
GENERATOR REGULATION
Bennett M. Leece, Shaker Heights, Ohio, assignor to The Leece-Neville Company, Cleveland, Ohio, a corporation of Ohio
Application April 24, 1936, Serial No. 76,103
9 Claims. (Cl. 171—223)

1. In combination a generator having a shunt field winding of normal polarity, a regulator having magnet coils energized from the generator and cooperating contacts adapted to be opened and closed, a field winding of reverse polarity adapted when energized to magnetically oppose the normal polarity field winding of the generator, and means connecting said reverse polarity field winding and one of the magnet coils in series with each other across said contacts.

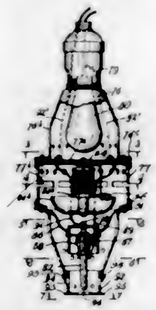


2,100,906
SEAT AND SEAT COVER ACTUATING MECHANISM FOR TOILETS
Emil Lefkowitz, Comstock, N. Y.
Application December 17, 1935, Serial No. 54,873
6 Claims. (Cl. 4—251)

1. Means for raising and lowering the hinged seat or cover part of a water closet bowl, comprising such a hinged part, a bracket secured to said hinged part and carrying a pivot located rearwardly of the horizontal axis of pivotal movement of said hinged part, a rocking lever having therein a U-shaped slot and pivoted intermediate its ends on a fixed horizontal axis, a link connecting one end of the rocking lever to the pivot on said bracket, a foot operable lever and a link

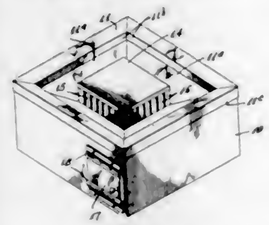
connected to the lever and having a follower operable within the slot of the rocking lever.

2,100,907
APPARATUS FOR MANUFACTURING DRIED FEED
Wallace L. McGehee and Harold W. Luhnow, Kansas City, Mo.
Application January 20, 1936, Serial No. 59,935
15 Claims. (Cl. 34—34)



1. In an apparatus of the character described, a vertically-disposed furnace, a burner in the furnace, an air duct having an outlet communicating with said furnace and arranged at a tangent to the inner surface of the latter, a dehydrating chamber arranged axially above and communicating at its lower end with said furnace to serve as a flue for the furnace, baffles at the zone of connection between said furnace and said dehydrating chamber, and means for discharging green feed material into said dehydrating chamber.

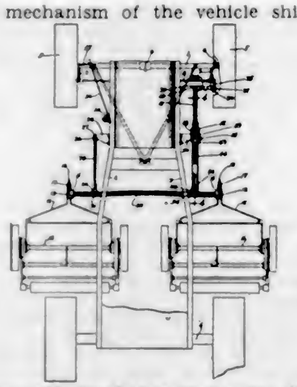
2,100,908
COMBINED LIGHT AND FIRE ALARM CASING
Alexander Merdan, New York, N. Y.
Application June 26, 1936, Serial No. 87,369
3 Claims. (Cl. 177—7)



1. In a combined light and fire alarm casing, a base member, a bell mounted thereon, a clapper mechanism coaxially mounted on said bell, a tubular casing supported on said clapper mechanism and encasing said clapper mechanism and being slightly spaced from said base member forming a space through which the edge portion of said bell projects, a housing section fixedly

mounted on said base member and partly encasing said bell, and a second housing section adjustably mounted on said tubular casing and being adapted to cooperate with said housing section to completely encase said bell, whereby said

adjustable housing section may be adjusted and held in a fixed position in relation to said housing section to control the amount of sound that will emanate from said device.

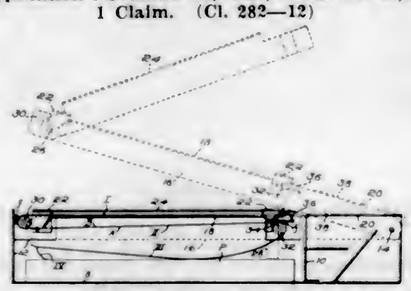


2,100,909
AUTOMATIC ROACH TRAP
Arnulfo Mora, El Paso, Tex.
Application September 11, 1936, Serial No. 100,256
7 Claims. (Cl. 43—121)

1. An automatic roach trap comprising a container having a top wall with an opening and the portion around said opening being smooth and steeply inclined downwards, a support within said container, a platform for bait above said opening and mounted on said support, and a plurality of trap doors pivotally mounted at their top ends upon the edge of said platform and extending downwards into said opening and freely resting against the edge of said portion.

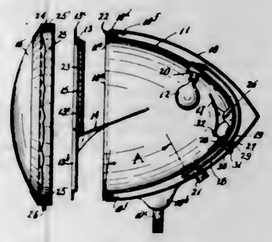
2,100,910
GANG LAWN MOWER
Amos F. Moyer, Minneapolis, Minn., assignor to Toro Manufacturing Corporation of Minnesota, Minneapolis, Minn., a corporation of Minnesota
Application November 23, 1936, Serial No. 112,188
11 Claims. (Cl. 56—7)

1. In combination with a vehicle having front and rear wheels, and front wheel steering means, mower units arranged between the front and rear wheels, a shift bar supported on said units and means connecting it to the units, means connecting the shift bar to the vehicle for vertical and horizontal motions, and means by which the steering mechanism of the vehicle shifts said



bar conformably to change in steering direction.

2,100,911
AUTOGRAPHIC REGISTER
Walter E. Oliver, Somerville, Mass.
Application November 13, 1935, Serial No. 49,467
10 Claims. (Cl. 282—12)

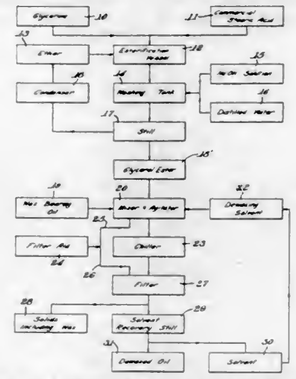


1. An autographic register for dispensing sections from a pack formed by webs folded in zigzag comprising a receptacle for positioning the pack, a table above the receptacle forming a support for a section to be inscribed, a guide at an end of the table located substantially one or more fold lengths from the remote end of the pack and about which the webs are drawn to dispose sections thereof over said table, springs in the receptacle for pressing the pack upwardly, said table presenting means at its lower face cooperating with the pack under pressure of the springs.

2,100,912
AUTOGRAPHIC REGISTER
Walter E. Oliver, Somerville, Mass.
Application November 13, 1935, Serial No. 49,468
1 Claim. (Cl. 282—12)

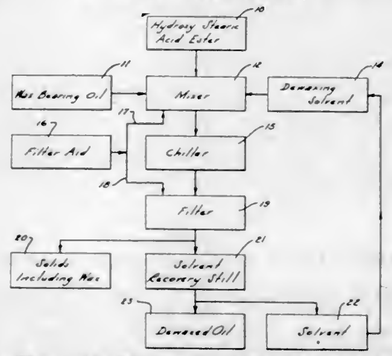
An autographic register for dispensing for inscription thereon successive sections of webs transversely folded in zigzag along predetermined, equally spaced lines to form a pack comprising a container for the pack, a table over which a section is disposed for inscription, a guide adjacent an end of the table around which the webs are drawn from the pack having a curved surface of substantial radius, and means for maintaining the webs in contact therewith over an arc of such extent that a length of paper substantially equal to the tangents thereto exhibits substantial resilience comprising a guide having a similarly curved surface about which the paper is looped, the guides being so spaced that, when a section of the webs is disposed over the table for inscription, a succeeding section will extend tangentially from the lower side of the first guide to the upper side of the second guide with end portions of the section projecting beyond the lines of tangency, which end portions are of a length to exhibit such substantial resilience that, when they with similar portions of adjacent sections are drawn by feeding traction of the webs against the arcs of the surfaces of the guides, they will, on release of the feeding tension, assume positions substantially tangent thereto.

2,100,913
NONGLARE HEAD LAMP
Eric Olsson, Jersey City, N. J.
Application September 16, 1935, Serial No. 40,740
4 Claims. (Cl. 240—48.4)



1. In a non-glare head lamp, a parabolic reflector, an annular member engaged over the front of said reflector and having a top translucent area and a bottom transparent area, a lamp mounted within said parabolic reflector and located above the axis and at an intermediate position between the outer edge and the inner base end of said reflector, a transverse member supported on said annular member and extending rearward from the junction of said translucent and said transparent areas to a position in which its rear edge is adjacent said lamp to form separate passages for the light of said lamp, and a pivotal glare director reflector mounted on the base portion of said parabolic reflector just behind said lamp and adapted to be adjusted to direct the reflected rays of said lamp over the transverse member and through one of said passages or below the transverse member and through the other of said passages.

2,100,914
STORAGE BATTERY
Joseph A. Orsino, East Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia
No Drawing. Application November 25, 1935, Serial No. 51,477
7 Claims. (Cl. 136—26)



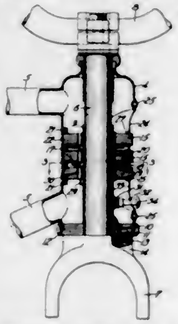
1. A plate for storage batteries of the lead-acid type having a minor proportion of pulverized leather incorporated in the lead compound of the plate.

2,100,915
REMOVAL OF WAX FROM HYDROCARBON OIL
Ernest F. Pevere, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application May 25, 1934, Serial No. 727,385
11 Claims. (Cl. 196—19)

1. The method of dewaxing a wax bearing oil, which comprises mixing with the oil an organic ester which has the property of modifying wax crystal formation upon chilling of the oil in the presence thereof, the said ester being selected from the group consisting of fatty acid esters of glycerol, fatty acid esters of glycols, fatty acid esters of monohydric alcohols selected from the group consisting of hexyl, heptyl, octyl and cetyl alcohols, fatty acid esters of polyhydric alcohols of the series higher than glycerol selected from the group consisting of erythritol, mannitol and sorbitol, and esters of the above-mentioned alcohols with the acids derived from oxidized waxy hydrocarbons, chilling the mixture to precipitate the wax, and separating the wax from the oil.

2,100,916
REMOVAL OF WAX FROM HYDROCARBON OIL
Ernest F. Pevere and Clifford G. Ludeman, Beacon, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
Application November 21, 1935, Serial No. 50,813
9 Claims. (Cl. 196—19)

1. The method in the dewaxing of a wax-bearing mineral oil, which comprises mixing with the oil an esterified hydroxy stearic acid which has



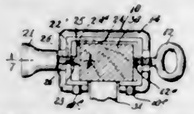
the property of modifying wax crystal formation upon chilling of the oil in the presence thereof, chilling the mixture to precipitate the wax, and separating the wax from the oil.

2,100,917

BICYCLE LOCK

Amyas Leigh Porter, Oakland, Calif.

Application February 29, 1936, Serial No. 66,473
6 Claims. (Cl. 70—185)



1. The combination, with the steering spindle, which carries the front wheel fork of a bicycle, and the housing in which said spindle is journaled, of a sleeve-like bolt enclosing said spindle and movable axially thereon, a lug projecting from one end of said sleeve-like bolt for engaging said housing and said fork to prevent relative movement therebetween and means for selectively locking said sleeve-like bolt with the lug in or out of engagement with said fork.

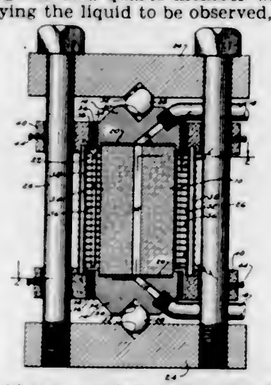
2,100,918

ADJUSTABLE NONSLIP LADDER PROTECTOR

Paul Ringman, St. Albans, N. Y.

Application July 31, 1936, Serial No. 93,639
4 Claims. (Cl. 228—61)

3. An adjustable non-slip protector, comprising a band member adapted to encircle the side bar of a ladder and having an open side so that said band member may be moved past the rungs in said ladder, a gripper element having a threaded stud portion engaged through one end of said band member, a clamp screw threadedly engaged through the other end of said band member to engage the side bar of said ladder to hold the protector in position, and means adapted to engage the end of said stud portion to lock said gripper element against accidentally disengaging from said band member.



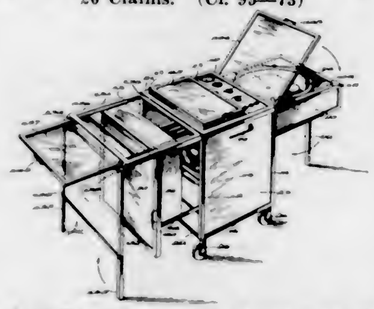
2,100,919

OBSERVATION CHAMBER FOR FLOWING LIQUIDS

Louis C. Roess and Carl E. Cummings, Beacon, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

Application October 15, 1935, Serial No. 45,168
5 Claims. (Cl. 116—117)

1. In an observation chamber for flowing liquids, a cylinder of fused quartz provided with a longitudinal passage of relatively small bore for the liquid to be observed, a cap member for each end of said quartz member, said cap member being provided with openings adapted to connect the passage in said quartz member with a conduit carrying the liquid to be observed, the open-



ings in said cap members being of substantially the same bore as the opening in said cylinder, and a supporting frame encircling said cylinder, said frame including means for forcing said cap members toward said quartz member so as to form a liquid tight joint between each of said cap members and said quartz member.

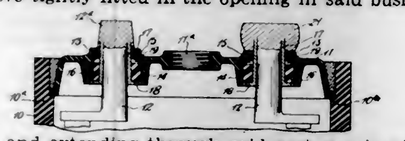
2,100,920

UNITARY STRUCTURE FOR SUPPORTING PHOTOPRINTING APPARATUS

William Henry Rogers, Washington, D. C.

Application June 5, 1936, Serial No. 83,789
20 Claims. (Cl. 95—73)

1. A unitary structure for supporting photoprinting equipment comprising a compartment, means for forming an opening in one side thereof, a light emitting device movably supported by said structure and adapted to be moved through said opening, a printing frame movably supported by said structure and adapted to be moved to substantially horizontal or vertical positions therein, and a recessed receptacle forming a side of said compartment hingedly supported by said structure.



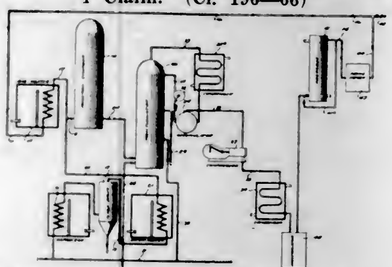
2,100,921

STORAGE BATTERY

Samuel W. Rolph, Cleveland Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia

Application September 22, 1932, Serial No. 634,284
Renewed June 21, 1937
4 Claims. (Cl. 136—168)

2. In a storage battery a cover for the battery container having a post opening and a recess aligned with and of larger diameter than said opening, an elastic bushing fitted in said recess and having a central opening, and a metallic sleeve tightly fitted in the opening in said bush-



ing and extending through said post opening in said cover and laterally expanding said bushing into tight frictional engagement with the wall of said recess.

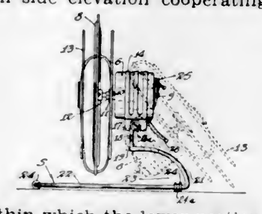
2,100,922

PROCESS OF CRACKING HYDROCARBONS

Albert P. Sachs, New York, N. Y., assignor to Petroleum Conversion Corporation, New York, N. Y., a corporation of Delaware

Application August 31, 1935, Serial No. 38,688
1 Claim. (Cl. 196—66)

The process of converting hydrocarbon oils which consists in heating up a heat carrier gas to a temperature at least equal to that of the cracking temperature, simultaneously vaporizing the oil to be cracked, admitting the vapor to be cracked into contact with said heated heat carrier gas in said reaction chamber, while maintaining a system pressure not greatly in excess of 50 pounds per square inch, said gas supplying the necessary heat for the cracking of said vapor, and withdrawing the mixture of gas and vapor products from the reaction chamber when the reaction has proceeded to a desired degree, subjecting such products to progressive dephlegmation to yield hydrocarbons of the gasoline range as the final product and a residual gas rich in light vapors, compressing said residual gas to a pressure not substantially less than 250 pounds per square inch, whereby substantially all of the light hydrocarbon vapors are condensed and recovered passing said compressed gas through a condenser to separate out the light vapors, recovering the energy of compression from said gas so compressed by passing the now lean gas through a prime mover, and withdrawing the gas from said prime mover at a pressure slightly above that of the system and recirculating a portion at least of said gas to constitute it the heat carrier on the next cycle.



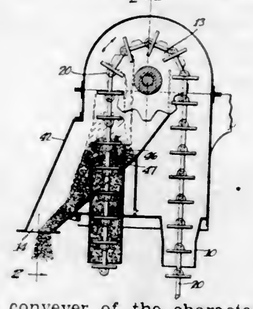
2,100,923

FAN WITH COLLAPSIBLE SUPPORT

Carl A. Schmidt and Harold D. Bricher, St. Paul Minn., assignors to Lydon-Bricher Mfg. Co., St. Paul, Minn., a corporation of Minnesota

Application April 21, 1937, Serial No. 138,172
7 Claims. (Cl. 230—273)

1. A fan with collapsible support comprising an electric motor having a motor shaft, a fan blade attached to an end portion of said shaft, a guard cage attached to said motor and surrounding said blade and on oppositely reversely curved ball-like support swingably connected to said motor, said support having a foot and an arm extending therefrom to said motor, said arm and foot as viewed in side elevation cooperating to form a



space within which the lower portion of the cage may be closely received with the foot lying adjacent the forward side of the cage when the support is swung to one position and said foot acting to stably support said motor, blade and cage on a supporting surface at various inclinations when the support has been swung to other positions.

2,100,924

CONVEYER

Alfred De Los Sinden, Aurora, Ill., assignor, by mesne assignments, to Redler Conveyor Company, Quincy, Mass., a corporation of Massachusetts

Application November 14, 1934, Serial No. 753,043
3 Claims. (Cl. 198—154)

1. In a conveyer of the character described, in combination, a conveyer casing provided with a vertical leg, a conveyer member comprising a plurality of connected open flights traversable through the casing, a head sprocket over which the conveyer member is arranged to pass, said open flights being constructed and arranged to carry up a substantial amount of material upon the surfaces of the flights into a position where such amounts are discharged from the flights as the same pass over the head sprocket whereby to clean out the conveyer casing at the end of the operation of the conveyer, and means disposed under the head sprocket for receiving said material and discharging it from the conveyer, said vertical leg extending into said means.

2,100,925

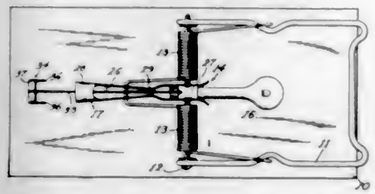
ANIMAL TRAP

Herbert A. Stilson, Chicago, Ill., assignor of one-half to A. S. Nichols Western Company, Chicago, Ill., a corporation of Illinois

Application July 30, 1932, Serial No. 626,349
11 Claims. (Cl. 43—83)

6. An automatically set trap comprising a base, a spring actuated striker, a latch member pro-

vided with a pivotal aperture having unequal transverse dimensions, and a reduced slot extending therefrom to an edge of the member, a bait treadle having a trigger portion for engaging said member, and a pivotal support for said member comprising guiding portions having parallel guiding surfaces, having at their lower edges points for securing them to the base and being united by a horizontally disposed integral pivot portion having unequal transverse dimensions, slightly less than the corresponding dimensions of said aperture, the minor dimension of said pivot portion being sufficiently less than that of said slot to permit the pivot portion to pass through said slot into said pivotal aperture.

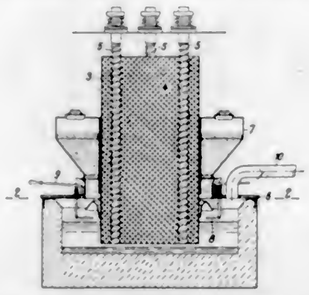


9. In an automatically set trap the combination with a base, of a spring actuated striker provided with a cross bar, and having a pivotal connection with the base, of a latch member pivotally connected to said base, and provided with a forwardly extending trigger engaging arm and a rearwardly extending detent portion located substantially directly above the axis of the pivotal connection of the member, and a pivotally mounted bait treadle having a trigger portion to extend beneath the said arm of the member, the detent portion of the member having a cam portion coacting with the cross bar of the striker to move the latch member rearward by taking up slack in its pivotal connection, and permit the cross bar to engage beneath the detent, in setting the trap with the member in operative relation with the trigger.

2,100,926

ANIMAL TRAP

Herbert A. Stilson, Chicago, Ill.
Application November 14, 1934, Serial No. 753,000
20 Claims. (Cl. 43—83)



1. An animal trap including a base, a spring actuated jaw, means for releasably holding said jaw, said means including a three-way movable articulated bi-part treadle carried on said base.

2,100,927

CONTINUOUS ANODE FOR ELECTROLYTIC CELLS FOR THE PRODUCTION OF ALUMINIUM

Raffaele Trematore, Mori, Trento, Italy, assignor to Det Norske Aktieselskab for Elektrokemisk Industri, Oslo, Norway
Application July 17, 1934, Serial No. 735,639
In Italy July 22, 1933
4 Claims. (Cl. 204—20)

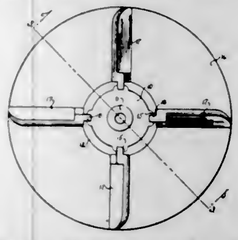
1. An anode for an electrolytic cell for the production of aluminum made from carbon paste that is baked during the operation in the cell, provided with current carrying threaded bars extending lengthwise through the electrode and being in contact with the baked as well as the

unbaked part of said electrode, said bars being unscrewable upwards as and when it becomes necessary in order to avoid contact between them and the bath as the anode is consumed.

2,100,928

CLOSURE FOR WALL OPENINGS

Walter R. Way, Quincy, Mass.
Application June 21, 1935, Serial No. 27,689
3 Claims. (Cl. 16—163)

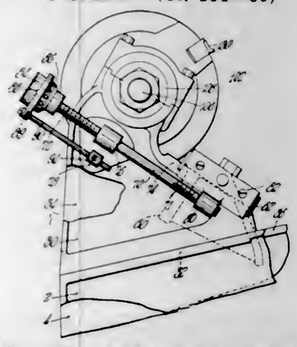


1. A hinge for an openable closure element for a wall opening, comprising a pair of links, each reaching to the closure element from a stationary interior wall of the opening; said links being mid-pivoted together, and each having a terminal fixed pivotal connection and a terminal sliding pivoted connection, one of which connections, of each link, is to the said interior wall of the opening and the other of which is to the said closure element; and a pair of cams, one fixed on said interior wall, for controlling the travel of the terminal sliding pivotal connection of one said link, and the other fixed on said closure element, for controlling the travel of the terminal sliding pivotal connection of the other said link; said cams having each a cam slot, and the said slots having curved terminal portions in which the said sliding pivotal connections respectively and simultaneously travel during initial opening movement of the closure element, the curvatures of said terminal portions of slots being in directions respectively away from, and toward the planes of said interior wall and said closure element.

2,100,929

DOLLY FOR WASHING MACHINES AND THE LIKE

Theodore P. Weinhart, Ankeny, Iowa, assignor of seventy-five percent to Glenn E. Kellogg, Des Moines, Iowa
Application January 28, 1937, Serial No. 122,809
6 Claims. (Cl. 259—99)

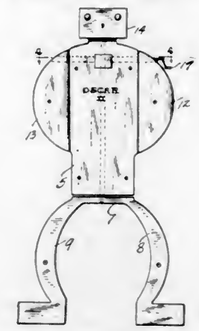


1. In a device of the class described, an inverted cup member, vertical ridges on the outside of said inverted cup member, a shaft bearing in the upper side of said inverted cup member at its center, an outwardly extending flange about the lower outer marginal edge of said inverted cup member, a flat ring, agitating fins on said ring, and lugs on the inner end of said fins capable of being received by said vertical ridges on said inverted cup member.

2,100,930

PAPER CUTTING APPARATUS

Walter S. Aiken, Lee, Mass., assignor to The Clark-Aiken Company, Lee, Mass., a corporation of Massachusetts
Original application November 17, 1935, Serial No. 51,877, now Patent No. 2,062,737. Divided and this application October 28, 1936, Serial No. 107,953
5 Claims. (Cl. 164—66)

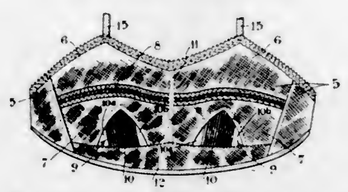


1. Web-cutting mechanism comprising in combination, a support, a rotatable member thereon, a relatively stationary member, a knife on said rotatable member and a knife on said relatively stationary member having co-operating cutting edges, the said knives being disposed so the cutting edges thereof are arranged angularly with relation to a plane passing through the axis of rotation of said rotatable member whereby the cutting edges operate with a shearing action and the angle incidence is constant throughout the shearing action, the said knives being formed of relatively different materials one of which is softer than the other whereby during the shearing action one is sharpened by the other.

2,100,931

TOY

Oscar Alvistur, San Francisco, Calif.
Application September 9, 1936, Serial No. 99,990
2 Claims. (Cl. 46—119)



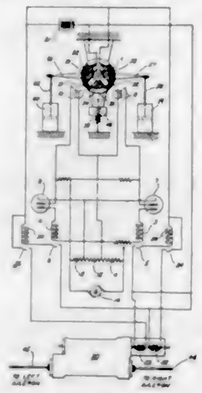
1. In a toy of the character described, a body portion having a vertically disposed rotary rod extending therethrough, a head secured to one end of said rod, a leg carrying member secured to the opposite end of said rod, means for rotating said rod, said means including a cross shaft, and a flexible band connecting said cross shaft and said rod, whereby when said cross shaft is rotated said rod will be rotated.

2,100,932

BRASSIÈRE AND FOUNDATION GARMENT

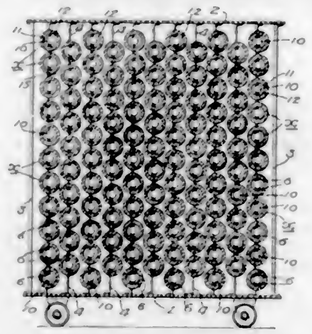
Louis J. A. Amyot, Quebec, Province of Quebec, Canada
Application December 2, 1935, Serial No. 52,535
In Canada October 25, 1935
3 Claims. (Cl. 2—42)

1. A brassière presenting breast pockets of soft fabric material divided into upper and lower sections joined together by a line of faggoting which extends across the centre of the breasts, the two sections of each pocket being joined to corresponding sections of the companion pocket in a central vertical seam extending a substantial distance above and below the line of faggoting, the upper section of each pocket being cut on the bias to give a smooth rounded figure effect without undue pressure from above and a relatively stiff breast supporting panel in the lower section of each pocket comprising an insert of woven fabric material stiffened by vertically extending textile stiffening cords laid in the fabric to form closely spaced stiffening ribs on the face of the fabric while leaving the back of the fabric substantially smooth and flat, said garment being further characterized in that each panel has the contour of a Gothic arch and is inclined so that the apex of the arch is directed toward the upper edge of the garment and away from said central vertical seam.



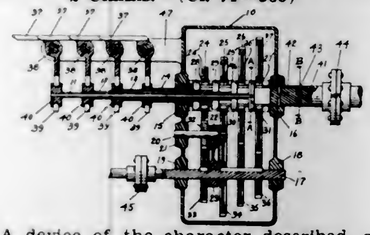
2,100,933
OUTER GARMENT
Abram K. Baer, Baltimore, Md., assignor to The Strouse Baer Company, Baltimore, Md.
Application November 11, 1936, Serial No. 110,397
1 Claim. (Cl. 2—234)

In an outer garment, a body part including a front and a crotch, said front being formed of a pair of oppositely disposed sections having imperforate flaps of like form extended from their inner sides, said flaps having outer side edges formed with straight upper portions and inwardly curved lower portions, the flap of one of said sections being inwardly folded against the inner face of the latter to oppose the other of said flaps whereby the flaps are concealed the outer face of the said front is provided with a bend aligning with the upper end of a side of the crotch at the front of the latter, the said nonfolded flap having its outer side edge merging into the upper end of the other side of the crotch at the front of the latter, said flaps, when opposed, disposed in a like direction and extended laterally with respect to the said other side of said crotch, said flaps extending from the upper end of the front of the crotch to the upper portions of said sections, a row of stitching adjacent said bend for connecting said flaps together, said row of stitching extending from the upper portion of the body part to a point removed from the lower end of the flaps and in connection with a portion of the folded flap and a portion of the section having the folded flap providing the front of said body part with an expansible pleat aligning with the upper end of the front of the crotch, said row of stitching aligning substantially with the said other side of the crotch, the portions of said flaps below and free of connection to said row of stitching coacting to provide a horizontally disposed passageway open at each end, a row of stitching coextensive with the length of the folded flap, spaced from the said side edge of the latter spaced from and of greater length than the other row of stitching and providing for securing said folded flap against the inner face of that section of which it forms a part and horizontally disposed means for securing said sections together at the upper end of the front of the crotch.



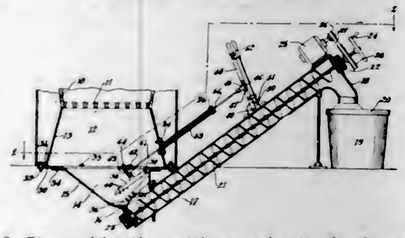
2,100,934
AIRCRAFT
Donald M. Berges, Bloomfield, N. J., assignor to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application February 5, 1936, Serial No. 62,516
3 Claims. (Cl. 244—77)

1. In an aircraft of the type in which portions of the craft's exposed surface are actuated as the means of controlling the flying attitude of the craft, the combination with said surface portions of electromagnetic actuating means therefor, a pair of inter-engaged telescoped cylinders having registrable apertures controlling energization of said electromagnetic means, means integrated with one of said cylinders to cause



both to move in unison after a predetermined differential movement of one, and dashpot means connecting with said cylinders to damp the movement of one more than the movement of the other.

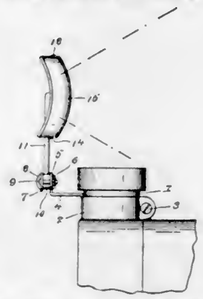
2,100,935
AIR BAFFLE FOR RAYON CAKE DRIERS
Harold G. Black, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application January 28, 1936, Serial No. 61,232
6 Claims. (Cl. 34—26)



1. In a drier for rayon cakes each having a core opening, means for supporting said cakes, means for passing a current of conditioning medium in a direction axially of said cakes and through said core openings, deflectors disposed substantially within the core openings of predetermined cakes respectively in planes transverse to the axes of said core openings and of lesser area than the cross-sectional areas of said core openings leaving relatively narrow passages for said medium between the marginal edges of the deflectors and the walls of said core openings and deflecting to the outsides of said cake portions of the flow of said medium which normally pass through said core openings, and means for supporting said deflectors in said positions relative to said core openings.

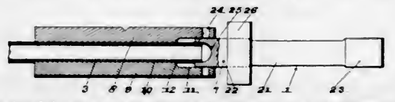
2,100,936
SPEED CHANGING DEVICE
Henry H. Bonn, Jr., Milwaukee, Wis.
Application April 24, 1935, Serial No. 18,045
2 Claims. (Cl. 74—363)

1. A device of the character described, comprising a casing, a tubular drive shaft extending inwardly of one side of said casing, a driven shaft extending inwardly of the opposite side of said casing, gears loosely mounted on said drive shaft within said casing, gears rigidly mounted on said driven shaft and meshing with the gears on said drive shaft, nested tubular members extending into said casing and inwardly of the inner end of said tubular drive shaft, the opposite ends of said tubular members being offset one from the other, keys carried at the inner ends of said tubular members, said drive shaft having longitudinal slots engaged by said keys, each of said loosely mounted gears having a plurality of ways to receive said keys, and means engaging the outer ends of said tubular members to selectively shift the same to move said keys into and out of engagement with said ways.



2,100,937
ASH REMOVER
Charles F. Bowe, Canton, Ohio, assignor of twenty-two and one-half per cent to Elmer George Baird, Canton, and twenty-two and one-half per cent to Charles W. Traynor, Massillon, Ohio
Application November 10, 1936, Serial No. 110,089
5 Claims. (Cl. 110—165)

3. In combination with an ash pit of a furnace, an auxiliary ash pit mounted below said ash pit and provided with walls converging downwardly to a discharge opening, a feed tube communicating with said discharge opening, a conveyer in said feed tube, a grating at said discharge opening, a movable gate cooperating with said grating for crushing clinkers in the ashes before they enter the feed tube, and means outside of the ash pit for operating said gate.



2,100,938
MIRROR FOR VEHICLES
Leo L. Brandt, Savannah, Mo.
Application February 4, 1935, Serial No. 4,935
1 Claim. (Cl. 88—98)

A rear view mirror for mounting above the radiator cap of an automobile for viewing the road to both sides of the automobile, said rear view mirror including a clamp for attachment to the automobile radiator nozzle with a bracket extending upwardly and forwardly therefrom, a cross head on the bracket having a central cup, a plate having a cup, a pair of bolts passed through the ends of the plate and the cross head, said cups forming a ball receiving socket, a post,

a ball on the lower end of the post received in said socket, the ball and socket permitting the post to be swung in a vertical plane to either side of said bracket as well as permitting turning of the post, said angular adjustment of the post being limited by contact of the post with either of said bolts, a bracket on the upper end of the post, and a convex mirror supported by the bracket

2,100,939
HAND TOOL FOR MAKING JOINTS ON TUBULAR MEMBERS
Charles M. Brenner, Shreveport, La.
Application January 25, 1937, Serial No. 122,306
1 Claim. (Cl. 153—79)

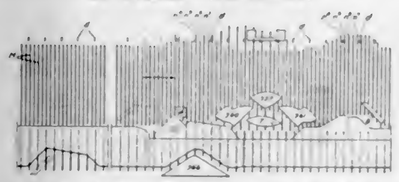
A tool to upset a piece of tubing at a determined distance from one end thereof, comprising jaws with a bore to grip said piece of tubing, said bore having a counterbore terminating in an internal seat which merges directly with the bore, said jaws having gauge pin holes leading into the counterbore, a gauge pin temporarily insertable in said holes crosswise of the counterbore to accurately fix the position of the tubing tip with reference to the seat, a forming die having its working end fitted in the counterbore and having a cylindrical die cavity fitting the tip and beginning at the perpendicular working end, the bottom of said cavity comprising an abutment to push the tubing tip so that it is outwardly crimped at the edge of the cylindrical die cavity and is formed against said internal seat, a collar on the forming die, and means to adjustably fix the position of said collar so as to regulate the size of the space between the working end and seat in which space the crimped and formed portion is expanded into a circular bead.

2,100,940
LOUPE
John F. Coleman, Smithboro, N. Y.
Application August 8, 1936, Serial No. 95,007
3 Claims. (Cl. 88—41)

2. A spectacle frame including a resilient lens holder formed on its inner face with a groove, a

loupe lens, a tubular body having means adjacent one end for supporting said lens, an annular peripheral bead at the other end of said body, and

said bead having spaced portions thereof extending radially therefrom and into said groove and coacting with the walls of the latter for connecting said body to the lens holder.



2,100,941

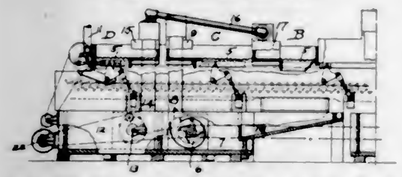
METHOD OF AND MACHINE FOR KNITTING FABRIC

William Coleman, Johnson City, Tenn., assignor to Scott & Williams, Incorporated, New York, N. Y., a corporation of Massachusetts

Application October 20, 1936, Serial No. 106,673

10 Claims. (Cl. 66—24)

10. In a method of changing from the knitting of ribbed fabric to the knitting of plain fabric in a dial and cylinder machine, the steps of drawing down all cylinder needles to stretch the loops of the previous course, delaying the raising of the needles immediately following the needles taking the dial loops while the dial loops are taken and casting off the loops from the dial needles.



2,100,942

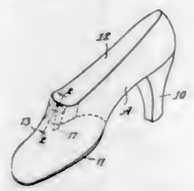
METHOD OF WASHING FRUITS, VEGETABLES, AND OTHER PRODUCTS

Frank W. Cutler, Portland, Oreg., assignor to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware

Application June 6, 1934, Serial No. 729,328

2 Claims. (Cl. 99—100)

1. A process of washing fruit to remove spray residue therefrom preparatory to packing, comprising subjecting the fruit to an alkaline washing treatment, rinsing the fruit with liquid from a source of substantially neutral rinse liquid to remove the alkaline washing liquid adhering to the fruit and returning the mixed rinsing and alkaline washing liquids to said source, then subjecting the fruit to an acid washing treatment, and thereafter rinsing the fruit with liquid from said source to remove the acid washing liquid adhering to the fruit and then returning the mixed rinsing and acid washing liquids to said source, whereby said rinsing liquid remains substantially neutral and can be used repeatedly.



2,100,943

PUMP CONSTRUCTION

Frank D'Alessandro, Carlisle, Pa.

Application June 24, 1935, Serial No. 28,201

2 Claims. (Cl. 36—45)

1. A pump comprising an upper, a lining interiorly of the upper and having an arcuate slot at its front, an extension integral with the upper at its uppermost edge adjacent to said slot, said extension having a medial slit therein to provide a pair of tongues for bending downwardly and inwardly through said slot with the tongues in spread apart relation and with the adjacent edges of the tongues engaging the respective ends of the slot, the tongues being of such a length that when disposed in the slot the free ends thereof are disposed at a considerable distance from the upper edge of the vamp of the pump, and means for securing the tongues to the lining.

2,100,944

PROCESS OF MAKING ALKALI SUB-SILICATES

Richard Lloyd Davies, Philadelphia, Pa., assignor to Pennsylvania Salt Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania

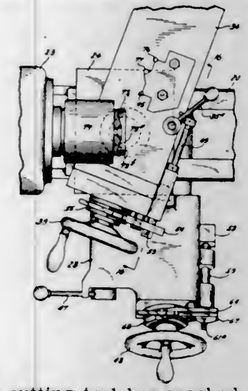
No Drawing. Application September 3, 1936, Serial No. 99,309

20 Claims. (Cl. 23—110)

1. The process of preparing a solid, alkali sub-silicate product which comprises adding molten caustic alkali, containing not more than approximately 15% water, and a solid, sub-divided, silica-containing material selected from the group consisting of silica and alkali metal silicate having a molecular ratio of SiO_2 to alkali oxide greater than 1 to 1, to a reaction vessel, the reactants being present in such molecular proportions that the alkali oxide content is not less than the silicon dioxide content, reacting the mixture while stirring it at a temperature, below the melting point of the reaction product, sufficient to form an alkali sub-silicate product, and converting the reaction mass into a solid state.

2,100,945

MACHINE TOOL



Wilbur C. De Graff, Cleveland Heights, Ohio, assignor to The Warner & Swasey Company, Cleveland, Ohio, a corporation of Ohio

Application October 27, 1936, Serial No. 107,834

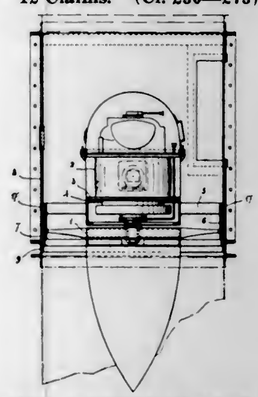
17 Claims. (Cl. 82—12)

1. In a machine tool having a carriage, a base pivotally mounted on said carriage and adapted to have a cutting tool operatively associated therewith, means for rotating said base on its pivot to feed the cutting tool in a circular path, and cooperating means carried in part by said first named means and having stop portions normally held out of alignment with each other but automatically moved into abutting alignment for

stopping the rotating movement of said base

when said cutting tool has reached a predetermined position.

2,100,946



SUSPENSION ARRANGEMENT FOR SCREW FAN ROTORS

René De Mey, Brussels, Belgium

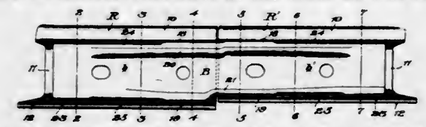
Application August 2, 1935, Serial No. 34,433

In Great Britain August 7, 1934

12 Claims. (Cl. 230—273)

1. A floating mounting of screw fan rotors within an encircling envelope comprising a casing to which the screw fan rotor is secured, said casing inserted within the envelope with a substantially continuous gap between these parts rigid overlapping means for freely but positively supporting the casing on the envelope, means to prevent relative rotating movements of the casing within the envelope, means for covering the gap and means for securing the casing in the supported position.

2,100,947



STEP JOINT

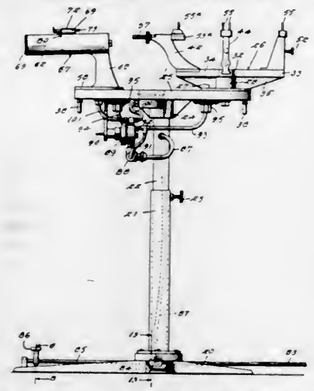
Clarkson A. Disbrow, New Rochelle, N. Y., assignor, by mesne assignments, to Poor & Company, a corporation of Delaware

Application April 21, 1936, Serial No. 75,636

3 Claims. (Cl. 238—167)

1. A compromise rail joint, including in combination with the dissimilar rails, a splice bar lying wholly inside of the outer edges of the rail flanges of both rails and having contact with the rails at its medial and end portions, said bar being provided throughout the medial portions of its head and foot with outer ribs tapering in cross-sectional thickness at the outer face of the

bar web toward the ends of the latter, said bar tapering in cross-sectional thickness from its thicker medial portion to its thinner flexible end portions, and provided with rail head clearance at both sides of its medial portion.



2,100,948

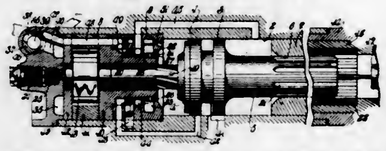
APPARATUS FOR STRINGING RACKETS

Laurance C. Doll, Ithaca, N. Y., assignor to Doll Air-Stringer of America, Inc., Ithaca, N. Y., a corporation of New York

Application November 25, 1936, Serial No. 112,807

17 Claims. (Cl. 273—73)

1. In apparatus for stringing rackets, a stand, a racket turret support and a string tensionizer at the upper end of the stand, adjustable means on the turret support upon which a racket is adapted to be mounted, said tensionizer being rotatably adjustable, and pneumatically operated means for holding the turret support and tensionizer against rotation and operating the tensionizer.



2,100,949

ROCK DRILL HOLE CLEANSING MEANS

Elmer G. Gartin, Claremont, N. H., assignor to Sullivan Machinery Company, a corporation of Massachusetts

Application April 26, 1934, Serial No. 722,572

16 Claims. (Cl. 121—10)

1. In a rock drill, a cylinder having a bore, a piston reciprocable therein, fluid supply and distribution means for effecting reciprocation of said piston including a supply passage through which motive fluid is supplied to the distributing means

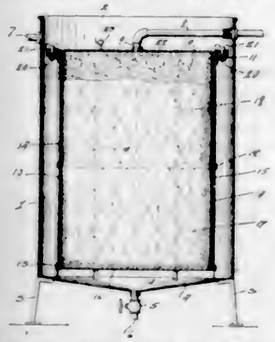
and a piston controlled exhaust port, means for supplying motive fluid simultaneously to the opposite ends of the cylinder bore to act directly on pressure areas at the opposite ends of said piston including a fluid supply passage distinct from said first mentioned fluid supply passage, supply and controlling means for said supply passages operative to effect concurrent motive fluid supply to each of the same, thereby to maintain the piston in a substantially exhaust port closing position substantially midway between the ends of the cylinder, and means for supplying pressure fluid from one end of the cylinder bore, when said piston is in said substantially midway position, continuously to the drill hole.

2,100,950

DEFLECTOR MEANS FOR TOILET MECHANISMS

Catherine T. Giblette, Detroit, Mich.

Original application October 19, 1932, Serial No. 638,589. Divided and this application December 7, 1935, Serial No. 53,340
11 Claims. (Cl. 4—135)



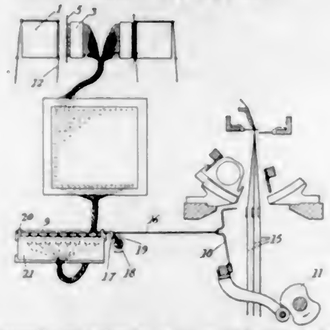
1. In a toilet provided with a housing and a vessel therein having a flange, a deflector member having a chamber with an open side, said deflector member being provided with a flange portion extending over said flange of said vessel and engaging the inside of said vessel, said deflector member being further provided with an extension portion suitably engaging said housing to maintain said deflector member in its assembled position, said extension portion being located adjacent the edge of said flange of said vessel and under the deflector portion of said deflector member.

2,100,951

FILTER

Willie F. Glass and Milton G. Sibley, Gulfport, Miss.

Application September 5, 1935, Serial No. 39,330
Renewed February 25, 1937
1 Claim. (Cl. 210—183)



In a filtering device in which a filtering powder is used, an outer receptacle, an inner receptacle comprising a bottom, a plurality of vertical standards surrounding said bottom, a plurality of annular bands surrounding said standards and secured thereto in vertical spaced relation, the upper one of said bands having an integral outwardly directed flange, a vertical screen wall resting upon said bottom and positioned against the inner sides of said standards and terminating at said top band, a removable cover plate overlying said top band and the flange thereof, means for coupling said cover plate with said flange, means for introducing fluid into the strainer structure through said cover plate, and a cloth strainer bag within the strainer structure and having its top edge clamped between said cover plate and said flange, said bag being made up of an outer hard woven cloth and an inner rough soft woven cloth of the character of turkish toweling against the inner surface of which the said filtering powder clings to form a filtering body.

2,100,952

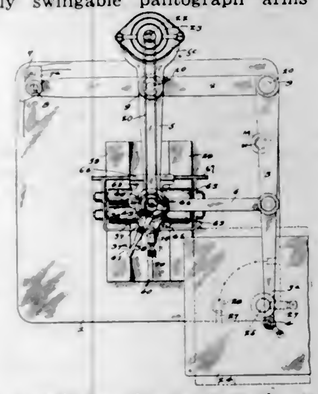
JACQUARD MECHANISM AND TEXTILE MACHINE EMPLOYING SUCH MECHANISM

Harry Goodley, Nottingham, England

Application May 18, 1936, Serial No. 80,451
In Great Britain August 13, 1935
7 Claims. (Cl. 96—20)

1. A textile machine, e. g. a lace curtain machine, embodying in combination a series of pickers or jacks co-operating with threads such as spool or warp threads to determine the character of fabric produced, a series of electro-magnets associated with said pickers, jacquard mechanism with co-operating perforated jacquard cards, electric contact elements co-operating with perforations in the jacquard cards and functioning by such co-operation selectively to energize the electro-magnets, an electric current distributor between the jacquard and the magnets functioning to distribute the electric current to the magnets in such a manner that the number of contacts simultaneously operated can be in excess of the number of operative contact elements at the jacquard and the character of the fabric being produced can be increased without increasing the size of the jacquard cards or the perforated area thereof.

2,100,953



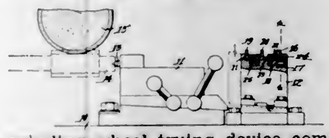
ENGRAVING AND RELATED MACHINES

George Gorton and Peter M. Henkes, Racine, Wis., assignors, by direct and mesne assignments, to George Gorton Machine Co., Racine, Wis., a corporation of New Jersey

Application December 30, 1932, Serial No. 649,664
Renewed October 7, 1935
26 Claims. (Cl. 90—13.6)

1. An engraving machine including a cutter head having a rotary cutter spindle, said head

movable laterally while its cutter spindle is operating on the work; a motor for driving said spindle; and a horizontally arranged pantograph supporting and carrying said cutter head and said motor, and embodying pivotally connected laterally swingable pantograph arms one of



which constitutes the pantograph supporting main arm provided with and swingable on a vertical axis that supports the pantograph and its load, said motor being arranged with respect to said main arm to exert a counterbalancing influence on other pantograph arms loaded by said cutter head.

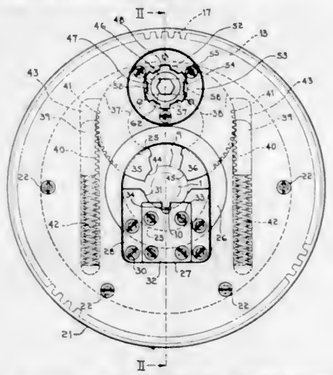
2,100,954

GRINDING WHEEL TRUING DEVICE

Gardner S. Gould, Lunenberg, and Elphege D. La Fleur, Lancaster, Mass., assignors to Fitchburg Grinding Machine Corporation, Fitchburg, Mass., a corporation of Massachusetts

Application July 13, 1936, Serial No. 90,276
8 Claims. (Cl. 125—11)

1. A grinding wheel truing device comprising a plurality of pairs of abrading surfaces, the two surfaces of each pair being set at an angle to each other and each pair being spaced apart, whereby a grinding wheel or the like can be relatively moved in a straight line through the series of abrading surfaces, the first pair of abrading surfaces being composed of comparatively coarse diamond impregnated material, the second of finer material of the same kind, and the last of very fine diamond impregnated material for finishing purposes.



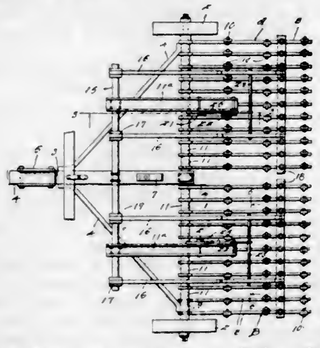
2,100,955

CHUCK FOR CAMSHAFTS AND THE LIKE

William F. Groene, Cincinnati, Ohio, assignor to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a corporation of Ohio

Application October 28, 1936, Serial No. 108,039
12 Claims. (Cl. 82—1)

1. A process of treating unmachined camshafts having a main shaft portion, journal bearings, and cam lobes for simultaneously finishing a plurality of said journal bearings in a single chucking operation, which comprises forming a driving lug on said shaft and machining a cylindrical portion on said shaft concentric with its axis of rotation, and chucking said work in a chucking device, said work piece being centered by engagement of said cylindrical portion with a work locating abutment on said chuck fixed with respect to the center of rotation of said chuck and the clamping of said portion thereagainst, said work piece being rotated by said chucking device by engagement of said driving lug with a driving abutment fixed on said chuck.

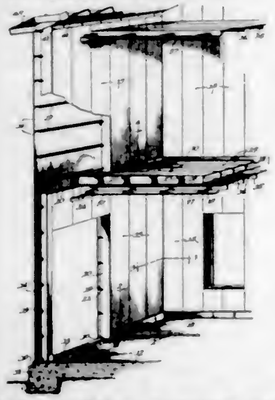


5. In a center drive chuck, means presenting surfaces equidistant from the chuck axis at one side thereof to receive a cylindrical part of a work piece and hold it coaxial with the chuck, said chuck having arcuate guides at opposite sides of said means, arcuate jaws guided in said guides, each adapted to present an end to an area of the cylindrical part of the work, which areas are spaced apart along a line beyond the axis of the chuck from said first mentioned surfaces, a clamping cam acting against the opposite ends of both of said jaws to force them against said work, said clamping cam comprising a rotatable element having peripheral cam portions diametrically opposite each other, each of said portions being adapted to engage an end of a jaw, and means on said chuck to engage another part of the work to cause the work piece to rotate with the chuck.

2,100,956

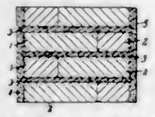
FARMING IMPLEMENT

Frank B. Hemmert, St. Marys, Ohio



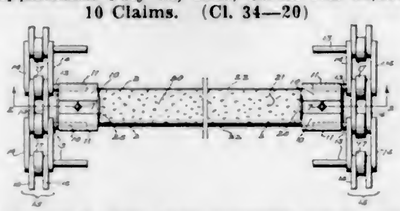
Application May 28, 1936, Serial No. 82,338
4 Claims. (Cl. 55—74)

1. In a farming implement of the character specified, a main axle, supporting wheels at the



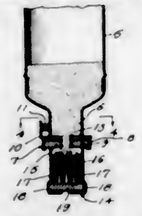
ends of the main axle, a tongue fastened to the axle, an adjustable tongue hitch, angle bars extending between the ends of the main axle and the tongue, harrow frames swiveled to the axle, teeth carried by said frames and means under the control of the operator for raising and lowering said harrow frames independently of each other.

2,100,957
METAL BUILDING STRUCTURE
George P. Hoffman, Jacksonville, Fla.
Application June 11, 1936, Serial No. 84,741
13 Claims. (Cl. 189—1)



6. A metallic building structure comprising interengaging horizontally disposed flanged sections forming the outer face of its side walls, said sections having their flanges inwardly disposed, vertically disposed flanged sections forming the inner face of its side walls having their flanges facing towards the outer wall sections and provided with notches into which the edges of the flanges on the outer sections engage to retain the sections in assembled position, the depths of said notches being less than the width of the flanges on the inner sections and the inner edges of the flanges of the outer sections being spaced from the inner wall sections, and means for supporting the lower ends of said inner wall sections.

2,100,958
DRY MASONRY
Erich Honigmann and Friedrich Bruckmayer, Vienna, Austria, assignors to N. H. Moos, London, England, and Heinrich Eisler, Vienna, Austria
Application April 5, 1937, Serial No. 135,095
13 Claims. (Cl. 72—37)

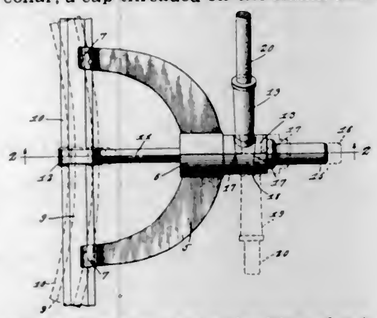


1. Intermediate joint material for use between courses of bricks or stones in a dry masonry structure comprising a sheet of material having at least in superficial portions thereof a limited degree of compressibility under load in order to compensate for surface inequalities of the bricks or stones mainly composing the masonry, said material having also great tensile strength so as to impart to said masonry a high resistance to buckling, bending, and distortion, and comprising at least one of the materials of the class consisting of asbestos, cellulose derivatives, protoplasm, seaweed, moss and paper impregnated with a moisture-repellent substance, and mixtures including light concrete, superficially compressible cement, dolomite silicious earth and pumice, said sheet of material having a reinforced construction.

2,100,959
CORK INSERT GIRT
Alpheus O. Hurxthal, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application July 12, 1935, Serial No. 31,127
10 Claims. (Cl. 34—20)

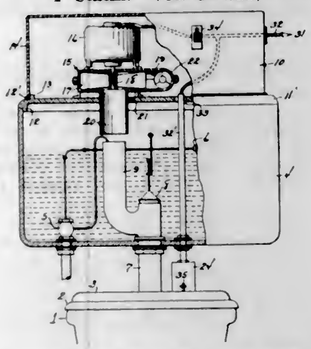
1. A girt for web drier conveyers comprising a metallic body and a body of cork partially enclosed by and projecting outwardly beyond said metallic body, said projection affording a goods engaging surface on the girt.

2,100,960
COMBINATION DENTIFRICE DISPENSER AND TOOTHBRUSH HOLDER
Herbert Jacoby, Croton-on-Hudson, N. Y.
Application August 6, 1936, Serial No. 94,680
3 Claims. (Cl. 221—62)



1. In combination with a dentifrice container, dispensing means attached to said container, said means including a member having upturned flanged edges and a discharge slot therein, a holder for supporting a toothbrush, said holder including a base slidable in the flanged edges of the dispensing means.

2,100,961
RAIL BENDER
Raymond P. Jones and Walter A. White, Scarbro, W. Va.
Application July 31, 1936, Serial No. 93,708
1 Claim. (Cl. 153—38)



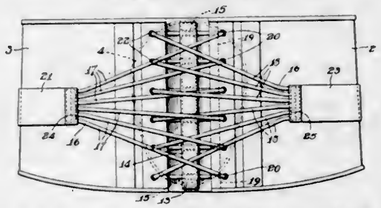
A rail bender comprising a substantially arch-shaped yoke having a medial sleeve portion provided with a cam end projected outwardly from said yoke, abutment terminals formed at the ends of said yoke, a shank slidable through the sleeve and having a jaw, a double cam-faced collar loose on said shank, one cam face of said collar being in confronting relation to the cam end of said sleeve, a socketed handle extension formed with

said collar, a cam-faced part loose upon said shank and confronting the other cam face of said collar, a cap threaded on the shank and act-

ing against the part, and a bushing about said shank and socketed within the sleeve for the fitting of the collar and part thereon with the cap in abutting engagement with said bushing.

2,100,962
VENTILATING APPARATUS FOR TOILETS
Gust Juntunen, Hancock, Mich.
Application September 9, 1936, Serial No. 99,980
1 Claim. (Cl. 4—213)

The combination with a toilet bowl having a hinged seat and a flush tank including an upright overflow pipe therein communicating with said bowl, of a casing surmounting said tank and forming a cover therefor, suction apparatus in said casing including a motor for operating the same, a suction pipe for the apparatus and depending therefrom into said tank for disposal directly over the overflow pipe an outlet pipe for the apparatus and extending through the casing, a switch box on said bowl, a conduit extending from said box through said tank and into said casing, a normally open switch in said box, conductors for the switch and extending therefrom through said conduit and connected in said casing in circuit with said motor, and means for closing said switch on the downward hinging movement of said seat.



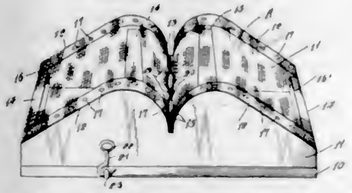
2,100,963
ARTIFICIAL LURE
Merriel Dale Keyser, Edgewood Arsenal, Md.
Application December 21, 1936, Serial No. 117,040
3 Claims. (Cl. 43—42)

1. In a fish lure, a spoon-like body having its front portion thick and shaped like the snout of a minnow and its center of gravity near the end of said front portion, its weight approximately equal to that of an aluminum body of the same size and shape, a gradually receding thickness from a point near the end of the thick front portion to the rear end, and its outer surface

convex and rounded from side to side and end to end, and a hook fixed to said body, said hook having its shank adjacent to said body, the bent portion projecting outwardly from said body, and its pointed end in substantial alinement with the rear end of said body.

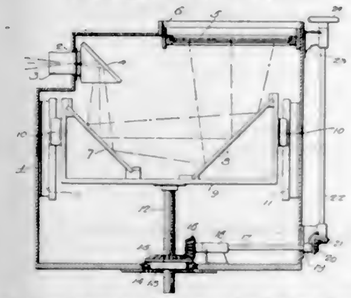
2,100,964
SURGICAL BELT
Arthur B. Kendrick, East Orange, N. J., assignor to James R. Kendrick Co., Inc., Philadelphia, Pa., a corporation of Pennsylvania
Application February 4, 1936, Serial No. 62,240
4 Claims. (Cl. 128—78)

1. In a surgical belt the combination of two belt members having two adjacent, relatively movable, rearward end portions, a pressure pad inwardly thereof, collapsible parts connecting said end portions and the pad, means for adjustably connecting said end portions, said means including a pair of laces, and means for anchoring the laces of the pair to one of said end portions, one lace of said pair extending between the pad and said end portions and passing freely through an aperture in the end portion opposite that to which the pair of laces is anchored, the other lace of said pair extending from said anchoring means across the space between said end portions outwardly thereof, and the first named lace of said pair extending from said aperture across the space between said end portions outwardly thereof.



2,100,965
PITMAN
Ralph Kuskie, Grant, Nebr.
Application November 9, 1936, Serial No. 109,999
1 Claim. (Cl. 74—587)

A pitman comprising a tubular member, a housing in engagement with one end of the member, a strap surrounding said housing, means for detachably and adjustably securing the strap on said member, ball bearings supported by said housing, a bearing sleeve engaging the other end of said member and including sections, a strap



secured to the member and surrounding the sleeve to retain the latter in engagement with the member and the sections thereof assembled, a set bolt carried by the last-named strap to engage the sleeve, a lubricant fitting secured to said housing for furnishing lubricant to the ball bearings, felt washers located in said housing to prevent escape of the lubricant, split rings releasably secured in said housing and retaining the felt washers in position, a block secured in said member adjacent the bearing sleeve to form a lubricant chamber, a lubricant fitting carried by said member for directing lubricant into the chamber, said sleeve having an opening to admit lubricant from the chamber to the inner face of the sleeve.

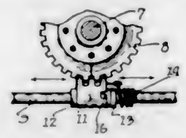
2,100,966
INSECT TRAP
Joseph Lambert, Pittsburg, Kans.
Application May 19, 1936, Serial No. 80,622
2 Claims. (Cl. 43—121)

1. In an insect trap, a trapping chamber having side walls inclined upwardly from their ends then downwardly to form V-shaped portions at their middles, screen wire fabrics for the trap chamber secured to said walls, the adjacent ends of said screen fabrics terminating between said V-shaped portions and being connected by spaced rivets to provide entrance openings, and the screen fabrics terminating in longitudinal strands extending into the trap chamber to prevent the return of insects.

2,100,967
CAMERA
Lionel F. Levy, Philadelphia, Pa., assignor of fifty one-hundredths to Howard S. Levy, Feasterville, Pa.
Application February 11, 1935, Serial No. 6,113
Renewed May 4, 1937
2 Claims. (Cl. 95—45)

1. In a photographic device including supporting means for a photo-sensitive surface, the combination of a lens, reflecting means having at least one reflecting surface arranged to reflect an image revertively from said lens to a photo-sensitive surface arranged on said supporting means, and means for adjusting said reflecting means toward or from said lens and said photo-sensitive surface to focus the image on said photo-sensitive surface, whereby the light path between said lens and said photo-sensitive surface shortens or lengthens more than the movement of the reflecting means toward or from said lens and said reflecting surface.

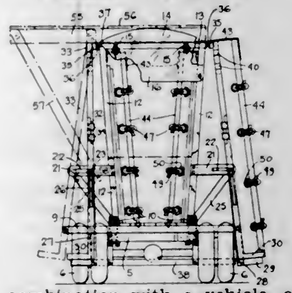
2,100,968
MANUFACTURE OF ORGANIC SULPHUR COMPOUNDS
Leon Lilienfeld, Vienna, Austria
No Drawing. Application March 8, 1932, Serial No. 597,641. In Great Britain March 31, 1931
39 Claims. (Cl. 260—151)



2. Process for the manufacture of aliphatic organic compounds which contain a hydroxyl group, at least one atom of sulphur and at least one halogen atom, wherein a polyhalogenated aliphatic compound containing at least one hydroxyl group is acted upon with such an amount of an inorganic non-oxidized metal compound of sulphur as is substantially below the stoichiometric proportion.

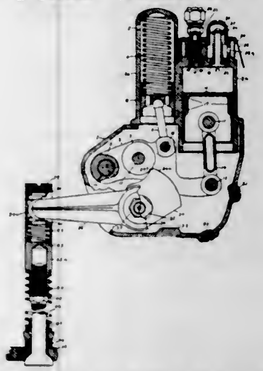
32. An organic compound containing at least one hydroxyl group, at least one atom of sulphide sulphur and at least one halogen atom, said substitutes being attached to different carbon atoms of a polyvalent aliphatic radical, such product being purified by treatment with water and by fractional distillation in a partial vacuum.

2,100,969
MAKING ARTIFICIAL THREADS
Leon Lilienfeld, Vienna, Austria
No Drawing. Original application November 28, 1928, Serial No. 322,590, which in turn is a division of Serial No. 567,428, June 10, 1922. Divided and this application November 7, 1933, Serial No. 697,083. In Austria June 13, 1921
12 Claims. (Cl. 18—54)



1. A process for the production of artificial threads or filaments which consists in spinning into a liquid setting bath, a solution containing an ether derivative of cellulose in solution in a solvent liquid, said setting bath being composed essentially of water and having a temperature of at least 16° C.

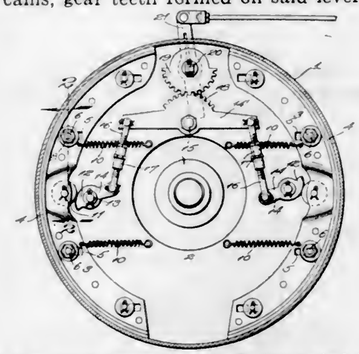
2,100,970
AUTOMATIC SAFETY BRAKE FOR MOTOR VEHICLES
John S. MacMullen, San Francisco, Calif.
Application July 30, 1936, Serial No. 93,496
6 Claims. (Cl. 188—31)



1. In a device of the character described, in combination with a vehicle having a propeller shaft and wheels connected thereto, a gear associated with said propeller shaft, a gear segment pivotally mounted below said gear and adapted to engage the teeth of said gear, means for moving said segment into engagement with said gear, said means including a rod on which said segment is rotatably mounted, and a system of levers extending from said rod to the cab of said vehicle.

2,100,971
PLATE GLASS CARRYING TRUCK
John McDonald, Brooklyn, N. Y.
Application February 17, 1934, Serial No. 711,688
7 Claims. (Cl. 296—3)

1. The combination with a vehicle, of a pair of side racks, one being positioned on each side of the vehicle, a support means upon which said racks are pivotally mounted, said racks being slotted to receive said support means whereby the racks can be moved from vertical position alongside the vehicle to horizontal position atop thereof, and means for joining the ends of the racks when the same are in horizontal position.

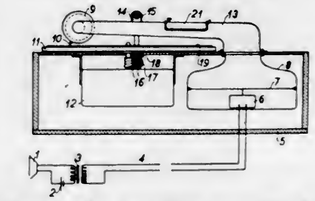


2,100,972
AIR COMPRESSOR
Louis J. Michaels, Dayton, Ky.
Application June 9, 1934, Serial No. 729,763
1 Claim. (Cl. 230—34)

An air compressor consisting of a casing, a cylinder on the casing, a piston in the cylinder, a rocker arm in the casing, pivotally mounted at one end and pivotally associated with the piston at its opposite end, a cam pivotally mounted in the casing and engaging the rocker arm between the ends thereof, said cam having a portion of its surface adapted to produce arm movement and an adjacent portion adapted to establish arm dwell after a limit of arm movement has been reached, stops limiting the action of said cam to said two portions thereof, and a yielding link connecting the cam with a driving element.

2,100,973
INTERNAL BRAKE
Clayton W. Naylor, Eaton Rapids, Mich.
Application May 26, 1936, Serial No. 81,924
1 Claim. (Cl. 188—78)

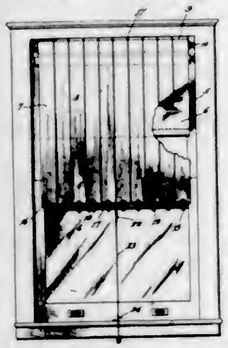
A brake including a drum and a fixed support, brake shoes slidably mounted on the support and movable towards and from the drum, brake linings for said shoes, springs acting on said shoes to move them away from the drum, rollers journaled to the shoes intermediate their ends, cams pivoted to the support and acting on said rollers, a lever pivoted on the support, tie rods pivoted to the ends of the lever and to the cams, gear teeth formed on said lever adja-



cent the pivot thereof, a shaft journaled in said support, a gear secured on said shaft and meshing with the gear teeth of the lever, a brake arm secured to said shaft and adapted to be connected to a brake operating means and means for effecting a minute adjustment of said tie rods as to length whereby to equalize the pressure applied on said drum by each of said shoes and to apply pressure on said drum by one of said shoes in advance of the other.

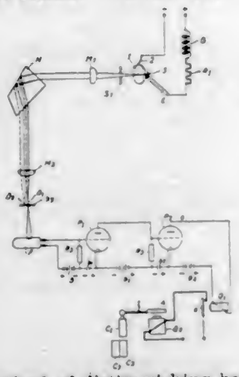
2,100,974
SOLDERING PREPARATION
Raymond F. Neilson, Detroit, Mich.
No Drawing. Application July 24, 1935, Serial No. 32,876
2 Claims. (Cl. 148—25)

2. A soldering preparation consisting of a metallic chloride, a metal etching acid, a monoalkyl ether derivative of ethylene glycol, and a surface tension reducing agent selected from a group of substances consisting of soap-like glucosides of vegetable derivation and monocarboxylic acids of the olefin series.



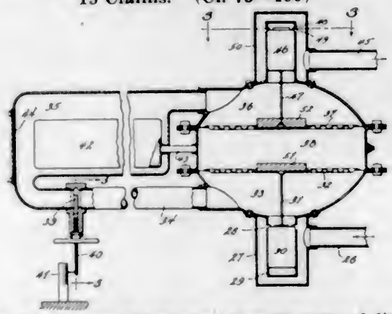
2,100,975
SOUND RECORDING
Leopold Neumann, Vienna, Austria, assignor to Ronag A.-G., Chur, Switzerland
Application August 17, 1936, Serial No. 96,513
In Austria December 13, 1935
1 Claim. (Cl. 179—100.4)

In apparatus for recording acoustic oscillations a sound-conducting tube filled with a gaseous fluid, an electrically excited diaphragm at one end of the said tube and adapted to close over the said end, and an acoustically operated recording



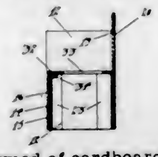
sound-box built into the other end of the said tube, the said electrically excited diaphragm being of larger area than the diaphragm of the said acoustically operated recording sound-box, so that the oscillations of the said larger diaphragm are converted into oscillations of the smaller diaphragm of greater amplitude, as and for the purpose specified.

2,100,976
VENETIAN SHADE
Chester H. Norton, Louisville, Ky.
Application July 6, 1936, Serial No. 89,177
7 Claims. (Cl. 156—16)



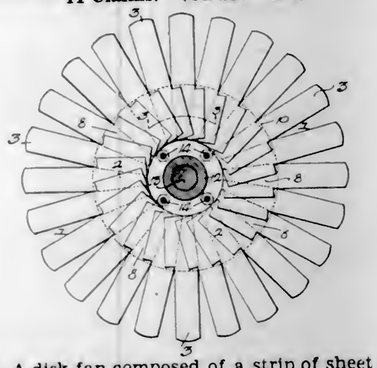
1. A shade comprising a supporting roller, spacing members carried by the roller, vertically disposed flexible slats having their upper ends secured to the roller between the spacing members, a transverse bar extending across the lower ends of the slats, and an independent pivotal connection between each slat and said bar to permit independent angular adjustment of the slats by individually turning the slats from their lower ends.

2,100,977
TESTING METAL ARTICLES
Hjalmar Leonard Pettersson, Stockholm, Sweden, assignor to Patentaktiebolaget Ambia, Stockholm, Sweden
Application July 15, 1935, Serial No. 31,529
In Sweden July 21, 1934
14 Claims. (Cl. 194—100)



1. The method of distinguishing between genuine coins, tokens or like metallic articles having a definite, known composition and spurious articles of other materials which comprises the steps of producing an electric discharge having a spectrum characteristic of the material of the article being tested, directing the spectrum of the discharge toward a light-sensitive device, preventing all but certain predetermined wave lengths peculiar to the spectrum of a genuine article from affecting said device, and utilizing the output of said light-sensitive device for indicating when a genuine article is being tested.

2,100,978
APPARATUS FOR MEASURING AND DELIVERING GAS QUANTITIES REDUCED TO A NORMAL CONDITION
Paul Rheinländer, Hagen, in Westphalia, Germany, assignor to Askania-Werke A. G. vormals Central Werkstatt Dessau und Earl Bamberg-Friedenau, a German company
Application August 2, 1933, Serial No. 683,308
In Germany August 5, 1932
15 Claims. (Cl. 73—199)



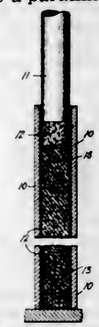
1. Apparatus of the class described for delivering constant gas quantities reduced to a normal condition, comprising in combination, a passage for the gas to be delivered; a constriction in said passage; and two regulating means one of which maintains the pressure of the gas upstream of said constriction proportionally equal to the absolute temperature of said gas upstream of said constriction, the other of said regulating means being connected to maintain the difference in pressures of the gas on opposite sides of said constriction substantially constant.

2,100,979
FOLDABLE SEAT
Allen W. Rowe, Binghamton, N. Y.
Application September 17, 1935, Serial No. 40,914
2 Claims. (Cl. 155—41)

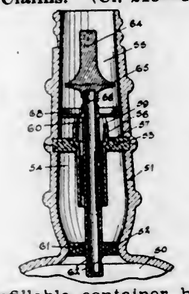
2. A seat formed of cardboard or the like, comprising a single blank of material provided with a plurality of cuts and scorings to form back, side, front and seat sections, said sections being bent along said cuts and scorings, said side sections having flaps adapted to be bent to underlie and to support said seat section, and means for securing said sections in their bent positions in seat form, said seat section being selectively foldable adjacent said front section, and an auxiliary seat member adapted to be supported upon the upper edge of said front section and said flaps, said auxiliary seat having a rib on the underside thereof for engaging the folded seat section for retaining the auxiliary seat in position.

2,100,980
DISK FAN
Walter M. Schwartz, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a corporation of Pennsylvania
Application January 28, 1936, Serial No. 61,218
11 Claims. (Cl. 230—134)

1. A disk fan composed of a strip of sheet material and comprising a plurality of blades projecting radially from and spaced angularly about a common axis extending substantially perpendicular to the general plane of the fan, said blades being uniformly pitched with respect to said axis and said plane and each including a base portion disposed adjacent said axis, said base portions being arranged in overlapping relation to each other around said axis with one edge of each base portion joined to the opposite edge of the base portion of the next adjacent blade by a connecting portion forming part of said strip together with said blades and said base portions thereof.



2,100,981
CONSTRUCTION OF BILLIARD TABLES
Richard Seifert, Vienna, Austria, assignor to Metallbillard A. G., Chur, Switzerland, a Swiss company
Application February 19, 1936, Serial No. 64,742
In Austria February 27, 1935
5 Claims. (Cl. 273—6)



1. A billiard table, pool table and the like, comprising in combination a self-supporting playing plate of a single piece of artificial stone, means cast in and extending out of said plate for securing legs directly to said plate, and means in said plate for attaching the cushions to said plate.

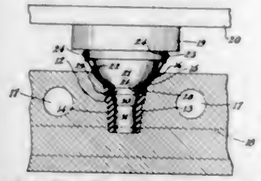
2,100,982
DEVICE FOR BLACKING SIGHTS OF WEAPONS
David M. Shoup, Bremerton, Wash.
Application August 5, 1936, Serial No. 94,471
4 Claims. (Cl. 93—2)

1. The step in a method of manufacturing a device for blacking the sights of weapons consisting of pressing a supply of camphor in finely comminuted form into a paraffin cylinder rigidly supported throughout its entire wall to produce a solid camphor body coated with paraffin.

2,100,983
NONREFILLABLE CONTAINER
Myer Sigman, Cleveland, Ohio
Application August 6, 1936, Serial No. 94,646
5 Claims. (Cl. 215—14)

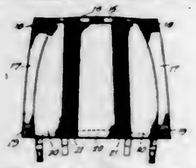
1. A non-refillable container having a liquid containing body portion and an integral throat portion, the throat portion having an opening for dispensing quantities of a liquid contained in the body portion and conducted by the throat portion, a wall element supported in the throat and dividing the throat into an outermost and an innermost portion, a second wall element supported in the innermost throat portion in spaced relation to the first named wall element to form a chamber therebetween, a hollow stem having closed ends and a side opening at each end extending through said elements and chamber for conducting liquid from the body portion to the outermost throat portion, said stem located so that the opening of one end is located in spaced relation to the outermost surface of the first named wall element, a second hollow stem extending through the first named wall element and having an opening located more proximate to the outermost surface of the first named wall element for conducting liquid introduced in the outermost throat portion into said chamber to thereby indicate said introduction.

2,100,984
ADAPTER FOR INCANDESCENT BULBS
Emanuel C. Smally, Canton, Ohio, assignor of one-half to Kenneth B. Cope, Canton Ohio
Application August 21, 1935, Serial No. 37,171
6 Claims. (Cl. 240—143)



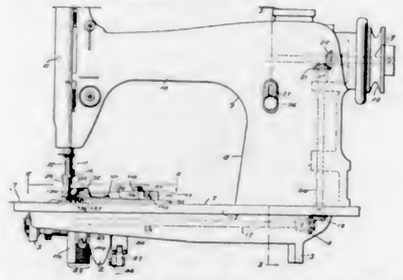
1. An adapter for electric lamps and the like including an insulation base having a longi-

tudinal opening of substantially uniform diameter extending entirely therethrough, a sheet metal base shell located around the sides and rear end of said insulation base, a sheet metal socket shell located within the opening of the insulation base and directly connected at its rear



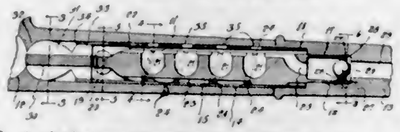
end to said base shell forming a unit therewith, a center contact insulated from both shells and extending through the rear end of the adapter, said insulation base extending forwardly beyond said base shell, and a reflector fixed to the forwardly extending portion of the insulation base.

2,100,985
MOLDING APPARATUS
Emanuel C. Smally, Canton, Ohio, assignor of one-half to Kenneth B. Cope, Canton, Ohio
Application October 19, 1935, Serial No. 45,789
2 Claims. (Cl. 18—34)



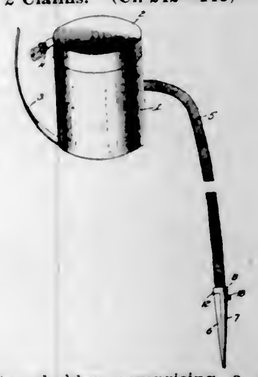
1. Apparatus for forming an insulation base with a sheet metal member having a portion imbedded in said base, comprising a cavity mold member having a cavity therein shaped to form the exterior of the insulation base, a plunger mold member shaped to form the interior of the insulation base, means upon the plunger mold member for attaching the sheet metal member, and means upon said mold members for clamping the sheet metal member therebetween at a single line contact only.

2,100,986
BODY MOLDING GARMENT
Howard A. Smith and May E. Smith, Fairfield, Conn.
Application June 27, 1936, Serial No. 87,605
5 Claims. (Cl. 2—37)



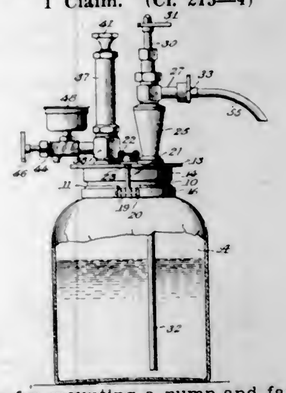
1. A relatively light-weight foundation garment including a vertically stretchable back section woven from relatively sheer elastic yarn, said back section having two spaced bands extending between the top and bottom edges of the section, each band being formed of a plurality of strands of elastic thread of considerably larger gauge than the elastic yarn, said strands being woven into the fabric comprising the back section, said bands extending over high point regions of the buttocks to flatten them and to cause the garment better to cling to the body without appreciably interfering with the natural freedom of movement permitted by the back section.

2,100,987
PINKING MECHANISM FOR SEWING MACHINES
Adolph Spielman, Philadelphia, Pa., assignor to Sarah Spielman, Philadelphia, Pa.
Application June 15, 1936, Serial No. 85,418
14 Claims. (Cl. 112—124)



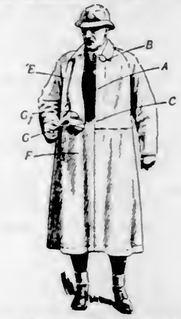
1. A pinking attachment for a sewing machine having a work-supporting surface, said attachment comprising a rotary pinking wheel rotatably mounted beneath said surface about an axis substantially parallel to said surface and a cooperating rotary anvil disk rotatably mounted above said surface about an axis substantially perpendicular to said pinking wheel axis with a flat side of the disk in contact with the peripheral face of the pinking wheel.

2,100,988
SMOKING PIPE
George Lee Tanner, Dacula, Ga.
Application December 19, 1935, Serial No. 55,249
3 Claims. (Cl. 131—12)



2. A chokeless pipe having a bowl, a stem communicating therewith and leading therefrom, a mouth piece communicating with the stem, a tube within the bore of the stem and mouth piece connecting them together, a core within and removable with the tube, said core having a plurality of wells, a plurality of smoke passages communicating with the bowl, wells and mouth piece, said passages including a longitudinally extending passage communicating with the wells at the tops thereof and with the bore of the mouth piece, spiral passages exteriorly surrounding the core and intersecting the wells at the tops thereof, a longitudinally extending passage communicating with all of the last-mentioned passages and terminating short of the front of the core, an extension at the forward end of the core disposed in the mouth piece, an obstruction carried by said extension, knob means adjacent the forward end of the tube having a plurality of longitudinally extending passages communicating with the bore of the tube, said knob having a part disposed in the tube, and said tube being upset to retain said knob.

2,100,989
TWINE HOLDER
Obadiah N. Tomlinson, Howell, Ga.
Application October 26, 1936, Serial No. 107,719
2 Claims. (Cl. 242—146)

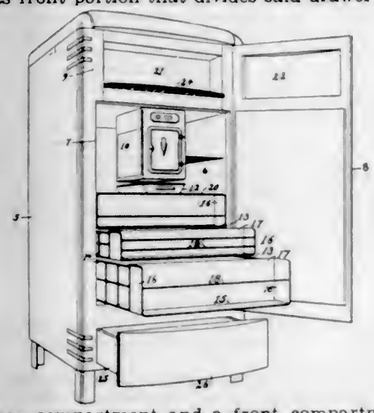


1. A twine holder comprising a container, tubular flexible means secured to the container for the passage of the twine therethrough, tensioning means secured to the outer end of the tubular flexible means and including a pair of sections providing a body of elongated substantially conical formation, one of said sections being hollow, the other section being solid and hingedly secured to the first section, the solid section having a flat serrated inner face, spring means in the hollow section and engageable with the serrated face to contact the twine to hold the latter under tension, and said body having a twine outlet at the apex end thereof.

2,100,990
LIQUID DISPENSING APPARATUS
Leonard W. Valentine, Baltimore, Md.
Application April 29, 1935, Serial No. 18,901
1 Claim. (Cl. 215—4)

Means for mounting a pump and faucet pressure-tight upon a container, including a cylindrical neck integral with the container, an annular bead extending circumferentially around the neck about midway between the container and the rim of the neck, said bead having a pair of gaps disposed diametrically opposite each other therein, a lug on the neck rising from the bead midway between the gaps and extending to the top of the neck, a disc cover for supporting the pump and faucet on the neck having a skirt telescopically receiving the neck, there being a notch formed in the skirt receiving the lug and anchoring the cover against rotation, a clamp ring having a pair of half circular sections encircling the neck and having inwardly directed bottom flanges disposed beneath the bead, a resilient gasket on the flanges engaging underneath and embracing the bead and preventing the clamp ring from damaging the neck, the clamp ring sections having perforated ears disposed at the gaps in the bead, adjusting screws for drawing the ears together to tighten the clamp ring, binding posts pivoted at the lower ends on said adjusting screws, the cover having a peripheral flange provided with seats receiving the upper ends of the binding posts, nuts on the binding posts engaged with the cover to hold the cover tightly down upon the neck, and a gasket between the cover and the rim of the neck compressed by the cover to prevent pressure leakage from the container.

2,100,991
WEARING APPAREL
William Hainsworth Watson, Bradford, England, assignor to Burberrys Limited, London, England
Application February 24, 1937, Serial No. 127,490
In Great Britain January 3, 1936
4 Claims. (Cl. 2—85)



1. An outer garment comprising a neck portion, a body portion extending from said neck portion to the waist line of the wearer, a skirt portion attached to the lower edge of said body portion, a sleeve united to said body portion, said body portion having an opening at the front thereof extending vertically therealong from said neck portion to the upper edge of said skirt portion, the lower edge of said body portion being detachably connected along a horizontal line to said upper edge of the skirt portion from said opening to a point below the armpit of the wearer of the garment, and a brace having one end attached to the upper edge of the skirt about midway of the free edge thereof and the other end attached at the back of the neck part of the garment, said neck, body portion and sleeve forming a flap, said flap being discardable from the wearer without permitting or causing the garment to drop from the wearer.

2,100,992
REFRIGERATOR STRUCTURE
Harry Woodhead, Roy A. Plumb, and Thomas A. Sindelar, Cleveland, Ohio, assignors to Truscon Steel Company, Youngstown, Ohio, a corporation of Michigan
Application October 1, 1935, Serial No. 43,124
5 Claims. (Cl. 62—89)

1. In a refrigerator including a casing having a chamber for the goods to be refrigerated pro-

vided with a doorway, and refrigerating means within the chamber, a drawer having an open front and an open top mounted in the chamber and movable outwardly through the doorway, said drawer having a transverse partition in rear of its front portion that divides said drawer into

a rear compartment and a front compartment, the front compartment being accessible through the doorway by way of the open front of the drawer when the drawer is within the chamber, and the rear compartment being accessible by way of the open top of the drawer when the drawer is moved outwardly.

2,100,993

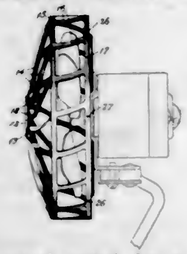
PROCESS FOR PREPARING ESTERS AND PRODUCTS

Herman A. Bruson, Elkins Park, Pa., assignor to Röhm & Haas Company, Philadelphia, Pa.

No Drawing. Application December 14, 1934, Serial No. 757,456

16 Claims. (Cl. 260—2)

1. A process for making esters of alpha-methacrylic acid and primary monohydric alcohols containing more than five carbon atoms, which comprises reacting the corresponding ester of alpha-hydroxyisobutyric acid with from ½ to 1 mol. equivalent of phosphorus pentoxide in the presence of a volatile organic liquid which is inert towards the reactants; filtering off any solid material, and distilling the resulting solution.



2,100,994

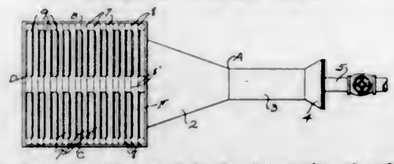
FAN GUARD

Joseph H. Cohen, Bridgeport, Conn., assignor to Casco Products Corporation, Bridgeport, Conn., a corporation of Connecticut

Application February 6, 1936, Serial No. 62,562

13 Claims. (Cl. 230—275)

1. A sheet metal guard for a rotatable fan structure comprising sheet metal parts presenting front, circumferential and rear sections, said front and circumferential sections together including a front central portion, a rim flange near the front of said circumferential section, spaced stays permitting air currents to pass therebetween and extending from said rim flange to said central portion, a ring near the back of said circumferential section, and spaced ties extending rearwardly from said rim flange and joining the same and said ring; said rear section being formed of one piece of sheet metal and including a rim flange telescopically engaging said ring, and a plurality of radial members extending inwardly from the rim flange last mentioned for supporting said rear section on the frame of a fan motor.



2,100,995

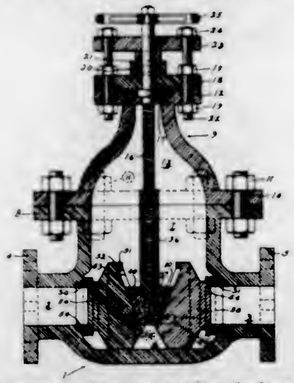
GAS BURNER

Frank H. Le Compte, Wichita, Kans., assignor of one-half to O. A. Keach, Wichita, Kans.

Application September 9, 1936, Serial No. 100,004

3 Claims. (Cl. 158—104)

1. In a gas burner, a fuel mixing chamber having an open top for supporting a grate, a grate formed of assembled bars arranged transversely of the incoming stream of fuel mixture, each bar being generally rectangular in cross-section with one side only recessed to form a narrow fuel discharge slot when in place against the opposite side of an adjacent bar, and one edge only of each bar being recessed, said bars being assembled with the recessed edges faced alternately in upward and downward directions for the purposes set forth.



2,100,996

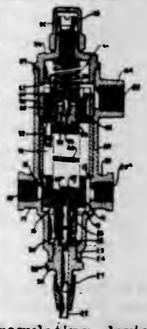
GATE VALVE

John N. Moore, Oklahoma City, Okla., assignor of one-half to Tom G. Drake, Oklahoma City, Okla.

Application February 13, 1936, Serial No. 63,702

2 Claims. (Cl. 251—71)

1. In a valve, a housing, a flow-hole extending therethrough and comprised of an axially alined inlet and outlet, a valve chamber between the inner ends of the flow-hole and extending upwardly therefrom perpendicularly, a removable bonnet over the chamber, a shaft rotatably carried by the bonnet and held against longitudinal movement with relation thereto, said shaft having its lower end threaded, an internally threaded sleeve engaged by the threads of the shaft and having a square head on its lower end, a wedge positively engaged by the head and having oppositely disposed inwardly and downwardly beveled surfaces, a closure for the inner end of the inlet and another for the inner end of the outlet, each closure dove-tailed to one of the inclined faces of the wedging element, and means carried cooperatively by the housing, by the closures, and by the wedge for forcing the closures to remain adjacent each other while they are in the chamber above the flow-hole, for releasing them to movement away from each other by the wedge when they reach a position in the flow-hole in axial alinement therewith, and for preventing rotation of the wedge; said means including: an inverted substantially T-shaped groove carried by the housing walls at each side of the flow-hole, said grooves being alined with each other in similar positions with relation to the flow-hole; outstanding lugs carried by the wedge, slidably engaged in the grooves, and confined within the leg portions thereof; and, outstanding lugs carried by the closures and slidably engaged within the grooves, the last mentioned lugs adapted to slide upwardly and downwardly in the leg portions of the grooves as the wedge is moved vertically, and adapted to slide horizontally within the horizontal portions of the grooves after they reach the lowermost end of their throws if downward movement of the wedge is continued.



2,100,997

PRESERVATION OF RUBBER

Philip Sherman Russel, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan

Application June 18, 1935, Serial No. 27,181

10 Claims. (Cl. 137—153)

1. A pressure regulating device comprising a casing having an inlet and an outlet, and a pressure chamber for receiving fluid under pressure and through which chamber the inlet and the outlet communicate, said casing having a second pressure chamber for receiving fluid under pressure, said second-named chamber having an outlet, flexible pressure responsive means in said casing and acted upon by the pressures of the fluids in both of said chambers, said pressures opposing each other with the pressure of the fluid in said second-named chamber being greater than atmospheric pressure and less than the pressure in the first-named chamber, a valve for controlling flow from said first-named outlet and actuated by said pressure responsive means, valve means controlling the outlet of said second-named chamber, and pressure responsive means for actuating said valve means, said last-named pressure responsive means being responsive to the pressure in said second-named chamber to maintain a substantially constant pressure therein.

2,100,998

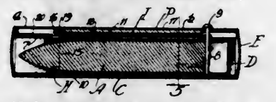
PRESERVATION OF RUBBER

Robert L. Sibley, Nitro, W. Va., assignor, by mesne assignments, to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application March 9, 1935, Serial No. 10,175

13 Claims. (Cl. 18—50)

1. The method of preserving rubber which comprises treating rubber with a product obtainable by treating 2,2,4-trimethyl-dihydroquinoline with a strong non-oxidizing mineral acid, and in addition thereto a diaryl p-phenylene diamine as an activator for said acid treated quinoline body.



2,100,999

LIPSTICK CONTAINER

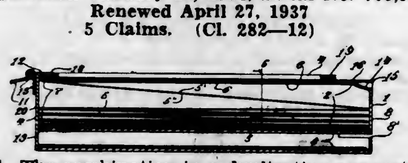
Edward C. Anderson, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a corporation of Illinois

Application July 1, 1936, Serial No. 88,406

6 Claims. (Cl. 132—79)

1. An article container comprising an elongated case open upon one side and at one end, a closure for the open side comprising a panel fitted therewithin and pivoted intermediately of its ends to the case for swinging movement through substantially 90°, and an article holder slidable into and out of the case through its open end adapted when advanced into the case to engage the pivoted panel to swing it into closed position.

2,101,000



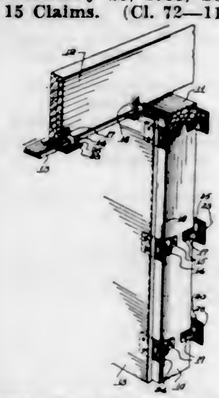
DUPLICATOR

James G. Brennan, Baltimore, Md.

Application January 17, 1934, Serial No. 706,924

Renewed April 27, 1937

5 Claims. (Cl. 282—12)



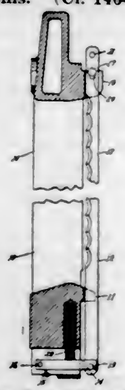
1. The combination in a duplicating apparatus comprising a box adapted to receive and fit closely upon a Z folded multiple web composed of successive record slips, the said box and multiple web being substantially the same size, said box having a stationary top wall which serves as a writing plate over which the web is drawn rearwardly to successive writing positions, a top frame having an opening to expose the sheet on the plate for writing, a front flange to close the front of the box which is otherwise open beneath the writing plate to receive the tablet, the forward edge of the writing plate being spaced backwardly from the front plate of the frame in closed position by a distance just sufficient to permit free passage of the web from the Z tablet, said tablet having weakened lines separating it into record slips, the said front edge being thin and sharp to enter and maintain the sharp fold of the paper web, thus serving as a positive positioning edge to engage the weakened lines between the successive record slips as the web is folded

about said edge due to the tension in feeding the front flange having a plate extending backwardly and overlying said edge and spaced upwardly therefrom by a distance just sufficient to pass the web which is led about said edge upwardly and backwardly, the writing plate having at its rear end a tearing edge to sever the written sheets as they are drawn forwardly.

2,101,001
BUILDING CONSTRUCTION

Bruno E. Balduf, Chicago, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois

Application February 23, 1935, Serial No. 7,702
15 Claims. (Cl. 72—118)



1. A resilient clip structure for building constructions, comprising a resilient loop, a perforated plate associated with one end of said loop and adapted to receive board attaching screws, said plate having closely spaced perforations the edges of said perforations being adapted to act as threads for said board attaching screws, and means on the other end of said resilient loop for attachment to a building frame.

2,101,002
MOUNTING FOR SLICER BLADES

Donald M. Fincke, Great Neck, N. Y., assignor to American Machine & Foundry Company, a corporation of New Jersey

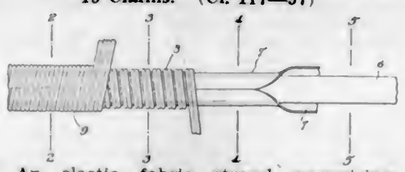
Application December 10, 1936, Serial No. 115,115
4 Claims. (Cl. 146—153)

1. A knife blade for a bread slicing machine comprising a thin, flat, elongated body having a sharpened edge and a blade supporting member comprising a rivet projecting through and beyond the faces of said blade, and said rivet having at each side of the blade a head of considerably larger diameter than that of the rivet shank, each head having a face engaged firmly with a contiguous annular area of the blade, and said heads being of like dimensions and contour, presenting at each side of the blade a smooth cylindrical bearing surface extending outwardly at right angles to said annular area.

2,101,003
ELASTIC STRAND

William J. Fox, Philadelphia, Pa., assignor to James R. Kendrick Co., Inc., Philadelphia, Pa., a corporation of Pennsylvania

Application August 3, 1936, Serial No. 94,003
9 Claims. (Cl. 117—57)

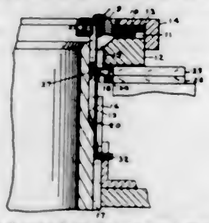


1. An elastic fabric strand comprising a rubber core, inner covering threads surrounding the core, outer covering threads surrounding the inner threads, and a flat strip of rubber extending longitudinally of the strand between said inner threads and said outer threads, said strip being transversely deformed by said outer covering threads and embracing said core and said inner threads.

2,101,004
ELASTIC STRAND

William J. Fox, Philadelphia, Pa., assignor to James R. Kendrick Co., Inc., Philadelphia, Pa., a corporation of Pennsylvania

Application February 23, 1937, Serial No. 127,288
19 Claims. (Cl. 117—57)

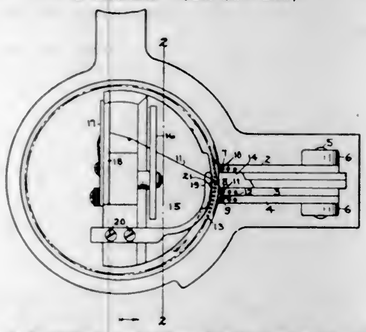


1. An elastic fabric strand comprising a stretchable, elastic, rubber core extending longitudinally of the strand; a stretchable, elastic, rubber ribbon extending longitudinally of the strand; and covering threads surrounding said core and said ribbon and transversely deforming the ribbon into contact with the rubber core.

2,101,005
KNITTING MACHINE

Robert H. Lawson, Pawtucket, R. I., assignor to Hemphill Company, Central Falls., R. I., a corporation of Massachusetts

Application March 20, 1930, Serial No. 437,560
Renewed August 25, 1934
24 Claims. (Cl. 66—8)

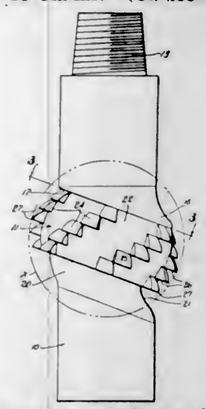


1. A jack adapted to be associated with a sinker and including a laterally extending sinker engaging part and a butt for engagement by cams, the sinker engaging part and butt extending substantially at right angles to one another.

2,101,006
YARN CHANGE MECHANISM FOR KNITTING MACHINES

Robert H. Lawson, Pawtucket, and Augustin Gagne, Central Falls, R. I., assignors to Hemphill Company, Central Falls, R. I., a corporation of Massachusetts

Application June 3, 1931, Serial No. 541,856
4 Claims. (Cl. 66—140)

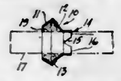


3. A knitting machine having means at one side of the needles for feeding yarns thereto, means at the other side of the needles for engaging a yarn when first moved to a feeding position with respect to the needles to retain the said yarn in a position always to be first engaged by the same needle, the said yarn thereafter being moved to a position to be engaged by following needles.

2,101,007
WELL REAMER

Charles J. Maher, Los Angeles, Calif.

Application November 9, 1934, Serial No. 752,299
13 Claims. (Cl. 255—73)

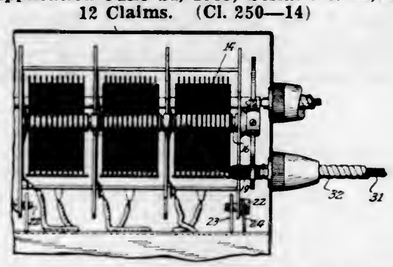


1. A well reamer including a shank adapted to be connected in a drilling string, a cutter surrounding and rotatably supported on the shank, and circumferentially and vertically spaced cutting parts on the cutter adapted to operate in a path constituting a portion of a sphere and simultaneously contact the wall of the well bore at spaced points throughout its circumference.

2,101,008
MITE KILLER ATTACHMENT FOR BIRD CAGE PERCHES

Frederick Mayer, New York, N. Y., assignor to Cornell Center Homeopathic Bird Remedy Co., Inc., New York, N. Y., a corporation of New York

Application June 6, 1936, Serial No. 83,827
2 Claims. (Cl. 119—25)



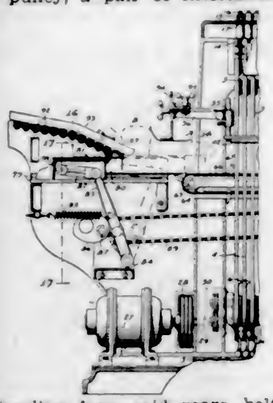
1. A mite killer attachment for bird cage perches comprising a horizontally extending hollow body open at its inner and outer ends, and a hollow hub extending outwardly from the body about the open inner end thereof for fitting about a perch, the wall of the body being channel-shaped in cross section to provide a receptacle having inner and outer wall portions diverging from each other towards ends of the body, and the open outer end of the body being of greater diameter than said hub to dispose margins thereof in spaced relation to the surface of a perch snugly received in the hub.

2,101,009
RADIO TUNING APPARATUS

Donald H. Mitchell, Chicago, Ill., assignor to Galvin Manufacturing Corporation, Chicago, Ill., a corporation of Illinois

Application June 24, 1935, Serial No. 28,037
12 Claims. (Cl. 250—14)

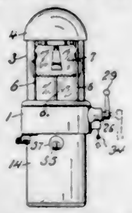
5. In a radio receiving set, a housing, a chassis removably located within said housing, a tuning condenser on said chassis including a rotatably mounted shaft, a gear mounted on said shaft for rotating said tuning condenser, a pinion rotatably mounted on said housing and meshing with said gear, and means accessible from the outside of the housing for adjusting one of said meshing members with respect to its support means to properly space said meshing members with respect to one another in spite of variations in the position of said chassis within said housing.



2,101,010
BREAD SLICING MACHINE

Charles H. Petskeyes, Davenport, Iowa, assignor to Micro-Westco, Inc., Bettendorf, Iowa, a corporation of Delaware

Application March 15, 1934, Serial No. 715,694
10 Claims. (Cl. 146—88)

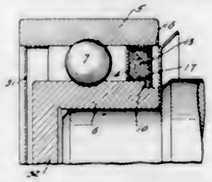


1. In a slicing machine, a series of individual pulleys, each pulley having its axis offset with respect to the other pulleys in said series according to the thickness of the slices to be produced, a second series of pulleys, each having its axis offset with respect to the other pulleys in said series according to the thickness of the

slices to be produced and each lying in the plane of a pulley in the other series, an endless cutter band carried by each pair of coplanar pulleys, each of said pulleys of one of said series having a driving pulley, a pair of intermeshed gears,

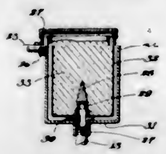
shafts extending from said gears, belts carried by one of said shafts and some of said driving pulleys, belts carried by the other of said shafts and the other of said driving pulleys, and means for driving said gears.

2,101,011
FARE RECEPTACLE
William P. Pitt and Frederick D. Pitt, Kansas City, Mo., assignors to The Pitt Corporation, Kansas City, Mo., a corporation of Missouri
Application May 24, 1935, Serial No. 23,231
14 Claims. (Cl. 232—16)



1. In a fare receptacle, a fare receiver having a fare outlet, a safe having a fare inlet and removably engaging said receiver and revoluble to and from a position in which said inlet will register with said outlet for receiving fares discharged therefrom, means for closing said inlet, and means engageable by said inlet closing means for locking said safe from being turned from said position.

2,101,012
CLEANING OF FILTER SURFACES
Hoyt A. Pond and Elvis E. Perry, Port Arthur, Tex., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application May 11, 1937, Serial No. 142,068
7 Claims. (Cl. 210—62)

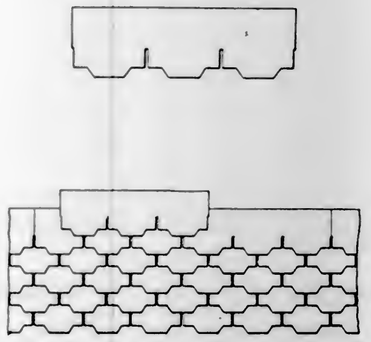


1. The method of cleaning filter leaves used in the filtration of petroleum tars, which comprises subjecting the leaves to the action of a hot petroleum hydrocarbon tar solvent, withdrawing the leaves from the action of the hot solvent, then subjecting the leaves to the action of a hot concentrated water solution of a caustic alkali, withdrawing the leaves from the action of this solution, passing steam through the leaves, and then washing the leaves with hot water.

2,101,013
BEARING SEAL
Fayette Leister and John W. Smith, New Britain, Conn., assignors to The Fafnir Bearing Company, New Britain, Conn., a corporation of Connecticut
Application October 4, 1934, Serial No. 746,788
2 Claims. (Cl. 286—5)

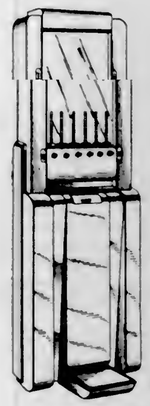
1. Seal means for a bearing comprising inner and outer bearing rings with interposed antifriction bearing members, said seal being between said inner and outer bearing rings and including a ring of absorbent material surrounding the inner ring, the inner diameter of the absorbent ring being slightly greater than the diameter of that part of the inner ring which it surrounds, whereby there is a slight clearance of capillary dimensions between said inner ring and said absorbent ring.

2,101,014
DRY CLEANING APPARATUS AND FLUID CIRCULATING SYSTEM THEREFOR
Louis Angelus, New York, and Daniel Lawrence Baylis, Bellerose, N. Y.; said Baylis assignor to said Angelus
Application April 12, 1935, Serial No. 15,986
1 Claim. (Cl. 210—62)



In a dry cleaning apparatus, a porous bag, a closed circulatory system whereby a quantity of cleaning fluid is continuously forced into and through said bag, a layer of adsorptive material lining the inside of said bag, a cartridge having an openable top and a frangible bottom and containing a measured charge of said material, a chamber in the circulatory system adapted to accommodate said cartridge, and means associated with said chamber for puncturing the frangible bottom of said cartridge during its insertion thereinto.

DESIGNS



NOVEMBER 30, 1937

107,209
DESIGN FOR A ROOFING OR SIDING
Jack J. Batell, Crete, Ill.
Application December 22, 1936, Serial No. 66,684
Term of patent 14 years

The ornamental design for a roofing or siding substantially as shown.

107,210
DESIGN FOR A COMBINATION VENDING MACHINE AND SCALE
William George Behling, Brooklyn, N. Y.
Application February 9, 1937, Serial No. 67,534
Term of patent 3½ years

The ornamental design for a combination vending machine and scale, as shown and described.

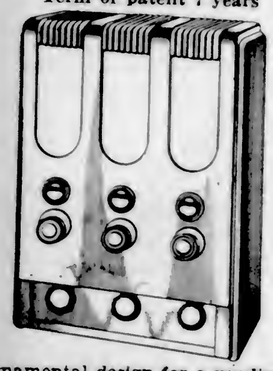
107,211
DESIGN FOR A SHOE
Benjamin Benjamin, Brooklyn, N. Y.
Application October 27, 1937, Serial No. 72,451
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

107,212
DESIGN FOR A SHOE
Benjamin Benjamin, Brooklyn, N. Y.
Application October 27, 1937, Serial No. 72,452
Term of patent 3½ years

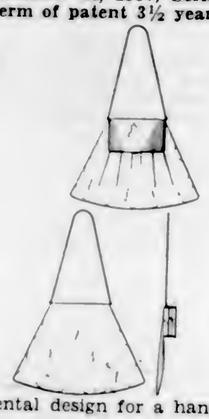
The ornamental design for a shoe substantially as shown.

107,213
DESIGN FOR A SWEATER
Hans Boepple, New York, N. Y.
Application October 30, 1937, Serial No. 72,525
Term of patent 3½ years



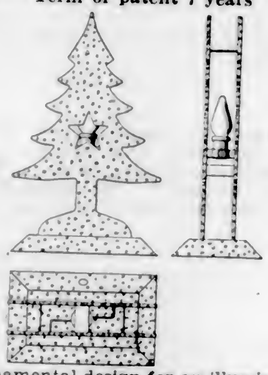
The ornamental design for a sweater, substantially as shown, and described.

107,214
DESIGN FOR A SWEATER
Hans Boepple, New York, N. Y.
Application October 30, 1937, Serial No. 72,526
Term of patent 3½ years



The ornamental design for a sweater, substantially as shown.

107,215
DESIGN FOR A VENDING MACHINE
David S. Bond, Brookline, Mass.
Application June 16, 1936, Serial No. 63,321
Term of patent 7 years



The ornamental design for a vending machine substantially as shown and described.

107,216
DESIGN FOR A HANDBAG OR THE LIKE
William F. Bowen, North Attleboro, Mass., assignor to Evans Case Company, a corporation of Massachusetts
Application October 11, 1937, Serial No. 72,122
Term of patent 3½ years

The ornamental design for a handbag or the like as shown.

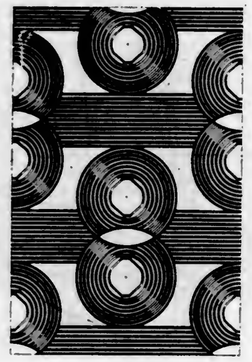
107,217
DESIGN FOR AN ILLUMINATED ARTIFICIAL CHRISTMAS TREE
Odilon Charette, Fitchburg, Mass.
Application July 29, 1937, Serial No. 70,722
Term of patent 7 years

The ornamental design for an illuminated artificial Christmas tree, as shown.

107,218
DESIGN FOR A SHOE
David S. Cohen, Brooklyn, N. Y.
Application October 27, 1937, Serial No. 72,450
Term of patent 3½ years

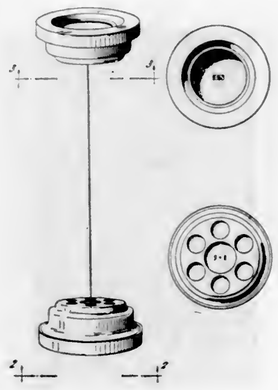
The ornamental design for a shoe substantially as shown.

107,219
DESIGN FOR AN ASHTRAY
George R. Debnam, Baltimore, Md.
Application May 11, 1937, Serial No. 69,299
Term of patent 3½ years



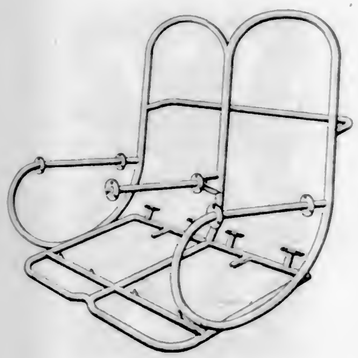
The ornamental design for an ashtray substantially as shown.

107,220
DESIGN FOR A TEXTILE FLOOR COVERING
William O. Dewsbury, Freehold, N. J., assignor to A. & M. Karagheusian, Inc., New York, N. Y., a corporation of Delaware
Application June 8, 1937, Serial No. 69,739
Term of patent 3½ years



The ornamental design for a textile floor covering, as shown and described.

107,221
DESIGN FOR A TEXTILE FLOOR COVERING
William O. Dewsbury, Freehold, N. J., assignor to A. & M. Karagheusian, Inc., New York, N. Y., a corporation of Delaware
Application June 8, 1937, Serial No. 69,742
Term of patent 3½ years



The ornamental design for a textile floor covering, as shown and described.

107,222
DESIGN FOR A TOY TELEPHONE
George Dobrusin, Chicago, Ill.
Application September 16, 1937, Serial No. 71,644
Term of patent 7 years

The ornamental design for a toy telephone, as shown.

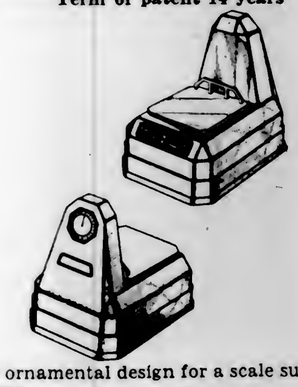
107,223
DESIGN FOR AN UPHOLSTERY SUPPORTING FRAME FOR A RAILWAY COACH OR BUS CHAIR
Warren R. Elsey, Merion, Pa.
Application July 26, 1937, Serial No. 70,668
Term of patent 14 years

The ornamental design for an upholstery supporting frame for a railway coach or bus chair, as shown.

107,224
DESIGN FOR A BROCATELLE FABRIC
Emile Ericson, Pelham, N. Y., assignor to Whitehouse Fabrics, Inc., New York, N. Y., a corporation of New Jersey
Application October 19, 1937, Serial No. 72,305
Term of patent 3½ years

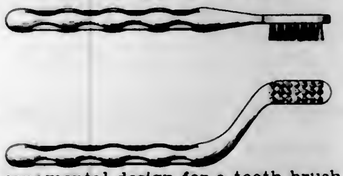
The ornamental design for a brocatelle fabric substantially as shown.

107,225
DESIGN FOR A BOTTLE
John H. Funkey, Baltimore, Md., assignor to Carr-Lowrey Glass Co., Baltimore, Md.
Application February 21, 1936, Serial No. 61,290
Term of patent 14 years



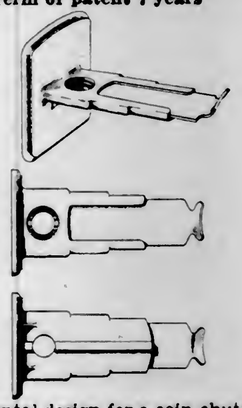
The ornamental design for a bottle, as shown.

107,226
DESIGN FOR A BOTTLE
John H. Funkey, Baltimore, Md., assignor to Carr-Lowrey Glass Co., Baltimore, Md.
Application October 25, 1937, Serial No. 72,424
Term of patent 14 years



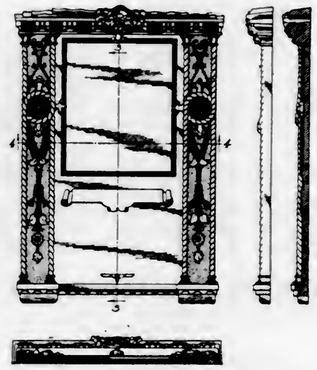
The ornamental design for a bottle, as shown.

107,227
DESIGN FOR A SCALE
Max Garbell, Chicago, Ill., assignor to Victor Adding Machine Company, Chicago, Ill., a corporation of Delaware
Application June 7, 1937, Serial No. 69,729
Term of patent 14 years



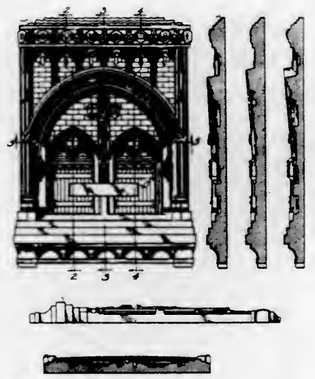
The ornamental design for a scale substantially as shown.

107,228
DESIGN FOR A TOOTH BRUSH
Louis Goodman, New York, N. Y.
Application September 22, 1937, Serial No. 71,717
Term of patent 7 years



The ornamental design for a tooth brush, substantially as shown.

107,229
DESIGN FOR A COIN CHUTE MOUNTING PLATE
Bernhard C. Grunig, Chicago, Ill.
Application September 20, 1937, Serial No. 71,693
Term of patent 7 years



The ornamental design for a coin chute mounting plate, as shown.

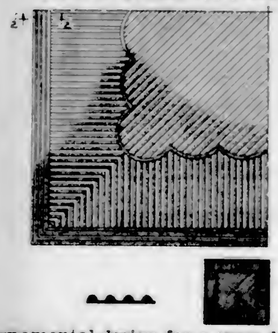
107,230
DESIGN FOR A PLAQUE
Samuel L. Hefter, Chicago, Ill.
Application September 7, 1937, Serial No. 71,488
Term of patent 3½ years

The ornamental design for a plaque, as shown.

107,231
DESIGN FOR A PLAQUE
Samuel L. Hefter, Chicago, Ill.
Application September 7, 1937, Serial No. 71,489
Term of patent 3½ years

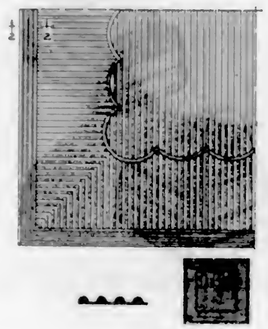
The ornamental design for a plaque as shown.

107,232
DESIGN FOR A FRATERNAL CHARM OR SIMILAR ARTICLE
William E. Holler, Birmingham, Mich.
Application July 26, 1937, Serial No. 70,667
Term of patent 7 years



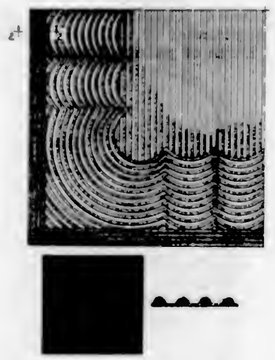
The ornamental design for a fraternal charm or similar article as shown.

107,233
DESIGN FOR A SHOE
Alphons Hurzeler, New Rochelle, N. Y.
Application October 29, 1937, Serial No. 72,498
Term of patent 3½ years



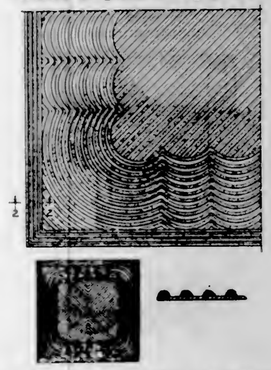
The ornamental design for a shoe substantially as shown.

107,234
DESIGN FOR A SPREAD, OR SIMILAR ARTICLE
Charles S. Jacobs, New York, N. Y.
Application March 16, 1937, Serial No. 68,197
Term of patent 3½ years



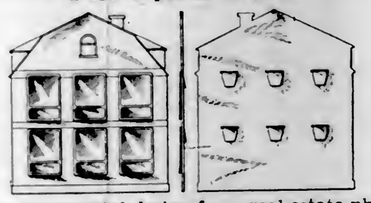
The ornamental design for a spread, or similar article, as shown.

107,235
DESIGN FOR A SPREAD, OR SIMILAR ARTICLE
Charles S. Jacobs, New York, N. Y.
Application March 16, 1937, Serial No. 68,198
Term of patent 3½ years



The ornamental design for a spread, or similar article, as shown.

107,236
DESIGN FOR A SPREAD, OR SIMILAR ARTICLE
Charles S. Jacobs, New York, N. Y.
Application March 16, 1937, Serial No. 68,199
Term of patent 3½ years



The ornamental design for a spread, or similar article, as shown.

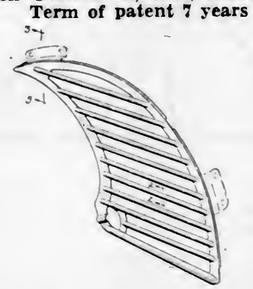
107,237
DESIGN FOR A SPREAD OR SIMILAR ARTICLE
Charles S. Jacobs, New York, N. Y.
Application March 16, 1937, Serial No. 68,200
Term of patent 3½ years

The ornamental design for a spread or similar article, as shown.

107,238
DESIGN FOR A REAL ESTATE PHOTOGRAPH DISPLAY RACK
Harry W. Joline, Philadelphia, Pa.
Application April 13, 1937, Serial No. 68,734
Term of patent 14 years

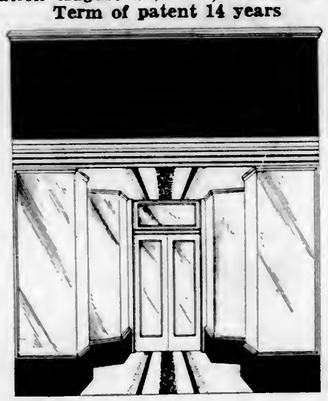
The ornamental design for a real estate photograph display rack, as shown.

107,239
DESIGN FOR A TEXTILE FABRIC
Walter F. Kaplan, San Francisco, Calif., assignor to The Emporium-Capwell Company, a corporation of California
Application April 14, 1937, Serial No. 68,775
Term of patent 3½ years



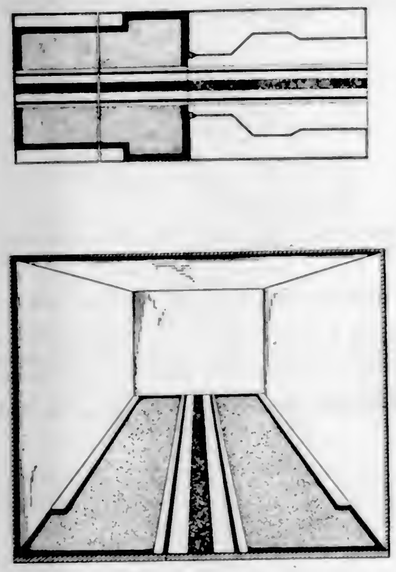
The ornamental design for a textile fabric, as shown.

107,240
DESIGN FOR A SHOE
Charles Kelly, Brooklyn, N. Y.
Application October 27, 1937, Serial No. 72,449
Term of patent 3½ years



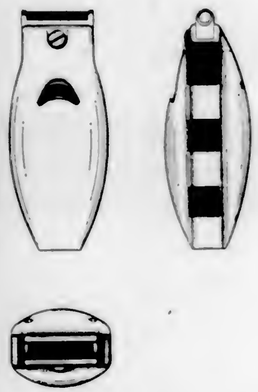
The ornamental design for a shoe, substantially as shown and described.

107,241
DESIGN FOR A SKIRT GUARD FOR A BICYCLE
Herman L. Kraeft, Cleveland Heights, Ohio, assignor to The Murray-Ohio Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application October 15, 1937, Serial No. 72,203
Term of patent 7 years

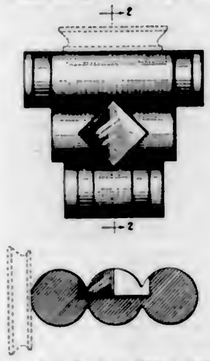


The ornamental design for a skirt guard for a bicycle, substantially as shown and described.

107,242
DESIGN FOR A STORE
Howard Irvin Kuebler, Baltimore, Md., assignor to Cannon Shoe Company, Baltimore, Md., a corporation of Massachusetts
Application August 20, 1937, Serial No. 71,220
Term of patent 14 years



107,242—Continued

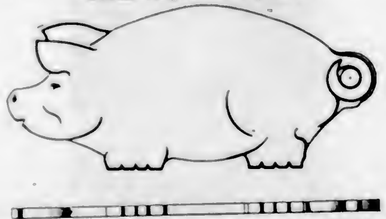


The ornamental design for a store, as shown and described.

107,243
DESIGN FOR AN ELECTRIC SHAVER
Harry Landsiedel, Wilton, Conn., assignor to General Shaver Corporation, Bridgeport, Conn., a corporation of Delaware
Application July 29, 1937, Serial No. 70,719
Term of patent 14 years

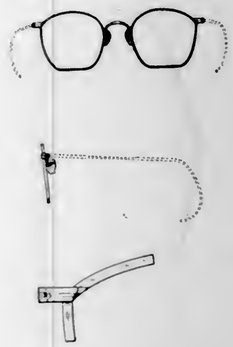
The ornamental design for an electric shaver, as shown.

107,244
DESIGN FOR A TOWEL BAR POST OR SIMILAR ARTICLE
Harry Lang, New York, N. Y.
Application August 19, 1937, Serial No. 71,191
Term of patent 3½ years



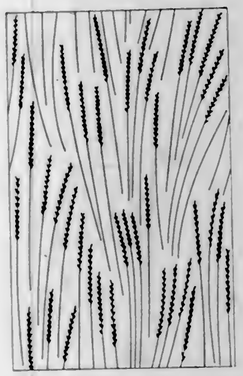
The ornamental design for a towel bar post or similar article, as shown.

107,245
DESIGN FOR A SHOE OR SIMILAR ARTICLE
David E. Levin, New York, N. Y.
Application October 5, 1937, Serial No. 71,965
Term of patent 3½ years



The ornamental design for a shoe or similar article, substantially as shown.

107,246
DESIGN FOR A FOOD CUTTING BOARD
Lewis M. Luteran and August P. Brunell, Clifton, N. J.
Application July 28, 1937, Serial No. 70,705
Term of patent 7 years

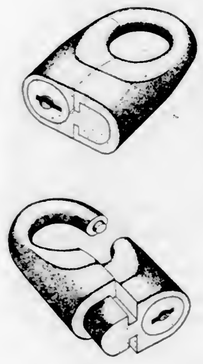


The ornamental design for a food cutting board, as shown.

107,247
DESIGN FOR A SPECTACLE FRAME
Michael R. McDanal, Denver, Colo.
Application February 13, 1937, Serial No. 67,634
Term of patent 14 years

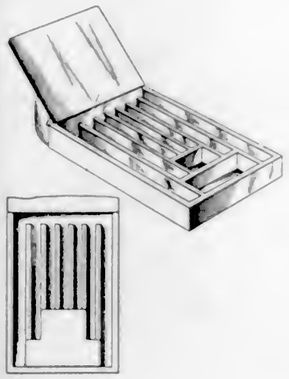
The ornamental design for a spectacle frame, as shown and described.

107,248
DESIGN FOR WALLPAPER OR SIMILAR ARTICLE
John R. Morgan, Oak Park, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application October 8, 1937, Serial No. 72,066
Term of patent 7 years



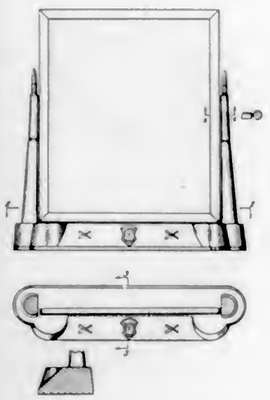
The ornamental design for wallpaper or similar article, as shown.

107,249
DESIGN FOR A VANITY CASE
August Most and Joseph Fogel, Brooklyn, N. Y.
Application September 24, 1937, Serial No. 71,771
Term of patent 7 years



The ornamental design for a vanity case, as shown and described.

107,250
DESIGN FOR A PADLOCK
Charles H. Nehls, Detroit, Mich.
Application March 18, 1937, Serial No. 68,268
Term of patent 7 years

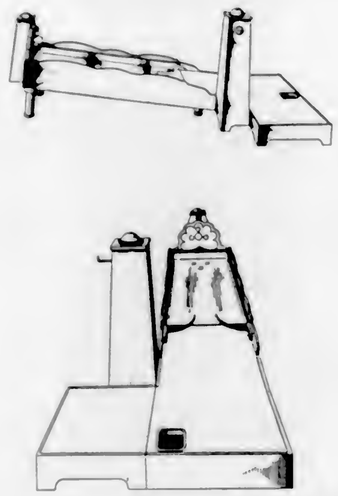


The ornamental design for a padlock, as shown.

107,251
DESIGN FOR A FILE DISPLAY BOX
Raymond C. R. Noren, Providence, R. I., assignor to Nicholson File Company, Providence, R. I., a corporation of Rhode Island
Application August 20, 1937, Serial No. 71,221
Term of patent 7 years

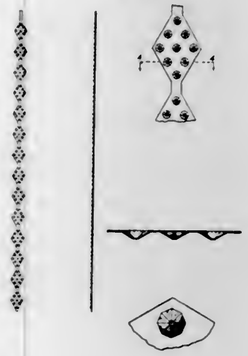
The ornamental design for a file display box substantially as shown and described.

107,252
DESIGN FOR A PICTURE FRAME STAND
William H. Ott, Cincinnati, Ohio
Application September 3, 1937, Serial No. 71,450
Term of patent 3½ years



The ornamental design for a picture frame stand, as shown.

107,253
DESIGN FOR A SHOE SOLE
Oswald M. Pick, Chicago, Ill., assignor to The Florsheim Shoe Company, Chicago, Ill., a corporation of Illinois
Application December 24, 1936, Serial No. 66,729
Term of patent 3½ years

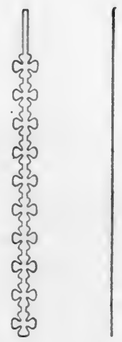


The ornamental design for a shoe sole or a similar article as shown and described.

107,254
DESIGN FOR A PUTTING GAME APPARATUS
Fred W. Preece, Toledo, Ohio
Application October 6, 1937, Serial No. 72,029
Term of patent 3½ years

The ornamental design for a putting game apparatus, as shown.

107,255
DESIGN FOR A TINSEL ORNAMENT FOR CHRISTMAS TREES
Lambert L. Raymond, Minneapolis, Minn.
Application April 30, 1937, Serial No. 69,087
Term of patent 14 years



The ornamental design for a tinsel ornament for Christmas trees as shown.

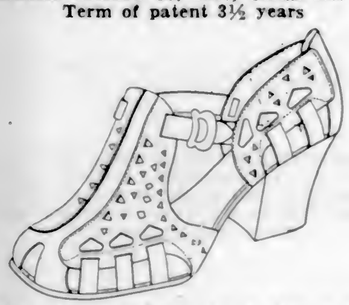
107,256
DESIGN FOR A TINSEL ORNAMENT FOR CHRISTMAS TREES
Lambert L. Raymond, Minneapolis, Minn.
Application April 30, 1937, Serial No. 69,090
Term of patent 14 years

The ornamental design for a tinsel ornament for Christmas trees as shown.

107,257
DESIGN FOR A TINSEL ORNAMENT FOR CHRISTMAS TREES
Lambert L. Raymond, Minneapolis, Minn.
Application April 30, 1937, Serial No. 69,091
Term of patent 14 years

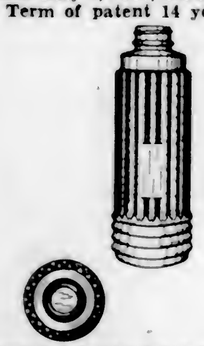
The ornamental design for a tinsel ornament for Christmas trees as shown.

107,258
DESIGN FOR A TINSEL ORNAMENT FOR CHRISTMAS TREES
Lambert L. Raymond, Minneapolis, Minn.
Application April 30, 1937, Serial No. 69,092
Term of patent 14 years



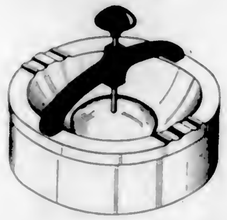
The ornamental design for a tinsel ornament for Christmas trees as shown.

107,259
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Morris Rosenston, Boston, Mass.
Application October 30, 1937, Serial No. 72,529
Term of patent 3½ years



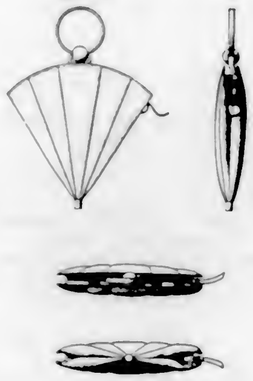
The ornamental design for a shoe or similar article, substantially as shown.

107,260
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Morris Rosenston, Boston, Mass.
Application October 30, 1937, Serial No. 72,530
Term of patent 3½ years



The ornamental design for a shoe or similar article, substantially as shown.

107,261
DESIGN FOR A BOTTLE
Garland D. Runnels, Seattle, Wash.
Application May 1, 1937, Serial No. 69,104
Term of patent 14 years



The ornamental design for a bottle, substantially as shown and described.

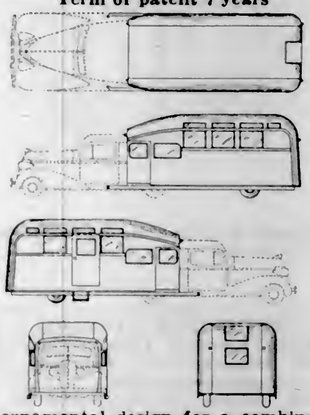
107,262
DESIGN FOR A SMOKER'S ASH STAND
Jacob I. Russakov, Chicago, Ill.
Application January 21, 1937, Serial No. 67,174
Term of patent 7 years

The ornamental design for a smoker's ash stand, substantially as shown and described.

107,263
DESIGN FOR A LADY'S HANDBAG
Max Samuelson, Newburgh, N. Y.
Application October 21, 1937, Serial No. 72,351
Term of patent 3½ years

The ornamental design for a lady's handbag, as shown.

107,264
DESIGN FOR A WATCH BRACELET
John Sand, Newark, N. J., assignor to Gemex Company, Newark, N. J., a corporation of New Jersey
Application October 8, 1937, Serial No. 72,064
Term of patent 3½ years

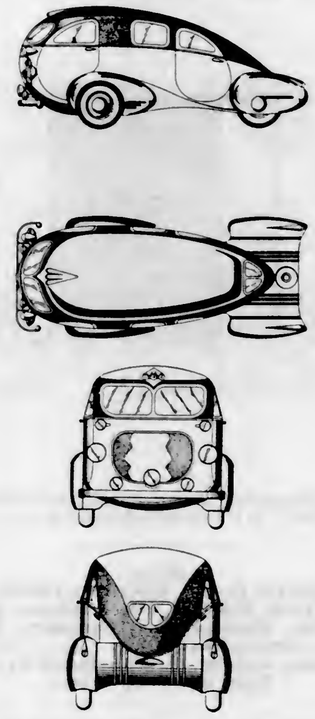


The ornamental design for a watch bracelet, as shown.

107,265
DESIGN FOR A WATCH BRACELET
John Sand, Newark, N. J., assignor to Gemex Company, Newark, N. J., a corporation of New Jersey
Application October 8, 1937, Serial No. 72,065
Term of patent 3½ years

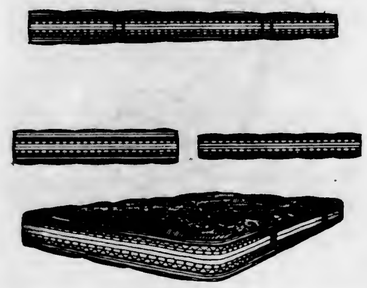
The ornamental design for a watch bracelet, as shown.

107,266
DESIGN FOR A COMBINED AUTOMOBILE AND TRAILER
Henry G. Schaefer, Lakewood, Ohio
Application September 30, 1937, Serial No. 71,886
Term of patent 7 years



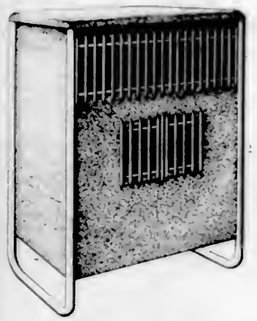
The ornamental design for a combined automobile and trailer, substantially as shown and described.

107,267
DESIGN FOR A BUTTON
Abraham Stark, Brooklyn, N. Y.
Application October 26, 1937, Serial No. 72,432
Term of patent 7 years



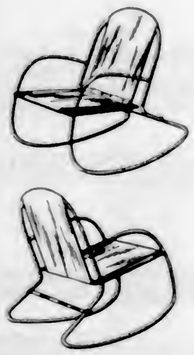
The ornamental design for a button, substantially as shown and described.

107,268
DESIGN FOR AN AUTOMOBILE
Clifford Brooks Stevens, Milwaukee, Wis., assignor to William Woods Plankinton, Milwaukee, Wis.
Application November 9, 1936, Serial No. 65,798
Term of patent 14 years



The ornamental design for an automobile, as shown and described.

107,269
DESIGN FOR A MATTRESS
Charles T. Stirratt, Duluth, Minn.
Application April 19, 1937, Serial No. 68,857
Term of patent 14 years

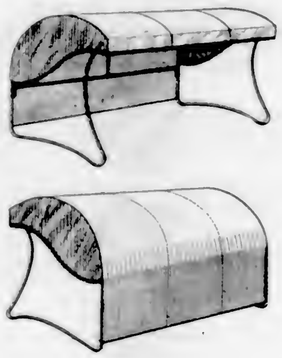


The ornamental design for a mattress, as shown.

107,270
DESIGN FOR AN AIR HEATER UNIT
Melvin M. Tilley, San Rafael, Calif., assignor to H. C. Little Burner Co., Inc., San Rafael, Calif., a corporation of California
Application September 13, 1937, Serial No. 71,585
Term of patent 7 years

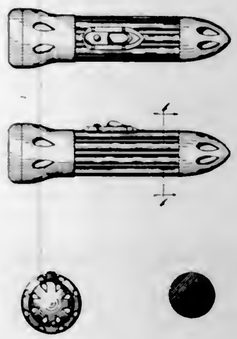
The ornamental design for an air heater unit substantially as shown and described.

107,271
DESIGN FOR A ROCKING CHAIR
Louis Vavrik, Rossford, Ohio, assignor to The Hettrick Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application October 19, 1937, Serial No. 72,315
Term of patent 7 years



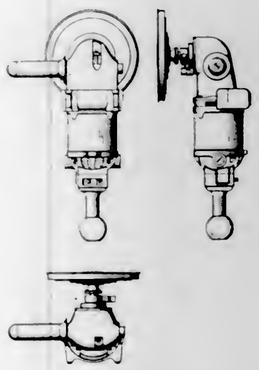
The ornamental design for a rocking chair substantially as shown.

107,272
DESIGN FOR A GLIDER FRAME
Louis Vavrik, Rossford, Ohio, assignor to The Hettrick Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application October 19, 1937, Serial No. 72,316
Term of patent 7 years



The ornamental design for a glider frame substantially as shown.

107,273
DESIGN FOR A CANOPY
Louis Vavrik, Rossford, Ohio, assignor to The Hettrick Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application October 19, 1937, Serial No. 72,317
Term of patent 7 years



The ornamental design for a canopy substantially as shown.

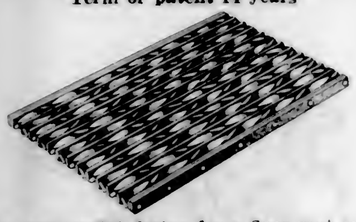
107,274
DESIGN FOR A FLASHLIGHT
Orville T. Wood, Clinton, Mass., assignor to Blake Manufacturing Corporation, Clinton, Mass., a corporation of Massachusetts
Application September 29, 1936, Serial No. 65,064
Term of patent 14 years

The ornamental design for a flashlight, as shown.

107,275
DESIGN FOR A SANDING MACHINE
Frans O. Albertson, Sioux City, Iowa, assignor to Albertson & Company, Inc., Sioux City, Iowa, a corporation of Iowa
Application September 29, 1937, Serial No 71,860
Term of patent 14 years

The ornamental design for a sanding machine as shown.

107,276
DESIGN FOR A TEXTILE FLOOR COVERING
William O. Dewsbury, Freehold, N. J., assignor to A. & M. Karagheusian, Inc., New York, N. Y., a corporation of Delaware
Application June 8, 1937, Serial No. 69,738
Term of patent 3½ years

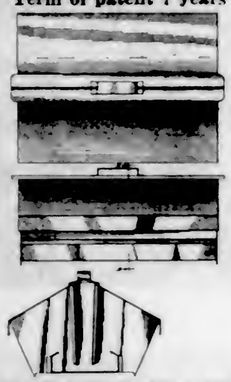


The ornamental design for a textile floor covering, as shown and described.

107,277
DESIGN FOR A TEXTILE FLOOR COVERING
William O. Dewsbury, Freehold, N. J., assignor to A. & M. Karagheusian, Inc., New York, N. Y., a corporation of Delaware
Application June 8, 1937, Serial No. 69,740
Term of patent 3½ years

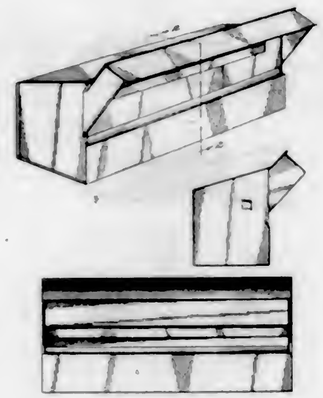
The ornamental design for a textile floor covering, as shown and described.

107,278
DESIGN FOR A FLOOR MAT OR SIMILAR ARTICLE
Wallace G. Grossman and Howard Field Carpenter, White Plains, N. Y.
Application September 25, 1937, Serial No. 71,797
Term of patent 14 years



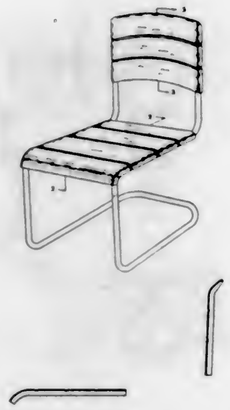
The ornamental design for a floor mat or similar article, substantially as shown.

107,279
DESIGN FOR A DRESS
Ida Lampel, New York, N. Y.
Application August 23, 1937, Serial No. 71,232
Term of patent 3½ years



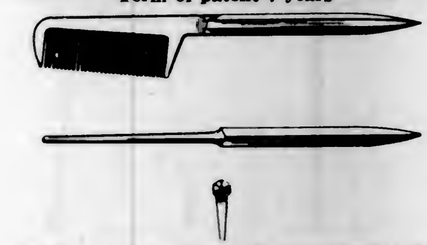
The ornamental design for a dress, substantially as shown.

107,280
DESIGN FOR A MULTIPLE TROUGH OUTDOOR WEATHERPROOF FEEDER
Harold R. Ray, Woodstock, Ill.
Application July 14, 1937, Serial No. 70,437
Term of patent 7 years



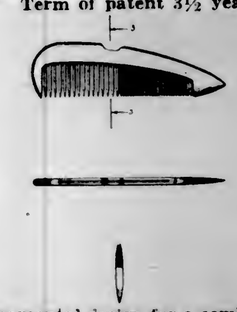
The ornamental design for a multiple trough outdoor weatherproof feeder as shown.

107,281
DESIGN FOR AN OUTDOOR WEATHERPROOF FEEDER
Harold R. Ray, Woodstock, Ill.
Application July 14, 1937, Serial No. 70,438
Term of patent 7 years



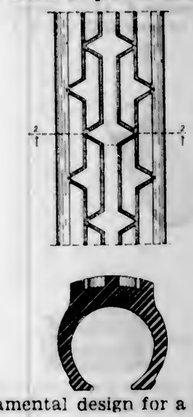
The ornamental design for an outdoor weatherproof feeder as shown.

107,282
DESIGN FOR A CHAIR
Jackson D. Rogers, Bay Village, Ohio
Application September 25, 1937, Serial No. 71,801
Term of patent 3½ years



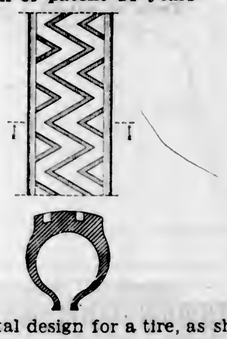
The ornamental design for a chair, as shown.

107,283
DESIGN FOR A COMBINED HAIR COMB AND CURLER
Zetta Stinson, Hammon, Okla.
Application September 28, 1937, Serial No. 71,849
Term of patent 7 years



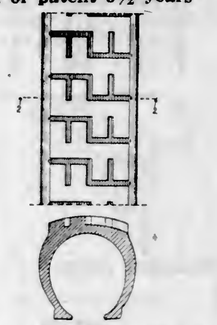
The ornamental design for a combined hair comb and curler as shown.

107,284
DESIGN FOR A COMBINATION COMB AND MANICURING IMPLEMENT
Hamell J. Suhadolc, Hoboken, N. J.
Application March 5, 1937, Serial No. 68,023
Term of patent 3½ years



The ornamental design for a combination comb and manicuring implement, as shown.

107,285
DESIGN FOR A TIRE
Adolph A. Thomas, New York, N. Y.
Application June 9, 1937, Serial No. 69,752
Term of patent 14 years

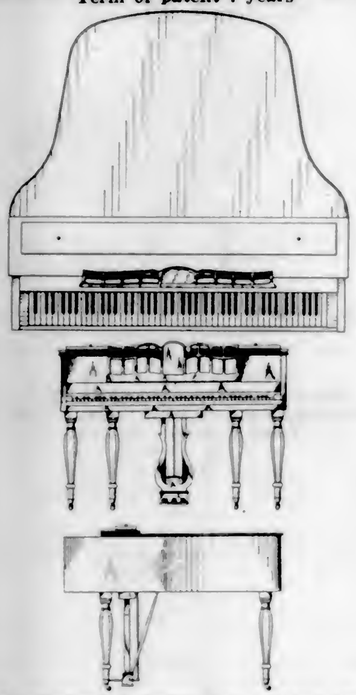


The ornamental design for a tire, as shown.

107,286
DESIGN FOR A TIRE
Adolph A. Thomas, New York, N. Y.
Application June 9, 1937, Serial No. 69,753
Term of patent 14 years

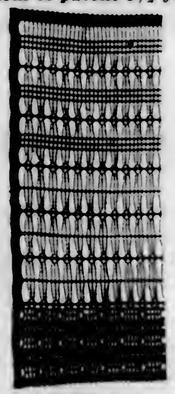
The ornamental design for a tire, as shown.

107,287
DESIGN FOR A TIRE
Adolph A. Thomas, New York, N. Y.
Application June 9, 1937, Serial No. 69,754
Term of patent 3½ years



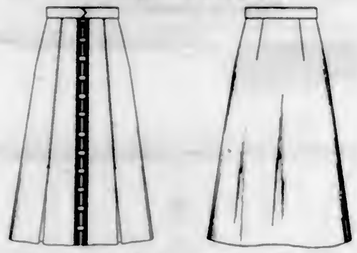
The ornamental design for a tire, as shown.

107,288
DESIGN FOR A HAT
Ernest O. Crocker, Washington, D. C.
Application October 26, 1937, Serial No. 72,430
Term of patent 3½ years



The ornamental design for a hat as shown.

107,289
DESIGN FOR A PIANO CASE
Wilbur M. Day, Cincinnati, Ohio, assignor to The Baldwin Company, Cincinnati, Ohio
Application September 23, 1937, Serial No. 71,759
Term of patent 7 years



The ornamental design for a piano case, as shown.

107,290
DESIGN FOR A CURTAIN
Gustave F. Erhard, Scranton, Pa., assignor to The Scranton Lace Company, Scranton, Pa., a corporation of Pennsylvania
Application October 15, 1937, Serial No. 72,187
Term of patent 3½ years

The ornamental design for a curtain substantially as shown and described.

107,291
DESIGN FOR A SKIRT
Jonas Fuld, New York, N. Y.
Application November 2, 1937, Serial No. 72,577
Term of patent 3½ years

The ornamental design for a skirt, substantially as shown and described.

107,292
DESIGN FOR A BEDSPREAD
Clarence M. Jones, Calhoun, Ga.
Application October 21, 1937, Serial No. 72,346
Term of patent 3½ years

The ornamental design for a bedspread, substantially as shown.

107,293
DESIGN FOR A HANDBAG
Irving Pichel, New York, N. Y.
Application November 8, 1937, Serial No. 72,693
Term of patent 3½ years

The ornamental design for a handbag substantially as shown and described.

107,294
DESIGN FOR AN ARCHER'S GLOVE
Fred B. Bear, Detroit, Mich.
Refiled for abandoned application Serial No. D-62,709, May 18, 1936. This application filed September 17, 1937, Serial No. D-71,660
Term of patent 14 years

The ornamental design for an archer's glove as shown.

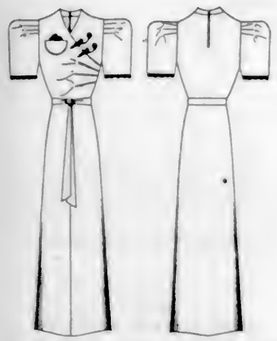
107,295
DESIGN FOR A DRESS
Israel Bucholz, New York, N. Y.
Application November 6, 1937, Serial No. 72,643
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

107,296
DESIGN FOR A DRESS
Israel Bucholz, New York, N. Y.
Application November 6, 1937, Serial No. 72,644
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

107,297
DESIGN FOR A DRESS
Israel Bucholz, New York, N. Y.
Application November 6, 1937, Serial No. 72,645
Term of patent 3½ years

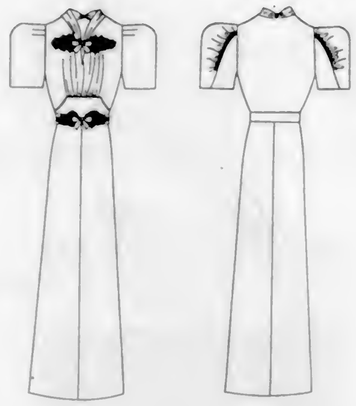


The ornamental design for a dress, substantially as shown.

107,298
DESIGN FOR A DRESS
Louise Fenaroli, Astoria, Long Island, N. Y.
Application September 28, 1937, Serial No. 71,832
Term of patent 3½ years

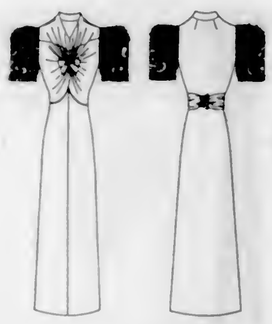
The ornamental design for a dress, substantially as shown.

107,299
DESIGN FOR A DRESS
Eva Fisk, New York, N. Y.
Application November 4, 1937, Serial No. 72,605
Term of patent 3½ years



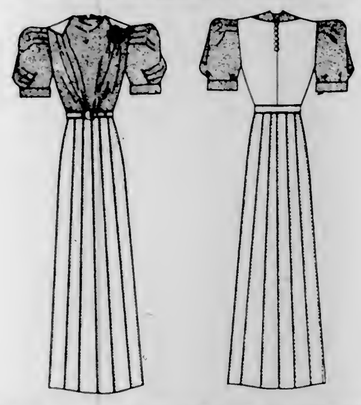
The ornamental design for a dress substantially as shown.

107,300
DESIGN FOR A DRESS
Harry Goldman, New York, N. Y.
Application November 2, 1937, Serial No. 72,579
Term of patent 3½ years



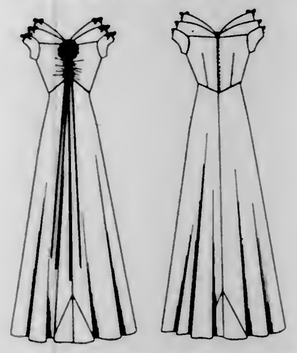
The ornamental design for a dress, substantially as shown.

107,301
DESIGN FOR A DRESS
Albert Kaplan, New York, N. Y.
Application November 1, 1937, Serial No. 72,551
Term of patent 3½ years



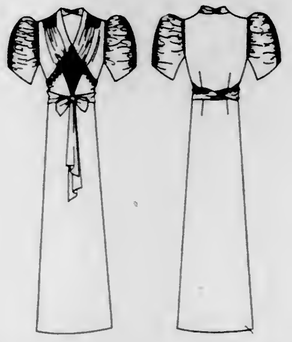
The ornamental design for a dress, substantially as shown and described.

107,302
DESIGN FOR A DRESS
Albert Kaplan, New York, N. Y.
Application November 1, 1937, Serial No. 72,552
Term of patent 3½ years



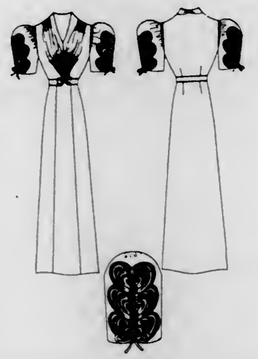
The ornamental design for a dress, substantially as shown and described.

107,303
DESIGN FOR A DRESS
Herman Kushner, New York, N. Y.
Application November 1, 1937, Serial No. 72,553
Term of patent 3½ years



The ornamental design for a dress substantially as shown.

107,304
DESIGN FOR A DRESS
Carolyn M. Santore, New York, N. Y.
Application November 2, 1937, Serial No. 72,582
Term of patent 3½ years



The ornamental design for a dress, substantially as shown.

107,305
DESIGN FOR A DRESS
Jacob Sohmer, New York, N. Y.
Application November 4, 1937, Serial No. 72,609
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

107,306
DESIGN FOR A DRESS
Jacob Sohmer, New York, N. Y.
Application November 8, 1937, Serial No. 72,689
Term of patent 3½ years

The ornamental design for a dress substantially as shown.

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

[Act of Feb. 20, 1905, Sec. 6, as amended Mar. 2, 1907]

A. & M. Products Co., Stillwater, Okla. Liquid preparation to be added to the drinking water of poultry as a germicide. Serial No. 398,027; Dec. 7. Class 6.

Acco Products, Inc., Long Island City, N. Y. Fasteners and fastener bases for binding loose papers together. Serial No. 397,921; Dec. 7. Class 37.

Agicide Laboratories, Milwaukee, Wis. Insecticides. Serial No. 398,598; Dec. 7. Class 6.

Agicide Laboratories, Milwaukee, Wis. Insecticides. Serial No. 398,600; Dec. 7. Class 6.

Aikin-Lambert Company, New York, N. Y. Fountain pens and parts thereof. Serial No. 398,336; Dec. 7. Class 37.

Allen-A Company, The, Kenosha, Wis. Swim trunks. Serial No. 395,388; Dec. 7. Class 39.

Alton Garment Company, St. Louis, Mo. Ladies' wash frocks. Serial No. 398,302; Dec. 7. Class 39.

American Safety Razor Corporation, Brooklyn, N. Y. Razors and hair removing devices. Serial Nos. 398,142–3; Dec. 7. Class 23.

Anodex Laboratories. (See von Dellen, A. W.)

Arden-Rayshine Company, Watertown, Mass. Material for making coaptation bandages and splints. Serial No. 397,993; Dec. 7. Class 44.

Aronab Products Co., San Francisco, Calif. Prophylactic rubber parchment articles. Serial No. 396,527; Dec. 7. Class 44.

Arrow-Hart & Hegeman Electric Company, The, Hartford, Conn. Electrical circuit breakers, switches, fuses, etc. Serial No. 389,007; Dec. 7. Class 21.

Atlas Brewing Company, Chicago, Ill. Beer and ale. Serial No. 389,401; Dec. 7. Class 48.

Automatic Cone Company. (See Denaro, James.)

Bancroft, Joseph, & Sons Co., Wilmington, Del. Cotton piece goods. Serial No. 398,145; Dec. 7. Class 42.

Bancroft, Joseph, & Sons Co., Wilmington, Del. Cotton piece goods. Serial No. 398,233; Dec. 7. Class 42.

Baum, Ellen N., Denver, Colo. Deodorants and perspiration retarding preparations. Serial No. 397,567; Dec. 7. Class 6.

Beautywise Laboratories. (See Leitner, F. F.)

Beck, Koller & Co., Inc., Detroit and Ferndale Station, Detroit, Mich. Synthetic resin for paints, enamels, etc. Serial No. 398,658; Dec. 7. Class 16.

Berkeley Club Bottling and Manufacturing Co., Inc., Berkeley Springs, W. Va. Beverages and syrups, extracts and flavors used in making same. Serial No. 398,751; Dec. 7. Class 45.

Bordo Products Company, Chicago, Ill. Canned grapefruit juice for food purposes. Serial No. 397,747; Dec. 7. Class 46.

Bozeman Canning Company, Mount Vernon, Wash. Canned peas. Serial No. 397,276; Dec. 7. Class 46.

Bradley, Milton, Company, Springfield, Mass. Board game. Serial No. 398,664; Dec. 7. Class 22.

Brooks Oil Company, The, Cleveland, Ohio. Lubricating grease. Serial No. 386,400; Dec. 7. Class 15.

Brown, Mortimer J., Niagara Falls, N. Y. Draft arm nozzles. Serial No. 397,108; Dec. 7. Class 13.

Calgon Incorporated, Pittsburgh, Pa. Chemical compound. Serial No. 398,088; Dec. 7. Class 6.

California Spray-Chemical Corporation, Wilmington, Del., and Richmond, Calif. Insecticide barriers. Serial No. 396,667; Dec. 7. Class 6.

Celanese Corporation of America, New York, N. Y. Sweaters and vests. Serial No. 398,459; Dec. 7. Class 39.

Chase Brass & Copper Co. Incorporated, Waterbury, Conn. Condenser-tubes of non-ferrous metal. Serial No. 397,069; Dec. 7. Class 34.

Chester Brewery, Inc., Chester, Pa. Beer and ale. Serial No. 391,176; Dec. 7. Class 48.

Chicago Buying Sources Co. (See Prussing, H. J., Jr.)

Cranston Print Works Company, Cranston, R. I. Cotton piece goods. Serial No. 398,668; Dec. 7. Class 42.

Day Publishing Company, The, New London, Conn. Daily newspaper. Serial No. 394,591; Dec. 7. Class 38.

Dealkol Company, The, Chagrin Falls, Ohio. Medicinal preparation. Serial No. 398,392; Dec. 7. Class 6.

Decker, Alfred, & Cohn, Inc., Chicago, Ill. Outside garments known as topcoats. Serial No. 397,329; Dec. 7. Class 39.

Delgado & Bruce, Inc., Long Beach, Calif. Honey. Serial No. 397,899; Dec. 7. Class 46.

Denaro, James, doing business as Automatic Cone Company, Cambridge, Mass. Edible pastry containers. Serial No. 397,749; Dec. 7. Class 46.

Denicotea, Societe Anonyme, Antwerp, Belgium. Cigarette holders, cigar holders, and pipes, etc. Serial No. 393,584; Dec. 7. Class 8.

Denver and Rio Grande Western Railroad Company, The, Denver, Colo. Booklets or pamphlets. Serial No. 385,835; Dec. 7. Class 38.

De Wilde, Waldo, Pendleton, Oreg. Receptacles for tickets. Serial No. 395,446; Dec. 7. Class 2.

Dick, A. B., Company, Chicago, Ill. Lettering. Serial No. 398,194; Dec. 7. Class 26.

Dick, A. B., Company, Chicago, Ill. Fluid adapted for use in stenciling and for softening stencils and stencil paper. Serial No. 398,567; Dec. 7. Class 6.

Durable Furs, Inc., New York, N. Y. Ladies' fur coats. Serial No. 391,951; Dec. 7. Class 39.

E. A. Laboratories, Inc., Brooklyn, N. Y. Ventilating, circulating, and air conditioning fans. Serial No. 397,403; Dec. 7. Class 34.

Electrolux, Inc., New York, N. Y. Insecticides. Serial No. 398,408; Dec. 7. Class 6.

El Louvre, S. A., Willemstad, Curacao, Netherlands West Indies. Alcoholic beverage distilled from fresh orange peel with rum. Serial No. 397,216; Dec. 7. Class 49.

Ezo-Tex Laboratory. (See Scheidler, Madalen.)

Fashion Company, The, Columbus, Ohio. Ladies' hosiery. Serial No. 398,652; Dec. 7. Class 39.

Fashions Preferred Inc., New York, N. Y. Publication. Serial No. 397,651; Dec. 7. Class 38.

Field, Burr D., Freeport, Long Island, N. Y. Game boards. Serial No. 397,930; Dec. 7. Class 22.

Fischer, B., & Company, Inc., New York, N. Y. Coffee, tea, spices, etc. Serial No. 397,655; Dec. 7. Class 46.

Zahn, Phillip, New York, N. Y. Dress. 107,368; Dec. 7.
Zaiser, William, Rockville Centre, N. Y., assignor to The Rudolph Wurlitzer Company, De Kalb, Ill. Piano. 107,329; Dec. 7.
Zinkil, Roy H., Oak Park, assignor to Crane Co., Chicago, Ill. Bathtub. 107,330; Dec. 7.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 7TH DAY OF DECEMBER, 1937

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Ackerman, Charles. (See Rosenstone, S. D., and Ackerman.)
Adlake Company, The. (See Hedin, U. C., and Larson assignors.)
"Afag" Finanzierungs A. G. (See Sindl, O., and Frank, assignors.)
Agfa Ansco Corporation. (See Huber, Karl, assignor.)
Air Reduction Company. (See Weil, André, assignor.)
Air-Way Electric Appliance Corporation. (See Dow, Dewey M., assignor.)
Albertson & Company. (See Albertson, Frans O., assignor.)
Albertson, Frans O., assignor to Albertson & Company, Inc., Sioux City, Iowa. Sanding machine. 2,101,205; Dec. 7.
Alco Products Incorporated. (See Cooke, M. B., Schutt, and Throckmorton, assignors.)
Aldridge, Arthur A., Paxtang, assignor of one-fourth to W. A. Laird, Chambersburg, and one-half to W. T. Gardner, Pittsburgh, Pa. Washing machine. 2,101,634; Dec. 7.
Allis-Chalmers Manufacturing Company. (See Stein, Harold J., assignor.)
Allis-Chalmers Manufacturing Company. (See Winograd, Harold, assignor.)
Alston, Roland, Washington, D. C. Mechanical adjustable shirt. 2,101,380; Dec. 7.
Amacher, Edward, et al. (See Warren, Calvin C., assignor.)
Amco, Incorporated. (See Morton, William A., assignor.)
American Brass Company, The. (See Munson, Elmer L., assignor.)
American Can Company. (See Mercer, William J., assignor.)
American Car and Foundry Company. (See Dietrichson, William F., assignor.)
American Car and Foundry Company. (See Field, Henry P., assignor.)
American Car and Foundry Company. (See Ostrander, A. E., Joy, and Kassler, assignors.)
American Car and Foundry Company. (See Willoughby, Victor, assignor.)
American Hyalsol Corporation. (See Grün, Adolf, assignor.)
American Laundry Machinery Company, The. (See Daly, Joseph P., assignor.)
American Machine and Metals, Inc. (See Sonntag, Alfred.)
American Sales Book Company. (See Gochnauer, Walter E., assignor.)
American Soya Products Corporation. (See Bonotto, Michele, assignor.)
American Steel Foundries. (See Baselt, Walter H., assignor.)
American Steel Foundries. (See Oelkers, Alfred H., assignor.)
American Telephone and Telegraph Company. (See Bacon, Walter M., assignor.)
American Telephone and Telegraph Company et al. (See Osborne, H. S., assignor, and Wright.)
Ames, John K., Machias, assignor to Burrowes Corporation, Portland, Maine. Double window. 2,101,803; Dec. 7.
Amidon, Charles H., assignor to Norton Company, Worcester, Mass. Grinding machine. 2,101,787; Dec. 7.
Amidon, Charles H. (See Cole, R. A., and Amidon.)
Anchor Steel and Conveyor Company. (See Waalkes, Gerrit, assignor.)
Andersen, Andrew C. (See Simpson, E. G., and Andersen.)
Anderson, Carl R., assignor to The Griswold Manufacturing Company, Erie, Pa. Rack for cooking utensils. 2,101,487; Dec. 7.
Anderson, Clair H. (See Anderson, R. O. and C. H.)
Anderson, Edward, Dayton, Ohio. Hydraulic mold. 2,101,015; Dec. 7.
Anderson, Howard P., Erie, Pa., assignor to The Standard Stoker Company, Inc. Sectional fuel distributor. 2,101,463; Dec. 7.
Anderson, John P., Köppel, assignor, by mesne assignments, to Pressed Steel Car Company Inc., Pittsburgh, Pa. Car construction. 2,101,698; Dec. 7.
Anderson, Roland O., and C. H. Anderson, Des Moines, Iowa. Ice or snow scooter. 2,101,229; Dec. 7.
Anderson, Russell G. (See Blazek, J. Y., and Anderson.)
Anderson, Walter A., Bridgeport, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Combined cabinet and business machine stand. 2,101,230; Dec. 7.
Andrews, Charles W., and C. E. Dougan, Chicago, Ill., assignors, by mesne assignments, to A. F. Giese, Jr., Gary, Ind. Mud gun. 2,101,306; Dec. 7.
Anibal, Benjamin H., Pontiac, assignor to General Motors Corporation, Detroit, Mich. Gear shift lever mounting. 2,101,727; Dec. 7.
Appel, Abraham. (See Block, David J., assignor.)
Appleyard, Kenelm C., assignor of one-half to The Birtley Company Limited, Birtley, England. Apparatus for the separation of coal and the like. 2,101,381; Dec. 7.
Arcadia Hosiery Co. (See Weisbecker, Frank G., assignor.)
Arden, Thomas R., Baldwin, assignor to Nic Projector Corporation, New York, N. Y. Typewriter. 2,101,231; Dec. 7.
Arey, Ralph G., Swampscott, and H. T. Faus, Lynn, Mass., assignors to General Electric Company. Synchronous motor. 2,101,665; Dec. 7.
Armour and Company. (See Conquest, Victor, assignor.)
Armour and Company. (See Kistler, John C., assignor.)
Armour and Company. (See Ralston, Anderson W., assignor.)
Armour and Company. (See Ralston, A. W., and Christensen, assignors.)
Armstrong-Blum Mfg. Co. (See Davidson, Jack H., assignor.)
Armstrong, Victor C., Short Hills, N. J., assignor, by mesne assignments, to Poor & Company. Rail supporting and retaining means. 2,101,038; Dec. 7.
Arndt, Paul, Los Angeles, Calif. Adhesive applying device. 2,101,464; Dec. 7.
Aronson, Louis V., Newark, N. J., assignor to Art Metal Works, Inc. Flame producing mechanism. 2,101,125; Dec. 7.
Art Metal Works, Inc. (See Aronson, Louis V., assignor.)
Asbridge, Harry H., Ashton-on-Mersey, assignor to The Churchill Machine Tool Company Limited, Broadheath, near Altrincham, England. Precision grinding machine. 2,101,383; Dec. 7.
Assalit, Louis, Marseilles, France. Flexible seat support. 2,101,422; Dec. 7.
Assel, Walter J., assignor to The Timken Roller Bearing Company, Canton, Ohio. Cross-roll mill. 2,101,357; Dec. 7.
Atkinson, Guy, et al. (See Taylor, Wesley, assignor.)
Atlantic Refining Company, The. (See Reuter, R., and Gaus, assignors.)
Atwell, George J. (See Paul, Leon R., assignor.)
Auburn Automobile Company. (See Buehrig, Gordon M., assignor.)
Augustin, Johann G. F., assignor to Verpackungsbedarf G. m. b. H., Krefeld, Germany. Filling machine. 2,101,232; Dec. 7.
Austin, Ellsworth W., assignor to La Plant-Choate Manufacturing Company, Incorporated, Cedar Rapids, Iowa. Snow moving device. 2,101,666; Dec. 7.
Autogiro Company of America. (See Larsen, Agnew E., assignor.)
Ayres, John, Carshelton, assignor to Bryce Limited, Hackbridge, Surrey, England. Engine starter. 2,101,606; Dec. 7.
Babb, George H., Brooklyn, N. Y. Advertising cinematograph. 2,101,126; Dec. 7.
Babcock & Wilcox Company, The. (See Stillman, Thomas B., assignor.)
Bachelier, Eugene. (See Cramer, W. G., and Bachelier.)
Bacon, Walter M., New York, N. Y., assignor to American Telephone and Telegraph Company. Signaling system. 2,101,209; Dec. 7.
Baesecke, Martin, Berlin-Siemensstadt, and H. Mayer, Berlin-Charlottenburg, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Alternating current signaling system. 2,101,699; Dec. 7.
Bahnson Company, The. (See Stimson, Samuel C., assignor.)
Bakelite Corporation. (See Bender, Howard L., assignor.)
Bakelite Corporation. (See Elbel, E., and Seebach, assignors.)
Baker, Arthur R., Indianapolis, Ind., assignor to Columbia Carburetor Company, Washington, D. C. Carburetor with choke control. 2,101,039; Dec. 7.
Baker, Claude M., et al. (See Wright, William, assignor.)
Baldwin, Phil. (See Sandul, Amil, assignor.)
Baldwin Rubber Company. (See Pryale, H. M., and Clark, assignors.)
Balle, Gerhard, and K. Eisfeld, Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Quaternary ammonium compounds and preparing them. 2,101,524; Dec. 7.

Bally Manufacturing Co. (See Williams, B. W. and H. S., assignors.)
Bancroft, Charles, New Canaan, Conn. Variable transmission means. 2,101,233; Dec. 7.
Barclay, Wright, New York, N. Y. Combination latch. 2,101,210; Dec. 7.
Bartels, Hans, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Linear amplifier circuit. 2,101,525; Dec. 7.
Baselt, Walter H., assignor to American Steel Foundries, Chicago, Ill. Clasp brake. 2,101,488; Dec. 7.
Baughn, Roscoe N., Conway, Ark. Compound master cylinder. 2,101,772; Dec. 7.
Bayley, Lee, Springfield, Ohio, and R. L. Clingerman, Washington, D. C., assignors to The William Bayley Company, Springfield, Ohio. Alarm system for detention windows. 2,101,040; Dec. 7.
Bayley, William, Company, The. (See Bayley, L., and Clingerman, assignors.)
Bayley, William, Company, The. (See Clingerman, Robert L., assignor.)
Beach, Howard D., Buffalo, N. Y. Lens. 2,101,016; Dec. 7.
Beal, Walter H., et al., trustees. (See Starkey, William C., assignor.)
Bebinger, Charles N., assignor to La-Del Conveyor & Mfg. Co., New Philadelphia, Ohio. Conveyer section connection. 2,101,017; Dec. 7.
Bebinger, Charles N., assignor to La-Del Conveyor & Mfg. Co., New Philadelphia, Ohio. Conveyer driving mechanism. 2,101,018; Dec. 7.
Becher, Theodor, Wiesbaden, assignor to Maschinenfabrik Augsburg-Nurnberg A. G., Nuremberg, Germany. Sluice gate. 2,101,234; Dec. 7.
Beck, Stefan, Budapest, Hungary. Furnace. 2,101,423; Dec. 7.
Beers, Arthur D. (See Brunner, J., and Beers.)
Beers, Harry F., Pelham, N. Y. Storage cabinet. 2,101,465; Dec. 7.
Bell Telephone Laboratories, Incorporated. (See Bishop, J. B., and Knott, assignors.)
Bell Telephone Laboratories, Incorporated. (See Cummings, George C., assignor.)
Bell Telephone Laboratories, Incorporated. (See Dickieson, Alton C., assignor.)
Bell Telephone Laboratories, Incorporated. (See Hague, Alfred E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Jones, Theodore A., assignor.)
Bell Telephone Laboratories, Incorporated. (See Korn, Franklin A., assignor.)
Bell Telephone Laboratories, Incorporated. (See Scott, Herbert J., assignor.)
Bell Telephone Laboratories, Inc., et al. (See Osborne, H. S., and Wright, assignor.)
Bell, William L., assignor to G. H. Chick, Oakland, Calif. Orthopedic table. 2,101,466; Dec. 7.
Bellingham, Leonard, F. S. and G. F. Stanley, London, England. Prism combination for three color photography and cinematography. 2,101,728; Dec. 7.
Bender, Howard L., Bloomfield, N. J., assignor to Bakelite Corporation, New York, N. Y. Resin dehydration. 2,101,635; Dec. 7.
Benedek, Elek K., Mount Gilead, Ohio. Hydraulic pump or motor. 2,101,729; Dec. 7.
Benedek, Elek K., Bucyrus, Ohio. High pressure hydraulic pump or motor. 2,101,730; Dec. 7.
Benedek, Elek K., Bucyrus, Ohio. Hydraulic machine. 2,101,731; Dec. 7.
Benedek, Elek K., Bucyrus, Ohio. Hydraulic machine. 2,101,732; Dec. 7.
Benedek, Elek K., Bucyrus, Ohio. Hydraulic motor. 2,101,829; Dec. 7.
Bennett, Melvin C., assignor of one-half to T. F. Smithwick, Middletown, Conn. Combined filter and primer for oil burners. 2,101,424; Dec. 7.
Benson, Arthur C., et al. (See Benson, Lew, assignor.)
Benson, Bert O., et al. (See Benson, Lew, assignor.)
Benson, Charl., et al. (See Benson, Lew, assignor.)
Benson, John, et al. (See Benson, Lew, assignor.)
Benson, Lesley D., et al. (See Benson, Lew, assignor.)
Benson, Lew, San Francisco, assignor of one-half to A. C. Benson, Glendale, Calif.; one-sixteenth to L. D. Benson, Tillimook, Oreg.; one-sixteenth to J. Benson, Phillipsburg, Kans.; one-sixteenth to B. O. Benson, one-sixteenth to C. Benson, and one-sixteenth to W. Benson, Vennes, Calif.; and one-sixteenth to K. Mudge, East St. Louis, Ill. Trap. 2,101,788; Dec. 7.
Benson, William, et al. (See Benson, Lew, assignor.)
Bentley Engineering Company Limited, The. (See Deans, F. E., Manger, and Buswell, assignors.)
Berggren, John L. (See Warnick, P., and Scott, assignors.)
Berman, Henry J., River Forest, assignor to Edison General Electric Appliance Comany, Chicago, Ill. Exhaust device. 2,101,667; Dec. 7.
Bethlehem Steel Company. (See Gillispie, Raymond L., assignor.)
Beth-Mary-Steel Corporation. (See Gerhardt, Reginald B., assignor.)
Bidwell, Paul W., Holyoke, Mass. Bookbinding. 2,101,804; Dec. 7.
Binks Manufacturing Company. (See Bramsen, S., and Wahlin, assignors.)
Binks Manufacturing Company. (See Gustafsson, Eric, assignor.)
Birtley Company Limited, The. (See Appleyard, Kenelm C., assignor.)
Bishop, John B., Bloomfield, and W. M. Knott, Fairlawn, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Radio communication system. 2,101,668; Dec. 7.
Bisonit G. m. b. H. (See Gullich, Kurt, assignor.)
Bissell Carpet Sweeper Company. (See Dillard, Herbert C., assignor.)
Bjorklund, John R., assignor to Northwestern Terra Cotta Corp., Chicago, Ill. Treating liquid containing compressible bodies of material. 2,101,528; Dec. 7.
Black, Harry L., Toronto, Ontario, Canada. Apparatus for indicating an operative condition of vehicle lights. 2,101,489; Dec. 7.
Blanchard, Benjamin B., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Lasting machine. 2,101,041; Dec. 7.
Blazek, John L., Maple Heights, and R. G. Anderson, Cleveland, assignors to Lempco Products, Inc., Bedford, Ohio. Surface forming machine. 2,101,569; Dec. 7.
Blettner, George H., assignor to Renette Company, Chicago, Ill. Apparatus for making pistons. 2,101,043; Dec. 7.
Blettner, George H., assignor to Renette Company, Chicago, Ill. Making pistons. 2,101,044; Dec. 7.
Blettner, George H., assignor to Renette Company, Chicago, Ill. Internal combustion engine. 2,101,045; Dec. 7.
Blettner, George H., assignor to Renette Company, Chicago, Ill. Casting pistons. 2,101,046; Dec. 7.
Block, David J., Winnetka, assignor to A. Appel, Chicago, Ill. Patching material. 2,101,607; Dec. 7.
Blomberg, Martin P. (See Mussey, W. H., and Blomberg.)
Blount, Golden, et al. (See Cheek, Lightle J., assignor.)
Boardman, Charles S., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa. Making load sustaining structures. 2,101,358; Dec. 7.
Boddinghouse, Emmons R., assignor to Gas Tool Patents Corporation, Chicago, Ill. Internal combustion hammer. 2,101,608; Dec. 7.
Bodette, Edward T., Wisconsin Rapids, assignor to Nekoosa-Edwards Paper Company, Port Edwards, Wis. Paper dispenser. 2,101,307; Dec. 7.
Böhme Fettchemie-Gesellschaft mit beschrankter Haftung. (See Götte, E., and Kling, assignors.)
Bolen, Emerson A., Morris, assignor, by mesne assignments, to F. L. Borchert, Rockford, Ill. Confection making machine. 2,101,570; Dec. 7.
Bonner, Daniel B., Philadelphia, Pa. Carpeting. 2,101,359; Dec. 7.
Bonotto, Michele, assignor to American Soya Products Corporation, Evansville, Ind. Treating leguminous materials. 2,101,805; Dec. 7.
Bonsall, Charles D., Pittsburgh, assignor to P. H. Murphy Company, New Kensington, Pa. Car roof. 2,101,360; Dec. 7.
Borchert, Fred L. (See Bolen, Emerson A., assignor.)
Borg-Warner Corporation. (See Fawick, Thomas L., assignor.)
Borg-Warner Corporation. (See Nutt, H., and Reed, assignors.)
Borg-Warner Corporation. (See Reed, Harold V., assignor.)
Borg-Warner Corporation. (See Swennes, Benjamin A., assignor.)
Borvisk Syndicate Ltd. (See Borzykowski, Benno, assignor.)
Borzykowski, Benno, Paris, France, assignor to Borvisk Syndicate Ltd., London, England. Direct production of artificial silk in wound form suitable for the textile industry. 2,101,361; Dec. 7.
Boulton Paul Aircraft Limited. (See Townend, Hubert C. H., assignor.)
Bowen, Thomas B., Huntington, W. Va. Windshield wiper. 2,101,773; Dec. 7.
Bowers, Cecelia E. (See Schaeffer, Edward G., assignor.)
Bowes, David M., Bath, N. Y. Molding form for structural material. 2,101,019; Dec. 7.
Bowser, S. F., & Company. (See Carroll, William M., assignor.)
Bramsen, Svend, and F. Wahlin, assignors to Binks Manufacturing Company, Chicago, Ill. Spray gun with pneumatic needle valve control. 2,101,164; Dec. 7.
Brasfield, Evan W., Sheffield, Ala. Reversible reduction gear. 2,101,774; Dec. 7.
Bray, Ulric B., Palos Verdes Estates, and C. E. Swift, Glendale, assignors to Union Oil Company of California, Los Angeles, Calif. Producing lubricating oils. 2,101,308; Dec. 7.
Breedlove, Harry B., Memphis, Tenn. Radio transmission and reception. 2,101,529; Dec. 7.
Breisch, Edgar W., Lancaster, N. Y. Battery charging and testing apparatus. 2,101,571; Dec. 7.
Breitling, Ernst, Berlin-Tempelhof, and H. Schwenk, Berlin, Germany, assignors to The National Cash Register Company, Dayton, Ohio. Cash register, accounting, and the like machine. 2,101,636; Dec. 7.
Brenkert Light Projection Company. (See Brenkert, Wayne D., assignor.)

Brenkert, Wayne D., assignor to Brenkert Light Projection Company, Detroit, Mich. Ventilating system for arc lamps. 2,101,638; Dec. 7.
Brenzinger, Julius, Fairfield, Conn. Sheet-material container and making same. 2,101,530; Dec. 7.
Brisson, Louis C., Neuilly-sur-Seine, assignor to Société Anonyme Société des Freins Hydrauliques S. de Lavaud, Paris, France. Braking device for rotating machine parts. 2,101,425; Dec. 7.
Britton, Karl B., Cleveland, Ohio. Filter. 2,101,211; Dec. 7.
Broadmeyer, Albert, assignor to W. O. Hickok Manufacturing Company, Harrisburg, Pa. Sheet piling mechanism. 2,101,328; Dec. 7.
Broatch, John, Vancouver, British Columbia, Canada. Mineral separator. 2,101,572; Dec. 7.
Brüche, Ernst, and W. Henneberg, Berlin-Reinickendorf-Ost, Germany, assignors to General Electric Company. Device for the deflection of electron beams. 2,101,669; Dec. 7.
Bruins, Paul F., Jamaica, N. Y. Magazine and filter cigarette holder. 2,101,127; Dec. 7.
Brunner, Cora M., executrix. (See Brunner, J., and Beers.)
Brunner, John, Chicago, Ill., by C. M. Brunner, executrix, and A. D. Beers, Gary, Ind. Treating rails. 2,101,047; Dec. 7.
Brunnhuber, Joseph, and J. Schmid, Altoona, Pa. Window strip. 2,101,733; Dec. 7.
Bryant, Willard G., Miami, Fla. Receptacle holder. 2,101,526; Dec. 7.
Bryce Limited. (See Ayres, John, assignor.)
Buckeye Aluminum Company, The. (See Porter, Kirk E., assignor.)
Buckwalter, Tracy V. (See Scribner, W. L., and Buckwalter.)
Bucyrus-Erie Company. (See Parker, Paul R., assignor.)
Budd, Edward G., Manufacturing Company. (See Tarbox, John P., assignor.)
Buehrig, Gordon M., assignor to Auburn Automobile Company, Auburn, Ind. Clock. 2,101,235; Dec. 7.
Bullard, William P., and O. L. Williams, assignors to National Pecan Growers Exchange, Albany, Ga. Branding machine. 2,101,775; Dec. 7.
Bullock, Fred J., deceased, Shortsville, by V. V. Bullock, administratrix, Rochester, and W. H. Preston, assignors to Papec Machine Company, Shortsville, N. Y. Mixing machine. 2,101,490; Dec. 7.
Bullock, Violet V., administratrix. (See Bullock, F. J., deceased, and Preston.)
Burgess, Charles O., Niagara Falls, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Producing low carbon high chromium cast iron. 2,101,426; Dec. 7.
Burns, Laurence, Revere, assignor to Hygrade Sylvania Corporation, Salem, Mass. Control of electric arc lamps. 2,101,789; Dec. 7.
Burns, Wilford E., Burlingame, Calif., assignor to M. J. B. Co. Can end curling ring. 2,101,309; Dec. 7.
Burrowes Corporation. (See Ames, John K., assignor.)
Burt, F. N., Company. (See Dreux, A. H., and Royal, assignors.)
Burton, Frank F., Mount Carmel, assignor to Winchester Repeating Arms Company, New Haven, Conn. Cartridge-ejecting mechanism for firearms. 2,101,236; Dec. 7.
Business Corners, Inc. of Delaware. (See Toulmin, Harry A., Jr., assignor.)
Buswell, George A. (See Deans, F. E., Manger, and Buswell.)
Byerlein, Arthur A., Detroit, Mich., assignor to General Machinery Corporation, Hamilton, Ohio. Press. 2,101,527; Dec. 7.
Byk, Maurice, and J. de Mare, Paris, France, assignors to General Electric Company. Radio frequency amplifier. 2,101,670; Dec. 7.
C-S Engineering Company. (See Schellens, Christopher A., assignor.)
Cabell, Charles A., Washington, D. C., assignor to Economy Fuse & Manufacturing Company, Chicago, Ill. Composite article. 2,101,128; Dec. 7.
California Machinery & Supply Co. (See Winfield, Edward A., assignor.)
Callaghan, Thomas F., Toronto, Ontario, Canada. Applicator for tinting hair. 2,101,310; Dec. 7.
Cameron, Allan M., Oak Park, assignor to Cameron Can Machinery Co., Chicago, Ill. Can tester. 2,101,129; Dec. 7.
Cameron Can Machinery Co. (See Cameron, Allan M., assignor.)
Campbell, Wyant & Cannon Foundry Company. (See Grotewohl, Laurence A., assignor.)
Canadian Locomotive Company. (See Casey, William, assignor.)
Carlsen, Leonard O., assignor to Gleason Works, Rochester, N. Y. Machine for producing gears. 2,101,237; Dec. 7.
Carraway Engineering Company. (See Carraway, Thomas W., assignor.)
Carraway, Thomas W., assignor to Carraway Engineering Company, Inc., Dallas, Tex. Air conditioning unit. 2,101,467; Dec. 7.
Carroll, William M., assignor to S. F. Bowser & Company, Inc., Fort Wayne, Ind. Liquid dispensing apparatus. 2,101,806; Dec. 7.
Carter Carburetor Corporation. (See Ericson, George R., assignor.)
Cartlidge, Frank, assignor to Goodman Manufacturing Company, Chicago, Ill. Gathering or pick-up conveyer. 2,101,238; Dec. 7.
Casco Products Corporation. (See Johnson, Arthur A., assignor.)
Casey, William, assignor to Canadian Locomotive Company, Limited, Kingston, Ontario, Canada. Method of and apparatus for treating materials. 2,101,042; Dec. 7.
Castings Patent Corporation. (See Hagemeyer, Henry F., assignor.)
Caudle, Arthur A., assignor to J. P., C. L., and J. P., Jr. Grey, a co-partnership doing business as Grey Hosiery Mills, Hendersonville, N. C. Circular knitting machine. 2,101,639; Dec. 7.
Celanese Corporation of America. (See Hale, F. C., and Yeadon, assignors.)
Celanese Corporation of America. (See Hale, F. C., and Yorke, assignors.)
Celanese Corporation of America. (See Piper, William G., assignor.)
Celanese Corporation of America. (See Pool, William, assignor.)
Chamberlain, Paul R. (See Tyler, W. E., Douglas, Chamberlain, and Loveland.)
Chapple, Jean S., assignor of one-half to B. V. Chotzner, Hove, England. Net cap for personal wear. 2,101,734; Dec. 7.
Chase Companies, The. (See Reichenbach, Howard F., assignor.)
Cheek, H. M., et al. (See Cheek, Lightle J., assignor.)
Cheek, Lightle J., Little Rock, assignor of one-third to H. M. Cheek, North Little Rock, and one-third to G. Blount, Searcy, Ark. Trap. 2,101,609; Dec. 7.
Chemical Works formerly Sandoz. (See Peter, Albin, assignor.)
Chesnut, Guy E., Jr., St. Joseph, Mo. Crusher for used safety razor blades. 2,101,700; Dec. 7.
Chessman, Samuel C. (See Hunt, N. C., and Chessman.)
Chicago Cardboard Company. (See Ziemmerman, Henry, assignor.)
Chicago Pneumatic Tool Company. (See Lear, Earl B., assignor.)
Chicago Pneumatic Tool Company. (See Stevens, Edward W., assignor.)
Chick, Gilbert H. (See Bell, William L., assignor.)
Chilcott, Langdon S., Brewer, Maine. Fishhook. 2,101,491; Dec. 7.
Chilton, Roland, Ridgewood, N. J., assignor, by mesne assignments, to The Reed Propeller Co., Inc., Garden City, N. Y. Supercharger drive. 2,101,239; Dec. 7.
Chittenden & Eastman Company. (See Eaton, Robert E., assignor.)
Chonette, William C., Ojai, and R. H. Hamilton, Los Angeles, assignor to Shell Development Company, San Francisco, Calif. Method and apparatus for cementing wells. 2,101,640; Dec. 7.
Chotzner, Beatrice V. (See Chapple, Jean S., assignor.)
Christensen, Carl W. (See Ralston, A. W., and Christensen.)
Christman, John M., assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle. 2,101,130; Dec. 7.
Churchill Machine Tool Company Limited, The. (See Asbridge, Harry H., assignor.)
Cincinnati Grinders Incorporated. (See Ernst, H., Herfurth, and Nenninger, assignors.)
Cincinnati Milling Machine Co. (See Isler, Herman R., assignor.)
Clark, Samuel C. (See Pryale, H. M., and Clark.)
Clearing Machine Corporation. (See Johansen, Einar K., assignor.)
Clemson, Earle P., Baltimore, Md. Toilet paper holder. 2,101,531; Dec. 7.
Cleveland Rock Drill Company, The. (See Curtis, John C., assignor.)
Clingerman, Robert L. (See Bayley, L., and Clingerman.)
Clingerman, Robert L., Washington, D. C., assignor to The William Bayley Company, Springfield, Ohio. Protective signaling device. 2,101,049; Dec. 7.
Cloud, William S., Wilmette, Ill. Method and apparatus for coating confections. 2,101,240; Dec. 7.
Cluett, Peabody & Co. (See Madsen, Louis P., assignor.)
Cogswell, Charles W., Elizabeth, N. J. Utility holder. 2,101,492; Dec. 7.
Cohen, Leonard, New York, N. Y. Sleeping garment. 2,101,701; Dec. 7.
Cohn, Benno, assignor to Ferdinand Gutmann & Co., Brooklyn, N. Y. Making center spot crowns. 2,101,131; Dec. 7.
Cole, Edward S. (See Cole, Edward S. and E. S., and Hooper.)
Cole, Edward S., and E. S., Montclair, N. J., and L. J. Hooper, Holden, Mass., assignors to Pitometer Log Corporation. Pitot tube. 2,101,165; Dec. 7.
Cole, Joseph, Whiting, Ind., assignor to Sinclair Refining Company, New York, N. Y. Lubricating oils. 2,101,241; Dec. 7.
Cole, Raymond A., and C. H. Amidon, assignors to Norton Company, Worcester, Mass. Grinding machine. 2,101,790; Dec. 7.
Coleman, William F., Richmond, Calif. Cream dispenser. 2,101,020; Dec. 7.

Collegiate Manufacturing Co. (See Smutny, Theodore J., assignor.)
Collette, Elmer E., et al. (See Fischer, Oliver C., assignor.)
Columbia Carburetor Company. (See Baker, Arthur R., assignor.)
Commonwealth Trust Company, trustee. (See Sharp, Henry J., assignor.)
Compagnie Generale de Telegraphie Sans Fil. (See Rocard, Yves, assignor.)
Congreve, Willard. (See Wolff, G. F., and Congreve.)
Conquest, Victor, assignor to Armour and Company, Chicago, Ill. Textile lubrication. 2,101,532; Dec. 7.
Conradi, Leo C., and A. M. Fairbrother, Binghamton, assignors to International Business Machines Corp., New York, N. Y. Tabulating card. 2,101,427; Dec. 7.
Consolidated Packaging Machinery Corporation. (See Cundall, R. N., and Gantzer, assignors.)
Continental Gin Company. (See Morgan, George C., assignor.)
Continental Motors Corporation. (See Meyer, Andre J., assignor.)
Cooke, Maurice B., Plainfield, N. J., H. C. Schutt, North Tarrytown, and J. W. Throckmorton, N. Y., assignors to Alco Products Incorporated, New York, N. Y. Producing coke. 2,101,641; Dec. 7.
Cooper, La Mar S., Erie, Pa., assignor to General Electric Company. Magnetic clutch. 2,101,671; Dec. 7.
Cooperative Engineering Co. (See Zelov, Victor L., assignor.)
Coppin, Camille, Brussels, Belgium. Boiled egg opener. 2,101,212; Dec. 7.
Corey, John W., assignor to The Dow Chemical Company, Midland, Mich. Fertilizer. 2,101,807; Dec. 7.
Cornell Securities Corporation. (See Lockhart, William, assignor.)
Coubray, Edwin, Auckland, New Zealand. Means for use in automatically weighing predetermined quantities of discrete materials. 2,101,354; Dec. 7.
Crago, Paul H., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Electromagnetic apparatus. 2,101,166; Dec. 7.
Crain, Arthur W., Providence, R. I. Collar clasp. 2,101,493; Dec. 7.
Cramer, Walter G., and E. Bacheller, Cincinnati, Ohio. Collapsible and separable table. 2,101,573; Dec. 7.
Crane Co. (See Kacena, J., and Kelly, assignors.)
Crawford, John W. C., Norton-on-Tees, England, assignor to Imperial Chemical Industries Limited. Manufacture of unsaturated organic compounds. 2,101,821; Dec. 7.
Crawford, John W. C., Norton-on-Tees, England, assignor England, assignors to Imperial Chemical Industries Limited. Manufacture of unsaturated organic amides. 2,101,822; Dec. 7.
Crewdson, Sarah M., assignor of nineteen thirtieths to R. H. Goodhart and three-thirtieths to H. M. Soloway, Chicago, Ill. Clutch. 2,101,242; Dec. 7.
Crosby, Murray G., Riverhead, N. Y., assignor to Radio Corporation of America. Phase modulation receiver. 2,101,703; Dec. 7.
Crosby Steam Gage and Valve Company. (See Klafstad, Erling, assignor.)
Crosley, Lewis M., assignor to The Crosley Radio Corporation, Cincinnati, Ohio. Cabinet for mechanical refrigerators and appurtenances thereof. 2,101,702; Dec. 7.
Crosley Radio Corporation, The. (See Crosley, Lewis M., assignor.)
Cummings, George C., Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telegraph signal repeating system. 2,101,243; Dec. 7.
Cundall, Robert N., Lackawanna, and H. E. Gantzer, Kenmore, assignors to Consolidated Packaging Machinery Corporation, Buffalo, N. Y. Foil capping machine. 2,101,533; Dec. 7.
Cunningham, Lewis L., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Automatic air conditioning system. 2,101,808; Dec. 7.
Cunward, Inc. (See Cuny, Ernest A., assignor.)
Cuny, Ernest A., New York, assignor to Cunward, Inc., Brooklyn, N. Y. Rotary fluid displacement device. 2,101,051; Dec. 7.
Cuny, Ernest A., New York, assignor to Cunward, Inc., Brooklyn, N. Y. Rotary fluid displacement device. 2,101,428; Dec. 7.
Curtis, Charles, Chicago, Ill., assignor of twenty-five per cent to F. A. Luthy and twenty-five per cent to D. R. Luthy, Jackson, Mich. Piston ring. 2,101,244; Dec. 7.
Curtis, John C., Garfield Heights, assignor to The Cleveland Rock Drill Company, Cleveland, Ohio. Rock drill mounting. 2,101,672; Dec. 7.
Daimler-Benz A. G. (See Nallinger, Fritz, assignor.)
Dale, Arthur L., Tacoma, Wash. Oil dispenser. 2,101,468; Dec. 7.
Dale, Grover C. (See Mallory, Louis V., assignor.)
Dällenbach, Walter, Berlin-Charlottenburg, Germany, assignor to N. V. Machinerieen-en Apparaten Fabrieken "Meaf", Utrecht, Netherlands. Electric discharge tube. 2,101,610; Dec. 7.
Daly, Joseph P., New York, N. Y., assignor to The American Laundry Machinery Company, Norwood, Ohio. Pressing machine and control mechanism. 2,101,021; Dec. 7.
Daly, Lewis, and M. Johannsen, New York, N. Y. Device for applying mascara and similar material. 2,101,132; Dec. 7.
Dangelmajer, Charles, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Hardening of proteins. 2,101,574; Dec. 7.
Dangelmajer, Charles, Niagara Falls, N. Y., assignor to The E. I. du Pont de Nemours & Company, Wilmington, Del. Insecticidal composition. 2,101,704; Dec. 7.
Davidson, Jack H., assignor to Armstrong-Blum Mfg. Co., Chicago, Ill. Hacksaw. 2,101,362; Dec. 7.
Davies, Gomer L. (See Mashbir, S. F., Kear, Davies, and Orton.)
Davis, Arthur B., Springfield, Ohio. Printing plate and mounting the same. 2,101,052; Dec. 7.
Davis & Furber Machine Company. (See Knight, Henry H., assignor.)
Davis, George H., Washington, D. C. Multiple action thermostat. 2,101,637; Dec. 7.
Deans, Frederick E., C. F. Manger, and G. A. Buswell, assignors to The Bentley Engineering Company Limited, Leicester, England. Circular knitting machine. 2,101,494; Dec. 7.
De Baufre, William L., Lincoln, Nebr. Making and arrangement of interchangers for heat exchange between fluids at low temperatures. 2,101,157; Dec. 7.
De Felice, Quido, Devon, Conn. Electrical switch. 2,101,429; Dec. 7.
De Franco, Anthony, Euclid, Ohio. Stepladder attachment. 2,101,245; Dec. 7.
De Laney, William W., Marshallton, assignor to Hercules Powder Company, Wilmington, Del. Foundry core and dry binder for the preparation thereof. 2,101,330; Dec. 7.
Delaware Rayon Company. (See Ryan, Leon H., assignor.)
Dell, James A. (See Watkins, E. G., and Dell.)
Della Santina, Frank. (See Della Santina, Peter V., and F., and Nelson.
Della Santina, Peter V., A. Nelson, and F. Della Santina, San Francisco, Calif. Fire escape. 2,101,053; Dec. 7.
De Mare, Jehan. (See Byk, M., and de Mare.)
De Neumann, Michael, Budapest, Hungary, assignor to General Electric Company. Sealing-off apparatus. 2,101,673; Dec. 7.
De Rome, Lester L., Chicago, Ill. Sanitary tooth cleanser. 2,101,363; Dec. 7.
Deutsch, Walther, Frankfort-on-the-Main, Germany, assignor to International Precipitation Company, Los Angeles, Calif. Electrical precipitation apparatus. 2,101,168; Dec. 7.
Dewey Portland Cement Company. (See Tyler, W. E., Douglas, Chamberlain, and Loveland, assignors.)
Diamond Match Company, The. (See Traute, Henry C., assignor.)
Dichter, Jakob, Berlin, Germany. Machine for producing glass vessels from tubing. 2,101,213; Dec. 7.
Dickieson, Alton C., Hollis, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Transmission control in signaling systems. 2,101,246; Dec. 7.
Dietrichson, William F., Berwick, Pa., assignor to American Car and Foundry Company, New York, N. Y. Mine car end construction. 2,101,169; Dec. 7.
Dietzgen, Eugene, Company. (See Langsner, Adolph, assignor.)
Dilliard, Herbert C., East Bangor, Pa., assignor to Bissell Carpet Sweeper Company, Grand Rapids, Mich. Carpet sweeper case and dust pan construction. 2,101,133; Dec. 7.
Dittmar, Harry R., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparing cyanhydrins. 2,101,823; Dec. 7.
Dome, Robert B., Schenectady, N. Y., assignor to General Electric Company. Antenna. 2,101,674; Dec. 7.
Donovan, John F., and G. Illingworth, East Cleveland, Ohio, assignors to General Electric Company. Safety device for coiling machines. 2,101,382; Dec. 7.
Dopyera, Rudolph, Los Angeles, Calif. Neck construction for a stringed musical instrument. 2,101,364; Dec. 7.
Dorr Company, The. (See Fischer, Anthony J., assignor.)
Dorr Company, The. (See Lund, Nels B., assignor.)
Dougan, Charles E. (See Andrews, C. W., and Dougan.)
Douglas, James K. (See Ferris, W., Douglas, and Fobian.)
Douglas, Thomas B. (See Tyler, W. E., Douglas, Chamberlain, and Loveland.)
Dow Chemical Company, The. (See Corey, John W., assignor.)
Dow Chemical Company, The. (See Wass, H. W., and Rupright, assignors.)
Dow, Dewey M., assignor to Air-Way Electric Appliance Corporation, Toledo, Ohio. Vacuum cleaner. 2,101,575; Dec. 7.
Dowty, George H., Cheltenham, England. Locking means for retractable aircraft landing gear. 2,101,611; Dec. 7.
Dreux, Alexander H., Orchard Park, and J. N. Royal, assignors, by mesne assignments, to F. N. Burt Company, Inc., Buffalo, N. Y. Powder box. 2,101,809; Dec. 7.

Dubois, Raymond. (See Laboureur, L. A. M. J., and Dubois.)
Du Bois, Warren C., et al. (See Taylor, Wesley, assignor.)
Duffy, Charles G., Brooklyn, N. Y., assignor to Sealed Joint Products Co., Inc. Panel mounting. 2,101,612; Dec. 7.
Duncan, Charles R., Waukegan, assignor to Oakes Products Corporation, North Chicago, Ill. Flanged tubular article and making same. 2,101,311; Dec. 7.
Duncan, Justin R. (See Tolson, W. A., and Duncan.)
Du Pont, E. I., de Nemours & Company. (See Dangelmajer, Charles, assignor.)
Du Pont, E. I., de Nemours & Company. (See Dittmar, Harry R., assignor.)
Du Pont, E. I., de Nemours & Company. (See Edgar, Donald E., assignor.)
Du Pont, E. I., de Nemours & Company. (See Gordon, Wallace E., assignor.)
Du Pont, E. I., de Nemours & Company. (See Graves, G. D., and Harmon, assignors.)
Du Pont, E. I. de Nemours & Company. (See Hill, J. W., and Spanagel, assignors.)
Du Pont, E. I., de Nemours & Company. (See Levine, A. A., and McAllister, assignors.)
Du Pont, E. I., de Nemours & Company. (See Maxwell, Robert W., assignor.)
Du Pont, E. I., de Nemours & Company. (See Salzberg, Paul L., assignor.)
Du Pont, E. I., de Nemours & Company. (See Strain, Daniel E., assignor.)
Du Pont, E. I., de Nemours & Company. (See Werntz, James H., assignor.)
Du Pont, E. I., de Nemours & Company. (See Woodhouse, John C., assignor.)
Durex Products, Inc. (See Hay, Rene M., assignor.)
Duro Metal Products Company. (See Hedgpeth, Theron L., assignor.)
Dutchland Farms, Inc. (See Field, Fred F., Jr., assignor.)
Dymaxion Corporation, The. (See Fuller, Buckminster, assignor.)
Eagle Knitting Mills, Inc. (See Karger, David, assignor.)
Eames, George M., Bridgeport, and R. W. Stewart, Fairfield, Conn., assignors to The Singer Manufacturing Company, Elizabeth, N. J. Lubricating means for sewing machine loop-takers. 2,101,329; Dec. 7.
Earp, Charles W., Aldwych, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y. Amplifier coupling circuits. 2,101,247; Dec. 7.
Eaton, Charles F., West Newbury, Mass., assignor, by mesne assignments, of one-half to North American Holding Corporation, and one-half to Parshad Holding Corporation, Syracuse, N. Y. Marking machine. 2,101,705; Dec. 7.
Eaton, Robert E., assignor to Chittenden & Eastman Company, Burlington, Iowa. Open bottom, floating top spring cushion chair or the like. 2,101,054; Dec. 7.
Economy Fuse & Manufacturing Company. (See Cabell, Charles A., assignor.)
Edgar, Donald E., Philadelphia, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Urea-formaldehyde condensation products. 2,101,534; Dec. 7.
Edison General Electric Appliance Company. (See Berman, Henry J., assignor.)
Eggert, Johann. (See Günther, M., and Eggert.)
Elnson-Freeman Co. (See Leigh, Nathan J., assignor.)
Elsfeld, Kurt. (See Balle, G., and Elsfeld.)
Ekman, Olof I. H., Stockholm, Sweden. Air horn. 2,101,385; Dec. 7.
Elbel, Ernst, and F. Seebach, Erkner, near Berlin, Germany, assignors to Bakelite Corporation, New York, N. Y. Molding composition. 2,101,642; Dec. 7.
Electric Household Utilities Corporation. (See Jensen, J. W., and Shute, assignors.)
Electric Storage Battery Company, The. (See Woodbridge, Joseph L., assignor.)
Electric Trading Corporation. (See Goldbert, M. L., and Watts, assignors.)
Ellinwood, Herman R., Los Angeles, Calif. Film moving mechanism. 2,101,469; Dec. 7.
Ellis, Carleton, Montclair, N. J., assignor to Ellis-Foster Company. Altered tung oil and making same. 2,101,791; Dec. 7.
Ellis, Carleton, Montclair, N. J., assignor to Ellis-Foster Company. Alkyd resin coating and composition of improved alkali resistance and making same. 2,101,792; Dec. 7.
Ellis-Foster Company. (See Ellis, Carleton, assignor.)
Engdahl, Seth M. F., Stockholm, Sweden. Reversible propeller. 2,101,535; Dec. 7.
Engel, William H., assignor to Shellmar Products Company, Mount Vernon, Ohio. Sheeter. 2,101,170; Dec. 7.
Engelke, Ernest F., Camden, assignor, by mesne assignments, to Power Patents Company, Jersey City, N. J. Fractionation of petroleum oils. 2,101,643; Dec. 7.
Engelmann, Rudolf, Berlin, Germany. High speed seagoing ship. 2,101,613; Dec. 7.
Engler, Julius, and E. Studt, assignors to Norddeutsche Seekabelwerke A. G., Nordenham, Germany. Submarine signaling cable. 2,101,386; Dec. 7.
Ensslin, Alfred. (See Wagner, H., Zabel, and Ensslin.)
Equitable Paper Bag Co. (See Poppe, George W., assignor.)
Erickson, Tony T., South Hibbing, Minn. Drafting instrument. 2,101,365; Dec. 7.
Ericson, George R., assignor to Carter Carburetor Corporation, St. Louis, Mo. Fuel feed means. 2,101,536; Dec. 7.
Ernst, Charles K., Buffalo, N. Y. Safe. 2,101,470; Dec. 7.
Ernst, Hans, C. Herfurth, and L. F. Nenninger, assignors to Cincinnati Grinders Incorporated, Cincinnati, Ohio. Grinding machine. 2,101,644; Dec. 7.
Everett, Terry, Watertown, N. Y., assignor to The New York Air Brake Company. Wasp excluder for air brakes. 2,101,214; Dec. 7.
Every, Elmer D., Rochelle Park, N. J. Well screen. 2,101,537; Dec. 7.
Ewing, Wylie B., Wheeling, W. Va., assignor, by mesne assignments, to Vulcan Rail and Construction Company, Maspeth, N. Y. Railing and manufacture thereof. 2,101,707; Dec. 7.
Excelsior Hardware Company, The. (See Komenak, Albert J., assignor.)
Extrom, John A., Tomahawk, Wis., and H. Martin, Chicago, Ill.; said Extrom assignor to Tomahawk Kraft Paper Company, Tomahawk, Wis., and said Martin assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Bleaching of pulp. 2,101,706; Dec. 7.
Faber, Herbert A., Cincinnati, Ohio. Floor construction. 2,101,538; Dec. 7.
Facer, Charles A., Bridgeport, Ohio. Smoking pipe. 2,101,387; Dec. 7.
Fagergren, William, Salt Lake City, Utah. Aerating machine. 2,101,331; Dec. 7.
Fairbrother, Almon M. (See Conradi, L. C., and Fairbrother.)
Fairmount Glass Works, Incorporated. (See Ferguson, John, assignor.)
Falk Corporation, The. (See Schmitter, Walter P., assignor.)
Farnsworth Television Incorporated. (See Varian, Russell H., assignor.)
Faus, Harold T. (See Arey, R. G., and Faus.)
Fawick, Thomas L., Akron, Ohio, assignor to Borg-Warner Corporation, Chicago, Ill. Transmission. 2,101,134; Dec. 7.
Febod Corporation. (See Frank, Nathan, assignor.)
Fein-Maschinenbaugesellschaft m. b. H. (See Schumacher, Heinrich, assignor.)
Feldman, Arnold H., Chicago, Ill. Mold-flask separator. 2,101,776; Dec. 7.
Fenton, Benn F., Kansas City, Mo. Adjustable ladder leg. 2,101,576; Dec. 7.
Ferguson, John, assignor to Fairmount Glass Works, Incorporated, Indianapolis, Ind. Electric furnace. 2,101,675; Dec. 7.
Fernelius, Willis C. (See Fulton, R. A., and Fernelius.)
Fer-O-Con Corporation. (See Kotrbaty, Guy F., assignor.)
Ferris, Walter, and J. K. Douglas, Milwaukee, and G. H. Fobian, West Allis, assignors to The Oilgear Company, Milwaukee, Wis. Hydraulic transmission. 2,101,495; Dec. 7.
Field, Crosby, assignor to Flakice Corporation, Brooklyn, N. Y. Brine ice. 2,101,055; Dec. 7.
Field, Fred F., Jr., assignor to Dutchland Farms, Inc., Brockton, Mass. Tractor and trailer. 2,101,793; Dec. 7.
Field, Henry P., Berwick, Pa., assignor to American Car and Foundry Company, New York, N. Y. Mine car. 2,101,171; Dec. 7.
Figueira, Joseph, New York, assignor to Leviton Manufacturing Company, Brooklyn, N. Y. Electric switch. 2,101,539; Dec. 7.
Finch, James L., Patchogue, and L. L. Young, Rocky Point, N. Y., assignors to Radio Corporation of America. Temperature control container. 2,101,135; Dec. 7.
Finley, Sam E., Atlanta, Ga. Constructing pavements. 2,101,388; Dec. 7.
Fischer, Anthony J., Jackson Heights, assignor to The Dorr Company, Inc., New York, N. Y. Flocculation. 2,101,810; Dec. 7.
Fischer, Oliver C., assignor of one per cent to R. L. Miller, one per cent to O. J. Moffitt, one per cent to H. G. Horn, four per cent to H. F. Schneider, one per cent to E. E. Collette, one per cent to L. V. Sondelbeck, and one per cent to A. D. Goeddell, Waterloo; one per cent to A. A. Wierschem and M. Wierschem, and one per cent to E. W. Koch, Columbia, and one per cent to I. A. Moore, Collinsville, Ill. Muffler. 2,101,389; Dec. 7.
Fitch, Clyde J. (See Lemmon, W. S., Fitch, and Walz.)
Flakeice Corporation. (See Field, Crosby, assignor.)
Flygare, Carl G., assignor to Norton Company, Worcester, Mass. Grinding wheel positioning mechanism. 2,101,794; Dec. 7.
Flygare, Carl G., and H. A. Silven, assignors to Norton Company, Worcester, Mass. Grinding wheel truing apparatus. 2,101,795; Dec. 7.
Fobian, George H. (See Ferris, W., Douglas, and Fobian.)
Folifilm, Inc. (See Kittredge, H. G., and Williams, assignors.)
Fonseca, Edward L., assignor to The Wilcolator Company Newark, N. J. Self-compensating heat regulator. 2,101,735; Dec. 7.

Food Machinery Corporation. (See Hait, James M., assignor.)
Food Machinery Corporation. (See Lewis, Harold R., assignor.)
Formfit Company, The. (See Kunstadter, Sigmund W., assignor.)
Foster Wheeler Corporation. (See Frisch, Martin, assignor.)
Fox, Charles J., Ellicottville, N. Y. Building constructions. 2,101,777; Dec. 7.
Frank, Georg. (See Sindl, O., and Frank.)
Frank, Nathan, assignor to Febod Corporation, Newark, N. J. Clutch device. 2,101,366; Dec. 7.
Frankenburger, Walter, H. Hammerschmid, and G. Roessler, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Producing synthetic resins. 2,101,332; Dec. 7.
Frankenburger, Walter, H. Hammerschmid, and G. Roessler, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Producing synthetic resins. 2,101,333; Dec. 7.
Franz, Erwin E., Cranford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for winding material. 2,101,248; Dec. 7.
Franzmeier, Alvin W., Rosemount, Minn. Filter pad. 2,101,811; Dec. 7.
Fraser, James W., Cleveland, Ohio. Making a paving material. 2,101,614; Dec. 7.
Fraternali, Henry, Dobbs Ferry, N. Y. Candle holder and candle. 2,101,136; Dec. 7.
Freyn Engineering Company. (See Rice, Owen R., assignor.)
Frick, Henry E., Upper Montclair, N. J., assignor to The Metal Lumber Corporation of New Jersey, New York, N. Y. Covering cargo hatches and other openings. 2,101,056; Dec. 7.
Friedrichs, Wilhelm, Reinickendorf-Ost, near Berlin, Germany. Coin controlled prepaying machine for mail. 2,101,615; Dec. 7.
Frisch, Martin, assignor to Foster Wheeler Corporation, New York, N. Y. Pneumatic classifier. 2,101,249; Dec. 7.
Fritz, Karl, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Wave modulation. 2,101,137; Dec. 7.
Fuller Brush Company, The. (See Rowland, Clarence G., assignor.)
Fuller, Buckminster, assignor to The Dymaxion Corporation, Bridgeport, Conn. Motor vehicle. 2,101,057; Dec. 7.
Fulton Company, The. (See Thorp, Joel R., assignor.)
Fulton, Robert A., and W. C. Fernelius, Columbus, Ohio, dedicated to the free use of the Public in the Territory of the United States of America. Insecticide and fungicide. 2,101,645; Dec. 7.
Gantzer, Howard E. (See Cundall, R. N., and Gantzer.)
Gardner, William T., et al. (See Aldridge, Arthur A., assignor.)
Garlock Packing Company, The. (See Stewart, Hugh T., assignor.)
Gas Tool Patents Corporation. (See Boddinghouse, Emmons R., assignor.)
Gasoline Products Company. (See Nofsinger, C. W., and Keith, assignors.)
Gaus, Frank L. (See Reuter, R., and Gaus.)
Gebauer-Fuelnegg, Erich, deceased, by M. Gebauer-Fuelnegg, administratrix, Evanston, Ill., and E. M. Kratz, Gary, Ind., assignors, by mesne assignments, to Marbo Patents Inc. Apparatus for reacting strip material with a liquefied reagent. 2,101,138; Dec. 7.
Gebauer-Fuelnegg, Marie, administratrix. (See Gebauer-Fuelnegg, E., and Kratz.)
Gegenheimer, William, Brooklyn, assignor to Willard Manufacturing Corporation, New York, N. Y. Sprocket chain truing device. 2,101,172; Dec. 7.
Gegenheimer, William, Brooklyn, assignor to Willard Manufacturing Corporation, New York, N. Y. Plate clamp. 2,101,173; Dec. 7.
General Aniline Works, Inc. (See Balle, G., and Elsfeld, assignors.)
General Aniline Works, Inc. (See Neresheimer, H., Vilsmeier, and Heid, assignors.)
General Aniline Works, Inc. (See Wagner, H., Zabel, and Ensslin, assignors.)
General Electric Company. (See Arey, R. G., and Faus, assignors.)
General Electric Company. (See Brüche, E., and Henneberg, assignors.)
General Electric Company. (See Byk, M., and de Mare, assignors.)
General Electric Company. (See Cooper, La Mar S., assignor.)
General Electric Company. (See de Neumann, Michael, assignor.)
General Electric Company. (See Dome, Robert B., assignor.)
General Electric Company. (See Donovan, J. F., and Illingworth, assignors.)
General Electric Company. (See Gulhauman, Werner, assignor.)
General Electric Company. (See Hull, Edwin H., assignor.)
General Electric Company. (See Linn, Frank C., assignor.)
General Electric Company. (See Nisbet, Archibald W., assignor.)
General Electric Company. (See Payne, John H., Jr., assignor.)
General Electric Company. (See Sambleson, Robert F., assignor.)
General Electric Company. (See Steenstrup, Christian, assignor.)
General Electric Company. (See Wiegand, K., and Koenig, assignors.)
General Electric Vapor Lamp Company. (See Walker, Warren R., assignor.)
General Machinery Corporation. (See Byerlein, Arthur A., assignor.)
General Motors Corporation. (See Anibal, Benjamin H., assignor.)
General Motors Corporation. (See Grooms, Albert O., assignor.)
General Motors Corporation. (See Michel, C. A., and Winkelmeyer, assignors.)
General Motors Corporation. (See Saunders, L. P., and Rosenberg, assignors.)
General Motors Corporation. (See Smart, Clarence F., assignor.)
General Motors Corporation. (See Tenney, Perry L., assignor.)
General Motors Corporation. (See Thompson, Earl A., assignor.)
George, Glenn C., Omaha, Nebr. Refrigerator car. 2,101,736; Dec. 7.
Gerard, Frank W. (See Jennings, C. S., and Gerard.)
Gerhardt, Reginald B., Steelton, Pa., assignor to Beth-Mary Steel Corporation. Cooling rails. 2,101,312; Dec. 7.
Gesler, Leonard A., Aurora, Ill. Hair trimmer. 2,101,737; Dec. 7.
Gibson Electric Refrigerator Corporation. (See Gilbert, Herman F., assignor.)
Giese, August F., Jr. (See Andrews, C. W., and Dougan, assignors.)
Gilbert, Herman F., Greenville, Mich., assignor to Gibson Electric Refrigerator Corporation. Vitreous enameling process. 2,101,616; Dec. 7.
Gilbert, William L., Clock Corporation. (See Williams, Othenil G., assignor.)
Gillispie, Raymond L., Bethlehem, Pa., assignor to Bethlehem Steel Company. Rail brace. 2,101,313; Dec. 7.
Gleason Works. (See Carlsen, Leonard O., assignor.)
Gochnauer, Walter E., Dover, N. H., assignor to American Sales Book Company, Inc., Niagara Falls, N. Y. Strip feeding mechanism for writing machines. 2,101,334; Dec. 7.
Godfrey, Truman M., Winchester, Mass., and V. Serbell, Leonia, N. J., assignors to Lever Brothers Company. Finishing shortening. 2,101,496; Dec. 7.
Goeddel, Arthur D., et al. (See Fischer, Oliver C., assignor.)
Goertz, Frederick, South Orange, N. J. Spool needle cushion. 2,101,250; Dec. 7.
Goldbert, Max L., New York, N. Y., and R. T. Watts, Miami Beach, Fla., assignors to Electric Trading Corporation, New York, N. Y. Electric control device. 2,101,430; Dec. 7.
Goldstone, Benjamin, Long Beach, N. Y. Alarm system. 2,101,058; Dec. 7.
Goldstone, Benjamin, Long Beach, N. Y. Alarm apparatus. 2,101,059; Dec. 7.
Goodhart, Robert H., et al. (See Crewdson, Sarah M., assignor.)
Goodknight, Alva L., Fort Worth, Tex. Air brake mechanism. 2,101,708; Dec. 7.
Goodman Manufacturing Company. (See Cartlidge, Frank, assignor.)
Gookin, Sylvester L., Quincy, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Eyelet. 2,101,060; Dec. 7.
Gordon, Burgess L., Jr., assignor to Hogan Inventions, Inc., Philadelphia, Pa. Aquatic toy. 2,101,646; Dec. 7.
Gordon, Wallace E., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Casting. 2,101,061; Dec. 7.
Gorissen, Engelbert, deceased, M. Gorissen, nèe Becker, legal representative, assignor to the firm Vorwerk & Co., Wuppertal-Barmen, Germany. Blower for vacuum cleaners. 2,101,390; Dec. 7.
Gorissen, Margarete, nèe Becker, legal representative. (See Gorissen, Engelbert.)
Gossen, Martin J., Milwaukee, Wis. Window sash balance. 2,101,577; Dec. 7.
Götte, Ernst, and W. Kling, assignors, by mesne assignments, to Böhme Fettchemie-Gesellschaft mit beschrankter Haftung, Chemnitz, Germany. Pigmenting fibrous materials. 2,101,251; Dec. 7.
Gotthardt, Henry R., assignor to Logan Co. Inc., Louisville, Ky. Coil handling apparatus. 2,101,738; Dec. 7.
Graham, Maurice H., Minneapolis, Minn. Automatic toaster. 2,101,062; Dec. 7.
Grahame, James H., Mount Vernon, assignor to The Texas Company, New York, N. Y. Solvent refining of mineral oil. 2,101,497; Dec. 7.

Grahame, John, Sixes, Oreg. Support for fishing reels. 2,101,174; Dec. 7.
Grant, Charles H., et al. (See Lawler, Frank P., assignor.)
Graves, George D., and J. Harmon, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Resinous aminomethanol-aromatic amine-formaldehyde condensation products. 2,101,215; Dec. 7.
Gray, Harry H., Kansas City, Mo. Nut and bolt assembling machine. 2,101,367; Dec. 7.
Green, Clarence J., assignor to Norton Company, Worcester, Mass. Cam grinding apparatus. 2,101,796; Dec. 7.
Green, Samuel G., Gray, Ga. Muzzle attachment for guns. 2,101,063; Dec. 7.
Greenbaum, Martin, Newark, N. J. Nonrefillable bottle tapping device. 2,101,471; Dec. 7.
Grey, Charles L., et al. (See Caudle, Arthur A., assignor.)
Grey Hosiery Mills. (See Caudle, Arthur A.)
Grey, James P., Jr., et al. (See Caudle, Arthur A., assignor.)
Grigor, James. (See Crawford, J. W. C., and Grigor.)
Griswold Manufacturing Company, The. (See Anderson, Carl R., assignor.)
Groff, Frazier, Lakewood, Ohio, assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Denture blank. 2,101,431; Dec. 7.
Groll, Herbert P. A., Berkeley, assignor to Shell Development Company, San Francisco, Calif. Process and product relating to unsaturated xanthates. 2,101,648; Dec. 7.
Groll, Herbert P. A., Berkeley, assignor to Shell Development Company, San Francisco, Calif. Xanthates of unsaturated secondary alcohols and their preparation. 2,101,649; Dec. 7.
Groll, Herbert P. A., Oakland, assignor to Shell Development Company, San Francisco, Calif. Flotation process. 2,101,647; Dec. 7.
Grooms, Albert O., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,101,498; Dec. 7.
Grotewohl, Laurence A., Muskegon, assignor to Campbell, Wyant & Cannon Foundry Company, Muskegon Heights, Mich. Foundry cupola. 2,101,391; Dec. 7.
Grueschow, Adolph C., Milwaukee, Wis. Ceiling washer. 2,101,216; Dec. 7.
Grün, Adolf, Basel, Switzerland, assignor to American Hyalsol Corporation, Wilmington, Del. Production of unsaturated hydrocarbons. 2,101,314; Dec. 7.
Guilhauman, Werner, Berlin-Steglitz, Germany, assignor to General Electric Company. Elastic fluid turbine Control. 2,101,676; Dec. 7.
Guinzburg, Roland H., Flushing, assignor to I. B. Kleinert Rubber Company, New York, N. Y. Apparatus for molding and ornamenting rubber articles. 2,101,252; Dec. 7.
Gulf Research and Development Company. (See Weinrich, William W., assignor.)
Gullich, Kurt, assignor to Bisonit G. m. b. H., Marienberg in Saxony, Germany. Producing articles from moldable powder. 2,101,540; Dec. 7.
Günther, Martin, and J. Eggert, assignors to "Patentverwertung Dr. Martin Günther G. m. b. H.", Berlin, Germany. Producing artificial threads, fibers, and the like. 2,101,253; Dec. 7.
Gustafsson, Eric, assignor to Binks Manufacturing Company, Chicago, Ill. Air nozzle for flat-spraying appliances. 2,101,175; Dec. 7.
Gutmann, Ferdinand & Co. (See Cohn, Benno, assignor.)
Gyro Process Company. (See Schutt, Hermann C., assignor.)
Hackett, William F. (See Meyers, Charles J., assignor.)
Hagemeyer, Henry F., assignor to Castings Patent Corporation, Chicago, Ill. Apparatus for producing molds. 2,101,677; Dec. 7.
Hague, Alfred E., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Testing circuit. 2,101,254; Dec. 7.
Hain, Harry D., assignor to Railley Corporation, Cleveland, Ohio. Electric lighting fixture. 2,101,499; Dec. 7.
Hait, James M., Los Angeles, Calif., assignor to Food Machinery Corporation. Lubricating system for vertical pump shafts. 2,101,541; Dec. 7.
Hale, Frank C., and R. Yeadon, Spondon, near Derby, England, assignors to Celanese Corporation of America. Circular loom. 2,101,022; Dec. 7.
Hale, Frank C., and J. R. Yorke, Spondon, near Derby, England, assignors to Celanese Corporation of America. Circular loom. 2,101,023; Dec. 7.
Hall, Tom, New York, N. Y., assignor to C. S. Robinson, Sandy Hook, Conn. Candelabra. 2,101,578; Dec. 7.
Hall, Wesley F. (See Hogaboom, G. B., and Hall.)
Hamer, Edna, Sioux Falls, S. Dak. Powder puff dispenser. 2,101,579; Dec. 7.
Hamilton, Robert H. (See Chonette, W. C., and Hamilton.)
Hammerschmid, Herbert. (See Frankenburger, W., Hammerschmid, and Roessler.)
Hanford, John M. (See Willard, Louis E., assignor.)
Hansell, Clarence W., Rocky Point, N. Y., assignor to Radio Corporation of America. Visible detector of invisible radiation. 2,101,139; Dec. 7.
Hanson-Van Winkle-Munning Company. (See Hogaboom, G. B., and Hall.)
Harmon, Jesse. (See Graves, G. D., and Harmon.)
Harmon, Kenneth A., Longmeadow, assignor to Wico Electric Company, West Springfield, Mass. Electric generator. 2,101,392; Dec. 7.
Harrison, Laurence S., Binghamton, assignor to International Business Machines Corporation, New York, N. Y. Time system. 2,101,432; Dec. 7.
Hartbauer, August W. L., Chicago, Ill. Refrigerator hatch arrangement. 2,101,368; Dec. 7.
Hartford-Empire Company. (See Wise, Charles H., assignor.)
Hartzell Industries, Inc. (See Hartzell, Robert N., assignor.)
Hartzell, Robert N., assignor to Hartzell Industries, Inc., Piqua, Ohio. Compressing wood. 2,101,542; Dec. 7.
Haugen, Andrew L., New York, N. Y. Lawn mower. 2,101,739; Dec. 7.
Hautzenroeder, Richard W., Mansfield, Ohio. Fuel system for internal combustion engines. 2,101,064; Dec. 7.
Hay, Rene M., New York, N. Y., assignor to Durex Products, Inc. Making pessaries. 2,101,255; Dec. 7.
Hayes, Carl I., Providence, R. I. Heat treatment furnace. 2,101,065; Dec. 7.
Haynes, John. (See Rider, T. H., Shelton, and Haynes.)
Heckman, Joseph H., Chicago, Ill. Clasp for collars. 2,101,617; Dec. 7.
Hedgpeth, Theron L., Oak Park, assignor to Duro Metal Products Company, Chicago, Ill. Bench saw rip fence. 2,101,709; Dec. 7.
Hedin, Uno C., and C. H. Larson, Elkhart, Ind., assignors to The Adlake Company. Mercury switch. 2,101,824; Dec. 7.
Hege, Raymond W., San Diego, Calif. Automatic injecting syringe device. 2,101,140; Dec. 7.
Height, Lewis H., assignor to Thompson Manufacturing Co., Denver, Colo. Highway guardrail. 2,101,176; Dec. 7.
Heintz Manufacturing Company. (See Lambert, Albert L., and F. M., assignors.)
Heinze Development Company. (See Heinze, John O., assignor.)
Heinze, John O., Detroit, Mich., assignor to Heinze Development Company. High speed transportation system. 2,101,024; Dec. 7.
Held, Robert. (See Meresheimer, H., Vilsmeier, and Heid.)
Hempe, Max T., Providence, R. I. Aircraft. 2,101,778; Dec. 7.
Henkel, Gerhard, assignor to Zeiss Ikon Aktiengesellschaft, Dresden, Germany. Photographic camera. 2,101,543; Dec. 7.
Henneberg, Walter. (See Brüche, E., and Henneberg.)
Henricks, John A., Chicago, Ill., assignor to Udylite Company, Detroit, Mich. Obtaining bright zinc coating. 2,101,580; Dec. 7.
Henricks, John A., Chicago, Ill., assignor to Udylite Company, Detroit, Mich. Obtaining bright zinc coating. 2,101,581; Dec. 7.
Herbster, George, Cleveland, Ohio. Gas burning and control apparatus. 2,101,393; Dec. 7.
Hercules Powder Company. (See De Laney, William W., assignor.)
Hercules Powder Company. (See Hollabaugh, Cleveland B., assignor.)
Hercules Powder Company. (See Lorand, Eugene J., assignor.)
Herfurth, Charles. (See Ernst, H. Herfurth, and Nenninger.)
Herschmann, Arthur J., New York, N. Y. Nut lock. 2,101,678; Dec. 7.
Hickok, W. O., Manufacturing Company. (See Broadmeyer, Albert, assignor.)
Hilker, Luther D. (See Whitaker, R., Weisberg, and Hilker.)
Hill, Julian W., and E. W. Spanagel, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of dicarboxylic acids and esters thereof. 2,101,217; Dec. 7.
Hirschl, Harry, Washington, Mo. Corncob smoking pipe. 2,101,740; Dec. 7.
Hoagland, Frank O., West Hartford, assignor to Niles-Bement-Pond Company, Hartford, Conn. Bench type machine tool. 2,101,177; Dec. 7.
Hoff, John G., assignor to The Tappan Stove Company, Mansfield, Ohio. Oven lining. 2,101,582; Dec. 7.
Hogaboom, George B., New Britain, Conn., and W. F. Hall, assignors to Hanson-Van Winkle-Munning Company, Matawan, N. J. Apparatus for plating sheets. 2,101,178; Dec. 7.
Hogan Inventions, Inc. (See Gordon, Burgess L., Jr., assignor.)
Hollabaugh, Cleveland B., assignor to Hercules Powder Company, Wilmington, Del. Nitrocellulose emulsion. 2,101,066; Dec. 7.
Holophane Company. (See Rolph, Thomas W., assignor.)
Hönneknövel, Friedrich A., Remscheid-Biledinghausen, Germany. Hand tool for boring, sawing, and rasping wood and like materials. 2,101,583; Dec. 7.
Hood, Charles E., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Method of and apparatus for operating on unattached soles. 2,101,179; Dec. 7.
Hooper, Leslie J. (See Cole, Edward S. and E. S., and Hooper.)

Horn, Harold G., et al. (See Fischer, Oliver C., assignor.)
Horner, Albert, Kapaa, Kauai, Hawaii. Killing and controlling organisms on various plant materials 2,101,584; Dec. 7.
Hosking, Harry J., Sea Cliff, N. Y. Polishing compound. 2,101,050; Dec. 7.
Howard, William S., Detroit, Mich., assignor to B. Nicoll & Company, Inc., New York, N. Y. Material handling apparatus. 2,101,067; Dec. 7.
Hubbell, Jesse P., Fanwood, N. J. Transportation system and apparatus. 2,101,711; Dec. 7.
Huber, Karl, Munich, Germany, assignor to Agfa Ansco Corporation, Binghamton, N. Y. Apparatus for measuring the region of density of a negative. 2,101,710; Dec. 7.
Huff, Walter N., Harwood, Tex. Rodless pump. 2,101,218; Dec. 7.
Huggins, Merion J., Upper Saddle River, N. J. Controlling the flow of electric current. 2,101,068; Dec. 7.
Hull, Edwin H., Schenectady, N. Y., assignor to General Electric Company. Spinning bucket drive. 2,101,679; Dec. 7.
Hungerford, Daniel C., Chalfont, Pa., assignor, by mesne assignments, to Star Expansion Bolt Company, New York, N. Y. Tie for concrete forms. 2,101,141; Dec. 7.
Hunt, Nathan C., and S. C. Chessman, Salem, Ohio; said Chessman assignor to said Hunt. Pressure valve. 2,101,025; Dec. 7.
Hunter Tractor & Machinery Co. (See Wagler, Mann E., assignor.)
Hygrade Sylvania Corporation. (See Burns, Laurence, assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Frankenburger, W., Hammerschmid, and Roessler, assignors.)
Illingworth, George. (See Donovan, J. F., and Illingworth.)
Imperial Chemical Industries Limited. (See Crawford John W. C., assignor.)
Imperial Chemical Industries, Limited. (See Crawford, J. W. C., and Grigor, assignors.)
Imperial Chemical Industries Limited. (See Moore, Joseph G., assignor.)
Imperial Chemical Industries Limited. (See Wyler, Max, assignor.)
Industrial Dyestuff Company. (See Norman, Simon, assignor.)
International Business Machines Corp. (See Conradi, L. C., and Fairbrother, assignors.)
International Business Machines Corporation. (See Harrison, Laurence S.)
International Business Machines Corporation. (See Lang, William, assignor.)
International Business Machines Corporation. (See Lemmon, W. S., Fitch, and Walz, assignors.)
International Business Machines Corporation. (See Miles, Joseph W., assignor.)
International Business Machines Corporation. (See Rauch, Konrad, assignor.)
International Business Machines Corporation. (See Rose, Ernest, assignor.)
International Business Machines Corporation. (See Sprecker, Alfred L., assignor.)
International Harvester Company. (See Lindgren, A. C., and Raney, assignors.)
International Harvester Company. (See Rogers, Clifford R., assignor.)
International Precipitation Company. (See Deutsch, Walther, assignor.)
International Resistance Company. (See Marsten, Jesse, assignor.)
Ischinger, Alfred E., Mount Penn, assignor to Textile Machine Works, Wyomissing, Pa. Uninterrupted knitting of shaped fabrics. 2,101,048; Dec. 7.
Iske, Herbert. (See MacDonald, A. V., Minkler, and Iske.)
Isler, Herman R., Norwood, assignor to The Cincinnati Milling Machine Co., Cincinnati, Ohio. Milling machine transmission and control mechanism. 2,101,544; Dec. 7.
Jackson, Philip A., Dayton, assignor to W. C. Lamprechter, Cleveland Heights, Ohio, trustee. Apparatus for guiding paper forms. 2,101,433; Dec. 7.
Jacob, Thomas H., Wausau, Wis. Spring suspension for trailers. 2,101,545; Dec. 7.
Jacobs, Charles, Detroit, Mich. Portable cooker. 2,101,180; Dec. 7.
Jagus, Leon J., Chicago, Ill. Expansible frame and support. 2,101,500; Dec. 7.
Jennings, Chester S., Syracuse, N. Y., and F. W. Gerard, Dayton, Ohio, assignors to The Lamson Company, Syracuse, N. Y. Drying materials. 2,101,335; Dec. 7.
Jensen, Joseph W., and A. J. Shute, assignors to Electric Household Utilities Corporation, Chicago, Ill. Supporting mechanism for cabinet ironers. 2,101,142; Dec. 7.
Johannsen, Margaret. (See Daly, L., and Johannsen.)
Johansen, Einar K., assignor to Clearing Machine Corporation, Chicago, Ill. Tracer mechanism for duplicating machines. 2,101,712; Dec. 7.
Johns-Manville Corporation. (See Parry, Robert E., assignor.)
Johnson, Arthur A., assignor to Casco Products Corporation, Bridgeport, Conn. Cigar-lighter. 2,101,336; Dec. 7.
Johnson, Carl G., assignor to J. P. Seeburg Corporation, Chicago, Ill. Coin actuated switch. 2,101,546; Dec. 7.
Johnson, Charles E., Chicago, Ill., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Building block. 2,101,181; Dec. 7.
Johnson, Fay G. (See Watson, Charles B., assignor.)
Johnson, Franklin D., Charleston, W. Va. Meat block brush. 2,101,394; Dec. 7.
Johnson, Gustaf A., New Bedford, Mass. Electric light fixture. 2,101,680; Dec. 7.
Johnston, Howard M., assignor to Massey-Harris Company, Limited, Toronto, Ontario, Canada. Vise. 2,101,434; Dec. 7.
Jolliffe, John J., Hawthorne, assignor to The Okonite Company, Passaic, N. J. Electric connecter or terminal. 2,101,713; Dec. 7.
Jones-Laughlin Steel Corporation. (See Boardman, Charles S., assignor.)
Jones, Theodore A., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Carrier telegraph receiver. 2,101,256; Dec. 7.
Jorgensen, Bernhardt, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Lasting machine. 2,101,060; Dec. 7.
Jorgensen, Clarence H., administrator. (See Jorgensen, Clarence H. and P. J.)
Jorgensen, Clarence H., and P. J. Jorgensen, deceased, by C. H. Jorgensen, administrator, Elmhurst, Ill. Thermostatic control for internal combustion engines. 2,101,369; Dec. 7.
Jorgensen, Peter J. (See Jorgensen, Clarence H. and P. J.)
Josephs, Lester J., New York, N. Y. Attaching tip for suspender cords. 2,101,681; Dec. 7.
Joy, Robert W. (See Ostrander, A. E., Joy, and Kassler.)
Kacena, John, Chicago, and E. E. Kelly, Oak Park, assignors to Crane Co., Chicago, Ill. Shutter for radiator enclosures and the like. 2,101,797; Dec. 7.
Kantola, Carl F. (See Lentz, W. L., and Kantola.)
Kaplan, Morris, Brooklyn, N. Y. Eyeglasses. 2,101,026; Dec. 7.
Karger, David, assignor to Eagle Knitting Mills, Inc., Milwaukee, Wis. Dusting mitten. 2,101,027; Dec. 7.
Kassler, Adolph. (See Ostrander, A. E., Joy, and Kassler.)
Kato, Etsuro, Hara-Machi, Meguro-ku, Tokyo-Shi, Japan. Operating apparatus for flyer frames. 2,101,395; Dec. 7.
Kear, Frank G. (See Mashbir, S. F., Kear, Davies, and Orton.)
Keck, Harry A., Teaneck, N. J., assignor to Lever Brothers Company. Finishing fats. 2,101,501; Dec. 7.
Keeney, Arthur J., Cuyahoga Falls, Ohio. Rubber coated article and manufacturing same. 2,101,714; Dec. 7.
Kegresse, Adolphe, Paris, France. Endless track for vehicles. 2,101,618; Dec. 7.
Keith, Percy C., Jr. (See Nofsinger, C. W., and Keith.)
Keller, John M., Lakewood, Ohio. Hair drying apparatus. 2,101,502; Dec. 7.
Kelley, Shawl J., Baltimore, Md. Horseshoe. 2,101,070; Dec. 7.
Kelly, Edward E. (See Kacena, J., and Kelly.)
Kemp, William, St. Louis, Mo. Automatic check damper. 2,101,315; Dec. 7.
Kenney, Frederick W., Bloomfield, N. J. Cylinder lock. 2,101,779; Dec. 7.
Kershaw, Henry, Newark, N. J. Apparatus for marking articles. 2,101,219; Dec. 7.
Ketcham, Howard, New York, N. Y. Color analyzing apparatus. 2,101,741; Dec. 7.
Kettnich, Albert E., Chicago, Ill. Valve. 2,101,316; Dec. 7.
Kielland, Jakob de R. (See Samuelson, H., and Kielland.)
King, John M., Dover, N. J. Grenade. 2,101,071; Dec. 7.
Kingman, Russell B., Orange, N. J. Waxing device. 2,101,672; Dec. 7.
Kingsbury, Edward J., Keene, N. H. Automatic machine tool with work clamps. 2,101,396; Dec. 7.
Kinsley, Carl, Westfield, N. J., assignor to United States Steel Corporation, New York, N. Y. Electromagnetic testing of materials. 2,101,780; Dec. 7.
Kiser, Fred A., Lamar, Kans. Holder. 2,101,220; Dec. 7.
Kistler, John C., assignor to Armour and Company, Chicago, Ill. Curing hams. 2,101,547; Dec. 7.
Kistner, Herman H., Baltimore, Md., assignor to Kistner Lock & Appliance Company. Door lock. 2,101,812; Dec. 7.
Kistner Lock & Appliance Company. (See Kistner, Herman H., assignor.)
Kitson Company. (See Lovekin, Luther D., assignor.)
Kittredge, Harvey G., and F. W. Williams, assignors to Fothilm, Inc., Dayton, Ohio. Composite product. 2,101,182; Dec. 7.
Klafstad, Erling, Melrose, assignor to Crosby Steam Gage and Valve Company, Boston, Mass. Relief valve. 2,101,682; Dec. 7.
Klingfilm G. m. b. H. (See Weber, Heinrich, assignor.)

Klein, Maxmillian, and B. Willach, assignors to United States Gauge Company, Sellersville, Pa. Differential gauge. 2,101,028; Dec. 7.
Kleinert, I. B., Rubber Company. (See Guinzburg, Roland H., assignor.)
Kling, Walter. (See Götte, E., and Kling.)
Klotz, Ernest, K. Wilhelm, and H. O. Roosenstein, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Selective circuit arrangement. 2,101,715; Dec. 7.
Knight, Henry H., Canton, assignor, by mesne assignments, to Davis & Furber Machine Company, North Andover, Mass. Tape condenser. 2,101,370; Dec. 7.
Knobeck, John H., Madison, Wis. Freewheeling device for aeroplane propellers. 2,101,781; Dec. 7.
Knott, William M. (See Bishop, J. B., and Knott.)
Koch, Elmer W., et al. (See Fischer, Oliver C., assignor.)
Koch, George H. (See Simpson, R., and Koch.)
Koenig, Alexander. (See Wiegand, K., and Koenig.)
Koerber, William G., assignor to Karl A. Zimmerer Manufacturing Co. Inc., Detroit, Mich. Apparatus for preventing beer settling. 2,101,029; Dec. 7.
Komenak, Albert J., assignor to The Excelsior Hardware Company, Stamford, Conn. Lockable hasp fastener. 2,101,337; Dec. 7.
Koninklijke Nederlandsche Hoogovens en Staalfabrieken N. V. (See van Zijp, Antonius J., assignor.)
Kormann, Frederick A., Glendale, Calif. Antifreezing means. 2,101,472; Dec. 7.
Korn, Franklin A., Elizabeth, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,101,258; Dec. 7.
Kotrbaty, Guy F., New York, N. Y., assignor to Ferrocon Corporation, Bryn Mawr, Pa. Structural building element and building made therefrom. 2,101,073; Dec. 7.
Kotrbaty, Guy F., assignor to Fer-O-Con Corporation, New York, N. Y. Building system and construction units and elements therefor. 2,101,074; Dec. 7.
Krag, Franz K., Chicago, Ill. Food dispensing device. 2,101,075; Dec. 7.
Kratz, Edouard M. (See Gebauer-Fuelnegg, E., and Kratz.)
Krauer, Otto. (See Lewis, J. D., Waters, and Krauer.)
Kroll, Philip J., New York, N. Y. Vehicle rocking apparatus. 2,101,397; Dec. 7.
Kronmiller, Carl G., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Electromagnetic apparatus. 2,101,548; Dec. 7.
Krumbhaar, Wilhelm, Detroit, Mich. Shellac substitute and producing the same. 2,101,398; Dec. 7.
Kuhner, Max H., assignor to Riley Stoker Corporation, Worcester, Mass. Heat exchange apparatus. 2,101,782; Dec. 7.
Kunstadter, Sigmund W., assignor to The Formfit Company, Chicago, Ill. Brassière. 2,101,716; Dec. 7.
Kunze, Willy, Leipzig, Germany. Expansion-plug for barrels and other tanks, fire-tube and water-tube boilers. 2,101,030; Dec. 7.
Kurtz, Benjamin F., Bellevue, assignor to Pressed Steel Car Company, Inc., Pittsburgh, Pa. Car brake. 2,101,717; Dec. 7.
Laboureur, Louis A. M. J., Paris, and R. Dubois, Asnieres, France. Electric time indicator for sounding apparatus. 2,101,076; Dec. 7.
Lacy, Roy. (See Palmer, George V., assignor.)
La-Del Conveyor & Mfg. Co. (See Bebinger, Charles N., assignor.)
Laidig, Alfred H., Verona, N. J., assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, East Pittsburgh, Pa. Shockproof X-ray unit. 2,101,143; Dec. 7.
Laird, William A., et al. (See Aldridge, Arthur A., assignor.)
Lamb, James J., West Hartford, Conn., assignor, by mesne assignments, to A. N. Mann, Scarsdale, N. Y., trustee. Silencing circuits for radio receivers. 2,101,549; Dec. 7.
Lambert, Albert L. and F. M., Narberth, assignors to Heintz Manufacturing Company, Philadelphia, Pa. Ship door or hatch construction. 2,101,550; Dec. 7.
Lambert, Francis M. (See Lambert, Albert L. and F. M.)
Lamprechter, William C., trustee. (See Jackson, Philip A., assignor.)
Lamson Company, The. (See Jennings, C. S., and Gerard, assignors.)
Landau, Argo E., assignor to Royal Bond, Inc., St. Louis, Mo. Prayer bench. 2,101,259; Dec. 7.
Landers, Frary & Clark. (See Warner, Alonzo A., assignor.)
Landis & Gyr, A.-G. (See Pudelko, Riccard, assignor.)
Lang, Frederick W., Forsyth, Ga. Foot exercising device. 2,101,503; Dec. 7.
Lang, William, assignor to International Business Machines Corporation, New York, N. Y. Record controlled printing mechanism. 2,101,435; Dec. 7.
Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Spirit level and mounting. 2,101,077; Dec. 7.
Lannom, George S., Jr., assignor to The Lannom Manufacturing Company, Grinnell, Iowa. Blind stitch play ball. 2,101,473; Dec. 7.
Lannom Manufacturing Company, The. (See Lannom, George S., Jr., assignor.)
La Plant-Choate Manufacturing Company. (See Austin, Ellsworth W., assignor.)
Larsen, Agnew E., Kingston-on-Thames, England, assignor to Autogiro Company of America, Willow Grove, Pa. Aircraft of the rotative-wing type. 2,101,399; Dec. 7.
Larson, Carl H. (See Hedin, U. C., and Larson.)
Lava, Vincente G., Manila, P. I. Oil recovery. 2,101,371; Dec. 7.
La Vigne, Jerome R., assignor to The Waterbury Buckle Company, Waterbury, Conn. Belt buckle. 2,101,585; Dec. 7.
Lawler, Frank P., assignor to C. H. Grant, San Francisco, P. J. Tyler, Orville, Calif., and himself. Earth moving machine. 2,101,400; Dec. 7.
Lawton, Howard B., Detroit, Mich. Arrangement for resetting hobs. 2,101,183; Dec. 7.
Leach, Harry, Providence, R. I. Seal. 2,101,586; Dec. 7.
Lear, Earl B., Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y. Air or water tube connection for rock drills. 2,101,144; Dec. 7.
Lee, John G., Avon, Conn., assignor, by mesne assignments, to United Aircraft Corporation. Adjustable gunner's seat. 2,101,145; Dec. 7.
Lehmann Machine Company. (See Lehmann, Max A., assignor.)
Lehmann, Max A., Richmond Heights, assignor to Lehmann Machine Company, St. Louis, Mo. Lathe. 2,101,372; Dec. 7.
Leib, August, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Directive signaling. 2,101,436; Dec. 7.
Leigh, Nathan J., Great Neck, assignor to Elnson-Freeman Co., Inc., Long Island City, N. Y. Adjustable display device having a lustrous portion. 2,101,683; Dec. 7.
Lemieux, Emma, et al. (See Lemieux, Felix J., assignor.)
Lemieux, Felix J., assignor of twenty-five percent to J. J. McLaughlin, twelve and one-half percent to E. Lemieux, and twelve and one-half percent to M. Tonjum, Chicago, Ill. Clamping device. 2,101,317; Dec. 7.
Lemmon, Walter S., New York, N. Y., C. J. Fitch, Jersey City, N. J., and R. F. Walz, assignors to International Business Machines Corporation, New York, N. Y. System of operation of typewriters. 2,101,437; Dec. 7.
Lempco Products, Inc. (See Blazek, J. Y., and Anderson, assignors.)
Lentz, William L., Tuckahoe, N. Y., and C. F. Kantola, Ashtabula, Ohio, assignors to The New York Central Railroad Company. Locomotive structure. 2,101,619; Dec. 7.
Leppke, Louis A., Omaha, Nebr. Serving device. 2,101,401; Dec. 7.
Lever Brothers Company. (See Godfrey, T. M., and Serbell, assignors.)
Lever Brothers Company. (See Keck, Harry A., assignor.)
Levine, Arthur A., and R. W. McAllister, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Insecticidal product and process. 2,101,587; Dec. 7.
Leviton Manufacturing Company. (See Figueira, Joseph, assignor.)
Lewis, Harold R., Hoopeston, Ill., assignor to Food Machinery Corporation, San Jose, Calif. Pulper. 2,101,620; Dec. 7.
Lewis, Jacob D., Yonkers, N. Y., H. Waters, Hohokus, N. J., and O. A. Krauer, Yonkers, assignors to Otis Elevator Company, New York, N. Y. Control system. 2,101,146; Dec. 7.
Leyhausen, Wilhelm, Nuremberg, Germany. Spark chamber for automatic cut-outs. 2,101,783; Dec. 7.
Libbey-Owens-Ford Glass Company. (See Johnson, Charles E., assignor.)
Lindenblad, Nils E., Port Jefferson, N. Y., assignor to Radio Corporation of America. Neutralized coupling circuit. 2,101,438; Dec. 7.
Lindgren, Alexus C., Chicago, and C. R. Raney, Riverside, Ill., assignors to International Harvester Company. Grain binder. 2,101,439; Dec. 7.
Lindstaedt, Frank F., Oakland, Calif. Parasiticidal spray compound. 2,101,373; Dec. 7.
Linn, Frank C., Swampscott, Mass., assignor to General Electric Company. Spinning bucket drive. 2,101,684; Dec. 7.
Linsell, Alfred A., London, England, assignor to Radio Corporation of America. Short wave radio transmitting apparatus. 2,101,440; Dec. 7.
Lisowitz, Herman W., Uniontown, Pa. Emergency chain for automobile tires. 2,101,588; Dec. 7.
Lithographic Technical Foundation, Inc., The. (See Reed, Robert F., assignor.)
Little, Charles E., Los Angeles, Calif. Apparatus for handling concrete and the like. 2,101,031; Dec. 7.
Livingston, John W., Wilkinsburg, assignor to the Union Switch & Signal Company, Swissvale, Pa. Railway car retarder. 2,101,184; Dec. 7.
Lockhart, William, assignor to Cornell Securities Corporation, Cleveland, Ohio. Receptacle and closure. 2,101,813; Dec. 7.
Lockhart, William, assignor to Cornell Securities Corporation, Cleveland, Ohio. Receptacle and closure. 2,101,814; Dec. 7.
Logan Co. Inc. (See Gotthardt, Henry R., assignor.)

Logan, George H., Pittsburgh, Pa. Snare for drums. 2,101,784; Dec. 7.

Lognion, Euclide, Lake Charles, La. Clothespin. 2,101,742; Dec. 7.

Long, W. E., Company, The. (See Reece, Wade W., assignor.)

Lorand, Eugene J., assignor to Hercules Powder Company, Wilmington, Del. Recovery of aralkyl ethers of cellulose. 2,101,032; Dec. 7.

L'Orange, Rudolf, Stuttgart, Germany, assignor of one-half to F. R. Simms, London, England. Liquid fuel pump. 2,101,221; Dec. 7.

Lord, Hugh C., and T. Lord, Erie, Pa.; said T. Lord assignor to said H. C. Lord. Flexible coupling. 2,101,078; Dec. 7.

Lord, Thomas. (See Lord, Hugh C., and T.)

Lovekin, Luther D., Villa Nova, assignor to Kitson Company, Philadelphia, Pa. Temperature relief valve device. 2,101,338; Dec. 7.

Loveland, Russ A. (See Tyler, W. E., Douglas, Chamberlain, and Loveland.)

Lowres Optical Manufacturing Co. (See Petersen, Henry C., assignor.)

Luhn, Hans P., New York, N. Y. Apparatus for determining variations in thickness of thread. 2,101,260; Dec. 7.

Lund, Nels B., Seaford, assignor to The Dorr Company, Inc., New York, N. Y. Raking mechanism for sedimentation tanks. 2,101,081; Dec. 7.

Lund, Nels B., Seaford, assignor to The Dorr Company, Inc., New York, N. Y. Raking mechanism for sedimentation tanks. 2,101,981; Dec. 7.

Lund, Nels B., Seaford, assignor to The Dorr Company, Inc., New York, N. Y. Sedimentation apparatus. 2,101,079; Dec. 7.

Luthy, Deborah R., et al. (See Curtis, Charles, assignor.)

Luthy, Fred A., et al. (See Curtis, Charles, assignor.)

Lux, Saul, Brooklyn, N. Y. Automatic upwardly movable door or portion thereof. 2,101,147; Dec. 7.

Lynn, Adam W. (See Woods, Hazel H., assignor.)

Lyon, George A., Allenhurst, N. J. Ornamental bead and applying the same to ornamental wheel disks. 2,101,318; Dec. 7.

Lyon, Norman W., assignor to National Bread Wrapping Machine Co., Springfield, Mass. Guide mounting for bread slicing knife frames. 2,101,402; Dec. 7.

M. J. B. Co. (See Burns, Willford E., assignor.)

Maas, Louis J. P., London, England. Dough molding machine. 2,101,621; Dec. 7.

MacDonald, Archibald V., Los Angeles, R. A. Minkler, Hawthorne, and H. Iske, Alhambra, Calif. Carton for and method of packaging furniture. 2,101,403; Dec. 7.

MacLean, Allen D., assignor to Pittsburgh Equitable Meter Company, Pittsburgh, Pa. Method and apparatus for calibrating and proving meters. 2,101,745; Dec. 7.

Maclean, Robert S., Michigan City, Ind., assignor to Mastic Asphalt Corporation. Building corner unit. 2,101,589; Dec. 7.

Madsen, Louis P., assignor to Cluett, Peabody & Co., Inc., Troy, N. Y. Collar and making the same. 2,101,798; Dec. 7.

Magid, Florence R., et al. (See Miller, Richard B., assignor.)

Mahle, Ernst, Stuttgart, Germany. Chill mold. 2,101,404; Dec. 7.

Mallory, Louis V., assignor of one-half to G. C. Dale, Salina, Kans. Slip socket. 2,101,815; Dec. 7.

Malmquist, Clayton W., Minneapolis, Minn. Toasting apparatus. 2,101,504; Dec. 7.

Manger, Charles F. (See Deans, F. E., Manger, and Buswell.)

Manfredi, Marlo, New York, N. Y. Friction clamp. 2,101,746; Dec. 7.

Mann, Alan N., trustee. (See Lamb, James J., assignor.)

Mann, Miles H., Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Tally roll mechanism. 2,101,747; Dec. 7.

Manville, Charles J., Indianapolis, Ind. Machine projector. 2,101,148; Dec. 7.

Marbo Patents Inc. (See Gebauer-Fuelnegg, E., and Kratz, assignors.)

Marsh, Reginald E., Bronxville, N. Y., assignor to Simplon Products Corporation. Clip. 2,101,551; Dec. 7.

Marsh, Reginald E., Bronxville, N. Y., assignor to Simplon Products Corporation. Clip. 2,101,552; Dec. 7.

Marsten, Jesse, assignor to International Resistance Company, Philadelphia, Pa. Rheostat or potentiometer. 2,101,441; Dec. 7.

Martin, Erle, Hartford, assignor to United Aircraft Corporation, East Hartford, Conn. Airplane propeller. 2,101,149; Dec. 7.

Martin, Hoke. (See Extrom, J. A., and Martin.)

Martin, Michael A., Erie, Pa. Refrigerant system and apparatus. 2,101,261; Dec. 7.

Martinez B., Agustin, Mexico, D. F., Mexico. Centrifugal grinding machine. 2,101,442; Dec. 7.

Maschinenfabrik Augsburg-Nurnberg A. G. (See Becher, Theodor, assignor.)

Mashbir, Sidney F., Washington, D. C., F. G. Kear, Minersville, Pa., G. L. Davies, Cleveland, Ohio, and W. H. Orton, assignors to Washington Institute of Technology, Washington, D. C. Antenna belt. 2,101,033; Dec. 7.

Massey-Harris Company. (See Johnston, Howard M., assignor.)

Mastic Asphalt Corporation. (See Maclean, Robert S., assignor.)

Mathieson Alkali Works, Inc., The, et al. (See Extrom, J. A., and Martin, assignor.)

Mathsen, Marvin L., Wharton, N. J. Fuse. 2,101,082; Dec. 7.

Mattsson, Ernst J. M., assignor to F. Nilsson, Stockholm, Sweden. Coating iron or steel with aluminum or an alloy thereof. 2,101,553; Dec. 7.

Maxwell, Robert W., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Cellulose etherification. 2,101,262; Dec. 7.

Maxwell, Robert W., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Continuous preparation of cellulose derivatives. 2,101,263; Dec. 7.

Mayer, George F., Chicago, Ill. Padlock. 2,101,264; Dec. 7.

Mayer, Hans. (See Baesecke, M., and Mayer.)

Mayo, Robert H., London, England. Aircraft. 2,101,743; Dec. 7.

McAllister, Robert W. (See Levine, A. A., and McAllister.)

McBride, Frank D., Philadelphia, Pa. Galvanizing composition. 2,101,816; Dec. 7.

McCracken, Leonard O., North Little Rock, Ark. Vacuum cleaner appliance. 2,101,222; Dec. 7.

McGraw-Electric Company. (See Scharf, Frank W., assignor.)

McGuigan, Louis B., Bryn Mawr, Pa. Vehicle wheel. 2,101,744; Dec. 7.

McKeever, Roy S., assignor to Smith Separator Corporation, Tulsa, Okla. Coupling. 2,101,405; Dec. 7.

McKeever, Roy S., assignor to Smith Separator Corporation, Tulsa, Okla. Pipe coupling. 2,101,406; Dec. 7.

McLaughlin, John J., et al. (See Lemieux, Felix J., assignor.)

Meckler, Samuel. (See Penslee, Otis E., assignor.)

Meinert, Willy, Brooklyn, N. Y. Air brake for aeroplanes. 2,101,443; Dec. 7.

Mercer, William J., Berkeley, Calif., assignor to American Can Company, New York, N. Y. Press gauge. 2,101,083; Dec. 7.

Mercier, Jean, Neuilly-sur-Seine, France. Shock absorber. 2,101,265; Dec. 7.

Merrell, Wm. S., Company, The. (See Rider, T. H., Shelton, and Haynes, assignors.)

Metal Lumber Corporation of New Jersey, The. (See Frick, Henry E., assignor.)

Meuche, Alfred H., Washington, D. C. Drawing and map file. 2,101,034; Dec. 7.

Meyer, Andre J., Grosse Pointe Village, assignor to Continental Motors Corporation, Detroit, Mich. Internal combustion engine and injecting device therefor. 2,101,554; Dec. 7.

Meyer, John F. (See Radtke, Bruno, assignor.)

Meyer, J. Frank. (See Simpkins, Carl R., assignor.)

Meyers, Charles J., Wilmar, assignor to W. F. Hackett, Los Angeles, Calif. Constant speed controlled drive. 2,101,084; Dec. 7.

Michel, Clarence A., and R. Winkelmeyer, Anderson, Ind., assignors to General Motors Corporation, Detroit, Mich. Luggage compartment lamp. 2,101,748; Dec. 7.

Miehle Printing Press & Manufacturing Company. (See Stevens, Burt D., assignor.)

Miles, Joseph W., London, England, assignor to International Business Machines Corporation, New York, N. Y. Ticket printing machine. 2,101,444; Dec. 7.

Miller, Bernice, et al. (See Miller, Richard B., assignor.)

Miller, Frank P., Meadville, Pa. Inserted blade cutter. 2,101,085; Dec. 7.

Miller, Herchael W., Davenport, Iowa. Stove top. 1,101,590; Dec. 7.

Miller, Richard B., Detroit, Mich., assignor, by mesne assignments, of fifty per cent to B. Miller, Cleveland, Ohio, and fifty per cent to F. R. Magid, Brooklyn, N. Y. Wheel for motor vehicles. 2,101,505; Dec. 7.

Miller, Robert L., et al. (See Fischer, Oliver C., assignor.)

Milligan, Robert R. D., Portland, Ind. Trailer hitch coupling. 2,101,622; Dec. 7.

Minkler, Raymond A. (See MacDonald, A. V., Minkler, and Iske.)

Minneapolis-Honeywell Regulator Company. (See Cunningham, Lewis L., assignor.)

Minneapolis-Honeywell Regulator Company. (See Kronmiller, Carl G., assignor.)

Minters, Barnet S., Elmhurst, N. Y. Supporting device. 2,101,474; Dec. 7.

Mistretta, John, New York, N. Y. Securing mechanism for automobile doors. 2,101,035; Dec. 7.

Moffitt, Oscar J., et al. (See Fischer, Oliver C., assignor.)

Moffitt, Robert C., Seattle, Wash. Internal combustion engine. 2,101,319; Dec. 7.

Monroe Calculating Machine Company. (See Overbury, Austin A., assignor.)

Monroe Calculating Machine Company. (See Walter, Edward C., assignor.)

Monroe, Daniel B., Denver, Colo. Well drilling whip stock. 2,101,185; Dec. 7.

Monsanto Chemical Company. (See Nealon, Thomas F., assignor.)

Montroy, Frank E., Los Angeles, Calif. Luminous clock. 2,101,339; Dec. 7.

Moore, Alexander D., Merwood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Light signal. 2,101,186; Dec. 7.

Moore, Bart, Jr., San Antonio, Tex. Motor propelled wheeled roller. 2,101,150; Dec. 7.

Moore, Edmund B., Brooklyn, N. Y. Automatic constant heat electric soldering iron. 2,101,445; Dec. 7.

Moore, Harry W., Greene County, Ohio. Indicator gauge. 2,101,718; Dec. 7.

Moore, Ira A., et al. (See Fischer, Oliver C., assignor.)

Moore, Joseph G., Runcorn, England, assignor to Imperial Chemical Industries Limited. Chemical process. 2,101,223; Dec. 7.

Moore, Wiley T., U. S. Army, Wright Field, Ohio. Gun. 2,101,086; Dec. 7.

Moore, William E., Pittsburgh, and G. L. Simpson, Coraopolis, assignors to Pittsburgh Research Corporation, Pittsburgh, Pa. Air or gas conditioning apparatus. 2,101,555; Dec. 7.

Morgan, George C., Birmingham, Ala., assignor to Continental Gin Company. Linter gin rib mounting. 2,101,151; Dec. 7.

Morgan, Richard O., Evanston, Ill. Stamp support. 2,101,623; Dec. 7.

Morgan, Wayne N., Merced, Calif. Airplane engine. 2,101,556; Dec. 7.

Morland, Johan B., Langed, Nordmaling, Sweden. Alarm device for motor vehicles. 2,101,407; Dec. 7.

Morrison, Montford, Montclair, N. J., assignor to Westinghouse X-ray Company, Inc. X-ray apparatus. 2,101,152; Dec. 7.

Morrow, Eva M., and F. L. Morrow, Elgin, Ill. Making dehydrated potato chips. 2,101,506; Dec. 7.

Morrow, Forrest L. (See Morrow, E. M. and F. L.)

Morse Chain Company. (See Perry, David B., assignor.)

Morton, William A., Mount Lebanon, assignor to Amco, Incorporated, Pittsburgh, Pa. Regenerator. 2,101,817; Dec. 7.

Mudge, Karl, et al. (See Benson, Lew, assignor.)

Muller, Anthony S., Pontiac, Mich. Cutting jig. 2,101,624; Dec. 7.

Munson, Elmer L., Naugatuck, assignor to The American Brass Company, Waterbury, Conn. Copper base alloy. 2,101,087; Dec. 7.

Munson, Elmer L., Naugatuck, assignor to The American Brass Company, Waterbury, Conn. High strength corrosion resistant copper alloy. 2,101,625; Dec. 7.

Munson, Elmer L., Naugatuck, assignor to The American Brass Company, Waterbury, Conn. Hot workable copper alloys. 2,101,626; Dec. 7.

Munson, Joseph J., Houma, La. Rolling mill. 2,101,266; Dec. 7.

Murphy, P. H., & Company. (See Bonsall, Charles D., assignor.)

Muse, Marshall H., New York, N. Y. Producing electrotype plates. 2,101,591; Dec. 7.

Mussey, William H., and M. P. Blomberg, assignors to Pullman-Standard Car Manufacturing Company, Chicago, Ill. Lightweight railway car. 2,101,557; Dec. 7.

Muth, Herbert, and W. Runge, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. B., Berlin, Germany. Electrical condenser. 2,101,153; Dec. 7.

Muzzey, David S., Jr., Houston, Tex., assignor to Shell Development Company, San Francisco, Calif. Seismic surveying method. 2,101,408; Dec. 7.

Myers, Walter, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Lubricating device for sewing machine looptakers. 2,101,320; Dec. 7.

N. V. Machinerieen-en Apparaten Fabrieken "Meaf". (See Dillenbach, Walter, assignor.)

N. V. Wallramit Handel Maatschappij. (See Voigtländer, Hermann, assignor.)

Nallinger, Fritz, Stuttgart, assignor to Daimler-Benz A. G., Stuttgart-Unterturkheim, Germany. Motor vehicle with compressed air cooling. 2,101,627; Dec. 7.

National Bread Wrapping Machine Co. (See Lyon, Norman W., assignor.)

National Cash Register Company, The. (See Breitling, E., and Schwenk, assignors.)

National Gypsum Company. (See Venzie, Frederick M., assignor.)

National Pecan Growers Exchange. (See Bullard, W. P., and Williams, assignors.)

Nealon, Thomas F., Boston, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Processing of hydrocarbon resins. 2,101,558; Dec. 7.

Neiman, Abram, Cologne-on-the-Rhine, Germany. Safety locking device. 2,101,446; Dec. 7.

Nekoosa-Edwards Paper Company. (See Bodette, Edward T., assignor.)

Nelson, Arthur. (See Della Santina, Peter V., and F., and Nelson.)

Nenninger, Lester F. (See Ernst, H., Herfurth, and Nenninger.)

Nereshelmer, Heinrich, A. Villmeier, and R. Held, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Hydroxy compounds of the dibenzanthrone series. 2,101,321; Dec. 7.

Nestler, Edmund, Dresden, Germany. Humidifier. 2,101,267; Dec. 7.

New York Air Brake Company, The. (See Everett, Terry, assignor.)

New York Central Railroad Company, The. (See Lentz, W. L., and Kantola, assignors.)

Nicoll, B., & Company. (See Howard, William S., assignor.)

Nic Projector Corporation. (See Arden, Thomas R., assignor.)

Niebuhr, Henry J., Lewiston, Idaho. Merry-go-round. 2,101,719; Dec. 7.

Nier, Bruno, Beierfeld in Sachsen, Germany. Storm lantern. 2,101,409; Dec. 7.

Niles-Bement-Pond Company. (See Hoagland, Frank O., assignor.)

Niles-Bement-Pond Company. (See Raber, Robert R., assignor.)

Nilsson, Frans. (See Mattsson, Ernst J. M., assignor.)

Nisbet, Archibald W., Schenectady, N. Y., assignor to General Electric Company. Combined sprocket and guide wheel. 2,101,685; Dec. 7.

Nofsinger, Charles W., Orange, and P. C. Keith, Jr., Short Hills, assignors to Gasoline Products Company, Inc., Newark, N. J. Treating hydrocarbon oils. 2,101,088; Dec. 7.

NoKoRode Company, The. (See Schmaus, Louis R., assignor.)

Norddeutsche Seekabelwerke A. G. (See Engler, J., and Studt, assignors.)

Norman, Simon, Providence, assignor to Industrial Dyestuff Company, East Providence, R. I. Manufacture of monomethyl-para-aminophenol and its sulphate. 2,101,749; Dec. 7.

Norman, Simon, Providence, assignor to Industrial Dyestuff Company, East Providence, R. I. Manufacture of monomethyl-para-aminophenol and its sulphate. 2,101,750; Dec. 7.

Norris, Kenneth T. (See Rathbun, Homer E., assignor.)

North American Holding Corporation et al. (See Eaton, Charles F., assignor.)

Northwestern Terra Cotta Corp. (See Bjorklund, John R., assignor.)

Norton Company. (See Amidon, Charles H., assignor.)

Norton Company. (See Cole, R. A., and Amidon, assignors.)

Norton Company. (See Flygare, Carl G., assignor.)

Norton Company. (See Flygare, C. G., and Silven, assignors.)

Norton Company. (See Green, Clarence J., assignor.)

Novak, Izador J., assignor to Raybestos-Manhattan, Inc., Bridgeport, Conn. Latex stabilization. 2,101,089; Dec. 7.

Novick, Abraham, Flushing, assignor to F. L. Smithe Machine Co., Inc., New York, N. Y. Envelope machine. 2,101,268; Dec. 7.

Nutt, Harold, and H. V. Reed, assignors, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Clutch plate. 2,101,410; Dec. 7.

Nutt, Harold, and H. V. Reed, assignors to Borg-Warner Corporation, Chicago, Ill. Driven clutch disk. 2,101,411; Dec. 7.

Oakes Products Corporation. (See Duncan, Charles R., assignor.)

Oelkers, Alfred H., assignor to American Steel Foundries, Chicago, Ill. Inboard roller bearing unit. 2,101,650; Dec. 7.

Offutt, Bernard M., West Barrington, R. I. Service tray. 2,101,686; Dec. 7.

Ogg, Marie Y., Lincoln Park, N. J. Novelty display. 2,101,592; Dec. 7.

Oilgear Company, The. (See Ferris, W., Douglas, and Fobian, assignors.)

Okonite Company, The. (See Jolliffe, John J., assignor.)

Olbrich, George A., Minneapolis, Minn. Silo. 2,101,036; Dec. 7.

Older, Clifford, Wilmette, Ill. Expansion joint for pavements and the like. 2,101,154; Dec. 7.

Oldham, Samuel R., Elizabeth, N. J., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Thermostatic speed control. 2,101,447; Dec. 7.

Oliver, Edd C., Adrian, Mich. Sawing or filing machine. 2,101,507; Dec. 7.

Olson, Archie. (See Olson, Ray and A.)

Olson, Ray and A., Kingsburg, Calif. Levee disk. 2,101,187; Dec. 7.

O'Neil, Charles M. (See Worel, Glen J., assignor.)

O'Neil, Charles M., Hopkins, Minn. Telescopic sight for guns. 2,101,037; Dec. 7.

Orcutt, Joseph W., H. A. Stearns, and T. L. Wall, Los Angeles, Calif. Game apparatus. 2,101,188; Dec. 7.

Orton, William H. (See Mashbir, S. F., Kear, Davies, and Orton.)

Osborn, Alden E., New York, N. Y. Pipe joint. 2,101,155; Dec. 7.

Osborn, Frank C., Manchester, Vt. Cigarette stub receiver and extinguisher. 2,101,593; Dec. 7.

Osborne, Harold S., Upper Montclair, and S. B. Wright, South Orange, N. J.; said Osborne assignor to American Telephone and Telegraph Company, and said Wright assignor to Bell Telephone Laboratories, Inc. Privacy system. 2,101,224; Dec. 7.

Oshei, C. H. (See Schellinger, Theodor, assignor.)

Ostlind, Oscar J., Portland, Oreg. Thermal control switch. 2,101,475; Dec. 7.

Ostrander, Allen E., Larchmont, N. Y., R. W. Joy, Berwick, Pa., and A. Kassler, assignors to American Car and Foundry Company, New York, N. Y. Hopper car. 2,101,448; Dec. 7.

Oswego Falls Corporation. (See Price, John F., assignor.)

Otis Elevator Company. (See Lewis, J. D., Waters, and Kraner, assignors.)

Overbury, Austin A., East Orange, assignor to Monroe Calculating Machine Company, Orange, N. J. Calculating machine. 2,101,818; Dec. 7.

Owens, Adolphus W., Houston, Tex. Holder for optical instruments. 2,101,340; Dec. 7.

Packard Motor Car Company. (See Christman, John M., assignor.)

Padelford, Valerie B., Washington, D. C. Ice bag. 2,101,628; Dec. 7.

Palmer, George V., assignor, by mesne assignments, to Roy Lacy, Los Angeles, Calif. Composite girder construction. 2,101,090; Dec. 7.

Panther-Panco Rubber Co. Inc. (See Sheehan, Edward A., assignor.)

Papec Machine Company. (See Bullock, F. J., and Preston, assignors.)

Parker, Paul R., Brooklyn, N. Y., assignor to Bucyrus-Erie Company, South Milwaukee, Wis. Stone box. 2,101,091; Dec. 7.

Parry, Robert E., North Plainfield, N. J., assignor to Johns-Manville Corporation, New York, N. Y. Impregnated asbestos product. 2,101,449; Dec. 7.

Parshad Holding Corporation et al. (See Eaton, Charles F., assignor.)

Patentverwertung Dr. Martin Günther G. m. b. H. (See Günther, M., and Eggert, assignors.)

Pateras, Pescara, Raul, Paris, France. Free piston driving gas generator. 2,101,412; Dec. 7.

Paul, Leon R., Brooklyn, assignor of one-half to G. J. Atwell, New York, N. Y. Dispensing container. 2,101,687; Dec. 7.

Payne, John H., Jr., Ballston Spa, N. Y., assignor to General Electric Company. Liquid contact switch. 2,101,092; Dec. 7.

Payne, John H., Ballston Spa, N. Y., assignor to General Electric Company. Barrier for mercury switches. 2,101,093; Dec. 7.

Payne, John H., Ballston Spa, N. Y., assignor to General Electric Company. Machine for sealing receptacles. 2,101,156; Dec. 7.

Penny, Myrl N., Lawrence, Kans. Cleaner for conveyers. 2,101,751; Dec. 7.

Pensbee, Otis E., assignor of one-half to S. Meckler, St. Paul, Minn. Variable speed pulley. 2,101,504; Dec. 7.

Pepin, Charles H., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for pressing soles on shoes. 2,101,189; Dec. 7.

Percy, George W., et al. (See Warren, Calvin C., assignor.)

Perry, David B., assignor to Morse Chain Company, Ithaca, N. Y. Drive chain. 2,101,341; Dec. 7.

Peter, Albin, assignor to the firm Chemical Works formerly Sandoz, Basel, Switzerland. Arylamino anthraquinone dyestuffs and their manufacture. 2,101,094; Dec. 7.

Petersen, Henry C., Hillside, assignor to Lowres Optical Manufacturing Co., Newark, N. J. Leaf lock for ophthalmic mountings. 2,101,476; Dec. 7.

Pfanze, Charles F., University City, Mo. Duplex envelope. 2,101,342; Dec. 7.

Philley, William W., Valparaiso, Ind. Cool drink dispenser. 2,101,190; Dec. 7.

Phillips Petroleum Company. (See Youker, Malcolm P., assignor.)

Pickett, Gerald A., McKenzie Bridge, Oreg. Gas mixer. 2,101,477; Dec. 7.

Pickles, John. (See Pickles, Robert and J. P.)

Pickles, Robert, Burnley, and J. Pickles, Fence, near Burnley, England. Manufacture of elastic threads. 2,101,752; Dec. 7.

Pierson, Alberta M., Stockton, Calif. Invalid chair. 2,101,290; Dec. 7.

Pintsch, Julius, Aktiengesellschaft. (See Wilckens, Ernst, assignor.)

Piper, William G., Cumberland, Md., assignor to Celanese Corporation of America. Carton. 2,101,282; Dec. 7.

Pitometer Log Corporation. (See Cole, Edward S., and E. S., and Hooper, assignors.)

Pittsburgh Equitable Meter Company. (See MacLean, Allen D., assignor.)

Pittsburgh Research Corporation. (See Moore, W. E., and Simpson, assignors.)

Pittsburgh Steel Company. (See Protin, Edward J., assignor.)

Pollinger, Morris D., and H. J. Watson, Los Angeles County, Calif.; said Watson assignor to said Pollinger. Display device. 2,101,450; Dec. 7.

Ponton, Fortunat, assignor to Vaughan Company, Chicago, Ill. Tensioning apparatus for meat and bone cutting machines. 2,101,343; Dec. 7.

Pool, William, Spondon, near Derby, England, assignor to Celanese Corporation of America. Circular loom. 2,101,283; Dec. 7.

Poor & Company. (See Armstrong, Victor C., assignor.)

Poppe, George W., assignor to Equitable Paper Bag Co., Inc., Brooklyn, N. Y. Web cutting mechanism for bag machines. 2,101,191; Dec. 7.

Porter, Kirk E., assignor to The Buckeye Aluminum Company, Wooster, Ohio. Dinner pail. 2,101,281; Dec. 7.

Porter, Lewis O., Ovid, Colo. Barrel rack. 2,101,629; Dec. 7.

Potstada, George, Oakland, Calif. Corrugated slicer and detachable shredding set. 2,101,505; Dec. 7.

Power Patents Company. (See Engelke, Ernest F., assignor.)

Pressed Steel Car Company. (See Kurtz, Benjamin F., assignor.)

Pressed Steel Car Company Inc. (See Anderson, John P., assignor.)

Preston, Ward H. (See Bullock, F. J., and Preston.)

Prewitt, Sidney A., Pleasant Hill, Mo. Clamp head. 2,101,192; Dec. 7.

Price, George E., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Making electrical heaters. 2,101,095; Dec. 7.

Price, John F., assignor to Oswego Falls Corporation, Fulton, N. Y. Machine for preliminarily assembling covers to containers. 2,101,291; Dec. 7.

Protin, Edward J., Charleroi, assignor to Pittsburgh Steel Company, Pittsburgh, Pa. Thread protector. 2,101,451; Dec. 7.

Pruitt, Raymond S., et al., trustees. (See Starkey, William C., assignor.)

Pryale, Harry M., and S. C. Clark, assignors to Baldwin Rubber Company, Pontiac, Mich. Apparatus for manufacturing mats. 2,101,508; Dec. 7.

Public in the Territory of the United States of America, Dedicated to the. (See Fulton, R. A., and Fernelius, assignors.)

Pudelko, Riccard, Zug, Switzerland, assignor to Landis & Gyr, A.-G. Remote control system. 2,101,269; Dec. 7.

Pullman-Standard Car Manufacturing Company. (See Mussey, W. H., and Blomberg, assignors.)

Raber, Robert R., West Hartford, Conn., assignor, by mesne assignments, to Niles-Bement-Pond Company, New York, N. Y. Abrasive wheel. 2,101,193; Dec. 7.

Radabaugh, Tom B., West Milton, Ohio. Passbook or the like. 2,101,292; Dec. 7.

Radio Corporation of America. (See Crosby, Murray G., assignor.)

Radio Corporation of America. (See Finch, J. L., and Young, assignors.)

Radio Corporation of America. (See Hansell, Clarence W., assignor.)

Radio Corporation of America. (See Lindenblad, Nils E., assignor.)

Radio Corporation of America. (See Linsell, Alfred A., assignor.)

Radio Corporation of America. (See Sachtleben, Lawrence T., assignor.)

Radio Corporation of America. (See Tolson, W. A., and Duncan, assignors.)

Radtke, Bruno, Libertyville, assignor to J. F. Meyer, Chicago, Ill. Dashpot. 2,101,194; Dec. 7.

Railley Corporation. (See Hain, Harry D., assignor.)

Rainier Pulp & Paper Company. (See Vicary, Edward H., assignor.)

Rall, Harry T. (See Smith, H. M., and Rall.)

Ralston, Anderson W., assignor to Armour and Company, Chicago, Ill. Mixed thienyl-alkyl ketones. 2,101,560; Dec. 7.

Ralston, Anderson W., and C. W. Christensen, assignors to Armour and Company, Chicago, Ill. Carbazole-alkyl ketones. 2,101,559; Dec. 7.

Rambold, Adolf, Dresden-Laubegast, Germany. Production of wrappers. 2,101,225; Dec. 7.

Rambold, Adolf, Dresden, Germany. Producing perforations of small diameter in bands of cellulose foil, metal foil, and the like. 2,101,753; Dec. 7.

Randall, Anna M. (See Randall, Laurence H., assignor.)

Randall Company, The. (See Waddell, Edgar S., assignor.)

Randall, Howard D., Cincinnati, Ohio. Manufacturing paper clips. 2,101,195; Dec. 7.

Randall, Laurence H., Lakeland, assignor of one-half to A. M. Randall, Daytona Beach, Fla. Carriage release for lathes. 2,101,754; Dec. 7.

Raney, Clemma R. (See Lindgren, A. C., and Raney.)

Ransohoff, Nathan, Cincinnati, Ohio. Tumbling mill. 2,101,196; Dec. 7.

Rapp, Theodore, Los Angeles, Calif. Automatic weighing and packaging machine. 2,101,561; Dec. 7.

Räsänen, Isak, Helsingfors, Finland. Stove for domestic purposes. 2,101,509; Dec. 7.

Rath, Julius, Lippstadt, Germany. Machine for producing ropes from steel wires. 2,101,630; Dec. 7.

Rathbun, Homer E., assignor to K. T. Norris, Los Angeles, Calif. Umbrella structure. 2,101,510; Dec. 7.

Rauch, Konrad, Dayton, Ohio, assignor to International Business Machines Corporation, New York, N. Y. Recording scale. 2,101,452; Dec. 7.

Raybestos-Manhattan, Inc. (See Novak, Izador J., assignor.)

Rechnitzer, Rudolf, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Tone control device. 2,101,688; Dec. 7.

Redinger, Joseph M., Johnston, R. I. Lathe tool post. 2,101,157; Dec. 7.

Redinger, Joseph M., Johnston, R. I. Lathe tool and holder therefor. 2,101,158; Dec. 7.

Reece, Wade W., assignor to The W. E. Long Company, Chicago, Ill. Apparatus for cooling bread. 2,101,651; Dec. 7.

Reed, Harold V. (See Nutt, H., and Reed.)

Reed, Harold V., assignor to Borg-Warner Corporation, Chicago, Ill. Friction clutch. 2,101,293; Dec. 7.

Reed Propeller Co., The. (See Chilton, Roland, assignor.)

Reed, Robert F., Cincinnati, Ohio, assignor to The Lithographic Technical Foundation, Inc., New York, N. Y. Method and apparatus for measuring properties of inks and the like. 2,101,322; Dec. 7.

Reich, Frederick, Elizabeth, N. J. Adjustable templet. 2,101,478; Dec. 7.

Reichenbach, Howard F., assignor to The Chase Companies, Incorporated, Waterbury, Conn. Adjustable holder for lipsticks and the like. 2,101,596; Dec. 7.

Renette Company. (See Blettner, George H., assignor.)

Reuter, Raymond, Upper Aetna Lake, Medford Lakes, N. J., and F. L. Gaus, assignors to The Atlantic Refining Company, Philadelphia, Pa. Production of mercaptans. 2,101,096; Dec. 7.

Reynolds, Damian L., Burlingame, Calif. Carrier vehicle structure. 2,101,344; Dec. 7.

Rhodes, Margerie C., New York, N. Y. Diaper. 2,101,453; Dec. 7.

Rice, Cyrus W., Pittsburgh, Pa. Treatment of boiler water. 2,101,197; Dec. 7.

Rice, Owen R., assignor to Freyn Engineering Company, Chicago, Ill. Blowpipe. 2,101,270; Dec. 7.

Rich, Chester A., assignor to The Rich Pump & Ladder Company, Cincinnati, Ohio. Lockable ironing board. 2,101,597; Dec. 7.

Rich Pump & Ladder Company, The. (See Rich, Chester A., assignor.)

Richardson, Harry H., Hamilton, Ontario, Canada. Drawing die. 2,101,689; Dec. 7.

Rider, Theodore H., Mariemont, and R. Shelton and J. Haynes, assignors to The Wm. S. Merrell Company, Cincinnati, Ohio. Products for rendering the urine bacteriostatic. 2,101,097; Dec. 7.

Riedel, William, Lansdowne, Md. Nonreusable bottle. 2,101,598; Dec. 7.

Riley, Lee H., University City, Mo. Electrical connecter plug. 2,101,345; Dec. 7.

Riley Stoker Corporation. (See Kuhner, Max H., assignor.)

Robertson, Benjamin C., Los Angeles, Calif. Ball bearing mounting. 2,101,346; Dec. 7.

Robinette, Willard C., Pasadena, Calif. Tap. 2,101,347; Dec. 7.

Robins, Edward, Farnham, England. Lock. 2,101,562; Dec. 7.

Robinson, Charles S. (See Hall, Tom, assignor.)

Robinson, William C., Bell, Calif. Air gun. 2,101,198; Dec. 7.

Robles, Benjamin, Palmira, Chuva, Guatemala. Safety exposure recorder for cameras. 2,101,652; Dec. 7.

Rocard, Yves, Paris, France, assignor to Compagnie Generale de Telegraphie Sans Fil. Triode oscillator and the like. 2,101,563; Dec. 7.

Rock-Ola Manufacturing Corporation. (See Williams, Harry E., assignor.)

Roehrich, Victor H., St. Paul, Minn. Extractor. 2,101,819; Dec. 7.

Roessler, Georg. (See Frankenburger, W., Hammerschmid, and Roessler.)

Rogers, Clifford R., Oak Park, Ill., assignor to International Harvester Company. Front idler wheel for crawler tractors. 2,101,454; Dec. 7.

Röhm, Otto, Darmstadt, Germany. Sole leather and preparing the same. 2,101,511; Dec. 7.

Rolph, Thomas W., Newark, Ohio, assignor to Holophane Company, Inc., New York, N. Y. Luminair. 2,101,199; Dec. 7.

Roosenstein, Hans O. (See Klotz, E., Wilhelm, and Roosenstein.)

Root, Donald S., et al. (See Taylor, Wesley, assignor.)

Rose, Ernest, Washington, D. C., assignor to International Business Machines Corporation, New York, N. Y. Group selector for sorting machines. 2,101,455; Dec. 7.

Rose, Ernest, Washington, D. C., assignor to International Business Machines Corporation, New York, N. Y. Selector for sorting machines. 2,101,456; Dec. 7.

Rosenberg, Philip S. (See Saunders, L. P., and Rosenberg.)

Rosenmund, Alfred L., Rockaway, N. J., assignor to Stapling Machines Co. Box making machine. 2,101,457; Dec. 7.

Rosenstone, Samuel D., Passaic, and C. Ackerman, Hackensack, N. J. Slicing machine. 2,101,755; Dec. 7.

Ross, Raymond O., Portland, Oreg. Garment hanger. 2,101,294; Dec. 7.

Rowland, Clarence G., Newington Junction, assignor to The Fuller Brush Company, Hartford, Conn. Brush. 2,101,799; Dec. 7.

Royal Bond, Inc. (See Landau, Argo E., assignor.)

Royal, Joseph N. (See Dreux, A. H., and Royal.)

Rulon, Watson B., Atlantic City, N. J. Refrigerator. 2,101,512; Dec. 7.

Runge, Wilhelm. (See Muth, H., and Runge.)

Rupright, Howard J. (See Wass, H. W., and Rupright.)

Rusk, Edwin M., Seattle, Wash. Apparatus for air floatation separation. 2,101,295; Dec. 7.

Ruskin, Frances R. (See Ruskin, Simon L., assignor.)

Ruskin, Simon L., assignor to F. R. Ruskin, New York, N. Y. Manganese compounds of nucleotides and of their hydrolytic decomposition products. 2,101,099; Dec. 7.

Russell, William J., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Making electric heating units and resultant product. 2,101,098; Dec. 7.

Rust, John D. and M. D., Memphis, Tenn. Cotton picking machine. 2,101,100; Dec. 7.

Rust, Mack D. (See Rust, John D. and M. D.)

Ryan, Leon H., assignor to Delaware Rayon Company, New Castle, Del. Manufacture of artificial silk. 2,101,720; Dec. 7.

Sachtleben, Lawrence T., Camden, N. J., assignor to Radio Corporation of America. Trimming device. 2,101,458; Dec. 7.

Salzberg, Paul L., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Monoamides of dicarboxylic acids and preparing the same. 2,101,323; Dec. 7.

Sambleson, Robert F., Bridgeport, Conn., assignor to General Electric Company. Liquid contact circuit closer. 2,101,101; Dec. 7.

Samuelson, Hjalmar, Oslo, and J. de R. Kielland, Vinderen, near Oslo, Norway. Coin sorting device. 2,101,513; Dec. 7.

Sandlant, Harry, Wellington, New Zealand. Holding and serving machine for ice cream or the like. 2,101,599; Dec. 7.

Sandul, Amil, assignor of one-half to P. Baldwin, Humboldt, Minn. Automatic trailer brake appliance. 2,101,600; Dec. 7.

Sarff, Evert O., Roseburg, Oreg. Tractor construction. 2,101,631; Dec. 7.

Satz, William, New York, N. Y. Brief case construction. 2,101,459; Dec. 7.

Sauer, Albert H., Jr., Cincinnati, Ohio. Wrist watch guard. 2,101,600; Dec. 7.

Saunders, Laurence P., and P. S. Rosenberg, Lockport, N. Y., assignors to General Motors Corporation, Detroit, Mich. Radiator cap. 2,101,756; Dec. 7.

Sayour, Elias, Brooklyn, N. Y. House coat. 2,101,564; Dec. 7.

Schaeffer, Edward G., New York, N. Y., assignor to C. E. Bowers, Washington, D. C. Doll. 2,101,102; Dec. 7.

Scharf, Frank W., Western Springs, assignor to McGraw Electric Company, Chicago, Ill. Electric water heater. 2,101,691; Dec. 7.

Scharfenberg, Karl, Berlin-Nicolassee, Germany. Spring. 2,101,721; Dec. 7.

Schellens, Christopher A., Marblehead, Mass., assignor to C-S Engineering Company, Englewood, N. J. Impeller for centrifugel pumps. 2,101,653; Dec. 7.

Schellinger, Theodor, assignor to C. H. Oshei, Detroit, Mich. Radiator or gas tank cap lock. 2,101,348; Dec. 7.

Schenk, Cleveland H., Springfield, Ill. Night target range finder. 2,101,479; Dec. 7.

Schmaus, Louis R., assignor to The NoKoRode Company, Milwaukee, Wis. Pipe thread protector. 2,101,514; Dec. 7.

Schmid, Joseph. (See Brunnhuber, J., and Schmid.)

Schmidt, Ulrich, Berlin-Wilmersdorf, Germany. Sound muffling device. 2,101,460; Dec. 7.

Schmitter, Walter P., assignor to The Falk Corporation, Milwaukee, Wis. Geared motor. 2,101,515; Dec. 7.

Schneider, Henry F., et al. (See Fischer, Oliver C., assignor.)

Schnell, Steve, Overland, assignor to Wagner Electric Corporation, St. Louis, Mo. Brake shoe guide. 2,101,692; Dec. 7.

Schreiber, Louis J. J., Antwerp, Belgium, assignor to Western Electric Company, Incorporated, New York, N. Y. Substation telephone apparatus. 2,101,271; Dec. 7.

Schultz, Edward, Evansville, Ind. Bolting machine. 2,101,722; Dec. 7.

Schumacher, Heinrich, assignor to Fein-Maschenin bau-gesellschaft m. b. H., Berlin, Germany. Shock absorber. 2,101,757; Dec. 7.

Schutt, Hermann C. (See Cooke, M. B., Schutt, and Throckmorton.)

Schutt, Hermann C., North Tarrytown, N. Y., assignor, by mesne assignments, to Gyro Process Company, Detroit, Mich. Cracking hydrocarbon oils. 2,101,800; Dec. 7.

Schwenk, Hans. (See Breitling, E., and Schwenk.)

Scofield, Gilbert J., Loudonville, N. Y. Vending machine construction. 2,101,420; Dec. 7.

Scott, Herbert J., Passaic, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Combined magnetostriction and piezoelectric selective device. 2,101,272; Dec. 7.

Scott, Walter H. (See Warnick, P., and Scott.)

Scribner, William L., and T. V. Buckwalter, assignors to The Timken Roller Bearing Company, Canton, Ohio. Apparatus for cold rolling axle journals. 2,101,516; Dec. 7.

Sealed Joints Products Co. (See Duffy, Charles G., assignor.)
Sealtest System Laboratories, Inc. (See Whitaker, R., Weisberg, and Hilker, assignors.)
Seebach, Fritz. (See Elbel, E., and Seebach.)
Seeburg, J. P., Corporation. (See Johnson, Carl G., assignor.)
Seguy, Jean D., assignor to Universal Oil Products Company, Chicago, Ill. Hydrocarbon oil conversion. 2,101,517; Dec. 7.
Serbell, Victor. (See Godfrey, T. M., and Serbell.)
Shaffer, Phillip, Mitchell, Nebr. Electromagnetic gas tank lock. 2,101,758; Dec. 7.
Shakespeare Products Company. (See Weber, Herman, assignor.)
Sharp, Henry J., Emsworth, assignor to Commonwealth Trust Company, trustee, Pittsburgh, Pa. Joining lengths of metal. 2,101,349; Dec. 7.
Sheaffer, W. A., Pen Company. (See Wright, Howard S., assignor.)
Sheehan, Edward A., Stoughton, assignor to Panther-Panco Rubber Co. Inc., Chelsea, Mass. Machine for finishing molded articles of rubber. 2,101,654; Dec. 7.
Shell Development Company. (See Chonette, W. C., and Hamilton, assignors.)
Shell Development Company. (See Groll, Herbert P. A., assignor.)
Shell Development Company. (See Muzzey, David S., Jr., assignor.)
Shellmar Products Company. (See Engel, William H., assignor.)
Shelton, Robert. (See Rider, T. H., Shelton, and Haynes.)
Shields, Wendell H., Grand Rapids, Mich. Steaming and pressing machine. 2,101,655; Dec. 7.
Shute, Alfred J. (See Jensen, J. W., and Shute.)
Siemens & Halske, Aktiengesellschaft. (See Baesecke, M., and Mayer, assignors.)
Silven, Herbert A. (See Glygare, C. G., and Silven.)
Simms, Frederick R. (See L'Orange, Rudolf, assignor.)
Simpkins, Carl R., Inglewood, assignor to J. F. Meyer, Flintridge, Calif. Game apparatus. 2,101,201; Dec. 7.
Simplex Time Recorder Company. (See Watkins, E. G., and Dell, assignors.)
Simplon Products Corporation. (See Marsh, Reginald E., assignor.)
Simpson Electric Company. (See Simpson, R., and Koch, assignors.)
Simpson, Emory G., and A. C. Andersen, assignors to Ternstedt Manufacturing Company, Detroit, Mich. Seat adjuster. 2,101,350; Dec. 7.
Simpson, George L. (See Moore, W. E., and Simpson.)
Simpson, Lewis, Monterey Park, Calif. Lifesaving chute. 2,101,284; Dec. 7.
Simpson, Ray, River Forest, and G. H. Koch, assignors to Simpson Electric Company, Chicago, Ill. Electrical measuring instrument. 2,101,296; Dec. 7.
Sinclair Refining Company. (See Cole, Joseph, assignor.)
Sindl, Otto, Paris, France, and G. Frank, Moedling, near Vienna, Austria, assignors to "Afag" Finanzierungs A. G., Schaffhausen, Switzerland. Producing mixed cellulosic esters. 2,101,413; Dec. 7.
Singer Manufacturing Company, The. (See Eames, G. M., and Stewart, assignors.)
Singer Manufacturing Company, The. (See Myers, Walter, assignor.)
Sinko, John, Chicago, Ill. Cigar lighter. 2,101,601; Dec. 7.
Sinko, John, Chicago, Ill. Cigar lighter. 2,101,602; Dec. 7.
Slayback, Roy R., Decatur, Ill. Aeroplane. 2,101,351; Dec. 7.
Smart, Clarence F., assignor to General Motors Corporation, Pontiac, Mich. Bearing. 2,101,759; Dec. 7.
Smidth, F. L., & Co. (See Vogel-Jorgensen, Mikael, assignor.)
Smith, David F., Takoma Park, Md. Apparatus for clarifying saccharine liquids. 2,101,480; Dec. 7.
Smith, Edward W., Melrose, assignor to Submarine Signal Company, Boston, Mass. Treating milk. 2,101,103; Dec. 7.
Smith, Elmer, Shreveport, La. Athletic shoe. 2,101,723; Dec. 7.
Smith, Harold M., and H. T. Rall, Bartlesville, Okla. Catalyst for hydrogenating hydrocarbons. 2,101,104; Dec. 7.
Smith, Harvey H., Columbus, Ohio. Wrench. 2,101,760; Dec. 7.
Smith Separator Corporation. (See McKeever, Roy S., assignor.)
Smith, Wallace D., Kalamazoo, Mich. Massage instrument for treating the prostate gland. 2,101,273; Dec. 7.
Smithe, F. L., Machine Co. (See Novick, Abraham, assignor.)
Smithwick, Thomas F. (See Bennett, Melvin C., assignor.)
Smutny, Theodore J., assignor to Collegiate Manufacturing Co., Inc., New York, N. Y. Lady's undergarment. 2,101,604; Dec. 7.
Snell, Edgar W., San Francisco, Calif. Apparatus for establishing a standard cranial point of orientation. 2,101,105; Dec. 7.
Snelling, Nicholas, Jackson Heights, Long Island, N. Y. Can marking and displaying device. 2,101,565; Dec. 7.
Societe Anonyme Adolphe Saurer. (See Wiget, Georg, assignor.)
Société Anonyme Société des Freins Hydrauliques S. de Lavaud. (See Brisson, Louis C., assignor.)
Soloway, Herman M., et al. (See Crewdson, Sarah M., assignor.)
Sondelbeck, Leo V., et al. (See Fischer, Oliver C., assignor.)
Sonntag, Alfred, Moline, Ill., assignor, by mesne assignments, to American Machine and Metals, Inc., New York, N. Y. Leakage compensator for pumping systems. 2,101,226; Dec. 7.
Spanagel, Edgar W. (See Hill, J. W., and Spanagel.)
Spangler, Henry R., Denver, Colo. Cigarette extinguisher. 2,101,200; Dec. 7.
Sprecker, Alfred L., Freeport, assignor to International Business Machines Corporation, New York, N. Y. Communication system. 2,101,421; Dec. 7.
Square D Company. (See Van Valkenburg, Hermon L., assignor.)
Stagl, Charles. (See Stagl, Joseph E., assignor.)
Stagl, Joseph E., deceased, assignor to C. Stagl. Metatarsal rubber cushion rest. 2,101,761; Dec. 7.
Standard Stoker Company, The. (See Anderson, Howard P., assignor.)
Stanley, Frank. (See Bellingham, L., and Frank and G. F. Stanley.)
Stanley, Gilbert F. (See Bellingham, L., and Frank and G. F. Stanley.)
Stanzel, Victor, Schulenburg, Tex. Amusement ride device. 2,101,274; Dec. 7.
Stapling Machines Co. (See Rosenmund, Alfred L., assignor.)
Star Expansion Bolt Company. (See Hungerford, Daniel C., assignor.)
Starkey, William C., Indianapolis, Ind., assignor, by mesne assignments, to W. C. Starkey, R. S. Pruitt, and W. H. Beal, trustees. Automotive driving mechanism. 2,101,275; Dec. 7.
Stearns, Harry A. (See Orcutt, J. W., Stearns, and Wall.)
Steenstrup, Christian, Schenectady, N. Y., assignor to General Electric Company. Refrigerating machine. 2,101,656; Dec. 7.
Stein, Harold J., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Heat treating container. 2,101,481; Dec. 7.
Stevens, Burt D., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill. Dampening mechanism for printing presses. 2,101,202; Dec. 7.
Stevens, Edward W., Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y. Pneumatic hammer. 2,101,159; Dec. 7.
Stevens, Edwin F., St. Paul, Minn. Tubular interlocking piling. 2,101,285; Dec. 7.
Stevens, William H. N., Columbus, Ohio. Combined canteen, cooking, and mess kit. 2,101,414; Dec. 7.
Stewart, Hugh T., assignor to The Garlock Packing Company, Palmyra, N. Y. Metallized fibrous packing. 2,101,518; Dec. 7.
Stewart, Robert W. (See Eames, G. M., and Stewart.)
Stienen, Ernest A., New York, N. Y. Extracting and drying system. 2,101,461; Dec. 7.
Stillman, Thomas B., South Orange, assignor to The Babcock & Wilcox Company, Newark, N. J. Superheater boiler. 2,101,106; Dec. 7.
Stimson, Samuel C., assignor to The Bahnson Company, Winston-Salem, N. C. Humidifier. 2,101,603; Dec. 7.
Strain, Daniel E., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Molding compositions and molding. 2,101,107; Dec. 7.
Straub, Alvin L., Tomball, Tex. Air gun. 2,101,762; Dec. 7.
Stuart, Cameron A., Hettinger, N. Dak. Sealing device. 2,101,415; Dec. 7.
Studt, Ernst. (See Engler, J., and Studt.)
Sturm, Frank X., Sr., Jasper, Ind. Glove. 2,101,763; Dec. 7.
Submarine Signal Company. (See Smith, Edward W., assignor.)
Swart, Harry A., San Marino, Calif. Game. 2,101,764; Dec. 7.
Swennes, Benjamin A., Rockford, assignor to Borg-Warner Corporation, Chicago, Ill. Friction clutch plate. 2,101,297; Dec. 7.
Swift, Claude E. (See Bray, U. B., and Swift.)
Szabo, Alexander, Linden, N. J. Twin marble skill game. 2,101,657; Dec. 7.
Szabo, Alexander, Linden, N. J. Ball return amusement device. 2,101,658; Dec. 7.
Takenaga, Frank Y., Anaheim, Calif. Dehydrator. 2,101,352; Dec. 7.
Tappan Stove Company, The. (See Hoff, John G., assignor.)
Taraci, Joseph, East Elmhurst, Long Island, N. Y. Shoe structure. 2,101,693; Dec. 7.
Tarbox, John P., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Weld efficiency indicator. 2,101,108; Dec. 7.

Taylor, Wesley, New York, assignor of thirty-eight one-hundredths to D. S. Root, Bronxville, nineteen one-hundredths to G. Atkinson, and five one-hundredths to W. C. Du Bois, New York, N. Y. Calculator. 2,101,298; Dec. 7.
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Bartels, Hans, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Fritz, Karl, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Klotz, E., Wilhelm, and Roosenstein, assignors.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Leib, August, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Muth, H., and Runge, assignors.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Rechnitzer, Rudolf, assignor.)
Teletypesetter Corporation. (See Walden, Lester M., assignor.)
Tenney, Perry L., Lansing, assignor to General Motors Corporation, Detroit, Mich. Automotive transmission. 2,101,765; Dec. 7.
Ternstedt Manufacturing Company. (See Simpson, E. G., and Andersen, assignors.)
Texas Company, The. (See Grabame, James H., assignor.)
Textile Machine Works. (See Ischinger, Alfred E., assignor.)
Theunissen, Heinrich, Kaldenkirchen, Germany. Producing double warp pile fabrics with figured backs. 2,101,286; Dec. 7.
Thompson, Earl A., assignor to General Motors Corporation, Detroit, Mich. Synchronized power transmission mechanism. 2,101,827; Dec. 7.
Thompson, Earl A., Birmingham, assignor to General Motors Corporation, Detroit, Mich. Synchronizing clutch mechanism. 2,101,826; Dec. 7.
Thompson, Earl A., Portland, Oreg., assignor to General Motors Corporation, Detroit, Mich. Automatic gear shifting mechanism. 2,101,825; Dec. 7.
Thompson Manufacturing Co. (See Height, Lewis H., assignor.)
Thomson, William R., Toronto, Ontario, Canada. Method of and apparatus for the extraction of liquid from materials. 2,101,109; Dec. 7.
Thornton, Frank, Jr., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Heating unit. 2,101,110; Dec. 7.
Thorp, Joel R., assignor to The Fulton Company, West Allis, Wis. Steering wheel spinner knob. 2,101,519; Dec. 7.
Throckmorton, John W. (See Cooke, M. B., Schutt, and Throckmorton.)
Timken Roller Bearing Company, The. (See Assel, Walter J., assignor.)
Timken Roller Bearing Company, The. (See Scribner, W. L., and Buckwalter, assignors.)
Tinnerman, Albert H. (See Tinnerman, George A., assignor.)
Tinnerman, George A., Rocky River, assignor to A. H. Tinnerman, Cleveland, Ohio. Fastening device. 2,101,287; Dec. 7.
Toison, William A., Erlton, and J. R. Duncan, Camden, N. J., assignors to Radio Corporation of America. Oscillator for use with kinescope deflecting circuits. 2,101,520; Dec. 7.
Tomahawk Kraft Paper Company et al. (See Extrom, J. A., assignor, and Martin.)
Tonjum, Mary, et al. (See Lemieux, Felix J., assignor.)
Topiel, Abraham, New York, N. Y. Trimming material. 2,101,521; Dec. 7.
Toulmin, Harry A., Jr., assignor to Business Corners, Inc. of Delaware, Dayton, Ohio. Measuring instrument. 2,101,203; Dec. 7.
Townend, Hubert C. H., Teddington, assignor to Boulton Paul Aircraft Limited, Norfolk, England. Air cooled aero engine. 2,101,724; Dec. 7.
Traficante, Joseph, Hoboken, N. J. Table top. 2,101,725; Dec. 7.
Traute, Henry C., Monmouth Beach, N. J., assignor to The Diamond Match Company, Wilmington, Del. Match packet. 2,101,111; Dec. 7.
Tschantre, Julius, New City, N. Y. Animal trap. 2,101,482; Dec. 7.
Tucker, Martha E., Grand Rapids, Mich. Chocolate malted milk food product and forming same. 2,101,374; Dec. 7.
Tyden, Emil, Hastings, Mich. Sprinkler head. 2,101,694; Dec. 7.
Tyler, Paul J., et al. (See Lawler, Frank P., assignor.)
Tyler, Waldo E., Kansas City, Mo., T. B. Douglas, Houston, Tex., P. R. Chamberlain, and R. A. Loveland, Dewey, Okla., assignors to Dewey Portland Cement Company, Kansas City, Mo. Cement. 2,101,299; Dec. 7.
Udylite Company. (See Henricks, John A., assignor.)
Underwood Elliott Fisher Company. (See Anderson, Walter A., assignor.)
Underwood Elliott Fisher Company. (See Mann, Miles H., assignor.)
Union Carbide and Carbon Corporation. (See Burgess, Charles O., assignor.)
Union Carbide and Carbon Corporation. (See Groff, Frazier, assignor.)
Union Carbide and Carbon Corporation. (See Oldham, Samuel R., assignor.)
Union Oil Company of California. (See Bray, U. B., and Swift, assignors.)
Union Switch & Signal Company, The. (See Crago, Paul H., assignor.)
Union Switch & Signal Company, The. (See Livingston, John W., assignor.)
Union Switch & Signal Company, The. (See Moore, Alexander D., assignor.)
Union Switch & Signal Company, The. (See Vantassel, Harry C., assignor.)
Union Switch & Signal Company, The. (See Williamson, Kenneth T., assignor.)
United Aircraft Corporation. (See Lee; John G., assignor.)
United Aircraft Corporation. (See Martin, Erle, assignor.)
United Shoe Machinery Corporation. (See Blanchard, Benjamin B., assignor.)
United Shoe Machinery Corporation. (See Gookin, Sylvester L., assignor.)
United Shoe Machinery Corporation. (See Hood, Charles E., assignor.)
United Shoe Machinery Corporation. (See Jorgensen, Bernhardt, assignor.)
United Shoe Machinery Corporation. (See Pepin, Charles H., assignor.)
United States Steel Corporation. (See Kinsley, Carl, assignor.)
United States Gauge Company. (See Klein, M., and Willach, assignors.)
Universal Oil Products Company. (See Seguy, Jean D., assignor.)
Vale, Baldwin, San Francisco, Calif. Fire escape. 2,101,659; Dec. 7.
Van Cleef Bros. (See Wonder, Charles E., assignor.)
Vanderpool, Wade, assignor of one-half to D. Wakefield, Stevenson, Wash. Nonfouling drill. 2,101,566; Dec. 7.
Vanderveld, Anthony, Grand Rapids, Mich. Powder dispenser. 2,101,375; Dec. 7.
Vantassel, Harry C., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway traffic controlling apparatus. 2,101,204; Dec. 7.
Van Valkenburg, Hermon L., Wauwatosa, Wis., assignor to Square D Company, Detroit, Mich. Contactor construction. 2,101,288; Dec. 7.
Van Zijp, Antonius J., Haarlem, assignor to Koninklijke Nederlandsche Hoogovens en Staalfabrieken N. V., Ijmuiden, Netherlands. Manufacture of molds used for casting metal pipes and the like by the centrifugal method. 2,101,726; Dec. 7.
Varian, Russell H., San Francisco, Calif., assignor to Farnsworth Television Incorporated. Grid. 2,101,462; Dec. 7.
Vaughan Company. (See Ponton, Fortunat, assignor.)
Venzie, Frederick M., Philadelphia, Pa., assignor to National Gypsum Company, Buffalo, N. Y. Wall construction. 2,101,416; Dec. 7.
Vermette, Denis, Montreal, Quebec, Canada. Clutch mechanism. 2,101,484; Dec. 7.
Verpackungsbedarf G. m. b. H. (See Augustin, Johann G. F., assignor.)
Vicary, Edward H., Port Angeles, Wash., assignor to Rainier Pulp & Paper Company, San Francisco, Calif. Apparatus for the utilization of the heat of flue gases of a furnace to heat a liquid. 2,101,112; Dec. 7.
Victoreen, Charles H., Cleveland, Ohio. Illuminating device. 2,101,289; Dec. 7.
Vilsmeier, Anton. (See Neresheimer, H., Vilsmeier, and Held.)
Vogel-Jorgensen, Mikael, Frederiksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y. Apparatus for measuring liquid or fluent materials. 2,101,257; Dec. 7.
Vogel, Max, Frankfort-on-the-Main, Germany. Stapling machine for closing flaps of cartons and the like. 2,101,660; Dec. 7.
Voigtländer, Hermann, Essen, Germany, assignor to N. V. Wallramit Handel Maatschappij, Rotterdam, Netherlands. Percussive boring tool. 2,101,376; Dec. 7.
Vorwerk & Co. (See Gorissen, Engelbert, assignor.)
Vulcan Rail and Construction Company. (See Ewing, Wylie B., assignor.)
Waalkes, Gerrit, Highland Park, Mich., assignor to Anchor Steel and Conveyor Company. Conveyer mechanism. 2,101,353; Dec. 7.
Waddell, Edgar S., assignor to The Randall Company, Cincinnati, Ohio. Awning structure. 2,101,695; Dec. 7.
Wagler, Mann E., assignor to Hunter Tractor & Machinery Co., Milwaukee, Wis. Auxiliary moldboard attachment for plows. 2,101,661; Dec. 7.
Wagner Electric Corporation. (See Schnell, Steve, assignor.)
Wagner, Heinrich, Mannheim, M. Zabel and A. Ensslin, Dessau in Anhalt, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Producing two-color effects on skins or furs. 2,101,696; Dec. 7.
Wahlin, Fritz. (See Bramsen, S., and Wahlin.)
Wakefield, Dee. (See Vanderpool, Wade, assignor.)

Walden, Lester M., Chicago, Ill., assignor, by mesne assignments, to Teletypesetter Corporation. Control unit for linecasting machines. 2,101,113; Dec. 7.

Waldvogel, Albert C., Richmond Heights, Mo. Roasting apparatus. 2,101,417; Dec. 7.

Waldvogel, Albert C., Richmond Heights, Mo. Caffeine collector. 2,101,418; Dec. 7.

Walker, Warren R., Short Hills, assignor to General Electric Vapor Lamp Company, Hoboken, N. J. Fluid flow electric switch and method of and apparatus for manufacture of same. 2,101,114; Dec. 7.

Walker, Warren R., Short Hills, assignor to General Electric Vapor Lamp Company, Hoboken, N. J. Electric switch of the fluid flow type. 2,101,115; Dec. 7.

Wall, Thomas L. (See Orcutt, J. W., Stearns, and Wall.)

Walter, Edward C., assignor to Monroe Calculating Machine Company, Orange, N. J. Calculating machine. 2,101,766; Dec. 7.

Walter, Edward C., assignor to Monroe Calculating Machine Company, Orange, N. J. Calculating machine. 2,101,767; Dec. 7.

Walter, William J., Mishawaka, Ind. Toy airplane. 2,101,276; Dec. 7.

Wals, Richard F. (See Lemmon, W. S., Fitch, and Wals.)

Wappler, Frederick C., New York, N. Y. Miniature electric lamp. 2,101,277; Dec. 7.

Warner, Alonzo A., assignor to Landers, Frary & Clark, New Britain, Conn. Seal for percolators. 2,101,324; Dec. 7.

Warnick, Paul, and W. H. Scott, assignors to J. L. Berggren, Chicago, Ill. Electric motor. 2,101,116; Dec. 7.

Warren, Calvin C., assignor of one-third to E. Amacher and one-third to G. W. Percy, South Dayton, N. Y. Method and apparatus for molding seamless hollowware articles. 2,101,768; Dec. 7.

Washington Institute of Technology. (See Mashbir, S. F., Kear, Davies, and Orton, assignors.)

Wass, Harold W., and H. J. Rupright, assignors to The Dow Chemical Company, Midland, Mich. Vat dye composition. 2,101,828; Dec. 7.

Waterbury Buckle Company, The. (See La Vigne, Jerome E., assignor.)

Waters, Harold. (See Lewis, J. D., Waters, and Krauer.)

Watkins, Edward G., and J. A. Dell, assignors to Simplex Time Recorder Company, Gardner, Mass. Workman's time recorder. 2,101,205; Dec. 7.

Watson, Charles B., assignor of forty-nine per cent to F. G. Johnson, Omaha, Nebr. Traffic signal system. 2,101,697; Dec. 7.

Watson, Harry J. (See Pollinger, M. D., and Watson.)

Watts, Roy T. (See Goldbert, M. L., and Watts.)

Weber, Heinrich, assignor to Klangfilm G. m. b. H., Berlin, Germany. Recording of electrical impulses. 2,101,419; Dec. 7.

Weber, Herman, assignor to Shakespeare Products Company, Kalamazoo, Mich. Control device. 2,101,160; Dec. 7.

Weil, André, Paris, France, assignor to Air Reduction Company, Incorporated, New York, N. Y. Manufacture of krypton and xenon by separation from atmospheric air. 2,101,300; Dec. 7.

Weinrich, William W., assignor to Gulf Research and Development Company, Pittsburgh, Pa. Lubricating bearing surfaces. 2,101,632; Dec. 7.

Weisbecker, Frank G., Glenside, assignor to Arcadia Hosiery Co., Lansdale, Pa. Knitting machine. 2,101,801; Dec. 7.

Weisberg, Samuel M. (See Whitaker, R., Weisberg, and Hilker.)

Weldon, Walter S., Maryland Heights, Mo. Curtain tie-back securing device. 2,101,377; Dec. 7.

Wellmar, Sven, Stockholm, Sweden. Method and apparatus for drying cellulose and like material in a continuous web. 2,101,301; Dec. 7.

Wells, Leland E., Cleveland Heights, assignor to Willard Storage Battery Company, Cleveland, Ohio. Making ribbed separators. 2,101,206; Dec. 7.

Werntz, James H., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polycarboxylic acid esters of polyunsaturated higher alcohols. 2,101,227; Dec. 7.

Wescott, Jay V., et al. (See Wright, William, assignor.)

Western Electric Company. (See Earp, Charles W., assignor.)

Western Electric Company. (See Franz, Erwin E., assignor.)

Western Electric Company. (See Schreiber, Louis J. J., assignor.)

Westinghouse Electric & Manufacturing Company. (See Laidig, Alfred H., assignor.)

Westinghouse Electric & Manufacturing Company. (See Price, George E., assignor.)

Westinghouse Electric & Manufacturing Company. (See Russell, William J., assignor.)

Westinghouse Electric & Manufacturing Company. (See Thornton, Frank, Jr., assignor.)

Westinghouse Electric and Manufacturing Company. (See Woodside, Cornelius S., assignor.)

Westinghouse X-Ray Company. (See Morrison, Montford, assignor.)

Westmoreland, Andrew J., Florence, Ala. Sweeper attachment for motor vehicles. 2,101,769; Dec. 7.

Weston, Milton T., Keansburg, N. J. Mechanical control device. 2,101,117; Dec. 7.

Whitaker, Randall, S. M. Weisberg, and L. D. Hilker, Baltimore, Md., assignors to Sealtest System Laboratories, Inc., New York, N. Y. Food product and making same. 2,101,633; Dec. 7.

White, Clarence W., North Bennington, Vt. Carton. 2,101,522; Dec. 7.

Whiteman, Arthur, New York, N. Y. Slide staining and heating rack. 2,101,161; Dec. 7.

Whitman, Henry L., Los Angeles, Calif. Aluminum alloy. 2,101,118; Dec. 7.

Wico Electric Company. (See Harmon, Kenneth A., assignor.)

Wiegand, Kurt, Hohenneuendorf, near Berlin, and A. Koenig, Berlin-Charlottenburg, Germany, assignors to General Electric Company. Socket for tubular lamps. 2,101,662; Dec. 7.

Wierschem, Anton A., et al. (See Fischer, Oliver C., assignor.)

Wierschem, Mamie, et al. (See Fischer, Oliver C., assignor.)

Wiget, Georg, assignor to Societe Anonyme Adolphe Saurer, Arbon, Switzerland. Shuttle box mechanism for looms. 2,101,663; Dec. 7.

Wilckens, Ernst, Berlin-Sudende, assignor to Julius Pintsch Aktiengesellschaft, Berlin, Germany. Apparatus for signaling with ultrashort waves. 2,101,785; Dec. 7.

Wilcolator Company, The. (See Fonseca, Edward L., assignor.)

Wilder, Thomas B., Aberdeen, N. C. Impression seal. 2,101,119; Dec. 7.

Wilhelm, Karl. (See Klotz, E., Wilhelm, and Roosenstein.)

Wilkening, Frederick W., Narberth, assignor to Wilkening Manufacturing Company, Philadelphia, Pa. Piston ring. 2,101,120; Dec. 7.

Wilkening Manufacturing Company. (See Wilkening, Frederick W., assignor.)

Willach, Bernhard. (See Klein, M., and Willach.)

Willard, Louis E., assignor of fifty-one per cent to J. M. Hanford, Dallas, Tex. Testing machine for shock absorbers and the like. 2,101,228; Dec. 7.

Willard Manufacturing Corporation. (See Gegenheimer, William, assignor.)

Willard Storage Battery Company. (See Wells, Leland E., assignor.)

Williams, Bradlee W., and H. S., assignors to Bally Manufacturing Co., Chicago, Ill. Amusement game. 2,101,302; Dec. 7.

Williams, Frank W. (See Kittredge, H. G., and Williams.)

Williams, Harry E., assignor to Rock-Ola Manufacturing Corporation, Chicago, Ill. Game apparatus. 2,101,354; Dec. 7.

Williams, Homer S. (See Williams, Bradlee W., and H. S.)

Williams, Oswell L. (See Bullard, W. P., and Williams.)

Williams, Othneil G., assignor to William L. Gilbert Clock Corporation, Winsted, Conn. Clock door. 2,101,325; Dec. 7.

Williamson, Kenneth T., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Battery charging apparatus. 2,101,207; Dec. 7.

Williamson, Marshall L., Edgewater, N. J. Locking means for joining sheet material. 2,101,303; Dec. 7.

Willis, Richard M., Mobile, Ala. Toilet fixture. 2,101,523; Dec. 7.

Willoughby, Victor, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y. Mine car. 2,101,208; Dec. 7.

Winchester Repeating Arms Company. (See Burton, Frank F., assignor.)

Winfield, Edward A., La Canada, assignor to California Machinery & Supply Co., Ltd., Los Angeles, Calif. Automatic throttle control. 2,101,605; Dec. 7.

Wing, Dee A., Detroit, Mich. Ornamental reflector and sign. 2,101,162; Dec. 7.

Winkelmeyer, Robert. (See Michel, C. A., and Winkelmeyer.)

Winograd, Harold, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Rectifying system. 2,101,802; Dec. 7.

Winsor, Roy J., Marion, Ohio. Drag. 2,101,567; Dec. 7.

Wise, Charles H., assignor to Hartford-Empire Company, Hartford, Conn. Furnace construction. 2,101,786; Dec. 7.

Wiskoff, Alfred, Evanston, Ill. Partition assembling and retaining fixture. 2,101,378; Dec. 7.

Wixon, Howard H., Chicago, Ill. Sound recording and reproducing equipment. 2,101,121; Dec. 7.

Wolfe, Joseph A., Seattle, Wash. Pennant and staff means. 2,101,163; Dec. 7.

Wolfe, Wilbur, Carmel, Ind. Milk strainer. 2,101,770; Dec. 7.

Wolff, George F., and W. Congreve, Chicago, Ill. Weather strip. 2,101,278; Dec. 7.

Wonder, Charles E., assignor to Van Cleef Bros., Chicago, Ill. Tape carton. 2,101,355; Dec. 7.

Woodbridge, Joseph L., assignor to The Electric Storage Battery Company, Philadelphia, Pa. Storage battery separator containing a compound of mercury. 2,101,326; Dec. 7.

Woodbury, Francis R., Portland, Oreg. Sound deadening construction. 2,101,568; Dec. 7.

Woodhouse, John C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of polymerizable unsaturated compounds. 2,101,820; Dec. 7.

Woods, Hazel H., Greenville, assignor of forty-eight per cent to A. W. Lynn, Arcanum, Ohio. Burial garment. 2,101,483; Dec. 7.

Woodside, Cornelius S., Verona, N. J., assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, East Pittsburgh, Pa. Light intensity indicator. 2,101,122; Dec. 7.

Worel, Glen J., Minneapolis, assignor to C. M. O'Neil, Hopkins, Minn. Piston expander. 2,101,279; Dec. 7.

Wright, Howard S., assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa. Fountain pen. 2,101,304; Dec. 7.

Wright, Sumner B. (See Osborne, H. S., and Wright.)

Wright, William, assignor of one-half to J. V. Wescott and one-half to C. M. Baker, Chicago, Ill. Railway car coupler positioning device. 2,101,280; Dec. 7.

Wyche, Christopher L., York, Pa. Blower. 2,101,123; Dec. 7.

Wyler, Max, Blackley, Manchester, England, assignor to Imperial Chemical Industries, Limited. Diazo salt preparations. 2,101,664; Dec. 7.

Yarnell, Elizabeth, Elizabeth, N. J. Pulley. 2,101,771; Dec. 7.

Yeadon, Robert. (See Hale, F. C., and Yeadon.)

Yorke, James R. (See Hale, F. C., and Yorke.)

Youker, Malcolm P., assignor to Phillips Petroleum Company, Bartlesville, Okla. Process and apparatus for the conversion of hydrocarbon liquids and gases. 2,101,485; Dec. 7.

Young, Leonard A., Detroit, Mich. Spring structure. 2,101,124; Dec. 7.

Young, Lloyd L. (See Finch, J. L., and Young.)

Zabel, Max. (See Wagner, H., Zabel, and Ensslin.)

Zackowitz, Joseph, Flushing, N. Y. Lathe tool. 2,101,379; Dec. 7.

Zak, William, San Francisco, Calif. Orifice dial valve. 2,101,356; Dec. 7.

Zeiss Ikon Aktiengesellschaft. (See Henkel, Gerhard, assignor.)

Zelov, Victor I., Rosemont, assignor to Cooperative Engineering Co., Philadelphia, Pa. Prime mover governing system. 2,101,486; Dec. 7.

Ziemmerman, Henry, assignor to Chicago Cardboard Company, Chicago, Ill. Folding framed display. 2,101,327; Dec. 7.

Zimmerer, Karl A., Manufacturing Co. Inc. (See Koerber, William G., assignor.)

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 7TH DAY OF DECEMBER, 1937

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Bathing suit removable while dressed. L. H. Bachelis. 20,567; Dec. 7.
Cake icing machine. J. R. Litty and T. B. Lundin. 20,572; Dec. 7.
Control method and apparatus. R. P. Brown. 20,569; Dec. 7.
Cooking machine. G. H. Bushway. 20,570; Dec. 7.
Flush valve. W. E. Sloan. 20,576; Dec. 7.
Fuel injection pump, Liquid. R. L'Orange. 20,573; Dec. 7.
Girdle. M. G. Waksmundzka. 20,577; Dec. 7.
Joint for pavements and the like, Expansion. C. Older. 20,575; Dec. 7.
Motor system, Alternating current. B. D. Bedford. 20,568; Dec. 7.
Package and process, Medicament. P. G. Heineman. 20,571; Dec. 7.
Pump plunger. J. N. Martin. 20,574; Dec. 7.

LIST OF DESIGN INVENTIONS

Apron. V. Alcouloumre. 107,346; Dec. 7.
Apron. M. Mitrani. 107,361; Dec. 7.
Band, Metallic filigree. A. Brackman. 107,309; Dec. 7.
Bathtub. R. H. Zinkil. 107,330; Dec. 7.
Bier. E. C. Babcock. 107,307; Dec. 7.
Booth, Telephone. C. S. Potts. 107,321; Dec. 7.
Bottle. H. D. Henshel. 107,353; Dec. 7.
Bottle. F. McIntosh. 107,360; Dec. 7.
Bracket, Combined curtain rod and shade roller. H. W. Ullrich. 107,328; Dec. 7.
Brassière. W. Rosenthal. 107,362; Dec. 7.
Button. F. H. Fisher. 107,351; Dec. 7.
Cabinet, Self-contained air conditioner. H. F. Weissinger. 107,397; Dec. 7.
Cap, Combination bottle and closure. E. Horney. 107,375; Dec. 7.
Cap, Electrical connecting. R. E. Patten and G. W. Florian. 107,379; Dec. 7.
Case, Refrigerated vegetable display. G. J. Hopkins. 107,315; Dec. 7.
Casing for metalworking machine. G. C. Worrell. 107,398; Dec. 7.
Container, Toilet accessories. E. J. Lux. 107,340; Dec. 7.
Desk. J. R. Clark. 107,349; Dec. 7.
Door for a heater cabinet or the like. M. F. Cotes and W. C. Schneider. 107,384; Dec. 7.
Dress. A. C. Barnhart. 107,347; Dec. 7.
Dress. M. R. Berger. 107,381–2; Dec. 7.
Dress. S. Cicardo. 107,380; Dec. 7.
Dress. S. Cicardo. 107,383; Dec. 7.
Dress. A. Engel. 107,386; Dec. 7.
Dress. B. Fried. 107,387; Dec. 7.
Dress. S. J. Goldfarb. 107,352; Dec. 7.
Dress. M. Hall. 107,388; Dec. 7.
Dress. I. Lampel. 107,391; Dec. 7.
Dress. M. Michelson. 107,376; Dec. 7.
Dress. C. M. Santore. 107,392; Dec. 7.
Dress. M. Stone. 107,393–5; Dec. 7.
Dress. P. Zahn. 107,368; Dec. 7.
Eyecup. B. F. Conner. 107,332; Dec. 7.
Fabric for upholstery, Textile. H. P. Koch. 107,355; Dec. 7.
Fabric, Textile. J. F. Berlinger. 107,369; Dec. 7.
Fabric, Textile. J. W. H. Brooks. 107,348; Dec. 7.
Fabric, Textile. W. Ross. 107,363–4; Dec. 7.
Fabric, Textile. J. W. Snowden. 107,365; Dec. 7.
Fabric, Textile. M. Turpan. 107,366; Dec. 7.
Fabric, Textile. H. W. Wilde. 107,367; Dec. 7.
Fabric, Woven textile. J. G. Levy. 107,356; Dec. 7.
Flask. S. Brandeis. 107,371; Dec. 7.
Guard and lamp, Combined bicycle. G. S. Lewis. 107,358; Dec. 7.
Handbag and vanity case, Combined lady's. J. Gierden. 107,333; Dec. 7.
Hanger and deodorant container, Combined. H. de Benque. 107,385; Dec. 7.
Humidifier. E. H. Horst. 107,335; Dec. 7.
Humidifying device, Electrical. E. A. Reid. 107,344; Dec. 7.
Jewelry setting or similar article. J. J. Fischer. 107,313; Dec. 7.
Lace for a cape or similar article. L. E. Hart and H. E. Lewy. 107,373; Dec. 7.
Lace for a jacket or similar article. L. E. Hart and H. E. Lewy. 107,372; Dec. 7.
Lace for a jacket or similar article. L. E. Hart and H. E. Lewy. 107,374; Dec. 7.
Lamp. V. Nemeroff. 107,343; Dec. 7.
Lamp, Directional signal. E. T. Condon. 107,350; Dec. 7.
Lamp for vehicles, Directional signal. A. and J. Hollins. 107,334; Dec. 7.
Marimba. C. O. Musser. 107,318; Dec. 7.
Meter, Parking. C. H. Martin. 107,316; Dec. 7.
Meter, Parking. C. H. Martin. 107,359; Dec. 7.
Mirror, Decorative. F. H. Nonnenbacher. 107,319–20; Dec. 7.
Mirror, Hand vanity. W. La Hodny. 107,337–9; Dec. 7.
Mirror, Hand vanity. W. La Hodny. 107,377–8; Dec. 7.
Mirror, Hand vanity. W. La Hodny. 107,390; Dec. 7.
Mold, Refrigerating. J. H. de Murguiondo. 107,317; Dec. 7.
Nose device or similar article. B. Jacobson. 107,389; Dec. 7.
Paper, Wrapping. A. Lewin. 107,357; Dec. 7.
Piano. W. Zaiser. 107,329; Dec. 7.
Plate for air exhausting device, Cover. H. Broadwin. 107,399; Dec. 7.
Plate for radio receivers, Escutcheon. R. C. Marholz. 107,341; Dec. 7.
Radio receiving set and bed lamp, Combined. L. Tulauskas. 107,396; Dec. 7.
Range, Electric. O. M. Anderson. 107,331; Dec. 7.
Shingle or the like, Strip. A. C. Fischer. 107,312; Dec. 7.
Shoe. B. Benjamin. 107,308; Dec. 7.
Shoe. C. I. Stoddard. 107,325; Dec. 7.
Signal, Automobile direction. W. M. Wicker, Sr. 107,345; Dec. 7.
Spark arrester, Pipe. C. M. Bly. 107,370; Dec. 7.
Stand, Display. J. A. Kern. 107,336; Dec. 7.
Strap, Wrist watch. A. H. Sauer, Jr. 107,323; Dec. 7.
Table, Drawing. U. C. Holland. 107,354; Dec. 7.
Tire. R. M. Reel. 107,322; Dec. 7.
Tire, Pneumatic. S. P. Thacher. 107,327; Dec. 7.
Toy alphabet picture register or similar article. D. C. Cabalane. 107,310; Dec. 7.
Umbrella and support, Combined. D. P. Talamantes. 107,326; Dec. 7.
Vault, Grave. N. J. Schneiker. 107,324; Dec. 7.
Vehicle body. W. J. Miller. 107,342; Dec. 7.
Wardrobe. G. W. Harding. 107,314; Dec. 7.
Wrench, Torque measuring. A. I. Dunn. 107,311; Dec. 7.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 7TH DAY OF DECEMBER, 1937

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive wheel. R. R. Raber. 2,101,193; Dec. 7.
Acid esters of polyunsaturated higher alcohols, Polycarboxylic. J. H. Werntz. 2,101,227; Dec. 7.
Adhesive applying device. P. Arndt. 2,101,464; Dec. 7.
Acids and esters thereof, Production of dicarboxylic. J. W. Hill and E. W. Spanagel. 2,101,217; Dec. 7.
Aerating machine. W. Fagergren. 2,101,331; Dec. 7.
Aeroplane. R. R. Slayback. 2,101,351; Dec. 7.
Air conditioning system, Automatic. L. L. Cunningham. 2,101,808; Dec. 7.
Air conditioning unit. T. W. Carraway. 2,101,467; Dec. 7.
Air cooled aero engine. H. C. H. Townend. 2,101,724; Dec. 7.
Air flotation separation, Apparatus for. E. M. Rusk. 2,101,295; Dec. 7.
Air or gas conditioning apparatus. W. E. Moore and G. L. Simpson. 2,101,555; Dec. 7.
Aircraft. M. T. Hempe. 2,101,778; Dec. 7.
Aircraft. R. H. Mayo. 2,101,743; Dec. 7.
Aircraft of the rotative-wing type. A. E. Larsen. 2,101,399; Dec. 7.
Airplane engine. W. N. Morgan. 2,101,556; Dec. 7.
Airplane propeller. E. Martin. 2,101,149; Dec. 7.
Alarm apparatus. B. Goldstone. 2,101,059; Dec. 7.
Alarm device for motor vehicles. J. B. Morland. 2,101,407; Dec. 7.
Alarm system. B. Goldstone. 2,101,058; Dec. 7.
Alarm system for detention windows. L. Bayley and R. L. Clingerman. 2,101,040; Dec. 7.
Alkyd resin coating and composition of improved alkali resistance and making same. C. Ellis. 2,101,792; Dec. 7.
Alloy, Aluminum. H. L. Whitman. 2,101,118; Dec. 7.
Alloy, Copper base. E. L. Munson. 2,101,087; Dec. 7.
Alloy, High strength corrosion resistant copper. E. L. Munson. 2,101,625; Dec. 7.
Alloys, Hot workable copper. E. L. Munson. 2,101,626; Dec. 7.
Amides, Manufacturing of unsaturated organic. J. W. C. Crawford and J. Grigor. 2,101,822; Dec. 7.
Aminomethanol-aromatic amine-formaldehyde condensation products, Resinous. G. D. Graves and J. Harmon. 2,101,215; Dec. 7.
Ammonium compounds and preparing them, Quaternary. G. Balle and K. Elsfeld. 2,101,524; Dec. 7.
Amplifier, Radio frequency. M. Byk and J. De Mare. 2,101,670; Dec. 7.
Amusement device, Ball return. A. Szabo. 2,101,658; Dec. 7.
Amusement ride device. V. Stanzel. 2,101,274; Dec. 7.
Animal trap. J. Tschantre. 2,101,482; Dec. 7.
Antenna. R. B. Dome. 2,101,674; Dec. 7.
Antifreezing means. F. A. Kormann. 2,101,472; Dec. 7.
Applicator for tinting hair. T. F. Callaghan. 2,101,310; Dec. 7.
Aralkyl ethers of cellulose, Recovery of. E. J. Lorand. 2,101,032; Dec. 7.
Articles, Apparatus for marking. H. Kershaw. 2,101,219; Dec. 7.
Articles from moldable powder, Producing. K. Gullich. 2,101,540; Dec. 7.
Asbestos product, Impregnated. R. E. Parry. 2,101,449; Dec. 7.
Awning structure. E. S. Waddell. 2,101,695; Dec. 7.
Axle journals, Apparatus for cold rolling. W. L. Scribner and T. V. Buckwalter. 2,101,516; Dec. 7.
Bag: *See*—
Ice bag.
Ball, Blind stitch play. G. S. Lannom, Jr. 2,101,473; Dec. 7.
Barrel rack. L. O. Porter. 2,101,629; Dec. 7.
Barrier for mercury switches. J. H. Payne. 2,101,093; Dec. 7.
Battery charging and testing apparatus. E. W. Breisch. 2,101,571; Dec. 7.
Battery charging apparatus. K. T. Williamson. 2,101,207; Dec. 7.
Battery separator containing a compound of mercury, Storage. J. L. Woodbridge. 2,101,326; Dec. 7.
Bead and applying the same to ornamental wheel disks, Ornamental. G. A. Lyon. 2,101,318; Dec. 7.
Bearing. C. F. Smart. 2,101,759; Dec. 7.
Bearing mounting, Ball. B. C. Robertson. 2,101,346; Dec. 7.
Bearing surfaces, Lubricating. W. W. Weinrich. 2,101,632; Dec. 7.
Bearing unit, Inboard roller. A. H. Oelkers. 2,101,650; Dec. 7.
Beer settling, Apparatus for preventing. W. G. Koerber. 2,101,029; Dec. 7.
Belt, Antenna. S. F. Mashbir, F. G. Kear, G. L. Davies, and W. H. Orton. 2,101,033; Dec. 7.
Bench, Prayer. A. E. Landau. 2,101,259; Dec. 7.
Binder, Grain. A. C. Lindgren and C. R. Raney. 2,101,439; Dec. 7.
Blade cutter, Inserted. F. P. Miller. 2,101,085; Dec. 7.
Blank, Denture. F. Groff. 2,101,431; Dec. 7.
Block: *See*—
Building block.
Blower. C. L. Wyche. 2,101,123; Dec. 7.
Blower for vacuum cleaners. E. Gorissen. 2,101,390; Dec. 7.
Blowpipe. O. R. Rice. 2,101,270; Dec. 7.
Board: *See*—
Lockable ironing board.
Boiler: *See*—
Superheater boiler.
Bolting machine. E. Schultz. 2,101,722; Dec. 7.
Bookbinding. P. W. Bidwell. 2,101,804; Dec. 7.
Bottle, Nonreusable. W. Riedel. 2,101,598; Dec. 7.
Bottle tapping device, Nonrefillable. M. Greenbaum. 2,101,471; Dec. 7.
Box: *See*—
Powder box.
Stone box.
Box making machine. A. L. Rosenmund. 2,101,457; Dec. 7.
Brace: *See*—
Rail brace.
Brake: *See*—
Car brake.
Clasp brake.
Brake appliance, Automatic trailer. A. Sandul. 2,101,600; Dec. 7.
Brake for aeroplanes, Air. W. Meinert. 2,101,443; Dec. 7.
Brake mechanism, Air. A. L. Goodknight. 2,101,708; Dec. 7.
Braking device for rotating machine parts. L. C. Brisson. 2,101,425; Dec. 7.
Branding machine. W. P. Bullard and O. L. Williams. 2,101,775; Dec. 7.
Brassière. S. W. Kunstadter. 2,101,716; Dec. 7.
Bread, Apparatus for and method of cooling. W. W. Reece. 2,101,651; Dec. 7.
Brief case construction. W. Satz. 2,101,459; Dec. 7.
Brush. C. G. Rowland. 2,101,799; Dec. 7.
Brush, Meat block. F. D. Johnson. 2,101,394; Dec. 7.
Buckle, Belt. J. R. La Vigne. 2,101,585; Dec. 7.
Building block. C. E. Johnson. 2,101,181; Dec. 7.
Building constructions. C. J. Fox. 2,101,777; Dec. 7.
Building element and building made therefrom, Structural. G. F. Kotrbaty. 2,101,073; Dec. 7.
Building system and construction units and elements therefor. G. F. Kotrbaty. 2,101,074; Dec. 7.
Cabinet and business machine stand, Combined. W. A. Anderson. 2,101,230; Dec. 7.
Cabinet for mechanical refrigerators and appurtenances thereof. L. M. Crosley. 2,101,702; Dec. 7.
Cabinet, Storage. H. F. Beers. 2,101,465; Dec. 7.
Cable, Submarine signaling. J. Engler and E. Studt. 2,101,386; Dec. 7.
Caffeine collector. A. C. Waldvogel. 2,101,418; Dec. 7.
Calculating machine. A. A. Overbury. 2,101,818; Dec. 7.
Calculating machine. E. C. Walter. 2,101,766–7; Dec. 7.
Calculator. W. Taylor. 2,101,298; Dec. 7.
Cam grinding apparatus. C. J. Green. 2,101,796; Dec. 7.
Camera, Photographic. G. Henkel. 2,101,543; Dec. 7.
Can marking and displaying device. N. Snelling. 2,101,565; Dec. 7.
Can tester. A. M. Cameron. 2,101,129; Dec. 7.
Candelabra. T. Hall. 2,101,578; Dec. 7.
Canteen, cooking, and mess kit, Combined. W. H. N. Stevens. 2,101,414; Dec. 7.
Cap for personal wear, Net. J. S. Chapple. 2,101,734; Dec. 7.
Cap, Radiator. L. P. Saunders and P. S. Rosenberg. 2,101,756; Dec. 7.
Car brake. B. F. Kurtz. 2,101,717; Dec. 7.
Car end construction, Mine. W. F. Dietrichson. 2,101,169; Dec. 7.
Car construction. J. P. Anderson. 2,101,698; Dec. 7.
Car, Hopper. A. E. Ostrander, R. W. Joy, and A. Kassler. 2,101,448; Dec. 7.
Car, Lightweight railway. W. H. Mussey and M. P. Blomberg. 2,101,557; Dec. 7.
Car, Mine. H. P. Field. 2,101,171; Dec. 7.
Car, Mine. V. Willoughby. 2,101,208; Dec. 7.
Car, Refrigerator. G. C. George. 2,101,736; Dec. 7.

Car retarder, Railway. J. W. Livingston. 2,101,184; Dec. 7.
Carburetor with choke control. A. R. Baker. 2,101,039; Dec. 7.
Card, Tabulating. L. C. Conradi and A. M. Fairbrother. 2,101,427; Dec. 7.
Carpeting. D. B. Bonner. 2,101,359; Dec. 7.
Carriage release for lathes. L. H. Randall. 2,101,754; Dec. 7.
Carton. W. G. Piper. 2,101,282; Dec. 7.
Carton. C. W. White. 2,101,522; Dec. 7.
Carton for and method of packaging furniture. A. V. MacDonald, R. A. Minkler, and H. Iske. 2,101,403; Dec. 7.
Carton, Tape. C. E. Wonder. 2,101,355; Dec. 7.
Case and dust pan construction, Carpet sweeper. H. C. Dilliard. 2,101,133; Dec. 7.
Cash register, accounting and the like machine. E. Breitling and H. Schwenk. 2,101,636; Dec. 7.
Casting. W. E. Gordon. 2,101,061; Dec. 7.
Catalyst for hydrogenating hydrocarbons. H. M. Smith and H. T. Rall. 2,101,104; Dec. 7.
Ceiling washer. A. C. Grueschow. 2,101,216; Dec. 7.
Cellulose and like material in a continuous web, Method and apparatus for drying. S. Wellmar. 2,101,301; Dec. 7.
Cellulose derivatives, Continuous preparation of. R. W. Maxwell. 2,101,263; Dec. 7.
Cellulose etherification. R. W. Maxwell. 2,101,262; Dec. 7.
Cellulosic esters, Producing mixed. O. Sindl and G. Frank. 2,101,413; Dec. 7.
Cement. W. E. Tyler, T. B. Douglas, P. R. Chamberlain, and R. A. Loveland. 2,101,299; Dec. 7.
Center spot crowns, Making. B. Cohn. 2,101,131; Dec. 7.
Chain: *See*—
Drive chain.
Chain for automobile tires, Emergency. H. W. Lisowitz. 2,101,588; Dec. 7.
Chain truing device, Sprocket. W. Gegenheimer. 2,101,172; Dec. 7.
Chair: *See*—
Invalid chair.
Chair or the like, Open bottom, floating top spring cushion. R. E. Eaton. 2,101,054; Dec. 7.
Chemical process. J. G. Moore. 2,101,223; Dec. 7.
Chill mold. E. Mahle. 2,101,404; Dec. 7.
Chute, Lifesaving. L. Simpson. 2,101,284; Dec. 7.
Cigarette extinguisher. H. R. Spangler. 2,101,200; Dec. 7.
Cigarette stub receiver and extinguisher. F. C. Osborn. 2,101,593; Dec. 7.
Cinematograph, Advertising. G. H. Babb. 2,101,126; Dec. 7.
Circuit arrangement, Selective. E. Klotz, K. Wilhelm, and H. O. Roosenstein. 2,101,715; Dec. 7.
Circuit closer, Liquid contact. R. F. Sambleson. 2,101,101; Dec. 7.
Circuit, Testing. A. E. Hague. 2,101,254; Dec. 7.
Circuit, Linear amplifier. H. Bartels. 2,101,525; Dec. 7.
Circuit, Neutralized coupling. N. E. Lindenblad. 2,101,438; Dec. 7.
Circuits, Amplifier coupling. C. W. Earp. 2,101,247; Dec. 7.
Circuits for radio receivers, Silencing. J. J. Lamb. 2,101,549; Dec. 7.
Circular loom. F. C. Hale and R. Yeadon. 2,101,022; Dec. 7.
Circular loom. F. C. Hale and J. R. Yorke. 2,101,023; Dec. 7.
Circular loom. W. Pool. 2,101,283; Dec. 7.
Clamp: *See*—
Friction clamp. Plate clamp.
Clamp head. S. A. Prewitt. 2,101,192; Dec. 7.
Clamping device. F. J. Lemieux. 2,101,317; Dec. 7.
Clasp brake. W. H. Baselt. 2,101,488; Dec. 7.
Clasp, Collar. A. W. Crain. 2,101,493; Dec. 7.
Clasp for collars. J. H. Heckman. 2,101,617; Dec. 7.
Classifier, Pneumatic. M. Frisch. 2,101,249; Dec. 7.
Cleaner: *See*—
Vacuum cleaner.
Cleaner for conveyers. M. N. Penny. 2,101,751; Dec. 7.
Clip. R. E. Marsh. 2,101,551–2; Dec. 7.
Clips, Manufacturing paper. H. D. Randall. 2,101,195; Dec. 7.
Clock. G. M. Buehrig. 2,101,235; Dec. 7.
Clock, Luminous. F. E. Montroy. 2,101,339; Dec. 7.
Clothespin. E. Lognion. 2,101,742; Dec. 7.
Clutch: *See*—
Friction clutch. Magnetic clutch.
Clutch. S. M. Crewdson. 2,101,242; Dec. 7.
Clutch device. N. Frank. 2,101,366; Dec. 7.
Clutch disk, Driven. H. Nutt and H. V. Reed. 2,101,411; Dec. 7.
Clutch mechanism. D. Vermette. 2,101,484; Dec. 7.
Clutch mechanism, Synchronizing. E. A. Thompson. 2,101,828; Dec. 7.
Clutch plate. H. Nutt and H. V. Reed. 2,101,410; Dec. 7.
Clutch plate, Friction. B. A. Swennes. 2,101,297; Dec. 7.
Coal and the like, Apparatus for the separation of. K. C. Appleyard. 2,101,381; Dec. 7.
Coat, House. E. Sayour. 2,101,564; Dec. 7.
Coil handling apparatus. H. R. Gotthardt. 2,101,738; Dec. 7.
Coin actuated switch. C. G. Johnson. 2,101,546; Dec. 7.
Coin sorting device. H. Samuelsen and J. de R. Kielland. 2,101,513; Dec. 7.
Coke, Producing. M. B. Cooke, H. C. Schutt, and J. W. Throckmorton. 2,101,641; Dec. 7.
Collapsible and separable table. W. G. Cramer and E. Bachelier. 2,101,573; Dec. 7.
Collar and making the same. L. P. Madsen. 2,101,798; Dec. 7.
Color analyzing apparatus. H. Ketcham. 2,101,741; Dec. 7.
Color effects on skins or furs, Producing two. H. Wagner, M. Zabel, and A. Enselin. 2,101,696; Dec. 7.
Combination latch. W. Barclay. 2,101,210; Dec. 7.
Communication system. A. L. Sprecker. 2,101,421; Dec. 7.
Composite article. C. A. Cabell. 2,101,128; Dec. 7.
Composite product. H. G. Kittredge and F. W. Williams 2,101,182; Dec. 7.
Compounds, Preparation of polymerizable unsaturated. J. C. Woodhouse. 2,101,820; Dec. 7.
Concrete and the like, Apparatus for handling. C. E. Little. 2,101,031; Dec. 7.
Condenser: *See*—
Electrical condenser. Tape condenser.
Confection making machine. E. A. Bolen. 2,101,570; Dec. 7.
Confections, Method and apparatus for coating. W. S. Cloud. 2,101,240; Dec. 7.
Connecter or terminal, Electric. J. J. Jolliffe. 2,101,713; Dec. 7.
Connecter plug, Electrical. L. H. Riley. 2,101,345; Dec. 7.
Connection, Conveyer section. C. N. Bebinger. 2,101,017; Dec. 7.
Connection for rock drills, Air or water tube. E. B. Lear. 2,101,144; Dec. 7.
Contactor construction. H. L. Van Valkenburg 2,101,288; Dec. 7.
Container: *See*—
Dispensing container. Temperature control container.
Heat treating container.
Container and making same, Sheet-material. J. Brenzinger. 2,101,530; Dec. 7.
Control device. H. Weber. 2,101,160; Dec. 7.
Control device, Mechanical. M. T. Weston. 2,101,117, Dec. 7.
Control for internal combustion engines, Thermostatic C. H. and P. J. Jorgensen. 2,101,369; Dec. 7.
Control of electric arc lamps. L. Burns. 2,101,789; Dec. 7.
Control system. J. D. Lewis, H. Waters, and O. A. Krauer. 2,101,146; Dec. 7.
Control system, Remote. R. Pudelko. 2,101,269; Dec. 7.
Control unit for line casting machines. L. M. Walden. 2,101,113; Dec. 7.
Conveyer driving mechanism. C. N. Bebinger. 2,101,018; Dec. 7.
Conveyer, Gathering or pick-up. F. Cartlidge. 2,101,238; Dec. 7.
Conveyer mechanism. G. Waalkes. 2,101,353; Dec. 7.
Cooker, Portable. C. Jacobs. 2,101,180; Dec. 7.
Core and dry binder for the preparation thereof, Foundry. W. W. De Laney. 2,101,330; Dec. 7.
Corncob smoking pipe. H. Hirschl. 2,101,740; Dec. 7.
Corner unit, Building. R. S. Maclean. 2,101,589; Dec. 1.
Cotton picking machine. J. D. and M. D. Rust. 2,101,100; Dec. 7.
Coupler positioning device, Railway car. W. Wright. 2,101,280; Dec. 7.
Coupling: *See*—
Flexible coupling. Trailer hitch coupling.
Pipe coupling.
Coupling. R. S. McKeever. 2,101,405; Dec. 7.
Cream dispenser. W. F. Coleman. 2,101,020; Dec. 7.
Cross-roll mill. W. J. Assel. 2,101,357; Dec. 7.
Crusher for used safety razor blades. G. E. Chesnut. 2,101,700; Dec. 7.
Cupola, Foundry. L. A. Grotewohl. 2,101,391; Dec. 7.
Curling ring, Can end. W. E. Burns. 2,101,309; Dec. 7.
Current, Controlling the flow of electric. M. J. Huggins. 2,101,068; Dec. 7.
Current signaling system, Alternating. M. Baesecke and H. Mayer. 2,101,699; Dec. 7.
Curtain tie-back securing device. W. S. Weldon. 2,101,377; Dec. 7.
Cushion rest, Metatarsal rubber. J. E. Stagl. 2,101,761; Dec. 7.
Cushion, Spool needle. F. Goertz. 2,101,250; Dec. 7.
Cutter: *See*—
Blade cutter.
Cutting mechanism for bag machines, Web. G. W. Poppe. 2,101,101; Dec. 7.
Cyanhydrins, Preparing. H. R. Dittmar. 2,101,823; Dec. 7.
Cylinder, Compound master. R. N. Baughn. 2,101,772; Dec. 7.
Cylinder lock. F. W. Kenney. 2,101,779; Dec. 7.
Dampening mechanism for printing presses. B. D. Stevens. 2,101,202; Dec. 7.
Damper, Automatic check. W. Kemp. 2,101,315; Dec. 7.
Dashpot. B. Radtke. 2,101,194; Dec. 7.
Dehydrator. F. Y. Takenaga. 2,101,352; Dec. 7.
Detector of invisible radiation, Visible. C. W. Hansell. 2,101,139; Dec. 7.

Device for applying mascara and similar material. L. Daly and M. Johannsen. 2,101,132; Dec. 7.
Device for the deflection of electron beams. E. Brüche and W. Henneberg. 2,101,669; Dec. 7.
Diaper. M. C. Rhodes. 2,101,453; Dec. 7.
Diazo salt preparations. M. Wyler. 2,101,664; Dec. 7.
Die: *See*—
Drawing die.
Differential gauge. M. Klein and B. Willach. 2,101,028; Dec. 7.
Disk, Levee. R. and A. Olson. 2,101,187; Dec. 7.
Dispenser: *See*—
Cream dispenser. Paper dispenser.
Drink dispenser. Powder dispenser.
Oil dispenser. Powder puff dispenser.
Dispensing container. L. R. Paul. 2,101,687; Dec. 7.
Display device. M. D. Pollinger and H. J. Watson. 2,101,450; Dec. 7.
Display device having a lustrous portion, Adjustable. N. J. Leigh. 2,101,683; Dec. 7.
Display, Folding framed. H. Ziemmerman. 2,101,327; Dec. 7.
Doll. E. G. Schaeffer. 2,101,102; Dec. 7.
Door, Clock. O. G. Williams. 2,101,325; Dec. 7.
Door lock. H. H. Kistner. 2,101,812; Dec. 7.
Door or hatch construction, Ship. A. L. and F. M. Lambert. 2,101,550; Dec. 7.
Door or portion thereof, Automatic upwardly-movable. S. Lux. 2,101,147; Dec. 7.
Dough molding machine. L. J. P. Maas. 2,101,621; Dec. 7.
Drafting instrument. T. T. Erickson. 2,101,365; Dec. 7.
Drag. R. J. Winsor. 2,101,567; Dec. 7.
Drawing die. H. H. Richardson. 2,101,689; Dec. 7.
Drill: *See*—
Nonfouling drill.
Drink dispenser, Cool. W. W. Philley. 2,101,190; Dec. 7.
Drive chain. D. B. Perry. 2,101,341; Dec. 7.
Drive, Constant speed controlled. C. J. Meyers. 2,101,084; Dec. 7.
Drive, Spinning bucket. E. H. Hull. 2,101,679; Dec. 7.
Drive, Spinning bucket. F. C. Linn. 2,101,684; Dec. 7.
Drive, Supercharger. R. Chilton. 2,101,239; Dec. 7.
Driving mechanism, Automotive. W. C. Starkey. 2,101,275; Dec. 7.
Dye composition, Vat. H. W. Wass and H. J. Rupright. 2,101,828; Dec. 7.
Dyestuffs and their manufacture, Arylamino anthraquinone. A. Peter. 2,101,094; Dec. 7.
Earth moving machine. F. P. Lawler. 2,101,400; Dec. 7.
Electric control device. M. L. Goldbert and R. T. Watts. 2,101,430; Dec. 7.
Electric discharge tube. W. Dällenbach. 2,101,610; Dec. 7.
Electric furnace. J. Ferguson. 2,101,675; Dec. 7.
Electric generator. K. A. Harmon. 2,101,392; Dec. 7.
Electric lamp, Miniature. F. C. Wappler. 2,101,277; Dec. 7.
Electric motor. P. Warnick and W. H. Scott. 2,101,116; Dec. 7.
Electric switch. J. Figueira. 2,101,539; Dec. 7.
Electrical condenser. H. Muth and W. Runge. 2,101,153; Dec. 7.
Electrical impulses, Recording of. H. Weber. 2,101,419; Dec. 7.
Electrical measuring instrument. R. Simpson and G. H. Koch. 2,101,296; Dec. 7.
Electrical precipitation apparatus. W. Deutsch. 2,101,168; Dec. 7.
Electrical switch. Q. De Fellce. 2,101,429; Dec. 7.
Electromagnetic apparatus. P. H. Crago. 2,101,166; Dec. 7.
Electromagnetic apparatus. C. G. Kronmiller. 2,101,548; Dec. 7.
Electrotype plates, Producing. M. H. Muse. 2,101,591; Dec. 7.
Enameling process, Vitreous. H. F. Gilbert. 2,101,616; Dec. 7.
Engine: *See*—
Air cooled aero engine. Internal combustion engine.
Airplane engine.
Engine and injecting device therefor, Internal combustion. A. J. Meyer. 2,101,554; Dec. 7.
Envelope, Duplex. C. F. Pflanze. 2,101,342; Dec. 7.
Envelope machine. A. Novick. 2,101,268; Dec. 7.
Exhaust device. H. J. Berman. 2,101,667; Dec. 7.
Extracting and drying system. E. A. Stienen. 2,101,461; Dec. 7.
Extractor. V. H. Roehrich. 2,101,819; Dec. 7.
Eyeglasses. M. Kaplan. 2,101,026; Dec. 7.
Eyelet. S. L. Gookin. 2,101,060; Dec. 7.
Fabrics, Uninterrupted knitting of shaped. A. E. Ischinger. 2,101,048; Dec. 7.
Fabrics with figured backs, Producing double warp pile. H. Theunissen. 2,101,286; Dec. 7.
Fastener: *See*—
Hasp fastener.
Fastening device. G. A. Tinnerman. 2,101,287; Dec. 7.
Fats, Process for finishing. H. A. Keck. 2,101,501; Dec. 7.
File, Drawing and map. A. H. Meuche. 2,101,034; Dec. 7.
Fence, Bench saw rip. T. L. Hedgpeth. 2,101,709; Dec. 7.
Fertilizer. J. W. Corey. 2,101,807; Dec. 7.
Filling machine. J. G. F. Augustin. 2,101,232; Dec. 7.
Film moving mechanism. H. R. Ellinwood. 2,101,469; Dec. 7.
Filter. K. B. Britton. 2,101,211; Dec. 7.
Filter and primer for oil burners, Combined. M. C. Bennett. 2,101,424; Dec. 7.
Filter pad. A. W. Franzmeier. 2,101,811; Dec. 7.
Fire escape. P. V. Della Santina, A. Nelson, and F. Della Santina. 2,101,053; Dec. 7.
Fire escape. B. Vale. 2,101,659; Dec. 7.
Firearms, Cartridge-ejecting mechanism for. F. F. Burton. 2,101,236; Dec. 7.
Fish hook. L. S. Chilcott. 2,101,491; Dec. 7.
Fixture, Toilet. R. M. Willis. 2,101,523; Dec. 7.
Flame producing mechanism. L. V. Aronson. 2,101,125; Dec. 7.
Flexible coupling. H. C. and T. Lord. 2,101,078; Dec. 7.
Flexible seat support. L. Assalit. 2,101,422; Dec. 7.
Flocculation. A. J. Fischer. 2,101,810; Dec. 7.
Floor construction. H. A. Faber. 2,101,538; Dec. 7.
Flotation process. H. P. A. Groll. 2,101,647; Dec. 7.
Fluid displacement device, Rotary. E. A. Cuny. 2,101,051; Dec. 7.
Fluid displacement device, Rotary. E. A. Cuny. 2,101,428; Dec. 7.
Foil capping machine. R. N. Cundall and H. E. Gantzer. 2,101,533; Dec. 7.
Food dispensing device. F. K. Krag. 2,101,075; Dec. 7.
Food product and forming same, Chocolate malted milk. M. E. Tucker. 2,101,374; Dec. 7.
Food product and making same. R. Whitaker, S. M. Weisberg, and L. D. Hilker. 2,101,633; Dec. 7.
Foot exercising device. F. W. Lang. 2,101,503; Dec. 7.
Form for structural material, Molding. D. M. Bowes. 2,101,019; Dec. 7.
Forms, Apparatus for guiding paper. P. A. Jackson. 2,101,433; Dec. 7.
Frame and support, Expansible. L. J. Jagus. 2,101,500; Dec. 7.
Freewheeling device for aeroplane propellers. J. H. Knobeck. 2,101,781; Dec. 7.
Friction clamp. M. Manfredi. 2,101,746; Dec. 7.
Friction clutch. H. V. Reed. 2,101,293; Dec. 7.
Fuel distributor, Sectional. H. P. Anderson. 2,101,463; Dec. 7.
Fuel feed means. G. R. Ericson. 2,101,536; Dec. 7.
Fuel pump, Liquid. R. L'Orange. 2,101,221; Dec. 7.
Fuel system for internal combustion engines. R. W. Hautzenroeder. 2,101,064; Dec. 7.
Furnace: *See*—
Electric furnace. Heat treatment furnace.
Furnace, S. Beck. 2,101,423; Dec. 7.
Furnace construction. C. H. Wise. 2,101,786; Dec. 7.
Fuse. M. L. Mathsen. 2,101,082; Dec. 7.
Galvanizing composition. F. D. McBride. 2,101,816; Dec. 7.
Game. H. A. Swart. 2,101,764; Dec. 7.
Game, Amusement. B. W. and H. S. Williams. 2,101,302; Dec. 7.
Game apparatus. J. W. Orcutt, H. A. Stearns, and T. L. Wall. 2,101,188; Dec. 7.
Game apparatus. C. R. Simpkins. 2,101,201; Dec. 7.
Game apparatus. H. E. Williams. 2,101,354; Dec. 7.
Game, Twin marble skill. A. Szabo. 2,101,657; Dec. 7.
Garment, Burial. H. H. Woods. 2,101,483; Dec. 7.
Garment hanger. R. O. Ross. 2,101,294; Dec. 7.
Garment, Sleeping. L. Cohen. 2,101,701; Dec. 7.
Gas burning and control apparatus. G. Herbster. 2,101,393; Dec. 7.
Gas generator. Free piston driving. R. Pateras Pescara. 2,101,412; Dec. 7.
Gas mixer. G. A. Pickett. 2,101,477; Dec. 7.
Gas tank lock, Electromagnetic. P. Shaffer. 2,101,758; Dec. 7.
Gate: *See*—
Sluice gate.
Gauge: *See*—
Indicator gauge. Press gauge.
Gear: *See*—
Reversible reduction gear.
Gear shifting mechanism, Automatic. E. A. Thompson. 2,101,825; Dec. 7.
Geared motor. W. P. Schmitter. 2,101,515; Dec. 7.
Generator: *See*—
Electric generator. Gas generator.

Manganese compounds of nucleotides and of their hydrolytic decomposition products. S. L. Ruskin. 2,101,099; Dec. 7.

Marking machine. C. F. Eaton. 2,101,705; Dec. 7.
Massage instrument for treating the prostate gland. W. D. Smith. 2,101,273; Dec. 7.
Match packet. H. C. Traute. 2,101,111; Dec. 7.
Material, Apparatus for winding. E. E. Franz. 2,101,248; Dec. 7.
Material handling apparatus. W. S. Howard. 2,101,067; Dec. 7.
Material, Making a paving. J. W. Fraser. 2,101,614; Dec. 7.
Material, Patching. D. J. Block. 2,101,607; Dec. 7.
Material, Trimming. A. Topiel. 2,101,521; Dec. 7.
Material with a liquefied reagent, Apparatus for reacting strip. E. Gebauer-Fuelnegg and E. M. Kratz. 2,101,138; Dec. 7.
Materials, Apparatus for measuring liquid or fluent. M. Vogel-Jorgensen. 2,101,257; Dec. 7.
Materials, Drying. C. S. Jennings and F. W. Gerard. 2,101,335; Dec. 7.
Materials, Electromagnetic testing of. C. Kinsley. 2,101,780; Dec. 7.
Materials, Means for use in automatically weighing predetermined quantities of discrete. E. Coubray. 2,101,384; Dec. 7.
Materials, Method of and apparatus for treating. W. Casey. 2,101,042; Dec. 7.
Materials, Pigmenting fibrous. E. Götte and W. Kling. 2,101,251; Dec. 7.
Materials, Treating leguminous. M. Bonotto. 2,101,805; Dec. 7.
Mats, Apparatus for manufacturing. H. M. Pryale and S. C. Clark. 2,101,508; Dec. 7.
Measuring instrument. H. A. Toulmin, Jr. 2,101,203; Dec. 7.
Mercaptans, Production of. R. Reuter and F. L. Gaus. 2,101,096; Dec. 7.
Mercury switch. U. C. Hedin and C. H. Larson. 2,101,824; Dec. 7.
Merry-go-round. H. J. Niebuhr. 2,101,719; Dec. 7.
Metal, Joining lengths of. H. J. Sharp. 2,101,349; Dec. 7.
Meters, Method and apparatus for calibrating and proving. A. D. MacLean. 2,101,745; Dec. 7.
Milk, Treating. E. W. Smith. 2,101,103; Dec. 7.
Mill: *See*—
Cross-roll mill.
Rolling mill.
Tumbling mill.
Mitten, Dusting. D. Karger. 2,101,027; Dec. 7.
Milling machine transmission and control mechanism. H. R. Isler. 2,101,544; Dec. 7.
Mineral separator. J. Broatch. 2,101,572; Dec. 7.
Mixing machine. F. J. Bullock and W. H. Preston. 2,101,490; Dec. 7.
Mold: *See*—
Chill mold.
Hydraulic mold.
Mold-flask separator. A. H. Feldman. 2,101,776; Dec. 7.
Molds, Apparatus for producing. H. F. Hagemeyer. 2,101,677; Dec. 7.
Molds used for casting metal pipes and the like by the centrifugal method, Manufacture of. A. J. van Zijp. 2,101,726; Dec. 7.
Molding composition. E. Elbel and F. Seebach. 2,101,642; Dec. 7.
Molding compositions and molding. D. E. Strain. 2,101,107; Dec. 7.
Monoamides of dicarboxylic acids and preparing the same. P. L. Salzberg. 2,101,323; Dec. 7.
Monomethyl-para-aminophenol and its sulphate, Manufacture of. S. Norman. 2,101,749–50; Dec. 7.
Motor: *See*—
Electric motor.
Geared motor.
Hydraulic motor.
Synchronous motor.
Motor propelled wheeled roller. B. Moore, Jr. 2,101,150; Dec. 7.
Mounting for bread slicing knife frames, Guide. N. W. Lyon. 2,101,402; Dec. 7.
Mounting, Gear shift lever. B. H. Anibal. 2,101,727; Dec. 7.
Mounting, Linter gin rib. G. C. Morgan. 2,101,151; Dec. 7.
Mounting, Panel. C. G. Duffy. 2,101,612; Dec. 7.
Mounting, Rock drill. J. C. Curtis. 2,101,672; Dec. 7.
Mower, Lawn. A. L. Haugen. 2,101,739; Dec. 7.
Muffler. O. C. Fischer. 2,101,389; Dec. 7.
Muzzle attachment for guns. S. G. Green. 2,101,063; Dec. 7.
Neck construction for a stringed musical instrument. R. Dopyera. 2,101,364; Dec. 7.
Negative, Apparatus for measuring the region of density of a. K. Huber. 2,101,710; Dec. 7.
Nitrocellulose emulsion. C. B. Hollabaugh. 2,101,066; Dec. 7.
Nonfouling drill. W. Vanderpool. 2,101,566; Dec. 7.
Novelty display. M. Y. Ogg. 2,101,592; Dec. 7.
Nozzle for flat-spraying appliances, Air. E. Gustafsson. 2,101,175; Dec. 7.
Nut and bolt assembling machine. H. H. Gray. 2,101,367; Dec. 7.
Nut lock. A. J. Herschmann. 2,101,678; Dec. 7.
Oil and making same, Altered tung. C. Ellis. 2,101,791; Dec. 7.
Oil conversion, Hydrocarbon. J. D. Seguy. 2,101,517; Dec. 7.
Oil dispenser. A. L. Dale. 2,101,468; Dec. 7.
Oil recovery. V. G. Lava. 2,101,371; Dec. 7.
Oils, Cracking hydrocarbon. H. C. Schutt. 2,101,800; Dec. 7.
Oils, Lubricating. J. Cole. 2,101,241; Dec. 7.
Oils, Producing lubricating. U. B. Bray and C. E. Swift. 2,101,308; Dec. 7.
Oils, Treating hydrocarbon. C. W. Nofsinger and P. C. Keith, Jr. 2,101,088; Dec. 7.
Opener, Boiled egg. C. Coppin. 2,101,212; Dec. 7.
Operating apparatus for flyer frames. E. Kato. 2,101,395; Dec. 7.
Organic compounds, Manufacture of unsaturated. J. W. C. Crawford. 2,101,821; Dec. 7.
Organisms on various plant materials, Killing and controlling. A. Horner. 2,101,584; Dec. 7.
Orifice dial valve. W. Zak. 2,101,356; Dec. 7.
Orthopedic table. W. L. Bell. 2,101,466; Dec. 7.
Oscillator and the like, Triode. Y. Rocard. 2,101,563; Dec. 7.
Oscillator for use with kinescope deflecting circuits. W. A. Tolson and J. R. Duncan. 2,101,520; Dec. 7.
Packing, Metallized fibrous. H. T. Stewart. 2,101,518; Dec. 7.
Pad: *See*—
Filter pad.
Padlock. G. F. Mayer. 2,101,264; Dec. 7.
Pail, Dinner. K. E. Porter. 2,101,281; Dec. 7.
Paper dispenser. E. T. Bodette. 2,101,307; Dec. 7.
Partition assembling and retaining fixture. A. Wiskoff. 2,101,378; Dec. 7.
Passbook or the like. T. B. Radabaugh. 2,101,292; Dec. 7.
Pavements, Process of constructing. S. E. Finley. 2,101,388; Dec. 7.
Pen, Fountain. H. S. Wright. 2,101,304; Dec. 7.
Pennant and staff means. J. A. Wolfe. 2,101,163; Dec. 7.
Percussive boring tool. H. Voigtländer. 2,101,376; Dec. 7.
Perforations of small diameter in bands of cellulose foil, metal foil and the like, Producing. A. Rambold. 2,101,753; Dec. 7.
Pessaries, Making. R. M. Hay. 2,101,255; Dec. 7.
Petroleum oils, Fractionation of. E. F. Engelke. 2,101,643; Dec. 7.
Phase modulation receiver. M. G. Crosby. 2,101,703; Dec. 7.
Piling, Tubular interlocking. E. F. Stevens. 2,101,285; Dec. 7.
Pipe: *See*—
Corn cob smoking pipe.
Pipe coupling. R. S. McKeever. 2,101,406; Dec. 7.
Pipe joint. A. E. Osborn. 2,101,155; Dec. 7.
Pipe thread protector. L. R. Schmaus. 2,101,514; Dec. 7.
Piston expander. G. J. Worel. 2,101,279; Dec. 7.
Piston ring. C. Curtis. 2,101,244; Dec. 7.
Pistons, Apparatus for making. G. H. Blettner. 2,101,043; Dec. 7.
Pistons, Casting. G. H. Blettner. 2,101,046; Dec. 7.
Piston ring. F. W. Wilkening. 2,101,120; Dec. 7.
Pistons, Making. G. H. Blettner. 2,101,044; Dec. 7.
Pitot tube. E. S. and E. S. Cole, and L. J. Hooper. 2,101,165; Dec. 7.
Plate clamp. W. Gegenheimer. 2,101,173; Dec. 7.
Plows, Auxiliary moldboard attachment for. M. E. Wagler. 2,101,661; Dec. 7.
Plug: *See*—
Connecter plug.
Plug for barrels and other tanks, fire-tube and water-tube boilers, Expansion. W. Kunze. 2,101,030; Dec. 7.
Polishing compound. H. J. Hosking. 2,101,050; Dec. 7.
Post: *See*—
Lathe tool post.
Potato chips, Making dehydrated. E. M. and F. L. Morrow. 2,101,506; Dec. 7.
Powder box. A. H. Dreux and J. N. Royal. 2,101,809; Dec. 7.
Powder dispenser. A. Vanderveld. 2,101,375; Dec. 7.
Powder puff dispenser. E. Hamer. 2,101,579; Dec. 7.
Power transmission mechanism, Synchronized. E. A. Thompson. 2,101,827; Dec. 7.
Precision grinding machine. H. H. Asbridge. 2,101,383; Dec. 7.
Prepaying machine for mail, Coin controlled. W. Friedrichs. 2,101,615; Dec. 7.
Press. A. A. Byerlein. 2,101,527; Dec. 7.
Press gauge. W. J. Mercer. 2,101,083; Dec. 7.
Pressing machine and control mechanism. J. P. Daly. 2,101,021; Dec. 7.
Prime mover governing system. V. I. Zelov. 2,101,486; Dec. 7.
Printing mechanism, Record controlled. W. Lang. 2,101,435; Dec. 7.
Printing plate and mounting the same. A. B. Davis. 2,101,052; Dec. 7.
Prism combination for three color photography and cinematography. L. Bellingham and F. and G. F. Stanley. 2,101,728; Dec. 7.
Privacy system. H. S. Osborne and S. B. Wright. 2,101,224; Dec. 7.
Products for rendering the urine bacteriostatic. T. H. Rider, R. Shelton, and J. Haynes. 2,101,097; Dec. 7.
Propeller, Reversible. S. M. F. Engdahl. 2,101,535; Dec. 7.
Protector: *See*—
Pipe thread protector.
Thread protector.
Proteins, Hardening of. C. Dangelmajer. 2,101,574; Dec. 7.

Pulley. E. Yarnell. 2,101,771; Dec. 7.
Pulley, Variable speed. O. E. Pensbee. 2,101,594; Dec. 7.
Pulp, Bleaching of. J. A. Extrom and H. Martin. 2,101,706; Dec. 7.
Pulper. H. R. Lewis. 2,101,620; Dec. 7.
Pump: *See*—
Fuel pump. Rodless pump.
Pump or motor, High pressure hydraulic. E. K. Benedek. 2,101,730; Dec. 7.
Pump or motor, Hydraulic. E. K. Benedek. 2,101,729; Dec. 7.
Rack: *See*—
Barrel rack.
Slide staining and heating rack.
Rack for cooking utensils. C. R. Anderson. 2,101,487; Dec. 7.
Radio communication system. J. B. Bishop and W. M. Knott. 2,101,668; Dec. 7.
Radio transmission and reception. H. B. Breedlove. 2,101,529; Dec. 7.
Radio transmitting apparatus, Short wave. A. A. Linsell. 2,101,440; Dec. 7.
Rail brace. R. L. Gillispie. 2,101,313; Dec. 7.
Rail supporting and retaining means. V. C. Armstrong. 2,101,038; Dec. 7.
Rails, Cooling. R. B. Gerhardt. 2,101,312; Dec. 7.
Rails, Treating. J. Brunner and A. D. Beers. 2,101,047; Dec. 7.
Railing and manufacture thereof. W. B. Ewing. 2,101,707; Dec. 7.
Raking mechanism for sedimentation tanks. N. B. Lund. 2,101,080–1; Dec. 7.
Receptacle and closure. W. Lockhart. 2,101,813–4; Dec. 7.
Receptacle holder. W. G. Bryant. 2,101,526; Dec. 7.
Recorder: *See*—
Time recorder.
Recorder for cameras, Safety exposure. B. Robles. 2,101,652; Dec. 7.
Rectifying system. H. Winograd. 2,101,802; Dec. 7.
Reflector and sign, Ornamental. D. A. Wing. 2,101,162; Dec. 7.
Refrigerant system and apparatus. M. A. Martin. 2,101,261; Dec. 7.
Refrigerating apparatus. A. O. Grooms. 2,101,498; Dec. 7.
Refrigerating machine. C. Steenstrup. 2,101,656; Dec. 7.
Refrigerator. W. B. Rulon. 2,101,512; Dec. 7.
Refrigerator hatch arrangement. A. W. L. Hartbauer. 2,101,368; Dec. 7.
Regenerator. W. A. Morton. 2,101,817; Dec. 7.
Relief valve. E. Klafstad. 2,101,682; Dec. 7.
Resin dehydration. H. L. Bender. 2,101,635; Dec. 7.
Resins, Processing of hydrocarbon. T. F. Nealon. 2,101,558; Dec. 7.
Resins, Producing synthetic. W. Frankenburger, H. Hammerschmid, and G. Roessler. 2,101,332–3; Dec. 7.
Reversible reduction gear. E. W. Brasfield. 2,101,774; Dec. 7.
Rheostat or potentiometer. J. Marsten. 2,101,441; Dec. 7.
Ring: *See*—
Curling ring. Piston ring.
Roasting apparatus. A. C. Waldvogel. 2,101,417; Dec. 7.
Rodless pump. W. N. Huff. 2,101,218; Dec. 7.
Roller: *See*—
Motor propelled wheeled roller.
Rolling mill. J. J. Munson. 2,101,266; Dec. 7.
Roof, Car. C. D. Bonsall. 2,101,360; Dec. 7.
Rubber articles, Apparatus for molding and ornamenting. R. H. Guinzburg. 2,101,252; Dec. 7.
Rubber coated article and manufacturing same. A. J. Keeney. 2,101,714; Dec. 7.
Safe. C. K. Ernst. 2,101,470; Dec. 7.
Safety device for coiling machines. J. F. Donovan and G. Illingworth. 2,101,382; Dec. 7.
Sanding machine. F. O. Albertson. 2,101,305; Dec. 7.
Sash balance, Window. M. J. Gossen. 2,101,577; Dec. 7.
Sawing or filing machine. E. C. Oliver. 2,101,507; Dec. 7.
Scale, Recording. K. Rauch. 2,101,452; Dec. 7.
Scooter, Ice or snow. R. O. and C. H. Anderson. 2,101,229; Dec. 7.
Screen: *See*—
Well screen.
Seal. H. Leach. 2,101,586; Dec. 7.
Seal for percolators. A. A. Warner. 2,101,324; Dec. 7.
Seal, Impression. T. B. Wilder. 2,101,119; Dec. 7.
Sealing device. C. A. Stuart. 2,101,415; Dec. 7.
Sealing-off apparatus. M. de Neumann. 2,101,673; Dec. 7.
Seat: *See*—
Gunner's seat.
Seat adjuster. E. G. Simpson and A. C. Andersen. 2,101,350; Dec. 7.
Securing mechanism for automobile doors. J. Mistretta. 2,101,035; Dec. 7.
Sedimentation apparatus. N. B. Lund. 2,101,079; Dec. 7.
Seismic surveying method. D. S. Muzzey, Jr. 2,101,408; Dec. 7.
Selective device, Combined magnetostriction and piezo-electric. H. J. Scott. 2,101,272; Dec. 7.
Selector for sorting machines. E. Rose. 2,101,456; Dec. 7.
Separator: *See*—
Mineral separator. Mold-flask separator.
Separators, Making ribbed. L. E. Wells. 2,101,206; Dec. 7.
Serving device. L. A. Leppke. 2,101,401; Dec. 7.
Sheet piling mechanism. A. Broadmeyer. 2,101,328; Dec. 7.
Sheets, Apparatus for plating. G. B. Hogaboom and W. F. Hall. 2,101,178; Dec. 7.
Sheeter. W. H. Engel. 2,101,170; Dec. 7.
Shellac substitute and producing the same. W. Krumbhaar. 2,101,398; Dec. 7.
Ship, High speed seagoing. R. Engelmann. 2,101,613; Dec. 7.
Shirt, Mechanical adjustable. R. Alston. 2,101,380; Dec. 7.
Shock absorber. J. Mercier. 2,101,265; Dec. 7.
Shock absorber. H. Schumacher. 2,101,757; Dec. 7.
Shoe, Athletic. E. Smith. 2,101,723; Dec. 7.
Shoe structure. J. Taraci. 2,101,693; Dec. 7.
Shortening, Finishing. T. M. Godfrey and V. Serbell. 2,101,496; Dec. 7.
Shuttle box mechanism for looms. G. Wiget. 2,101,663; Dec. 7.
Shutter for radiator enclosures and the like. J. Kacena and E. E. Kelly. 2,101,797; Dec. 7.
Sight for guns, Telescopic. C. M. O'Neil. 2,101,037; Dec. 7.
Signal: *See*—
Light signal.
Signaling device, Protective. R. L. Clingerman. 2,101,049; Dec. 7.
Signaling, Directive. A. Leib. 2,101,436; Dec. 7.
Signaling system. W. M. Bacon. 2,101,209; Dec. 7.
Signaling with ultrashort waves, Apparatus for. E. Wilckens. 2,101,785; Dec. 7.
Silk in wound form suitable for the textile industry, Direct production of artificial. B. Borzykowski. 2,101,361; Dec. 7.
Silk, Manufacture of artificial. L. H. Ryan. 2,101,720; Dec. 7.
Silo. G. A. Olbrich. 2,101,036; Dec. 7.
Slicer and detachable shredding set, Corrugated. G. Potstada. 2,101,595; Dec. 7.
Slicing machine. S. D. Rosenstone and C. Ackerman. 2,101,755; Dec. 7.
Slide staining and heating rack. A. Whiteman. 2,101,161; Dec. 7.
Sluice gate. T. Becher. 2,101,234; Dec. 7.
Smoking pipe. C. A. Facer. 2,101,387; Dec. 7.
Snare for drums. G. H. Logan. 2,101,784; Dec. 7.
Snow moving device. E. W. Austin. 2,101,666; Dec. 7.
Socket for tubular lamps. K. Wiegand. 2,101,662; Dec. 7.
Socket, Slip. L. V. Mallory. 2,101,815; Dec. 7.
Soldering iron, Automatic constant heat electric. E. B. Moore. 2,101,445; Dec. 7.
Soles, Method of and apparatus for operating on unattached. C. E. Hood. 2,101,179; Dec. 7.
Solvent refining of mineral oil. J. H. Grahame. 2,101,497; Dec. 7.
Sound deadening construction. F. R. Woodbury. 2,101,568; Dec. 7.
Sound muffling device. U. Schmidt. 2,101,460; Dec. 7.
Sound recording and reproducing equipment. H. H. Wixon. 2,101,121; Dec. 7.
Spark chamber for automatic cut-outs. W. Leyhausen. 2,101,783; Dec. 7.
Spirit level and mounting. A. Langsner. 2,101,077; Dec. 7.
Spray compound, Parasiticidal. F. F. Lindstaedt. 2,101,373; Dec. 7.
Spring. K. Scharfenberg. 2,101,721; Dec. 7.
Spring structure. L. A. Young. 2,101,124; Dec. 7.
Spring suspension for trailers. T. H. Jacob. 2,101,545; Dec. 7.
Sprinkler head. E. Tyden. 2,101,694; Dec. 7.
Sprocket and guide wheel, Combined. A. W. Nisbet. 2,101,685; Dec. 7.
Stamp support. R. O. Morgan. 2,101,623; Dec. 7.
Standard cranial point of orientation, Apparatus for establishing a. E. W. Snell. 2,101,105; Dec. 7.
Stapling machine for closing flaps of cartons or the like. M. Bogel. 2,101,660; Dec. 7.
Starter, Engine. J. Ayres. 2,101,606; Dec. 7.
Steaming and pressing machine. W. H. Shields. 2,101,655; Dec. 7.
Stepladder attachment. A. DeFranco. 2,101,245; Dec. 7.
Stone box. P. R. Parker. 2,101,091; Dec. 7.
Stove for domestic purposes. I. Räsänen. 2,101,509; Dec. 7.
Stove top. H. W. Miller. 2,101,590; Dec. 7.
Strainer, Milk. W. Wolfe. 2,101,770; Dec. 7.
Strip feeding mechanism for writing machines. W. E. Gochnauer. 2,101,334; Dec. 7.
Strip, Window. J. Brunnhuber and J. Schmid. 2,101,733; Dec. 7.
Superheater boiler. T. B. Stillman. 2,101,106; Dec. 7.

Support: *See*—
Flexible seat support. Stamp support.
Support for fishing reels. J. Grahame. 2,101,174; Dec. 7.
Supporting device. B. S. Minters. 2,101,474; Dec. 7.
Supporting mechanism for cabinet ironers. J. W. Jensen and A. J. Shute. 2,101,142; Dec. 7.
Surface forming machine. J. Y. Blazek and R. G. Anderson. 2,101,569; Dec. 7.
Sweeper attachment for motor vehicles. A. J. Westmoreland. 2,101,769; Dec. 7.
Switch: *See*—
Coin actuated switch. Liquid contact switch.
Electric switch. Mercury switch.
Electrical switch. Thermal control switch.
Switch and method of and apparatus for manufacture of same, Fluid flow electric. W. R. Walker. 2,101,114; Dec. 7.
Switch of the fluid flow type, Electric. W. R. Walker. 2,101,115; Dec. 7.
Synchronous motor. R. G. Arey and H. T. Faus. 2,101,665; Dec. 7.
Syringe device, Automatic injecting. R. W. Hege. 2,101,140; Dec. 7.
Table: *See*—
Collapsible and separable table. Orthopedic table.
Table top. J. Traficante. 2,101,725; Dec. 7.
Tally roll mechanism. M. H. Mann. 2,101,747; Dec. 7.
Tank cap lock, Radiator or gas. T. Schellinger. 2,101,348; Dec. 7.
Tap. W. C. Robinette. 2,101,347; Dec. 7.
Tape condenser. H. H. Knight. 2,101,370; Dec. 7.
Target range finder, Night. C. H. Schenk. 2,101,479; Dec. 7.
Telegraph receiver, Carrier. T. A. Jones. 2,101,256; Dec. 7.
Telegraph signal repeating system. G. C. Cummings. 2,101,243; Dec. 7.
Telephone apparatus, Substation. L. J. J. Schreiber. 2,101,271; Dec. 7.
Telephone system. F. A. Korn. 2,101,258; Dec. 7.
Temperature control container. J. L. Finch and L. L. Young. 2,101,135; Dec. 7.
Templet, Adjustable. F. Reich. 2,101,478; Dec. 7.
Tensioning apparatus for meat and bone cutting machines. F. Ponton. 2,101,343; Dec. 7.
Testing machine for shock absorbers and the like. L. E. Willard. 2,101,228; Dec. 7.
Textile lubrication. V. Conquest. 2,101,532; Dec. 7.
Thermal control switch. O. J. Ostlind. 2,101,475; Dec. 7.
Thermostat, Multiple action. G. H. Davis. 2,101,637; Dec. 7.
Thermostatic speed control. S. R. Oldham. 2,101,447; Dec. 7.
Thread, Apparatus for determining variations in thickness of thread. H. P. Lubn. 2,101,260; Dec. 7.
Thread protector. E. J. Protin. 2,101,451; Dec. 7.
Threads, fibers, and the like, Producing artificial. M. Günther and J. Eggert. 2,101,253; Dec. 7.
Threads, Manufacture of elastic. R. and J. Pickles. 2,101,752; Dec. 7.
Throttle control, Automatic. E. A. Winfield. 2,101,605; Dec. 7.
Ticket printing machine. J. W. Miles. 2,101,444; Dec. 7.
Tie for concrete forms. D. C. Hungerford. 2,101,141; Dec. 7.
Time indicator for sounding apparatus, Electric. L. A. M. J. Laboureur and R. Dubois. 2,101,076; Dec. 7.
Time recorder, Workman's. E. G. Watkins and J. A. Dell. 2,101,205; Dec. 7.
Time system. L. S. Harrison. 2,101,432; Dec. 7.
Tip for suspender cords, Attaching. L. J. Josephs. 2,101,681; Dec. 7.
Toaster, Automatic. M. H. Graham. 2,101,062; Dec. 7.
Toasting apparatus. C. W. Malmquist. 2,101,504; Dec. 7.
Toilet paper holder. E. P. Clemson. 2,101,531; Dec. 7.
Tone control device. R. Rechnitzer. 2,101,688; Dec. 7.
Tool: *See*—
Lathe tool. Percussive boring tool.
Machine tool.
Tool for boring, sawing, and rasping wood and like materials, Hand. 2,101,583; Dec. 7.
Tool with work clamps, Automatic machine. E. J. Kingsbury. 2,101,396; Dec. 7.
Tooth cleanser, Sanitary. L. L. DeRome. 2,101,363; Dec. 7.
Toy airplane. W. J. Walter. 2,101,276; Dec. 7.
Toy, Aquatic. B. L. Gordon, Jr. 2,101,646; Dec. 7.
Tracer mechanism for duplicating machines. E. K. Johansen. 2,101,712; Dec. 7.
Track for vehicles, Endless. A. Kegresse. 2,101,618; Dec. 7.
Tractor and trailer. F. F. Field, Jr. 2,101,793; Dec. 7.
Tractor construction. E. O. Sarff. 2,101,631; Dec. 7.
Traffic controlling apparatus, Railway. H. C. Vantassel. 2,101,204; Dec. 7.
Traffic signal system. C. B. Watson. 2,101,697; Dec. 7.
Trailer hitch coupling. R. R. D. Milligan. 2,101,622; Dec. 7.
Transmission. T. L. Fawick. 2,101,134; Dec. 7.
Transmission, Automotive. P. L. Tenney. 2,101,765; Dec. 7.
Transmission control in signaling systems. A. C. Dickieson. 2,101,246; Dec. 7.
Transmission, Hydraulic. W. Ferris, J. K. Douglas, and G. H. Foblan. 2,101,495; Dec. 7.
Transmission means, Variable. C. Bancroft. 2,101,233; Dec. 7.
Transportation system and apparatus. J. P. Hubbell. 2,101,711; Dec. 7.
Transportation system, High speed. J. O. Heinze. 2,101,024; Dec. 7.
Trap: *See*—
Animal trap.
Trap. L. Benson. 2,101,788; Dec. 7.
Trap. L. J. Cheek. 2,101,609; Dec. 7.
Tray, Service. B. M. Offutt. 2,101,686; Dec. 7.
Trimming device. L. T. Sachtleben. 2,101,458; Dec. 7.
Tube: *See*—
Electric discharge tube. Pitot tube.
Tubular article and making same, Flanged. C. R. Duncan. 2,101,311; Dec. 7.
Tumbling mill. N. Ransohoff. 2,101,196; Dec. 7.
Turbine control, Elastic fluid. W. Guilhauman. 2,101,676; Dec. 7.
Typewriter. T. R. Arden. 2,101,231; Dec. 7.
Typewriters, System of operation of. W. S. Lemmon, C. J. Fitch, and R. F. Walz. 2,101,437; Dec. 7.
Umbrella structure. H. E. Rathbun. 2,101,510; Dec. 7.
Undergarment, Lady's. T. J. Smutny. 2,101,604; Dec. 7.
Urea-formaldehyde condensation products. D. E. Edgar. 2,101,534; Dec. 7.
Utility holder. C. W. Cogswell. 2,101,492; Dec. 7.
Vacuum cleaner. D. M. Dow. 2,101,575; Dec. 7.
Vacuum cleaner appliance. L. O. McCracken. 2,101,222; Dec. 7.
Valve: *See*—
Orifice dial valve. Relief valve.
Valve. A. E. Kettnich. 2,101,316; Dec. 7.
Valve device, Temperature relief. L. D. Lovekin. 2,101,338; Dec. 7.
Valve, Pressure. N. C. Hunt and S. C. Chessman. 2,101,025; Dec. 7.
Vehicle, Motor. J. M. Christman. 2,101,130; Dec. 7.
Vehicle, Motor. B. Fuller. 2,101,057; Dec. 7.
Vehicle rocking apparatus. P. J. Kroll. 2,101,397; Dec. 7.
Vehicle structure, Carrier. D. L. Reynolds. 2,101,344; Dec. 7.
Vehicle wheel. L. B. McGuigan. 2,101,744; Dec. 7.
Vehicle with compressed air cooling, Motor. F. Nallinger. 2,101,627; Dec. 7.
Vending machine construction. G. J. Scofield. 2,101,420; Dec. 7.
Ventilating system for arc lamps. W. D. Brenkert. 2,101,638; Dec. 7.
Vise. H. M. Johnston. 2,101,434; Dec. 7.
Wall construction. F. M. Venzie. 2,101,416; Dec. 7.
Washer: *See*—
Ceiling washer.
Washing machine. A. A. Aldridge. 2,101,634; Dec. 7.
Wasp excluder for air brakes. T. Everett. 2,101,214; Dec. 7.
Water heater, Electric. F. W. Scharf. 2,101,691; Dec. 7.
Water, Treatment of boiler. C. W. Rice. 2,101,197; Dec. 7.
Wave modulation. K. Fritz. 2,101,137; Dec. 7.
Waxing device. R. B. Kingman. 2,101,072; Dec. 7.
Weather strip. G. F. Wolff and W. Congreve. 2,101,278; Dec. 7.
Weighing and packaging machine, Automatic. T. Rapp. 2,101,561; Dec. 7.
Weld efficiency indicator. J. P. Tarbox. 2,101,108; Dec. 7.
Well screen. E. D. Every. 2,101,537; Dec. 7.
Wells, Method and apparatus for cementing. W. C. Chonette and R. H. Hamilton. 2,101,640; Dec. 7.
Wheel: *See*—
Abrasive wheel. Vehicle wheel.
Sprocket and guide wheel.
Wheel for crawler tractors, Front idler. C. R. Rogers. 2,101,454; Dec. 7.
Wheel for motor vehicles. R. B. Miller. 2,101,505; Dec. 7.
Wheel positioning mechanism, Grinding. C. G. Flygare. 2,101,794; Dec. 7.
Wheel spinner knob, Steering. J. R. Thorp. 2,101,519; Dec. 7.
Wheel truing apparatus, Grinding. C. G. Flygare and H. A. Silven. 2,101,795; Dec. 7.
Whip stock, Well drilling. D. B. Monroe. 2,101,185; Dec. 7.
Window, Double. J. K. Ames. 2,101,803; Dec. 7.
Wiper, Windshield. T. B. Bowen. 2,101,773; Dec. 7.
Wrappers, Production of. A. Rambold. 2,101,225; Dec. 7.
Wood, Compressing. R. N. Hartzell. 2,101,542; Dec. 7.
Wrench. H. H. Smith. 2,101,760; Dec. 7.
Xanthates of unsaturated secondary alcohols and their preparation. H. P. A. Groll. 2,101,649; Dec. 7.
Xanthates, Process and product relating to unsaturated. H. P. A. Groll. 2,101,648; Dec. 7.
X-ray apparatus. M. Morrison. 2,101,152; Dec. 7.
X-ray unit, Shockproof. A. H. Laidig. 2,101,143; Dec. 7.
Zinc coating, Obtaining bright. J. A. Henricks. 2,101,580–01; Dec. 7.

CLASSIFICATION OF PATENTS

ISSUED DECEMBER 7, 1937

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

Maisch, Jacques E., assignor to National Fabrics Corporation, New York, N. Y. Textile fabric. 107,489; Dec. 14.
Manning, Clarence J., Lake Bluff, Ill. Radio cabinet. 107,434; Dec. 14.
Marder, Leo, Brooklyn, N. Y. Brush. 107,435; Dec. 14.
McClellan, Fred C., Oak Park, Ill. Air conditioning apparatus. 107,436; Dec. 14.
McClellan, Fred C., Oak Park, Ill. Air filtering device. 107,437; Dec. 14.
McClellan, Fred C., Oak Park, Ill. Air conditioning apparatus. 107,439; Dec. 14.
McCreary, John T., Chicago, Ill. Combined ashtray and cigarette extinguishing device. 107,440; Dec. 14.
Molinard, Inc. (See Honnorat, René, assignor.)
Morgan, John R., Oak Park, assignor to Sears, Roebuck and Co., Chicago, Ill. Bicycle chain guard. 107,442; Dec. 14.
Morgan, John R., Oak Park, assignor to Sears, Roebuck and Co., Chicago, Ill. Bicycle tank. 107,443; Dec. 14.
National Fabrics Corporation. (See Maisch, Jacques E., assignor.)
Newman, Thomas J., Canton, Ohio. Insulated switch handle. 107,441; Dec. 14.
New York World's Fair 1939, Incorporated. (See Harrison, W. K., and Fouilhoux, assignors.)
Nutone Chimes Inc. (See Evans, Evan G., assignor.)
O'Brien, Harold J., assignor to The Swartzbaugh Manufacturing Company, Toledo, Ohio. Food conveyer. 107,444; Dec. 14.
Odencrants, Henning, assignor to Valley Shoe Corporation, St. Louis, Mo. Shoe. 107,445; Dec. 14.
Odencrants, Henning, assignor to Valley Shoe Corporation, St. Louis, Mo. Shoe. 107,446; Dec. 14.
Odencrants, Henning, assignor to Valley Shoe Corporation, St. Louis, Mo. Shoe. 107,447; Dec. 14.
Ohlsson, Irwin G., Los Angeles, and H. T. Rice, San Gabriel, Calif. Miniature airplane engine. 107,448; Dec. 14.
Owens-Illinois Glass Company. (See Lorenzen, Arnold I., assignor.)
Pixley, Judson S., Astoria, N. Y. Electric lantern. 107,449; Dec. 14.
Preston, Edward S., Hinsdale, assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Bread toaster. 107,450; Dec. 14.
Preston, Edward S., Hinsdale, assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Sandwich toaster or the like. 107,451; Dec. 14.
Preston, Edward S., Hinsdale, assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Toaster. 107,452; Dec. 14.
Preston, Edward S., Hinsdale, assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Stove. 107,453; Dec. 14.
Preston, Edward S., Hinsdale, assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Waffle mold or the like. 107,454; Dec. 14.
Raymond, Horace H., Berlin, assignor to The Stanley Works, New Britain, Conn. Handle or the like for doors and drawers. 107,455; Dec. 14.
Rice, Henry T. (See Ohlsson, I. G., and Rice.)
Rifkin, Milton, Denver, Colo. Showcase. 107,456; Dec. 14.
Rogers, Lunt & Bowlen Company. (See Koonz, Frederick W., assignor.)
Rosenthal China Corporation, The. (See Bayreuther, Karl, assignor.)
Rosenthal, David, New York, N. Y. Dress. 107,490; Dec. 14.
Rubin, Herbert, New York, N. Y. Frame for a bag or similar article. 107,457; Dec. 14.
San Giovanni, Edward, Jackson Heights, N. Y. Serving tray or similar article. 107,421; Dec. 14.
San Giovanni, Edward, Jackson Heights, N. Y. Teapot. 107,422; Dec. 14.
Schlenker, Max, LaSalle, Ill., assignor to General Time Instruments Corporation, New York, N. Y. Clock casing. 107,458; Dec. 14.
Schlessel, Philip, New York, N. Y. Dress. 107,491; Dec. 14
Schultze, Ralph, New York, N. Y. Dress. 107,492; Dec. 14.
Schwab, David E., New York, N. Y. Handkerchief. 107,493; Dec. 14.
Sears, Roebuck and Co. (See Morgan, John R., assignor.)
Snoke, Robert D., South Bend, assignor to Auburn Automobile Company, Connersville, Ind. Combined automobile steering wheel and horn control device. 107,459; Dec. 14.
Spence, James E., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va. Dish. 107,460; Dec. 14.
Standard Sanitary Manufacturing Company. (See Trout, Harry R., assignor.)
Stanley Works, The. (See Raymond, Horace H., assignor.)
Story, Brooks & Finley, Incorporated. (See Brooks, James M., assignor.)
Swartzbaugh Manufacturing Company, The. (See O'Brien, Harold J., assignor.)
Teague, Walter D., Jr., Kew Gardens, N. Y. Combined coal and gas range. 107,461; Dec. 14.
Teague, Walter D., Forest Hills, assignor to The Texas Company, New York, N. Y. Service station. 107,462; Dec. 14.
Teague, Walter D., Forest Hills, assignor to The Texas Company, New York, N. Y. Service station. 107,463; Dec. 14.
Texas Company, The. (See Teague, Walter D., assignor.)
Trout, Harry R., assignor to Standard Sanitary Manufacturing Company, Pittsburgh, Pa. Drinking fountain. 107,464; Dec. 14.
Tucker, John W., assignor to Linendoll Corporation, Chicago, Ill. Gear case flusher. 107,465; Dec. 14.
Turiansky, Abraham, New York, N. Y. Shoe. 107,466; Dec. 14.
Turiansky, Abraham, New York, N. Y. Shoe. 107,467; Dec. 14.
Turiansky, Abraham, New York, N. Y. Shoe. 107,468; Dec. 14.
Turiansky, Abraham, New York, N. Y. Shoe. 107,469; Dec. 14.
United States Rubber Products, Inc. (See Bannister, Allen S., assignor.)
Valley Shoe Corporation. (See Odencrants, Henning, assignor.)
Warner, Rudolph J., Buffalo, N. Y. Jewelry display stand. 107,470; Dec. 14.
Warren Telechron Company. (See Bruce, Ivan, assignor.)
Warren Telechron Company. (See Bars, Jacques M., assignor.)
Waxberg, Augusta, New York, N. Y. Dress. 107,494; Dec. 14.
Welch, Irene, New York, N. Y. Dress. 107,471; Dec. 14.
Wood, Schuyler A., Dolgeville, N. Y. Shoe or similar article. 107,472; Dec. 14.
Wurlitzer, Rudolph, Company, The. (See Zaiser, William, assignor.)
Zaiser, William, Rockville Centre, N. Y., assignor to The Rudolph Wurlitzer Company, DeKalb, Ill. Piano. 107,473; Dec. 14.
Zaiser, William, Rockville Centre, N. Y., assignor to The Rudolph Wurlitzer Company, DeKalb, Ill. Piano. 107,474; Dec. 14.
Zaretzky, Oscar, New York, N. Y. Dress. 107,495; Dec. 14.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 14TH DAY OF DECEMBER, 1937

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abe, Suyekichi. (See Hara, R., and Abe.)
Abendroth, Otto A., Appleton, Wis. Wire seam. 2,102,300; Dec. 14.
Aeschbach, Walter E., St. Louis, Mo. Can opener. 2,102,174; Dec. 14.
Air-way Electric Appliance Corporation. (See Riebel, F., and Dow, assignors.)
Aktiebolaget Transitoria. (See Ljungström, Erik, assignor.)
Alcorn Combustion Company. (See Alcorn, James S., assignor.)
Alcorn, James S., Wynnewood, assignor to Alcorn Combustion Company, Philadelphia, Pa. Heat transfer system. 2,101,835; Dec. 14.
Allan, John, and J. A. Wainwright, Spondon, near Derby, England, assignors to Celanese Corporation of America. Production of effects on materials. 2,101,887; Dec. 14.
Allegemeine Elektricitatz Gesellschaft. (See Klutke, Fritz, assignor.)
Allen, William S., Warwick, R. I. Apparatus for discharging condensate from drying drums. 2,102,106; Dec. 14.
Ambroslus, George M., Lakewood, assignor to The Standard Oil Company (Ohio), Cleveland, Ohio. Sheet metal piston manufacture. 2,101,888; Dec. 14.
American Bemberg Corporation. (See Brueggemann, Leo, assignor.)
American Brass Company, The. (See Davis, C. H., and Munsen, assignors.)
American Brass Company, The. (See Smith, Cyril S., assignor.)
American Fork & Hoe Company, The. (See Cowdery, R. H., and Wright, assignors.)
American Forging & Socket Company. (See Saunders, W. S., and McGregor, assignors.)
American Fork & Hoe Company, The. (See Fifield, Albert F., assignor.)
American Fork & Hoe Company, The. (See Kinnear, John K., assignor.)
American Fork & Hoe Company, The. (See Yearley, George W., assignor.)
American Machine & Foundry Company. (See Gwinn, George W., assignor.)
American Magnesium Metals Corporation. (See Hansgirg, Fritz, assignor.)
American Magnesium Metals Corporation. (See Schichtel, Georg, assignor.)
American Rolling Mill Company, The. (See McGohan, George W., assignor.)
American Rolling Mill Company, The. (See Passano, Russell F., assignor.)
American Sheet & Tin Plate Company. (See Moore, Carl E., assignor.)
American Smelting and Refining Company. (See Betterton, J. O., and Lebedeff, assignors.)
American Steel and Wire Company of New Jersey, The. (See Brickman, A. E., and Gleason, assignors.)
American Sweetwood Holder Co. (See McWane, Gerould R., assignor.)
American Steel and Wire Company of New Jersey, The. (See Elder, Flint C., assignor.)
American Telephone and Telegraph Company. (See Blackwell, O. B., and Herman, assignors.)
American Telephone and Telegraph Company. (See Gardner, L. A., and Singer, assignors.)
American Thermos Bottle Company, The. (See Payson, A. H., and Duevel, assignors.)
Anaconda Wire & Cable Company. (See Rosch, Samuel J., assignor.)
Anderson, Gustave. (See Nicholls, W. H., and Anderson.)
Anderson, Roger, assignor to The Tower Company, Seattle, Wash. Fracture splint. 2,101,889; Dec. 14.
Andres, Lloyd J., assignor to Automatic Instrument Company, Grand Rapids, Mich. Projector. 2,101,890; Dec. 14.
Arndt, W. F., et al. (See Spelts, George A., assignor.)
Arnold, Edwin E., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Making electric heater elements. 2,102,301; Dec. 14.
Arnold, Edwin E., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Resistor element. 2,102,302; Dec. 14.
Arnold, James C., assignor to Lane-Wells Company, Los Angeles, Calif. Commutator brush. 2,102,347; Dec. 14.
Arst, Morris, Chicago, Ill. Hooded garment. 2,102,251; Dec. 14.
Asahi Garasu Kabushiki Kaisha. (See Hara, R., and Abe, assignors.)
Atlas Ago Chemische Fabrik, Aktien-Gesellschaft. (See Closmann, Adolf, assignor.)
Atlas Powder Company. (See Power, J. T., and Brown, assignors.)
Atlas Werke Aktiengesellschaft. (See Kunze, Willy, assignor.)
Auburn Automobile Company. (See Burkey, Jay F., assignor.)
Auger, Joe, Elk Lake, Ontario, Canada. Faucet. 2,102,503; Dec. 14.
Austin, Arthur O., Near Barberton, Ohio. Uniform arc, compensating chord conductor support with resilient grip heads. 2,102,232; Dec. 14.
Autogiro Company of America. (See Prewitt, Richard H., assignor.)
Auto-Ordnance Corporation. (See Norman, George, assignor.)
Automatic Instrument Company. (See Andres, Lloyd J., assignor.)
Auto Radiator Manufacturing Co. (See Kirsch, Benjamin, assignor.)
Babcock, David L., assignor to Eastman Kodak Company, Rochester, N. Y. Tilting mechanism for projectors. 2,101,830; Dec. 14.
Baldwin, Alfred W., and H. M. Bunbury, Blackley, England, assignors to Imperial Chemical Industries Limited. Sulphated selachyl alcohol. 2,101,831; Dec. 14.
Balochi, Charlie T., Roanoke, Va. Cuspidor carrier and handler. 2,102,348; Dec. 14.
Barclay, Robert E., assignor to Federal Electric Company, Inc., Chicago, Ill. Gaseous conduction device. 2,102,189; Dec. 14.
Barclay, Robert E., assignor to Federal Electric Company, Inc., Chicago, Ill. Discharge apparatus and method. 2,102,190; Dec. 14.
Barclay, Robert E., assignor to Federal Electric Company, Inc., Chicago, Ill. Gaseous conduction device. 2,102,191; Dec. 14.
Barclay, Robert E., assignor to Federal Electric Company, Inc., Chicago, Ill. Effecting gaseous mixtures. 2,102,192; Dec. 14.
Baron, Charles S., Tiffin, Ohio. Closure for receptacles. 2,102,349; Dec. 14.
Barton, Loy E., Collingswood, N. J., assignor to Radio Corporation of America. Volume control circuits. 2,101,832; Dec. 14.
Bates, Sidney Q., Houston, Tex. Fluid operated pump. 2,101,833; Dec. 14.
Batzer, George J., Cleveland, Ohio, assignor to Micromatic Hone Corporation. Grinding device. 2,102,053; Dec. 14.
Banmgarten, Paul, Berlin, Germany, assignor to E. I. du Pont de Nemours and Company, Wilmington, Del. Manufacturing amino sulphonic acid. 2,102,350; Dec. 14.
Bausch & Lomb Optical Company. (See Bausch, William, assignor.)
Bausch & Lomb Optical Company. (See Fassin, Gustave, assignor.)
Bausch & Lomb Optical Company. (See Fassin, G., and Miles, assignors.)
Bausch & Lomb Optical Company. (See Foster, Leon V., assignor.)
Bausch & Lomb Optical Company. (See Gallasch, George B., assignor.)
Bausch, William, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Microscope. 2,101,928; Dec. 14.
Bean, Fred R., Rochester, N. Y., assignor, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Compositions of matter for photographic processing baths. 2,101,834; Dec. 14.
Beardsley, Guy E., Jr., Hartford, and W. A. Parkins, West Hartford, Conn., assignors, by mesne assignments, to United Aircraft Corporation. Mixture control. 2,102,504; Dec. 14.
Becher, Theodor, Weisbaden, assignor to Maschinenfabrik Augsburg-Nurnberg A. G., Nuremberg, Germany. Double walled sluice gate. 2,101,973; Dec. 14.
Beck, Ernie J., and W. B. Schroeder, Chicago, Ill., assignors, by mesne assignments, to S. Karpen & Bros. Seat back. 2,102,351; Dec. 14.
Beers, George L., Collingswood, N. J., assignor to Radio Corporation of America. Tuning meter. 2,101,891; Dec. 14.
Behnke, George W., assignor to Simplicity Engineering Company, Durand, Mich. Gyrating machine. 2,102,252; Dec. 14.
Belcher, Harold H., assignor to The Philadelphia Drying Machinery Company, Philadelphia, Pa. Fabric treating machine. 2,101,974; Dec. 14.
Bell, James H. (See Dinley, Clarence F., assignor.)
Bell Telephone Laboratories, Incorporated. (See Hovland, Henry, assignor.)

Bell Telephone Laboratories, Incorporated. (See Sperry, Arthur B., assignor.)
Bell Telephone Laboratories, Incorporated. (See Strieby, Maurice E., assignor.)
Bell Telephone Laboratories, Incorporated. (See Wagar, Harold N., assignor.)
Benedict, Edward L., assignor to Elb Products, Inc., New York, N. Y. Thermal insulating building unit. 2,101,836; Dec. 14.
Benner, Winthrop W., Ithan and F. Leopold, Jr., Harmonville, assignor to Lee Rubber & Tire Corporation, Conshohocken, Pa. Automatic stock take-off machine. 2,102,453; Dec. 14.
Bennett, William, Westbury, N. Y. Clear-vision antiglare windshield. 2,102,454; Dec. 14.
Berkhoff, Gerrit, Jr., Kerensheide, Post Lutterade, assignor to De Directie van de Staatsmijnen in Limburg, Heerlen, Netherlands. Production of ammonium sulphate. 2,102,107; Dec. 14.
Berthiez, Charles W., assignor to "Compagnie de Fives-Lille", Paris, France. Machine for the tool of metallic screw propeller blades. 2,102,505; Dec. 14.
Bethlehem Steel Company. (See Kinney, James A., assignor.)
Betterton, Jesse O., and Y. E. Lebedeff, Metuchen, N. J., assignors to American Smelting and Refining Company, New York, N. Y. Refining lead. 2,101,975; Dec. 14.
Biedermann, Frank A., Chicago, Ill., assignor to Paper Patents Company, Neenah, Wis. Thermal insulation. 2,102,233; Dec. 14.
Bilde, Tord E. D., Stockholm, Sweden. Cooking range with muffle oven. 2,102,352; Dec. 14.
Billings, Edmund, Weston, and H. H. Offutt, Winchester, assignors to Godfrey L. Cabot, Inc., Boston, Mass. Apparatus for treating carbon black and the like. 2,102,054; Dec. 14.
Binkley Coal Company. (See Merchant, G. A., and Milan, assignors.)
Binks Manufacturing Company. (See Bramsen, S., and Wahlin, assignors.)
Birkenmaier, Theodore, assignor to W. N. Matthews Corporation, St. Louis, Mo. Fuse switch. 2,102,253; Dec. 14.
Bixler, Harley H., Schenectady, N. Y., assignor to General Electric Company. Refrigerating machine. 2,102,403; Dec. 14.
Blackwell, Otto B., Plandome, N. Y., and J. Herman, Westfield, N. J., assignors to American Telephone and Telegraph Company. Television system. 2,101,976; Dec. 14.
Blanchett, Luther E., assignor to Bucyrus-Erie Company, South Milwaukee, Wis. Leveling device. 2,101,837; Dec. 14.
Bland, Frederick O. S., Hamburg, Germany. Freezing medium, method of production and application for freezing purposes. 2,102,506; Dec. 14.
Blatchford, Albert O., Amballes Guernsey. Channel, Islands. Water tube boiler. 2,101,892; Dec. 14.
Blood, Laurence E., Newton, assignor to S. A. Woods Machine Company, Boston, Mass. Molder. 2,102,175; Dec. 14.
Boeing Aircraft Company. (See Kylstra, John, assignor.)
Boerger, Martin G., assignor to Modine Manufacturing Company, Racine, Wis. Soldering machine. 2,101,929; Dec. 14.
Boker & Company. (See Van Allen, George C., assignor.)
Bokovoy, Samuel A., Audubon, and P. D. Gerber, Woodlynne, N. J., assignors to Radio Corporation of America. Piezoelectric apparatus. 2,101,893; Dec. 14.
Bolle, León, assignor to La Nationale Societe Anonyme, Geneva, Switzerland. Combustible liquid lighter. 2,102,108; Dec. 14.
Bond, Samuel C., Holly Oak, Del. Machine for applying closures. 2,101,977; Dec. 14.
Bonsall, Charles D., Pittsburgh, assignor to P. H. Murphy Company, New Kensington, Pa. Car roof. 2,102,455; Dec. 14.
Bonstein, Robert J., Scranton, Pa. Insecticides and fungicides. 2,102,564; Dec. 14.
Boosey, Edward W. N., Detroit, Mich. Floor drain. 2,101,978; Dec. 14.
Booth, Roland T., assignor to McDonald Products Corporation, Buffalo, N. Y. Smoker's accessory. 2,102,565; Dec. 14.
Bordonaro, Benedict C. (See Johnson, L. E., and Bordonaro.)
Bosch, Robert Aktiengesellschaft. (See Schweizer, Alfred, assignor.)
Boughton, Roger C., San Francisco, Calif. Pipe joint. 2,101,894; Dec. 14.
Boulton, Harold S., Chicago, Ill. Machine for troweling. 2,101,895; Dec. 14.
Bramsen, Svend, and F. Wahlin, assignors to Binks Manufacturing Company, Chicago, Ill. Spray gun valve. 2,102,303; Dec. 14.
Brand, Robert A., assignor of one-half to J. A. Perley, Washington, D. C. Air conditioning system and apparatus. 2,102,507; Dec. 14.
Brandt, David G., Westfield, assignor, by mesne assignments, to Power Patents Company, Jersey City, N. J. Distillation of oil. 2,102,234; Dec. 14.
Brauer, Walter, Houston, Tex. Sidetracking tool. 2,102,055; Dec. 14.
Brennan, Edward J. (See Valentine, T. G., and Brennan.)
Brickman, Alan E., and G. A. Gleason, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey. Bar mat clip. 2,102,566; Dec. 14.
Brill, Abraham K., and W. A. Wake, assignors to The Republic Rubber Company, Youngstown, N. Y. Treatment of rubber articles. 2,102,456; Dec. 14.
Brock, Clarence A., assignor to Rexair Corporation, Detroit, Mich. Vacuum cleaner. 2,102,353; Dec. 14.
Brock, Norman H., Philadelphia, Pa. Stereoscopic photography. 2,101,979; Dec. 14.
Brockhurst, James B., Red Bank, N. J. Method and apparatus for building sea walls. 2,102,254; Dec. 14.
Brooks, Alfred J., Jamaica Plain, Mass. Package for dry goods, and method and apparatus for making the same. 2,102,508; Dec. 14.
Brody, Samuel C., Brighton, Mass. Automatic blast torch. 2,102,404; Dec. 14.
Brown & Bailey Company. (See Keppler, Albert E., assignor.)
Brown, Kenneth R. (See Power, J. T., and Brown.)
Brown, Robert S., assignor to The New Britain Machine Company, New Britain, Conn. Safety feed knock-out. 2,102,567; Dec. 14.
Brueggemann, Leo, Wuppertal-Oberbarmen, Germany, assignor to American Bemberg Corporation, New York, N. Y. Tension compensator for winding machines. 2,102,109; Dec. 14.
Brunner, Lillian B., Shaker Heights, Ohio. Guard attachment for mixing machines. 2,101,980; Dec. 14.
Buckley, Thomas A. (See Terry, M. C., and Buckley.)
Bucyrus-Erie Company. (See Blanchett, Luther E., assignor.)
Budden, Hanbury A. (See Warren, Thomas W., assignor.)
Buffington, John R. (See Raisch, W., Woodman, Buffington, and Morris.)
Bulldog Electric Products Company. (See Thomson, Alfred J., assignor.)
Bunbury, Hugh M. (See Baldwin, A. W., and Bunbury.)
Burgess, C. F., Laboratories, Inc. (See Sidell, Kemper, assignor.)
Burkey, Jay F., assignor to Auburn Automobile Company, Auburn, Ind. Vehicle body. 2,102,110; Dec. 14.
Burkhardt, James C., Dayton, Ohio. Buffer core. 2,102,193; Dec. 14.
Burlingame, Leslie G., Erlton, N. J., assignor to Radio Corporation of America. Capacitor. 2,101,896; Dec. 14.
Burnett, William E., Ilion, N. Y. Safety razor. 2,102,142; Dec. 14.
Burns, Erwin. (See Wickersham, Harry P., assignor.)
Burns, William E., West York, and E. N. Miller, assignors to York Narrow Fabrics Co., York, Pa. Shuttle driving mechanism for looms. 2,101,981; Dec. 14.
Busch-Sulzer Bros.-Diesel Engine Company. (See Rotter, Max, assignor.)
Byron Jackson Co. (See Mendenhall, E., and Van Horn, assignors.)
Cabot, Godfrey L., Inc. (See Billings, E., and Offutt, assignors.)
Campbell, Charles H., Kent, Ohio. Manufacture of composite glue products. 2,102,255; Dec. 14.
Campbell, John F., Cuyahoga Falls, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Mold breaker. 2,102,552; Dec. 14.
Campbell, Richard L., Oaklyn, N. J., assignor to Radio Corporation of America. Television system. 2,102,256; Dec. 14.
Campbell, William A., Youngstown, Ohio. Razor blade sharpener. 2,102,509; Dec. 14.
Campbell, Wyant and Cannon Foundry Company. (See Goldberg, Mark J., assignor.)
Canady, Don, Cleveland, Ohio. Sound recording system. 2,102,194; Dec. 14.
Carborundum Company, The. (See Chormann, G. W., and Cowle, assignors.)
Carey, Philip, Manufacturing Company, The. (See Warner, Leroy E., assignor.)
Carlberg, Raymond F., Grand Rapids, Mich. Machine and method for forming helical springs. 2,101,982; Dec. 14.
Carpender, William, New Brunswick, assignor, by mesne assignments, to Carrier Corporation, Newark, N. J. Fan economizer. 2,101,983; Dec. 14.
Carr, Commodore. (See Troesh, Morrison C., assignor.)
Carrier Corporation. (See Carpender, William, assignor.)
Carter, Willard K. (See McKinley, J. M., and Carter.)
Case, Lynn B. (See Scott, H. A., and Case.)
Cecil, Walter W., II, Harrison, Ark. Paper drinking cup. 2,102,510; Dec. 14.
Celanese Corporation of American. (See Allan, J., and Wainwright, assignors.)
Celanese Corporation of America. (See Whitehead, William, assignor.)
Central Bag & Burlap Co. (See Rose, Charles, assignor.)
Central National Bank of Cleveland. (See Stimson, Percy G., assignor.)
Chadwick, Lee S., Shaker Heights Village, M. Resek, Cleveland Heights, and W. G. Midnight, Bay Village, assignors to Perfection Stove Company, Cleveland, Ohio. Refrigeration control means and method. 2,102,056; Dec. 14.
Chain Belt Company. (See Lind, Arthur C., assignor.)
Chain Belt Company. (See Merwin, J. C., and Lindow, assignors.)

Chain Belt Company. (See Shafer, Samuel, Jr., assignor.)
Chamberlain, Alfred J., Wauwatosa, Wis. Dispensing container. 2,102,057; Dec. 14.
Chambers, Jewel C., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation. Refrigeration. 2,102,354; Dec. 14.
Chance, Britton, Haverford, Pa. Automatic steering means. 2,102,511; Dec. 14.
Chance, Britton, Mantoloking, N. J. Automatic steering means. 2,102,512; Dec. 14.
Chance, Britton, Mantoloking, N. J. Steering means. 2,102,513; Dec. 14.
Charbonneau, Allan P, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Pressure responsive device. 2,102,304; Dec. 14.
Chester, Alden P. (See Harvey, W. D., and Chester.)
Chesterman-Leeland Company, The. (See Foster, Charles C., assignor.)
Chicago Bridge & Iron Company. (See Hines, Clarence W., assignor.)
Chicago Spring Hinge Company. (See Keene, William J., assignor.)
Chilton Pen Company, The. (See Sypher, Milford G., assignor.)
Chormann, George W., Niagara Falls, N. Y., and H. J. Cowle, Niagara Falls, Ontario, Canada, assignors, by mesne assignments, to The Carborundum Company, Niagara Falls, N. Y. Making abrasive teeth for stone saws. 2,102,305; Dec. 14.
Chormann, George W., Niagara Falls, N. Y., and H. J. Cowle, Niagara Falls, Ontario, Canada, assignors, by mesne assignments, to The Carborundum Company, Niagara Falls, N. Y. Metal reinforcement for abrasive teeth. 2,102,306; Dec. 14.
Chronmaster Electric Corporation. (See Ferbend, Spencer, assignor.)
Chrysler Corporation. (See Herreshoff, Alexander G., assignor.)
Chrysler Corporation. (See Kogstrom, Axel W., assignor.)

Elder, Flint C., Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey. Tire wire. 2,102,358; Dec. 14.
Elektrotechnische Fabrik Schmidt & Co., Gesellschaft m. b. H. (See Rathmann, Paul, assignor.)
Elkins, Melvin A., Tucumcari, assignor of one-half to N. W. Sharp, Conchas Dam, N. Mex. Chest supported firearm. 2,102,568; Dec. 14.
Ellis, Carleton, Montclair, N. J., assignor to Ellis-Foster Company. Lacquers of the urea resin type. 2,102,114; Dec. 14.
Ellis, Elmer A., Medford, Mass. Treating textile fabric for reinforcing insoles. 2,101,987; Dec. 14.
Ellis-Foster Company. (See Ellis, Carleton, assignor.)
Ellis-Foster Company. (See Rust, John B., assignor.)
Ellsworth, Denne C. (See Haskins, J. F., and Ellsworth.)
Emergency Window and Exit Devices Corporation. (See Zeeb, W. J., Dammes, and Morris, assignors.)
England, Frank W., assignor to Illinois Tool Works, Chicago, Ill. Lock washer. 2,102,495; Dec. 14.
Ensign-Bickford Co., The. (See Pearsall, David E., assignor.)
Epstein, Harry M., New York, N. Y. Insect bait. 2,101,988; Dec. 14.
Estate Stove Company, The. (See Kahn, Bertrand B., assignor.)
Etzel, Charles, Philadelphia, Pa., assignor, by mesne assignments, to Etzo Corporation. Motion pictures and apparatus therefor. 2,101,842; Dec. 14.
Etzo Corporation. (See Etzel, Charles, assignor.)
Evans Case Company. (See Reilly, Alfred F., assignor.)
Factor, Frank, and P. E. Fisher, assignors to Max Factor & Co., Los Angeles, Calif. Dry make-up cosmetic in solid cake form. 2,101,843; Dec. 14.
Factor, Max, & Co. (See Factor, F., and Fisher, assignors.)
Fallou, Jean, Montrouge, France, assignor to Compagnie pour la Fabrication des Compteurs & Materiel d'Usines a Gaz. Automatic regulator. 2,102,145; Dec. 14.
Fassin, Gustave, Irondequoit, and J. R. Miles, assignors to Bausch & Lomb Optical Company, Rochester, N. Y. Colorimeter. 2,101,933; Dec. 14.
Fassin, Gustave, Irondequoit, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Colorimeter. 2,101,934; Dec. 14.
Faus, Harold T., Lynn, Mass., assignor to General Electric Company. Electrical-measuring instrument. 2,102,409; Dec. 14.
Fedders Manufacturing Company. (See Minkel, Frank J., assignor.)
Fedders Manufacturing Company. (See Przyborowski, Stanislaus, assignor.)
Federal Electric Company. (See Barclay, Robert E., assignor.)
Ferbend, Spencer, assignor to Chronmaster Electric Corporation, Chicago, Ill. Mixing apparatus and juice extractor. 2,101,989; Dec. 14.
Ferrara, Samuel J., and W. E. Deen, Peru, Ind. Blood transfusion machine. 2,102,523; Dec. 14.
Field, Ernest E., Brockton, assignor to Charles S. Walkup, Jr., Boston, Mass. Machine for attaching welts to soles. 2,101,990; Dec. 14.
Fleux, Jean, assignor of one-half to Schneider & Cie., Paris, France. Centrifugal clutch. 2,102,524; Dec. 14.
Fifield, Albert F., St. Catharines, Ontario, Canada, assignor to The American Fork & Hoe Company, Cleveland, Ohio. Rail joint shim. 2,101,900; Dec. 14.
Finley, Walter H., and C. H. Hamilton, Nashville, Tenn. Flush tank valve apparatus. 2,101,991; Dec. 14.
Fischer, Erich. (See Fleischhauer, R., and Fischer.)
Fish, Percy C., Kalamazoo, Mich. Manufacturing composite vitreous tile and concrete staves. 2,101,992; Dec. 14.
Fisher Flouring Mills Co. (See Fisher, O. W., and Walter, assignors.)
Fisher, Orin W., and R. E. Walter, assignors to Fisher Flouring Mills Co., Seattle, Wash. Electrically controlled valve mechanism. 2,102,311; Dec. 14.
Fisher, Paul E. (See Factor, F., and Fisher.)
Flaherty, John T. (See Montgomery, J. E., and Flaherty.)
Fleischer, Joseph, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation. Refrigerant mixture and using the same. 2,101,993; Dec. 14.
Fleischhauer, Richard, Frankfort-on-the-Main-Fechenheim, and E. Fischer, Bad Soden at the Taunus, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Monoazodyestuffs. 2,102,115; Dec. 14.

Fletcher, Charles L. (See Conklin, F. R., and Fletcher.)
Fletcher, Joseph H., Southgate, Calif. Glare shield. 2,101,901; Dec. 14.
Food Machinery Corporation. (See Van Wyk, Paul, assignor.)
Fordyce, Charles R. (See Malm, C. J., and Fordyce.)
Fordyce, Charles R., Rochester, N. Y., assignor, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Preparation of cellulose acetate proprionate butyrate. 2,101,994; Dec. 14.
Forestek Plating & Manufacturing Company, The. (See Sherman, Samuel D., assignor.)
Foster, Charles C., Westville, N. J., assignor to The Chesterman-Leeland Company, Philadelphia, Pa. Stocking. 2,102,064; Dec. 14.
Foster, Leon V., Irondequoit, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Analyzing ocular. 2,101,935; Dec. 14.
Fotre, Harold C., assignor to The Scholl Mfg. Co., Inc., Chicago, Ill. Chiropodist's stool. 2,102,261; Dec. 14.
Fox, Robert, Chelsea, Mass. Cotton setting machine. 2,102,116; Dec. 14.
Fraser, George H., Brooklyn, N. Y. Speed reducer and other transmission. 2,101,844; Dec. 14.
Fraser, George H., Brooklyn, N. Y. Speed reducer and other transmission. 2,101,845; Dec. 14.
Fraser, George H., Brooklyn, N. Y. Coupling or other transmission device. 2,102,312; Dec. 14.
Fraser, George H., Brooklyn, N. Y. Drive and differential. 2,102,313; Dec. 14.
Fraser, George H., Brooklyn, N. Y. Drive and differential. 2,102,314; Dec. 14.
Freeman, Horace, Three Rivers, Quebec, Canada, assignor to Nichols Engineering & Research Corporation, New York, N. Y. Separation of solid particles from fluids. 2,102,525; Dec. 14.
Frieman, Jacob G., Attica, Ohio. Sanitary garment. 2,102,359; Dec. 14.
Fyler, George W., Schenectady, N. Y., assignor to General Electric Company. Antenna system. 2,102,410; Dec. 14.
Gail, George W., Ruxton, assignor to G. W. Gail, Inc., Baltimore, Md. Sealing strip. 2,102,578; Dec. 14.
Gail, G. W., Inc. (See Gail, George W., assignor.)
Gallasch, George B., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Microscope. 2,101,936; Dec. 14.
Gandell, William R. K. (See Craske, Alfred H., assignor.)
Gandy, Raymond A., Stamford, Conn. Gas detecting apparatus. 2,102,457; Dec. 14.
Gardner, Leland A., Maplewood, N. J., and F. J. Singer, Rockville Centre, N. Y., assignors to American Telephone and Telegraph Company. Telegraph switching system. 2,101,995; Dec. 14.
Garretson, Harry D., Long Island City, N. Y. X-ray apparatus. 2,102,146; Dec. 14.
Gaylord, James A., assignor of one-third to L. Gaylord, Sharon, Tenn. Seed gatherer attachment for mowing machines. 2,102,065; Dec. 14.
General Aniline Works, Inc. (See Fleischhauer R., and Fischer, assignors.)
General Electric Company. (See Bixler, Harley H., assignor.)
General Electric Company. (See Faus, Harold T., assignor.)
General Electric Company. (See Fyler, George W., assignor.)
General Electric Company. (See Junggren, Oscar, assignor.)
General Electric Company. (See Kuehni, Hans P., assignor.)
General Electric Company. (See Larrecq, Anthony J., assignor.)
General Electric Company. (See Lenz, Walter, assignor.)
General Electric Company. (See Shapter, George H., assignor.)
General Electric Company. (See Steenstrup, Christian, assignor.)
General Electric Company. (See Walle, Ludwig S., assignor.)
General Electric Company. (See Wünsche, Otto, assignor.)
General Motors Corporation. (See Chambers, Jewel C., assignor.)
General Motors Corporation. (See Dyer, John B., assignor.)
General Motors Corporation. (See Fleischer, Joseph, assignor.)
General Motors Corporation. (See Maccabee, David E., assignor.)
General Motors Corporation. (See Turnquist, Edward, assignor.)
General Motors Corporation. (See Vandoren, Bernard J., assignor.)
General Motors Corporation. (See Williams, Harry M., assignor.)
Gerber, Paul D. (See Bokovoy, S. A., and Gerber.)
Gerhardt, Charles C., Douglas Manor, N. Y. Brush. 2,102,178; Dec. 14.
Geroux, Harvey, Los Angeles, Calif. Twine controlling and cutting device. 2,102,360; Dec. 14.
Gerstenberg, Vivian, Birmingham, England, assignor to The International Nickel Company, Inc., New York, N. Y. Manufacture of table tops and other articles of furniture or equipment. 2,101,996; Dec. 14.
Giberson, Chipman H., Elyria, Ohio. Swivel pipe joint. 2,101,937; Dec. 14.
Giberson, Chipman H., Elyria, Ohio. Lubricated swivel pipe joint. 2,101,938; Dec. 14.
Gibson, Carter, San Angelo, Tex. Amusement device. 2,102,458; Dec. 14.
Gibson, George H. (See Joos, C. E., and Gibson.)
Gladwell, Arthur W. D., London, England. Carburetor. 2,102,361; Dec. 14.
Gladwell, Arthur W. D., London, England. Carburetor. 2,102,362; Dec. 14.
Gleason, George A. (See Brickman, A. E., and Gleason.)
Gleason, William W., assignor to Nachman Spring-Filled Corporation, Chicago, Ill. Edging for spring assemblies for upholstery. 2,102,066; Dec. 14.
Gleason Works. (See Slade, Leon D., assignor.)
Globe American Corporation. (See Harvey, W. D., and Chester, assignors.)

Goelzer, Henry J. (See Hansen, W. C., and Goelzer.)
Goldberg, James E., New York, N. Y. Lady's handbag. 2,101,997; Dec. 14.
Goldberg, Mark J., Muskegon Heights, assignor to Campbell, Wyant and Cannon Foundry Company, Norton Township, Mich. Pump. 2,102,117; Dec. 14.
Goodman Manufacturing Company. (See Sloane, William W., assignor.)
Goodyear, Wayne D. (See Elder, E. M., and Goodyear.)
Goordman, Elmer O., New York, N. Y. Self-gripping mandrel. 2,101,846; Dec. 14.
Graham, Warren C., New York, N. Y. Atomizer. 2,102,147; Dec. 14.
Graham, William S., Canton, Ill., assignor to International Harvester Company. Tractor lister cultivator. 2,102,262; Dec. 14.
Grallat, Robert, assignor to George Schuler & Co., Inc., New York, N. Y. Clip pin flower holder. 2,102,411; Dec. 14.
Grammes, L. F., & Sons, Inc. (See Romig, Morris W., assignor.)
Grassmann, Wolfgang, and H. Rubenbauer, assignors to A. Karreth, Munich, Germany. Preparing an enzyme from mold. 2,102,315; Dec. 14.
Gray, Robert L., Brooklyn, N. Y. Patch uniting method for envelopes. 2,101,847; Dec. 14.
Green, Clarence J. (See Crompton, G., Jr., and Green, assignor.)
Green, Samuel G., Gray, Ga. Stabilizer for guns. 2,101,848; Dec. 14.
Green, Samuel G., Gray, Ga. Muzzle attachment for guns. 2,101,849; Dec. 14.
Green, Samuel G., Gray, Ga. Muzzle attachment for guns. 2,101,850; Dec. 14.
Green, Samuel G., Gray, Ga. Machine gun jacket mounting. 2,101,851; Dec. 14.
Gridley, George O., New Britain, D. H. Montgomery, Hartford, and E. H. Wheeler, assignors, by mesne assignments, to The New Britain Machine Company, New Britain, Conn. Chucking machine. 2,102,412; Dec. 14.
Griffith, George W., Norwalk, Conn. Cushioned heel. 2,102,067; Dec. 14.
Groeck, Max, assignor to Hydro-Groeck G. m. b. H., Berlin, Germany. Cooking or extracting process. 2,101,939; Dec. 14.
Groenewold, Edwin F., Loyal, Okla. Latch for doors or barns, sheds, etc. 2,102,203; Dec. 14.
Gross, Martin G. J. (See Edwards, P. A., and Gross.)
Grunewald, Hubert, Paris, France. Saliva ejector. 2,102,263; Dec. 14.
Guedon, Emile C., Audubon, N. J., assignor to Radio Corporation of America. Vibratory contact device. 2,101,902; Dec. 14.
Guedon, Emile C., Audubon, N. J., assignor to Radio Corporation of America. Phonograph recording control system. 2,102,316; Dec. 14.
Guilfoyle, Frederick M., Denfield, Ontario, Canada, assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. 2,102,526; Dec. 14.
Gullett Gin Company. (See Wallace, Jeffrey J., assignor.)
Gunnerson, Arthur R., Denver, Colo. Bull rake. 2,102,068; Dec. 14.
Gutehoffnungshutte Overhausen Aktiengesellschaft. (See Nashan, Paul, assignor.)
Guthrie, James M. (See Keaney, J. C., and Guthrie.)
Guthrie, James M., Pittsburgh, assignor of one-third to J. C. Keaney, Mount Lebanon, Pa. Bottle. 2,102,148; Dec. 14.
Guthrie, James M., assignor of one-half to J. C. Keaney, Mount Lebanon, Pa. Glass masonry. 2,102,149; Dec. 14.
Gwinn, George W., Hewlett, N. Y., assignor to American Machine & Foundry Company. Cigarette weigher for continuous-rod cigarette machines. 2,102,317; Dec. 14.
Haag, Ivan L., Lakewood, and C. A. Vana, Cleveland, Ohio, assignors, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Purification of lactic acid. 2,101,998; Dec. 14.
Haas, Joseph F., Forest Park, assignor to Wodack Electric Tool Corporation, Chicago, Ill. Tool retainer for portable power driven tools. 2,102,264; Dec. 14.

Habermaier, Reinhard A., assignor to The De Vilbiss Company, Toledo, Ohio. Material for use in preventing offset in printing. 2,101,999; Dec. 14.

Hadley, Everett M., Riverside, Calif. Air resistance reducer. 2,102,527; Dec. 14.

Halberstadt, Bert, New York, N. Y. Overshoe and the like. 2,102,265; Dec. 14.

Hall, Eric E., assignor to J. H. O'Brien, Chicago, Ill. Expansion joint. 2,102,528; Dec. 14.

Hall, Mora S., Baltimore, Md., assignor to May Oil Burner Corporation. Combustion chamber heating device. 2,101,903; Dec. 14.

Hall, William H., Cicero, Ill. Analemmic tellurian globe. 2,102,413; Dec. 14.

Hamilton, Charles H. (See Finley, W. H., and Hamilton.)

Hammer, Arthur, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Diaphragm. 2,102,150; Dec. 14.

Hammer, Samuel, Brooklyn, assignor to United Metal Box Co., Inc., New York, N. Y. Adjustable fixture support. 2,101,852; Dec. 14.

Handler, Edward J., Irvington, N. J. Apparatus for removing contents of flasks. 2,102,266; Dec. 14.

Hanicke, Paul W., Kansas City, Mo. Cervical splint. 2,102,069; Dec. 14.

Hanley, John A., Stamford, Conn., assignor, by mesne assignments, to Clipshave Inc. Hair clipper. 2,102,529; Dec. 14.

Hannings, Charles J., assignor to Illinois Watch Case Company, Elgin, Ill. Combination vanity and cigarette case. 2,102,414; Dec. 14.

Hansen, Sven S., and T. M. E. Wendt, Rasunda, Sweden. Oscillograph. 2,101,490; Dec. 14.

Hansen, William C., and H. J. Goelzer, Milwaukee, Wis. Storm sash ventilator. 2,101,941; Dec. 14.

Hansgirg, Fritz, Radentheln, Austria, assignor to American Magnesium Metals Corporation, Pittsburgh, Pa. Recovery of compact metallic magnesium from magnesium in finely divided form. 2,101,904; Dec. 14.

Hara, Ryosaburo, and S. Abe, Sendai, assignors to Asahi Garasu Kabushiki Kaisha, Tokyo, Japan. Manufacturing metallic sodium. 2,102,151; Dec. 14.

Hardwick, Christopher L., Cleveland, Tenn. Making burners. 2,102,530; Dec. 14.

Harris, Floyd M., Merchantville, N. J. Remote control system. 2,102,070; Dec. 14.

Hart, Lester C., Cleveland, Ohio, assignor to Hi-Voltage Equipment Company. Fuse protective circuit. 2,102,204; Dec. 14.

Hart, William A., Detroit, Mich., assignor to Colonial Broach Company. Gear broaching machine and method. 2,102,071; Dec. 14.

Harvel Corporation, The. (See Harvey, Mortimer T., assignor.)

Harvey, Mortimer T., East Orange, N. J., assignor to The Harvel Corporation. Composition of matter and method and steps of making and using the same. 2,101,853; Dec. 14.

Harvey, William D., and A. P. Chester, assignors to Globe American Corporation, Kokomo, Ind. Cook stove. 2,102,459; Dec. 14.

Haseltine, Stacy B., Glen Ellyn, assignor to W. H. Miner, Inc., Chicago, Ill. Refrigerator car door. 2,101,942; Dec. 14

Haskins, Joseph F., and D. C. Ellsworth, deceased, by J. F. Haskins, administrator, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Cellulose mixed ethers and the preparation thereof. 2,102,205; Dec. 14.

Hass, Henry B., West Lafayette, Ind., and E. W. Gluesenkamp, Dayton, Ohio, assignors to Purdue Research Foundation, West Lafayette, Ind. Producing cyclopropane. 2,102,556; Dec. 14.

Haunz, Charles F., Buffalo, N. Y. Method of and apparatus for coating substances with metals or alloys. 2,101,854; Dec. 14.

Haynes, George F. R., assignor of one-half to A. Sutcliffe, London, England. Receiving delivered commodities and preventing theft thereof. 2,102,000; Dec. 14.

Hays, Joseph W., Tulsa, Okla. Premixing device for fluid fuel burners. 2,102,152; Dec. 14.

Hays, Joseph W., Tulsa, Okla. Ignition apparatus for closed-system fluent-combustible burners. 2,102,153; Dec. 14.

Heatlie, William C., Norwood, Mass. Combined closure and powder ejector. 2,102,118; Dec. 14.

Heddon's, James, Sons. (See Stolley, William A., assignor.)

Heim, Lewis R., Mount Dora, Fla. Making roller bearings. 2,102,460; Dec. 14.

Henderson, Douglas, Toronto, Ontario, Canada. Container. 2,101,855; Dec. 14.

Henkel, Lewis C., Fairfield, Ala. Producing a slag soil conditioner. 2,102,119; Dec. 14.

Hercules Powder Company. (See Lane, Fred H., assignor.)

Hercules Powder Company. (See Peterson, John M., assignor.)

Hercules Powder Company. (See Shapleigh, James H., assignor.)

Herman, Joseph. (See Blackwell, O. B., and Herman.)

Herreshoff, Alexander G., Grosse Pointe, assignor to Chrysler Corporation, Detroit, Mich. Propeller shaft bearing. 2,102,415; Dec. 14.

Hevenor, Charles D., Buffalo, N. Y. Automobile bumper. 2,102,120; Dec. 14.

Heyer, Frederic K., assignor to The Yale & Towne Mfg. Co., Stamford, Conn. Combination lock. 2,102,579; Dec. 14.

Heywood, Vincent E., Worcester, assignor to United States Envelope Company, Springfield, Mass. Manufacture of dry-sealing envelopes. 2,102,001; Dec. 14.

Higgins, G. F., Company. (See Edwards, P. A., and Gross, assignors.)

Hill, Ernest C., Medford, Mass. Safety device for wringers. 2,102,154; Dec. 14.

Hill, Frank L., Garden City, N. Y. Overload release device. 2,102,002; Dec. 14.

Hinderliter, Frank J., Tulsa, Okla. Rotary tool joint. 2,102,072; Dec. 14.

Hines, Clarence W., assignor to Chicago Bridge & Iron Company, Chicago, Ill. Welding apparatus. 2,101,856; Dec. 14.

Hi-Voltage Equipment Company. (See Hart, Lester C., assignor.)

Hobart Manufacturing Company, The. (See Johnston, Herbert L., assignor.)

Hodgson, Howard E., Wauwatosa, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electromagnetic clutch. 2,102,318; Dec. 14.

Hodsdon, Floyd G., assignor to International Harvester Company. Pressure releaser milking system. 2,102,267; Dec. 14.

Hoffman, Jacob, assignor of one-half to W. Dumke, Chicago, Ill. Safety mechanism. 2,102,537; Dec. 14.

Hoke, Harry H., Jr., Washington, D. C. Automatic control for automatic talking machines. 2,102,531; Dec. 14.

Hoke, Harry H., Jr., Washington, D. C. Coin controlled machine. 2,102,532; Dec. 14.

Hollerung, Wilhelm, assignor to Kulmbacher Spinnerei, Kulmbach, Germany. Manufacturing yarns. 2,101,943; Dec. 14.

Holmes, Charles L., assignor of one-half to G. E. Pine, Chino, Calif. Multiple rack for pool balls. 2,102,003; Dec. 14.

Holmes, George E., Elkhart, Ind. Renewable electric fuse. 2,102,206; Dec. 14.

Holston Manufacturing Company. (See Szabo, George C., assignor.)

Hönel, Herbert, Vienna, Austria, assignor to H. Reichhold, Detroit, Mich., doing business as Reichhold Chemicals. Condensation product and producing same. 2,101,944; Dec. 14.

Hopff, Heinrich, Ludwigshafen-on-the-Rhine, and F. Schmidt, Troisdorf, near Cologne, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Polymerization products from styrene and their production. 2,102,179; Dec. 14.

Hopkinson, Ernest, assignor, by mesne assignments, to United States Rubber Company, New York, N. Y. Pile fabric and making the same. 2,101,905; Dec. 14.

Hopkinson, Ernest, assignor, by mesne assignments, to United States Rubber Company, New York, N. Y. Pile fabric and machine for making the same. 2,101,906; Dec. 14.

Hoppenstand, David, Pittsburgh, Pa. Windshield wiper. 2,102,208; Dec. 14.

Hovey, Bry E., Huntington, W. Va. Register. 2,102,533; Dec. 14.

Horland, Henry, Williston Park, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,102,155; Dec. 14.

Howard, Van Buren A. (See Suttenfield, W. H., York, and Howard.)

Howarth, Harry A. S., assignor to Kingsbury Machine Works, Inc., Philadelphia, Pa. Thrust bearing. 2,102,534; Dec. 14.

Howell, Bernard E., and W. S. McKnight, Council Bluffs, Iowa. Brake controlling appliance. 2,102,461; Dec. 14.

Howell, Theodore L., assignor to K. Versen, New York, N. Y. Hanger. 2,102,462; Dec. 14.

Huber, Charlotte, New York, N. Y. Combination mop. 2,102,319; Dec. 14.

Hudson, James H. (See Sheppard, S. E., and Hudson.)

Huff, Lyman C., assignor, by mesne assignments, to Universal Oil Products Company, Chicago, Ill. Cracking of hydrocarbon oils. 2,102,269; Dec. 14.

Hufford, George H., Detroit, Mich., assignor to Thompson Products Incorporated, Cleveland, Ohio. Ball joint for front wheel suspensions. 2,102,463; Dec. 14.

Hunt, James K., and G. H. Latham, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Coated paper and paper-coating compositions. 2,102,207; Dec. 14.

Hurd, Clarence M., Huntington, N. Y. Closure cap lock. 2,102,464; Dec. 14.

Hurt, Victor H., Naugatuck, Conn., assignor to United States Rubber Products, Inc., New York, N. Y. Making rubber articles. 2,101,907; Dec. 14.

Hutchins, Edward, Glens Falls, N. Y., assignor to International Paper Company. Process of and apparatus for the manufacture of paper and the like. 2,102,004; Dec. 14.

Hydro-Groeck G. m. b. H. (See Groeck, Max, assignor.)

Hyams, Mortimer N., New York, N. Y. Electro-surgical device. 2,102,270; Dec. 14.

I. G. Farbenindustrie Aktiengesellschaft. (See Eggert, J., and Nissen, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Hopff, H., and Schmidt, assignors.)

Ideal Electric and Manufacturing Company, The. (See Noel, Clay W., assignor.)

Illinois Tool Works. (See Connell, James J., assignor.)

Illinois Tool Works. (See England, Frank W., assignor.)

Illinois Tool Works. (See Thode, Adolf, assignor.)

Illinois Watch Case Company. (See Hannings, Charles J., assignor.)

Imperial Chemical Industries Limited. (See Wyler, Max, assignor.)

Imperial Chemical Industries Limited. (See Baldwin, A. W., and Bunbury, assignors.)

Imperial Chemical Industries Limited. (See Lodge, F., and Lunsden, assignors.)

Independent Pneumatic Tool Company. (See Skner, Arthur H., assignor.)

Industrial Patents Corporation. (See Mink, Leon D., assignor.)

Ingenium Aktiengesellschaft. (See Reiter, Bruno, assignor.)

International Cigar Machinery Company. (See Wheeler, Henry H., assignor.)

International Harvester Company. (See Graham, William S., assignor.)

International Harvester Company. (See Hodsdon, Floyd G., assignor.)

International Nickel Company, The. (See Gerstenberg, Vivian, assignor.)

International Nickel Company, The. (See Pilling, N. B., and Merica, assignors.)

International Paper Company. (See Hutchins, Edward, assignor.)

Ipatieff, Vladimir, and R. E. Schaad, assignors to Universal Oil Products Company, Chicago, Ill. Manufacture of motor fuels. 2,101,857; Dec. 14.

Ipatieff, Vladimir, and R. E. Schaad, assignors to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbons. 2,102,073; Dec. 14.

Ipatieff, Vladimir, and R. E. Schaad, assignors to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbons. 2,102,074; Dec. 14.

Irving, Frank J., Los Angeles, Calif. Automatic throttle. 2,102,271; Dec. 14.

Jackson, Joseph, assignor to Rode & Brand, New York, N. Y. Advertising sign. 2,102,075; Dec. 14.

Jänicke, Hermann, assignor to H. Junkers, Dessau; T. Junkers, née Bennhold, Gauting, Germany, administratrix of said H. Junkers, deceased. Free piston engine. 2,102,121; Dec. 14.

Jephson, Allen C. (See Young, J. L., and Jephson.)

Jessop Steel Company. (See Trembour, Max R., assignor.)

Johansen, Harry C., Michigan City, Ind., assignor to Sullivan Machinery Company. Drilling implement. 2,102,236; Dec. 14.

Johnson, Franklin E., assignor to Norton Company, Worcester, Mass. Grinding machine. 2,102,518; Dec. 14.

Johnson, George A., assignor to W. H. Minor, Inc., Chicago, Ill. Draft and Buffer gear. 2,101,945; Dec. 14.

Johnson, Gustav, West Roxbury, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Nut and installation thereof. 2,102,558; Dec. 14.

Johnson, Gustaf A., New Bedford, Mass. Lamp socket. 2,102,465; Dec. 14.

Johnson, Loren E., and B. C. Bordonaro, Olean, N. Y. Game apparatus. 2,102,535; Dec. 14.

Johnson, Roy E., assignor to Mercen-Johnson Machine Co., Minneapolis, Minn. Conveyer chain with readily detachable feed-lug. 2,102,569; Dec. 14.

Johnson, Roy W., Milwaukee, Wis. Valve control. 2,102,076; Dec. 14.

Johnston, Herbert L., assignor to The Hobart Manufacturing Company, Troy, Ohio. Food handling apparatus. 2,102,180; Dec. 14.

Jonas, Frank D., East Williston, assignor to Oxford Filing Supply Co., Brooklyn, N. Y. Filing cabinet shell. 2,102,272; Dec. 14.

Jones, Grinnell, Cambridge, Mass., and I. B. Rymph, La Grangeville, assignors to S. Sternau & Co., Inc., New York, N. Y. Gel formation. 2,102,005; Dec. 14.

Jones, John E., Benton, Ill. Rock dust barrier. 2,102,006; Dec. 14.

Jonsson, Gustaf E., Huddinge, Sweden. Centrifugal clutch for rotating machine elements. 2,101,946; Dec. 14.

Jones, Carl B. (See Lewis, M. W., and Jones.)

Joos, Charles E., Philadelphia, and G. H. Gibson, Upper Montclair, N. J., assignors to Cochrane Corporation, Philadelphia, Pa. Method of and apparatus for treating water. 2,101,908; Dec. 14.

Junkers, Hugo. (See Jänicke, Hermann, assignor.)

Junkers, Therese, administratrix. (See Jänicke, Hermann, assignor.)

Junggren, Oscar, deceased, by the Schenectady Trust Company, executor, Schenectady, N. Y., assignor to General Electric Company. Elastic fluid turbine arrangement. 2,102,416; Dec. 14.

Kadenacy, Michel, Paris, France. Explosion or internal combustion engine. 2,102,559; Dec. 14.

Kahn, Bertrand B., Cincinnati, assignor to The Estate Stove Company, Hamilton, Ohio. Stove. 2,102,536; Dec. 14.

Kahn, Julius. (See Schulz, Walter F., assignor.)

Kahn, Louis W., Cincinnati, Ohio. Overhead-rail cleaner. 2,102,537; Dec. 14.

Kahn, Milton, assignor to Novelart Mfg. Co., New York, N. Y. Novelty box. 2,102,077; Dec. 14.

Kalb, Frank, Sr., Baltimore, Md. Window shutter. 2,102,156; Dec. 14.

Kandarian, Leon, Oakland, Calif. Bearing obstruction ejector. 2,102,320; Dec. 14.

Kapella Limited. (See Reason, R. E., and Clifford, assignors.)

Karpen, S., & Bros. (See Beck, E. J., and Schroeder, assignors.)

Karreth, August. (See Grassmann, W., and Rubenbauer, assignors.)

Keaney, Joseph C. (See Guthrie, James M., assignor.)

Keaney, Joseph C., Mount Lebanon, and J. M. Guthrie, Pittsburgh, Pa. Bottle closure. 2,102,157; Dec. 14.

Keaney, Joseph M., Mount Lebanon, and J. M. Guthrie, Pittsburgh, Pa. Bottle closure. 2,102,158; Dec. 14.

Keene, William J., assignor to Chicago Spring Hinge Company, Chicago, Ill. Door closer. 2,102,321; Dec. 14.

Keene, William J., assignor to Chicago Spring Hinge Company, Chicago, Ill. Door closer. 2,102,322; Dec. 14.

Kemp, George W., Dayton, Ohio. Support device. 2,102,078; Dec. 14.

Kennedy, Margaret H. (See Stokes, W. E., and Kennedy.)

Keppler, Albert E., assignor to Brown & Bailey Company, Philadelphia, Pa. Display box. 2,102,079; Dec. 14.

Kimball, James L., Danvers, assignor to Ruggles-Klingemann Mfg. Co., Salem, Mass. Regulator. 2,102,007; Dec. 14.

Kimmich, Elmer G., Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Belt drive. 2,102,560; Dec. 14.

King, Clarence D. (See Zimmerman, R. E., and King.)

Kingsbury Machine Works, Inc. (See Howarth, Harry A. S., assignor.)

Kinkaid, Charles R., Nashville, Tenn. Armature unit. 2,102,538; Dec. 14.

Kinley, Myron M., Tulsa, Okla. Well surveying device. 2,102,080; Dec. 14.

Kinnear, John K., Geneva, assignor to The American Fork & Hoe Company, Cleveland, Ohio. Reel seat for fishing rod handles. 2,102,237; Dec. 14.

Kinney, James A., Lebanon, Pa., assignor to Bethlehem Steel Company. Apparatus for manufacturing bolts and similar articles. 2,102,417; Dec. 14.

Kinzie, Charles J., Niagara Falls, assignor to The Titanium Alloy Manufacturing Company, New York, N. Y. Coherent porous zirconium silicates. 2,101,947; Dec. 14.

Kirsch, Benjamin, assignor to Auto Radiator Manufacturing Co., Chicago, Ill. Automotive air circulator. 2,102,418; Dec. 14.

Klitsche, Leo H., Los Angeles, assignor to The A. Lietz Company, San Francisco, Calif. Parallel straightedge. 2,102,008; Dec. 14.

Klutke, Fritz, Berlin-Johannisthal, assignor to Allegemeine Elektricitatz Gesellschaft, Berlin, Germany. Oscillation generator. 2,102,419; Dec. 14.

Kneibler, Arthur R., assignor to Coopers Incorporated, Kenosha, Wis. Swimming trunks. 2,102,323; Dec. 14.

Knisley, Andrew W., Dayton, Ohio. Static tube sleeve. 2,101,858; Dec. 14.

Knoll, Hans. (See Zoettl, Robert, assignor.)

Kogstrom, Axel W., assignor to Chrysler Corporation, Highland Park, Mich. Vehicle suspension system. 2,102,420; Dec. 14.

Kondolf, Henry, New York, N. Y., assignor to Southern Kraft Corporation. Carton and blank for forming the same. 2,102,009; Dec. 14.

Kopp, George J., Allston, Mass. Protective device for flexible conduits. 2,102,010; Dec. 14.

Korn, Erna, et al., executrices. (See Weisstein, Jacob, assignor.)

Kronmiller, Carl G., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control system. 2,102,324; Dec. 14.

Kronquest, Alfred L., Syracuse, assignor to Continental Can Company, Inc., New York, N. Y. Packaging beer in open top metal containers. 2,102,208; Dec. 14.

Kuehni, Hans P., Schenectady, N. Y., assignor to General Electric Company. Cathode ray oscillograph. 2,102,421; Dec. 14.

Kugler, Theodore R., Inglewood, Calif. Bathing suit. 2,102,363; Dec. 14.

Kulmbacher Spinnerei. (See Hollerung, Wilhelm, assignor.)

Kunze, Willy, assignor to Atlas Werke Aktiengesellschaft, Breman, Germany. Mounting submarine signaling apparatus. 2,101,859; Dec. 14.

Kylstra, John, assignor to Boeing Aircraft Company, Seattle, Wash. Airplane control rod and making the same. 2,102,325; Dec. 14.

Kysor, Karl D., Northville, assignor of one-tenth to C. E. Wisner, Detroit, Mich. Thermostatically controlled mixing valve. 2,102,011; Dec. 14.

Lager, Max, New York, N. Y. Support for lamps. 2,102,422; Dec. 14.

Laguzzi, Mario, West Haven, assignor to The Strouse Adler Company, New Haven, Conn. Corset, girdle, and the like. 2,102,273; Dec. 14.

La Hodny, William, Buffalo, N. Y. Support. 2,102,012; Dec. 14.

La Nationale Societe Anonyme. (See Bolle, León, assignor.)

Lane, Fred H., Hillsdale, N. Y., assignor to Hercules Powder Company, Wilmington, Del. Foundry core and dry binder for the preparation thereof. 2,102,122; Dec. 14.

Lane-Wells Company. (See Arnold, James C., assignor.)

Langley, Sam G., Maplewood, assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Phonograph. 2,102,423; Dec. 14.

Langsner, Adolph, assignor to Eugene Dietzgen Company, Chicago, Ill. Spirit level and mounting same. 2,102,364; Dec. 14.

Larimore, Louise D., New York, N. Y. Microscope for pathological research. 2,102,274; Dec. 14.

Larrecq, Anthony J., Schenectady, N. Y., assignor to General Electric Company. Mercury power plant. 2,102,424; Dec. 14.

Lateur, Gaston L., San Francisco, Calif. Self-opening and closing cap for collapsible tubes. 2,101,909; Dec. 14.

Latham, George H. (See Hunt, J. K., and Latham.)

Latz, Harry, Service Inc. (See Latz, H. L., and Plum, assignors.)

Latz, Harry L., New York, N. Y., and S. H. Plum, 2d, Madison, N. J., assignors to Harry Latz Service Inc., New York, N. Y. Printing machine. 2,102,466; Dec. 14.

Lauenstein, Carl F., and P. F. Ulmer, Indianapolis, Ind., assignors to Link-Belt Company, Chicago, Ill. Treating metal. 2,102,539; Dec. 14.

Lauter, Felix, Evanston, assignor to Sealkote Corporation, Chicago, Ill. Synthetic resin. 2,101,948; Dec. 14.

Lavine Gear Company. (See Twyman, H. Wickliffe, assignor.)

Lebedeff, Yurii E. (See Betterton, J. O., and Lebedeff.)

Lechesne, Gabriel, Montreuil-sous-Bois, assignor to Paul Durand, Neuilly-sur-Seine, France. Machine for hobbing the teeth of worm wheels. 2,102,540; Dec. 14.

Lee Rubber & Tire Corporation. (See Benner, W. W., and Leopold, assignors.)

Leeds and Northrup Company. (See Quereau, John F., assignor.)

Leeds, Winthrop M., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Circuit breaker. 2,102,326; Dec. 14.

Lenz, Walter, Berlin-Reinickendorf-West, Germany, assignor to General Electric Company. Föttinger drive. 2,102,425; Dec. 14.

Leonard, Simpson C., Jr., assignor to Michigan Leather Packing Company, Detroit, Mich. Seal. 2,102,013; Dec. 14.

Leopold, Frederick, Jr. (See Benner, W. W., and Leopold.)

Lepsoe, Robert, Trail, British Columbia, assignor to The Consolidated Mining & Smelting Company of Canada, Limited, Montreal, Quebec, Canada. Reduction of sulphur dioxide to elemental sulphur by means of carbon. 2,102,081; Dec. 14.

Les Petits Fils de Francois de Wendel & Cie. (See Weber, Guillaume, assignor.)

Leveau, Walter, Newport News, Va., assignor to Horace E. Dodge Boat & Plane Corporation, New York, N. Y. Windshield. 2,102,123; Dec. 14.

Levitt, Percy B. (See Morgan, J. D., and Levitt.)

Levow, David. (See Pasternack, Henry A., assignor.)

Lewis, Charles H. (See Urbain, O. M., and Stemen, assignors.)

Lewis Machine Company, The. (See Lewis, M. W., and Jones, assignors.)

Lewis, Marvin W., Cleveland Heights, and C. B. Jones, East Cleveland, assignors to The Lewis Machine Company, Cleveland, Ohio. Wire cutting machine. 2,101,860; Dec. 14.

Lietz, A., Company, The. (See Klitsche, Leo H., assignor.)

Lillie Gaylord. (See Gaylord, James A., assignor.)

Lind, Arthur C., assignor to Chain Belt Company, Milwaukee, Wis. Screening apparatus for liquids. 2,102,570; Dec. 14.

Lind, Jay H., Brooklyn, N. Y. Apparel and parts thereof. 2,102,014; Dec. 14.

Lindenblad, Nils E., Port Jefferson, N. Y., assignor to Radio Corporation of America. Frequency control. 2,102,426; Dec. 14.

Lindow, Rudolph F. (See Merwin, J. C., and Lindow.)

Link-Belt Company. (See Lauenstein, C. F., and Ulmer, assignors.)

Lithgow, James, Chicago, Ill. Transportation of liquids. 2,102,124; Dec. 14.

Ljungström, Erik, assignor to Aktiebolaget Transitoria, Stockholm, Sweden. Manufacture of keys for preserve cans. 2,102,467; Dec. 14.

Lloyd, Harold B., Sioux City, Iowa. Can opening device. 2,102,365; Dec. 14.

Lloyd, Richard L., Great Neck, N. Y., and H. J. Stehli, Cedar Grove, N. J.; Stella W. Lloyd, executrix of said Richard L. Lloyd, deceased. Treating waste wet organic material. 2,102,427; Dec. 14.

Lloyd, Stella W., executrix. (See Lloyd, R. L., and Stehli.)

Lodge, Frank, and C. H. Lumsden, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited. Manufacture of alkoxyanthraquinones. 2,101,910; Dec. 14.

Loeber, Edgar O., Cleveland, assignor to William W. Taylor, East Cleveland, Ohio. Garter. 2,102,561; Dec. 14.

Loughridge, Matthew H., Bogota, N. J. Calculating and recording system. 2,101,861; Dec. 14.

Lowenbraun, Harry, Brooklyn, and M. Schwartz, New York, N. Y. Collar. 2,101,911; Dec. 14.

Lucarelle, Joseph M., and J. E. Renholdt, Bridgeport, Conn., assignors to Dictaphone Corporation, New York, N. Y. Dictating machine. 2,102,366; Dec. 14.

Lucke, William B., Wilmette, Ill. Bathtub hanger. 2,102,082; Dec. 14.

Luckie, Neil D., Miami, Fla. Addressing stencil. 2,101,949; Dec. 14.

Lumsden, Colin H. (See Lodge, F., and Lumsden.)

Lumsden, David, Sikeston, Mo. Burner and fuel control mechanism. 2,102,367; Dec. 14.

Lundholm, Carl H., Stockholm, Sweden. Parachute pack. 2,102,541; Dec. 14.

Lyon, George A., Allenhurst, assignor to Lyon Incorporated, Asbury Park, N. J. Combination tire cover and hub guard. 2,102,468; Dec. 14.

Lyon, George A., assignor to Lyon Incorporated, Detroit, Mich. Tire cover. 2,102,469; Dec. 14.

Lyon, George A., Detroit, Mich. Ornamental ring for disk wheels. 2,102,470; Dec. 14.

Lyon, George A., Allenhurst, N. J. Vehicle wheel and cover plate. 2,102,471; Dec. 14.

Lyon Incorporated. (See Lyon, George A., assignor.)

Macauley, John B., Jr., Grosse Pointe, and A. J. Roualet, assignors to Chrysler Corporation, Detroit, Mich. Internal combustion engine fuel system. 2,102,428; Dec. 14.

Maccabee, David E., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation. Refrigerating apparatus. 2,102,015; Dec. 14.

Macdonald, Florence E. (See Mahon, Robert F., assignor.)

MacDonald, Isaac M., West Hartford, Conn. Receptacle holder. 2,102,083; Dec. 14.

MacGregor, Stephen H., Savannah, Ga. Gas-operated gun. 2,101,862; Dec. 14.

Magami, Stephen, Nanaimo, British Columbia, Canada. Sheet paper cabinet. 2,101,863; Dec. 14.

Magnetic Analysis Corporation. (See Zuschlag, Theodor, assignor.)

Mahon, Robert F., assignor of one-half to F. E. Macdonald, Lake Geneva, Wis. Match folder. 2,102,580; Dec. 14.

Malm, Carl J., and C. R. Fordyce, Rochester, N. Y., assignors, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Separating an organic acid ester of cellulose from its reaction mixture. 2,102,016; Dec. 14.

Marinsky, Davis. (See Morin, L. H., and Marinsky.)

Markle, George B., Jr., Hazelton, Pa. Device for holding fowls and the like. 2,102,542; Dec. 14.

Martel, Edgar J., Laconia, N. H. Arch-supporting stocking. 2,102,368; Dec. 14.

Martel, Edgar J., Laconia, N. H. Garter stocking. 2,102,369; Dec. 14.

Martin, Philip H. J., Sacramento, Calif. Audible signal for milking machines. 2,102,275; Dec. 14.

Martina, Aldo. (See Chwala, A., Waldmann, and Martina.)

Maschinenfabrik Ausgburg-Nurnberg A. G. (See Becher, Theodor, assignor.)

Matthews, W. N., Corporation. (See Birkenmaier, Theodore, assignor.)

Mauser-Werke A. G. (See Ebert, Fritz, assignor.)

May Oil Burner Corporation. (See Hall, Mora S., assignor.)

Mayer, Hans, Berlin-Charlottenburg, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt near Berlin, Germany. Multichannel carrier transmission system. 2,102,472; Dec. 14.

McBride, Eugene A., assignor to Thompson Products, Incorporated, Cleveland, Ohio. Making retainer locks. 2,102,473; Dec. 14.

McCallum, William J., Islington, Ontario, Canada. Rock drill. 2,101,864; Dec. 14.

McCallum, William J., Islington, Ontario, Canada. Rock drill. 2,101,865; Dec. 14.

McCormick, George, Redwood City, Calif. Wheel cooling apparatus. 2,102,181; Dec. 14.

McCormick, John H., Williamsport, Pa. Refrigerator car. 2,102,182; Dec. 14.

McDannold, Eullice, Mountain View, Calif. Applicator. 2,102,209; Dec. 14.

McDonald Products Corporation. (See Booth, Roland T., assignor.)

MaGohan, George W., assignor to The American Rolling Mill Company, Middletown, Ohio. Preparing metal for enameling. 2,101,950; Dec. 14.

McGregor, Thomas A. (See Saunders, W. S., and McGregor.)

McInnis, Colin H., Windsor, Ontario, Canada. Trolley yoke. 2,101,951; Dec. 14.

McKenna Glo-Life Corporation. (See McKenna, Vincent and W., and Rouss, assignors.)

McKenna, Vincent and W., and S. Rouss, assignors to McKenna Glo-Life Corporation, New York, N. Y. Animated luminous display device. 2,102,474; Dec. 14.

McKenna, Walter. (See McKenna, Vincent and W., and Rouss.)

McKinley, John M., East Cleveland, and W. K. Carter, Columbus, Ohio, assignors to National Aluminate Corporation, Chicago, Ill. Ceramic patching cement. 2,102,327; Dec. 14.

McKnight, Walter S. (See Howell, B. E., and McKnight.)

McLeod, Arthur M., Madison, assignor to D. J. Murray Manufacturing Co., Wausau, Wis. Grease trap. 2,102,429; Dec. 14.

McLeod, Arthur M., Madison, assignor to D. J. Murray Manufacturing Co., Wausau, Wis. Grease trap. 2,102,430; Dec. 14.

McNamara, Jay, New York, N. Y. Copy holder for stenotype strips. 2,102,431; Dec. 14.

McNeish, Arthur W., Detroit, Mich. Automobile heater. 2,102,581; Dec. 14.

McNitt, Willard C., Winnetka, Ill. Slicing machine. 2,102,475; Dec. 14.

McWane, Gerould R., Sandusky, Ohio, assignor to American Sweetwood Holder Co., Ridgewood, N. J. Ferrule for cigarette holders. 2,102,017; Dec. 14.

Medallic Art Company. (See Trees, Clyde C., assignor.)

Mendenhall, Earl, Los Angeles, and J. B. Van Horn, Alhambra, assignors, by mesne assignments, to Byron Jackson Co., Huntington Park, Calif. Control system for submersible motors and the like. 2,102,018; Dec. 14.

Mennesson, Marcel, assignor to "Société Anonyme Solex", Neuilly-sur-Seine, France. Floatless carburetor. 2,102,476; Dec. 14.

Merchant, George A., Chicago, and R. Milan, Pinckneyville, assignors to Binkley Coal Company, Chicago, Ill. Blasting cartridge. 2,102,477; Dec. 14.

Merco Nordstrom Valve Company. (See Nordstrom, Sven J., assignor.)

Mercen-Johnson Machine Co. (See Johnson, Roy E., assignor.)

Merica, Paul D. (See Pilling, N. B., and Merica.)

Merriss, Marion H., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Flotation process. 2,102,370; Dec. 14.

Merritt, Matthew M., Middleton, assignor to The Tanning Process Company, Boston, Mass. Softening hides and skins. 2,101,866; Dec. 14.

Merwin, John C., and R. F. Lindow, assignors to Chain Belt Company, Milwaukee, Wis. Valve for controlling plastic concrete mixtures. 2,102,571; Dec. 14.

Metallwerk Alfred Schwarz, G. m. b. H. (See Schwarz, Alfred, assignor.)

Mayer, Christian F., assignor to Textile Machine Works, Wyomissing, Pa. Yarn carrier control mechanism. 2,102,562; Dec. 14.

Meyer, Edwin L., Bridgeport, Conn. Pyroelectric tool. 2,101,912; Dec. 14.

Meyer, Edwin L., Bridgeport, Conn. Pyrographic pencil. 2,101,913; Dec. 14.

Michigan Leather Packing Company. (See Leonard, Simpson C., Jr., assignor.)

Micromatic Hone Corporation. (See Batzer, George J., assignor.)

Micromatic Hone Corporation. (See Quigley, Thomas F., assignor.)

Midnight, Wilbur G. (See Chadwick, L. S., Resek, and Midnight.)

Milan, Roland. (See Merchant, G. A., and Milan.)

Miles, John R. (See Fassin, G., and Miles.)

Miller, Angus M., Pleasant Ridge, Mich. Carburizing box. 2,102,010; Dec. 14.

Miller, Benjamin, Richmond Hill, N. Y., assignor to Power Patents Company, Jersey City, N. J. Impulse rate meter. 2,102,371; Dec. 14.

Miller, Clemmy O., and A. E. Siehrs, Chicago, Ill. Manufacture of water-soluble, storage-stable acetylsalicylic acid products. 2,101,867; Dec. 14.

Miller, Donald W. (See Russell, E. A., and Miller.)

Miller, Eugene N. (See Burns, W. E., and Miller.)

Miller, Frank P., Meadville, Pa. Cutting tool. 2,102,478; Dec. 14.

Miller, Grant H., Caldwell, N. J. Method of and apparatus for treating beef carcasses. 2,102,084; Dec. 14.

Mills, Bert E., Oak Park, assignor to Mills Novelty Company, Chicago, Ill. Timing device for electrically controlled apparatus. 2,102,372; Dec. 14.

Mills Novelty Company. (See Miller, Bert E., assignor.)

Miner, W. H., Inc. (See Haseltine, Stacy B., assignor.)

Miner, W. H., Inc. (See Johnson, George A., assignor.)

Mink, Leon D., assignor to Industrial Patents Corporation, Chicago, Ill. Whipping apparatus. 2,102,125; Dec. 14.

Minkel, Frank J., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y. Metal forming tool. 2,102,572; Dec. 14.

Minneapolis-Honeywell Regulator Company. (See Kronmiller, Carl G., assignor.)

Mitchell, Orville, Dallas, Tex. Cotton extracting saw cylinder. 2,102,085; Dec. 14.

Mitchell & Smith, Inc. (See Schmidt, Harry M., assignor.)

Modine Manufacturing Company. (See Boerger, Martin G., assignor.)

Moittié, Lucien D. O., assignor to Société Anonyme des Etablissements Repusseau & Cie., Levallois-Perret, France. Latching system for automobiles or other vehicles. 2,102,373; Dec. 14.

Montgomery, Donald H. (See Gridley, G. O., Montgomery, and Wheeler.)

Montgomery, Donald H., Berlin, assignor to The New Britain Machine Company, New Britain, Conn. Metalworking machine. 2,102,183; Dec. 14.

Montgomery, Julian E., Cleveland, Ohio, and J. T. Flaherty, assignors to United Engineering & Foundry Company, Pittsburgh, Pa. Method and apparatus for rolling metallic strip. 2,102,184; Dec. 14.

Moore, Carl E., Gary, Ind., assignor to American Sheet & Tin Plate Company. Conveyer. 2,102,374; Dec. 14.

Morgan, Smith D., South Orange, N. J., and P. B. Levitt, Bayside, N. Y., assignors to Powers Patents Company, Jersey City, N. J. Apparatus for the analytical testing of internal combustion engines. 2,102,185; Dec. 14.

Morin, Louis H., and D. Marinsky, Bronx, assignors to Whitehall Patents Corporation, New York, N. Y. Making thermoplastic fasteners. 2,102,328; Dec. 14.

Morris, Alfred C. (See Zeeb, W. J., Dammes, and Morris.)

Morris, Howard I., Indianapolis, Ind. Check signer. 2,101,914; Dec. 14.

Morris, John E. (See Raisch, W., Woodman, Buffington, and Morris.)

Morton, Frederick C., Eggertsville, N. Y. Fastening means for bearing sleeves. 2,102,375; Dec. 14.

Moses, James E. (See Dixon, Fate, assignor.)

Mossberg, Frank, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation. Manufacture of warp beams. 2,102,020; Dec. 14.

Mossberg Pressed Steel Corporation. (See Mossberg, Frank, assignor.)

Motor Wheel Corporation. (See Stough, Charles R., assignor.)

Mountjoy, Garrard. (See Seeley, S. W., and Mountjoy.)

Mueller, Herbert B., Los Angeles, Calif. Portable dance floor. 2,102,086; Dec. 14.

Mugdan, Martin, and J. Sixt, Munich, assignors to Consortium für Elektrochemische Industrie, G. m. b. H., Munich, Bavaria, Germany. Manufacturing acetic anhydride. 2,101,868; Dec. 14.

Mugdan, Martin, and J. Sixt, assignors to Consortium für Elektrochemische Industrie, G. m. b. H., Munich, Germany. Producing acetic anhydride. 2,102,159; Dec. 14.

Munson, Elmer L. (See Davis, C. H., and Munson.)

Murphy, P. H., Company. (See Murphy, Walter P., assignor.)

Murphy, Walter P., Chicago, Ill., assignor to P. H. Murphy Company, New Kensington, Pa. Car roof. 2,102,276; Dec. 14.

Murphy, Walter P., Chicago, Ill., assignor to P. H. Murphy Company, New Kensington, Pa. Carline. 2,102,277; Dec. 14.

Murray, Alexander, Rochester, N. Y., assignor, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Photographic half-tone screen material and process. 2,102,021; Dec. 14.

Murray, Alexander, Rochester, N. Y., assignor, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Color corrected photo-mechanical printing plate. 2,102,022; Dec. 14.

Murray, D. J., Manufacturing Co. (See McLeod, Arthur M., assignor.)

Murphy, P. H., Company. (See Bonsall, Charles D., assignor.)

Myer, William, New York, N. Y. Safety razor. 2,102,278; Dec. 14.

Myers Adolph A., Louisville, Ky. Collar supporting and ironing device. 2,102,210; Dec. 14.

Nachman Spring-Filled Corporation. (See Gleason, William W., assignor.)

Nagel, August, Stuttgart, Germany, assignor to Eastman Kodak Company, Rochester, N. Y. Shutter trigger latch. 2,102,376; Dec. 14.

Nashan, Paul, assignor to the firm Gutehoffnungshutte Oberhausen Aktiengesellschaft, Oberhausen-Rheinland, Germany. Production of formaldehyde from methane. 2,102,160; Dec. 14.

National Aluminate Corporation. (See McKinley, J. M., and Carter, assignors.)

National Postal Meter Company. (See Tyler, Barnwell S., assignor.)

National Silver Deposit Ware Co. (See de Montmorency, Bruce, assignor.)

National Tinsel Mfg. Co. (See Crosser, David H., assignor.)

Nelson, Arthur J., Milwaukee, and J. H. Olsen, Whitefish Bay, assignors to Pulp Reproduction Company, Milwaukee, Wis. Package. 2,102,329; Dec. 14.
Nesseth, Clifford A., Detroit, Mich. Combination truck and conveyer. 2,102,432; Dec. 14.
Nevins-Church Press, The. (See Nevins, Matthew J., Jr., assignor.)
Nevins, Matthew J., Jr., Glen Ridge, N. J., assignor to The Nevins-Church Press, New York, N. Y. Box. 2,102,433; Dec. 14.
New Britain Machine Company, The. (See Brown, Robert S., assignor.)
New Britain Machine Company, The. (See Gridley, G. O., Montgomery, and Wheeler, assignors.)
New Britain Machine Company, The. (See Montgomery, Donald H., assignor.)
Newcomer, Vincent K., Independence, Mo. Conveying apparatus. 2,102,330; Dec. 14.
Newfield, Albert, Hartford, Conn. Tobacco hanger. 2,102,479; Dec. 14.
Newman, David F., Rockville Centre, N. Y., assignor to Trans-Lux Corporation. Projection apparatus. 2,102,161; Dec. 14.
Nicholls, William H., deceased, Roslyn, and G. Anderson, Brooklyn; W. H. Nicholls, Roslyn, administrator of said W. H. Nicholls, assignor to Wm. H. Nicholls Co., Inc., Richmond Hill, N. Y. Jolting and squeeze control for molding machines. 2,102,377; Dec. 14.
Nicholls, William H., deceased, Roslyn; W. H. Nicholls, administrator, assignor to Wm. H. Nicholls Co., Inc., Long Island City, N. Y. Roll-off molding machine. 2,102,378; Dec. 14.
Nicholls, William H., administrator. (See Nicholls, William H.)
Nicholls, William H., administrator. (See Nicholls, W. H., and Anderson.)
Nicholls, Wm. H., Co. (See Nicholls, William H., assignor.)
Nicholls, Wm. H., Co. (See Nicholls, W. H., and Anderson, assignors.)
Nichols Engineering & Research Corporation. (See Freeman, Horace, assignor.)
Nicholson, Frederick A., and W. T. Pritchard, assignors to Stetson-Ross Machine Company, Seattle, Wash. Wood planing machine. 2,102,186; Dec. 14.
Nielsen, Hans P. K. T., Aabyhøj, assignor to De Jydske Skærvefabriker, Aarhus, Denmark. Road covering. 2,102,480; Dec. 14.
Nierenberg, Albert, New York, N. Y. Producing etched surfaced shells and casings. 2,102,162; Dec. 14.
Niles, Harry F., Covina, Calif. Ice pick. 2,102,331; Dec. 14.
Nissen, Hans F. (See Eggert, J., and Nissen.)
Noble, Warren, Michigan City, Ind., assignor to Sullivan Machinery Company. Vibration reducing means. 2,101,869; Dec. 14.
Noel, Clay W., assignor to The Ideal Electric and Manufacturing Company, Mansfield, Ohio. Dynamo motor. 2,102,481; Dec. 14.
Noma Electric Corporation. (See Wolf, Abraham, assignor.)
No-Nail Cases Proprietary Limited. (See van den Bogaert, Alexander G. A., assignor.)
Nordstrom, Sven J., Piedmont, Calif., assignor to Merco Nordstrom Valve Company, Pittsburgh, Pa. Plug valve. 2,102,211; Dec. 14.
Norman, George, Birmingham, England, assignor to Auto-Ordnance Corporation, New York, N. Y. Firearm. 2,102,332; Dec. 14.
Norton Company. (See Crompton, G., Jr., and Green, assignor.)
Norton Company. (See Johnson, Franklin E., assignor.)
Norton Company. (See Whitcomb, K. F., and Wagner, assignors.)
Novelart Mfg. Co. (See Kahn, Milton, assignor.)
Nutter, James G., Round Grove Township, McLeod County, Minn. Beet-topping machine. 2,102,379; Dec. 14.
Oakes Products Corporation. (See Sandberg, Ray A., assignor.)
O'Brien, James H. (See Hall, Eric E., assignor.)
Offutt, Harold H. (See Billings, E., and Offutt.)
Oilgear Company, The. (See Douglas, James K., assignor.)
Olin, Robert R., Akron, assignor to The Worthington Ball Company, Elyria, Ohio. Making rubber composition. 2,101,915; Dec. 14.
Oliver, Herbert F. (See Sickles, R. F., and Oliver.)
Oliver United Filters Incorporated. (See Sweetland, Ernest J., assignor.)
Olsen, Anders C., Garden City, N. Y. Building construction. 2,101,952; Dec. 14.
Olsen, John H. (See Nelson, A. J., and Olsen.)
Olson, Harry F., Audubon, N. J., assignor to Radio Corporation of America. Sound reproducing apparatus. 2,102,212; Dec. 14.
Öman, Erik, Stocksund, Sweden. Method and apparatus for producing cold. 2,101,953; Dec. 14.
Open Hearth Combustion Company. (See Danforth, George L., Jr., assignor.)
Osborn, Alden E., New York, N. Y. Pipe joint. 2,102,434; Dec. 14.
Otis Elevator Company. (See Sanford, Selden B., assignor.)
Overbury, Austin A., West Orange, N. J. Surgical lamp. 2,102,023; Dec. 14.
Oxford Filing Supply Co. (See Jonas, Frank D., assignor.)
Palmer, Guillermo D., Buenos Aires, Argentina. Automatic safety seal. 2,102,088; Dec. 14.
Pankonin, William G., Chicago, Ill. Tool for removing staples. 2,102,087; Dec. 14.
Pannike, Walter, Waterloo, Ontario, Canada. Root crop digging device. 2,102,213; Dec. 14.
Paper Novelty Manufacturing Co. (See Cohen, Sol D., assignor.)
Paper Patents Company. (See Biederman, Frank A., assignor.)
Paper Service Company, The. (See Rowe, William W., assignor.)
Parker, Arthur H. (See Sebell, Harry, assignor.)
Parker, Arthur L., Cleveland, Ohio. Preventing seizure of contacting surfaces of soft alloys and like materials. 2,102,214; Dec. 14.
Parker, Claude E., assignor to Skoop-A Corporation, Chicago, Ill. Burner mechanism for gaseous fuel stoves. 2,102,482; Dec. 14.
Parkins, Wright A. (See Beardslew, G. E., Jr., and Parkins.)
Passano, Russell F., assignor to The American Rolling Mill Company, Middletown, Ohio. Iron and steel alloy having corrosion resistance. 2,102,215; Dec. 14.
Pasternack, Henry A., Brooklyn, assignor to David Levow, New York, N. Y. Collapsible hoisting frame. 2,102,163; Dec. 14.
Pasternack, Richard, assignor to Charles Pfizer & Company, Brooklyn, N. Y. Crystallizing pure d-gluconodelta-lactone. 2,102,380; Dec. 14.
Pattison, Joseph N., Jr., Philadelphia, Pa. Machine for enveloping articles. 2,101,870; Dec. 14.
Payson, Arthur H., and C. O. Duevel, Jr., assignors to The American Thermos Bottle Company, Norwich, Conn. Heat insulated receptacle. 2,102,164; Dec. 14.
Pearsall, David E., Pittsburgh, Pa., assignor to The Ensign-Bickford Co., Simsbury, Conn. Safety fuse. 2,102,024; Dec. 14.
Pease, William R., South Portland, Maine. Apparatus for moving and stacking heavy cargo units. 2,101,871; Dec. 14.
Pelouch, James J., assignor to The United States Air Compressor Company, Cleveland, Ohio. Grease gun. 2,102,025; Dec. 14.
Pelton, George F., Middleburg, Va. Supplying ink to ink transfer members. 2,102,216; Dec. 14.
Penn Electric Switch Co. (See Persons, Lawrence M., assignor.)
Pardue Research Foundation. (See Hass, H. B., and Gluesenkamp, assignors.)
Perfection Stove Company. (See Chadwick, L. S., Resek, and Midnight, assignors.)
Perkins, Julian L., West Springfield, Mass. Wringer head. 2,101,872; Dec. 14.
Perkins, Julian L., West Springfield, Mass. Wringer head. 2,101,873; Dec. 14.
Perley, James A. (See Brand, Robert A., assignor.)
Perrin, Charles N., Buffalo, N. Y. Applying siccative coatings to bundled shingles. 2,102,089; Dec. 14.
Persons, Lawrence M., assignor to Penn Electric Switch Co., Des Moines, Iowa. Refrigerant condenser cooler. 2,102,090; Dec. 14.
Persons, Lawrence M., assignor to Penn Electric Switch Co., Des Moines, Iowa. Safety switch heater circuit for burner controls. 2,102,091; Dec. 14.
Peterson, John E., Irvington, N. J. Tenter clip. 2,102,026; Dec. 14.
Peterson, John M., Avondale, Pa., assignor to Hercules Powder Company, Wilmington, Del. Producing ammonia and boric acid. 2,102,126; Dec. 14.
Petroleum Rectifying Company of California. (See Woolfin, William, assignor.)
Petty, Earl, Hempstead, N. Y., assignor, by mesne assignments, to Sun Oil Company, Philadelphia, Pa. Dewaxing hydrocarbon oils. 2,102,334; Dec. 14.
Pfizer, Charles, & Company. (See Pasternack, Richard, assignor.)
Phail, Herman A., River Rouge, Mich. Warm air circulating and filtering apparatus. 2,101,916; Dec. 14.
Philadelphia Drying Machinery Company, The. (See Belcher, Harold H., assignor.)
Pilling, Norman B., Westfield, N. J., and P. D. Merica, assignors to The International Nickel Company, Inc., New York, N. Y. Copper-nickel-titanium alloys. 2,102,238; Dec. 14.
Pine, Gilbert E. (See Holmes, Charles I., assignor.)
Place, Willard P., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Receiving apparatus for communication systems. 2,102,435; Dec. 14.
Plater, Albert S., Saginaw, Mich. Making valve tappets. 2,101,917; Dec. 14.
Plum, Stephen H., 2d. (See Latz, H. L., and Plum.)
Polhemus, Charles B., San Jose, Calif. Firebox. 2,102,217; Dec. 14.
Poore & Company. (See Warr, Harold G., assignor.)
Pope, George E., Stratford, assignor to Raybestos-Manhattan, Inc., Bridgeport, Conn. Clutch plate. 2,102,279; Dec. 14.

Pope, George E., Stratford, assignor to Raybestos-Manhattan, Inc., Bridgeport, Conn. Cushioned clutch plate. 2,102,280; Dec. 14.
Posthumus, Klaas, Eindhoven, Netherlands, assignor to Radio Corporation of America. Radio circuits. 2,102,165; Dec. 14.
Potts, Louis M., Evanston, Ill., assignor, by mesne assignments, to Teletypesetter Corporation. Duplex rail shift mechanism for line composing machines. 2,102,127; Dec. 14.
Powell, Fred F., La Valle, Mo. Cultivator. 2,102,483; Dec. 14.
Power, James T., Wilmington, Del., and K. R. Brown, Tamaqua, Pa., assignors to Atlas Powder Company, Wilmington, Del. Acceleration of gelatinization of cellulose nitrate and liquid nitric esters and the product thereof. 2,102,187; Dec. 14.
Power Patents Company. (See Brandt, David G., assignor.)
Power Patents Company. (See Miller, Benjamin, assignor.)
Powers Patents Company. (See Morgan, J. D., and Levitt, assignors.)
Prélaz, Jean. (See Walch, H., and Prélaz.)
Prewitt, Richard H., Lansdowne, assignor to Autogiro Company of America, Willow Grove, Pa. Aircraft rotor blade mounting mechanism. 2,102,027; Dec. 14.
Prewitt, Richard H., Lansdowne, Pa. Aircraft with sustaining rotor. 2,102,028; Dec. 14.
Pringle, Mary, Alameda, Calif. Baby support. 2,102,281; Dec. 14.
Pritchard, Wilmot T. (See Nicholson, F. A., and Pritchard.)
Production Engineering Company. (See Sinclair, William, assignor.)
Przyborowski, Stanislaus, assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y. Machine for forming radiator ribbons. 2,102,573; Dec. 14.
Pulp Reproduction Company. (See Nelson, A. J., and Olsen, assignors.)
Putterman, Benjamin, Brooklyn, N. Y., assignor to Yankee Metal Products Corp., Norwalk, Conn. Lamp. 2,102,029; Dec. 14.
Quent, Leonard. (See Städtler, Ludwig R., assignor.)
Quigley, Thomas F., Cleveland, Ohio, assignor, by mesne assignments, to Micromatic Home Corporation, Detroit, Mich. Abrading tool. 2,102,092; Dec. 14.
Quigley, Thomas F., Cleveland, Ohio, assignor to Micromatic Home Corporation. Honing and lapping machine. 2,102,093; Dec. 14.
Quereau, John F., Barren Hill, assignor to Leeds and Northrup Company, Philadelphia, Pa. Electrical measuring system. 2,102,030; Dec. 14.
Quinn, Edward, Brooklyn, assignor to The Del-Mac Shoe Process Corporation, New York, N. Y. Shoe and making same. 2,102,333; Dec. 14.
Radio Condenser Company. (See Cramer, Stanley S., assignor.)
Radio Corporation of America. (See Barton, Loy E., assignor.)
Radio Corporation of America. (See Beers, George L., assignor.)
Radio Corporation of America. (See Bokovoy, S. A., and Gerber, assignors.)
Radio Corporation of America. (See Burlingame, Leslie G., assignor.)
Radio Corporation of America. (See Campbell, Richard L., assignor.)
Radio Corporation of America. (See Guedon, Emile C., assignor.)
Radio Corporation of America. (See Lindenblad, Nils E., assignor.)
Radio Corporation of America. (See Olson, Harry F., assignor.)
Radio Corporation of America. (See Posthumus, Klaas, assignor.)
Radio Corporation of America. (See Roberts, Walter van B., assignor.)
Radio Corporation of America. (See Seeley, S. W., and Mountjoy, assignors.)
Radio Corporation of America. (See Vance, Arthur W., assignor.)
Radio Corporation of America. (See Yolles, Jon Joseph, assignor.)
Raisch, William, New York, J. C. Woodman, Flushing, J. R. Buffington, New York, and J. E. Morris, Flushing, N. Y., assignors to Decarie Incinerator Corporation. Incineration of sewage screenings and the like. 2,102,543; Dec. 14.
Raisch, William, assignor to Underpinning & Foundation Co., Inc., New York, N. Y. Furnace. 2,102,544; Dec. 14.
Rakauskas, James T., Chicago, Ill. Spectacle case. 2,102,218; Dec. 14.
Rapp, Arnold C., Covington, Va. Emergency fire escape. 2,102,484; Dec. 14.
Rathmann, Paul, assignor to Elektrotechnische Fabrik Schmidt & Co. Gesellschaft b. b. H., Podmokly, Czechoslovakia. Bicycle lighting generator. 2,101,954; Dec. 14.
Raybestos-Manhattan, Inc. (See Pope, George E., assignor.)
Rayburn, Alden G., Sausalito, Calif. Indicator. 2,101,955; Dec. 14.
Raymond, Sidney A., Green Bay, Wis. Water softening compound. 2,102,219; Dec. 14.
Reason, Richard E., and T. W. Clifford, assignors to Kapella Limited, Leicester, England. Photographic roll-film camera. 2,102,574; Dec. 14.
Reichhold Chemicals. (See Hönel, Herbert.)
Reichhold, Helmuth. (See Hönel, Herbert, assignor.)
Reilly, Alfred F., assignor to Evans Case Company, North Attleboro, Mass. Lighter construction. 2,102,381; Dec. 14.
Reiter, Bruno, London, England, assignor to Ingenium Aktiengesellschaft, Chur, Switzerland. Method and apparatus for the production of fastener elements. 2,102,031; Dec. 14.
Remington Typewriter Company. (See Guilfoyle, Frederick M., assignor.)
Remy, Benjamin P. (See Remy, Frank I. and B. P.)
Remy, Frank I., Syracuse, and B. P. Remy, deceased, Indianapolis, Ind., M. W. Remy, executrix. Closure for containers. 2,102,436; Dec. 14.
Remy, Margaret W., executrix. (See Remy, Frank I. and B. P.)
Renault, Louis. (See Saives, Leon, assignor.)
Renholdt, John E. (See Lucarelle, J. M., and Renholdt.)
Replogle, Harry H., Scarsdale, and S. N. Dalton, Huntington Terrace, N. Y., assignors to Sylvania Industrial Corporation, Fredericksburg, Va. Wrapped article. 2,102,128; Dec. 14.
Republic Rubber Company, The. (See Brill, A. K., and Wake, assignors.)
Resek, Marc. (See Chadwick, L. S., Resek, and Midnight.)
Rexair Corporation. (See Brock, Clarence A., assignor.)
Richards, James S., Cincinnati, Ohio. Toy. 2,102,335; Dec. 14.
Richardson, Baynard E., and R. W. Willey, Grand Rapids, Mich. Knock-down drawer. 2,102,437; Dec. 14.
Richardson, Charles H., Dover, N. H. Device for use in playing solitaire contract bridge. 2,102,220; Dec. 14.
Richardson, William R., Roswell, N. Mex. Soldering iron. 2,102,032; Dec. 14.
Rider, Ernest G., assignor to Stokes and Smith Company, Philadelphia, Pa. Method of and apparatus for transporting and registering sheets. 2,102,033; Dec. 14.
Riebel, Frederick, Jr., and D. M. Dow, assignors to Air-Way Electric Appliance Corporation, Toledo, Ohio. Vacuum cleaner. 2,102,221; Dec. 14.
Riegels, Olaf L. A., Cleveland, Ohio. Fuel injection means for motors. 2,102,485; Dec. 14.
Riley, Lynn G. (See Taliaferro, W. R., Whittaker, and Riley.)
Riley, William I., Trussville, Ala. Brake actuating mechanism. 2,102,222; Dec. 14.
Roberts, Walter van B., Princeton, N. J., assignor to Radio Corporation of America. Velocity measuring device. 2,102,166; Dec. 14.
Rode & Brand. (See Jackson, Joseph, assignor.)
Roe, Mayo E., assignor to The Colson Corporation, Elyria, Ohio. Invalid chair. 2,102,336; Dec. 14.
Röhm & Haas Company. (See Spence, Le Roy U., assignor.)
Roller, Louis H., Plainfield, N. J. Valve. 2,102,034; Dec. 14.
Romano, Adeline, administratrix. (See Romano, Michaël.)
Romano, Michaël, Providence, R. I.; A. Romano, administratrix of said Michaël Romano. Windshield wiper. 2,102,188; Dec. 14.
Romig, Morris W., assignor to L. F. Grammes & Sons, Inc., Allentown, Pa. Box. 2,102,094; Dec. 14.
Chicago, Ill. Self closing bag. 2,102,035; Dec. 14.
Rosch, Samuel J., Yonkers, assignor to Anaconda Wire & Cable Company, New York, N. Y. Electric cable. 2,102,129; Dec. 14.
Rose, Charles, assignor to Central Bag & Burlap Co., Chicago, Ill. Self closure bag. 2,102,035; Dec. 14.
Rose, George H., Cleveland, Ohio. Apparatus for handling coils. 2,102,337; Dec. 14.
Roselund, Harold A., assignor to The De Vilbiss Company, Toledo, Ohio. Spray head. 2,102,382; Dec. 14.
Roseman, Leo, Newark, N. J. Multiple fastener. 2,102,223; Dec. 14.
Ross, Ernest, Los Angeles, assignor to United Research Corporation, Burbank, Calif. Mounting for light sensitive devices. 2,101,918; Dec. 14.
Rotter, Max, Milwaukee, Wis., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo. Gear drive. 2,102,167; Dec. 14.
Roualet, Andre J. (See Macauley, J. B., Jr., and Roualet.)
Rouss, Sydney. (See McKenna, Vincent and W., and Rouss.)
Rowe, Raymond N., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Electric switch. 2,102,545; Dec. 14.
Rowe, William W., Cincinnati, assignor to The Paper Service Company, Lockland, Ohio. Composite fabric. 2,101,874; Dec. 14.
Roy, Cecile M., Meudon, assignor to Societe des Usines Chimiques Rhone-Poulenc, Paris, France. Automatic apparatus for determining the hardness of water. 2,102,282; Dec. 14.
Rubenbauer, Hans. (See Grassmann, W., and Rubenbauer.)

Ruggles-Klingemann Mfg. Co. (See Kimball, James L., assignor.)
Rundblad, George J. (See St. Louis, C. V., and Rundblad.)
Ruppel, Ernst, Gotha, Germany. Electric lamp. 2,102,224; Dec. 14.
Russell, Edward A., Chicago, and D .W. Miller, Elmhurst, assignors to Vapor Car Heating Company, Inc., Chicago, Ill. Temperature control system for railway cars. 2,102,225; Dec. 14.
Rust, John B., Orange, N. J., assignor to Ellis-Foster Company. Oil-soluble phenolic resin and making same. 2,102,130; Dec. 14.
Rymph, Irving B. (See Jones, G., and Rymph.)
Sachsenröder, Gustav, Wuppertal Barmen, Allee, Germany. Artificial sausage casing and making same. 2,101,958; Dec. 14.
Sailstad, Edward J., Minneapolis, assignor to Van Duyne-Moran Fixtures, Co., St. Paul, Minn. Sectional refrigerant compressor. 2,101,956; Dec. 14.
St. Joseph Iron Works. (See Schmidtke, Albert H., assignor.)
St. Louis, Charles V., and G. J. Rundblad, assignors to Wilson-Jones Company, Chicago, Ill. Back gauge for punches. 2,102,292; Dec. 14.
Salves, Leon, assignor to L. Renault, Billancourt, France. Clutch control device. 2,102,036; Dec. 14.
Saklatwalla, Byramji D., Crafton, Pa. Alloy steel. 2,102,283; Dec. 14.
Salzman, Joseph R., and C. J. Snyder, Detroit, Mich. Airplane. 2,102,095; Dec. 14.
Samson-United Corporation. (See Walder, Emil, assignor.)
Sandberg, Ray A., Waukegan, assignor to Oakes Products Corporation, North Chicago, Ill. Automobile lock structure. 2,102,438; Dec. 14.
Sanders Small Arms, Limited. (See Sanders, Thomas F., assignor.)
Sanders, Thomas F., Slough Trading Estate, assignor to Sanders Small Arms, Limited, London, England. Recoil loading firearm. 2,101,957; Dec. 14.
Sandin, Jerome M., Forest Hills, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Circuit interrupter. 2,102,284; Dec. 14.
Sanford, Selden B., Yonkers, assignor to Otis Elevator Company, New York, N. Y. Connecting device. 2,102,383; Dec. 14.
Saunders, Walter S., and T. A. McGregor, assignors to American Forging & Socket Company, Pontiac, Mich. Seat support. 2,102,226; Dec. 14.
Schaad, Raymond E. (See Ipatieff, V., and Schaad.)
Scantlebury, Francis H., Brooklyn, N. Y. Illuminated mensuring device. 2,102,384; Dec. 14.
Schär, Fritz, Zurich, Switzerland. Device for dispensing measured quantities of liquid. 2,102,239; Dec. 14.
Schatz, Charles, assignor of one-half to J. P. Spitzel, Los Angeles, Calif. Finger-ring welding appliance. 2,102,546; Dec. 14.
Scheer, Richard H., New Holland, assignor to Vanity Fair Silk Mills, Reading, Pa. Hosiery with strain absorbing zone reinforced against curling. 2,102,486; Dec. 14.
Schenectady Trust Company, The, executor. (See Jungren, Oscar.)
Schichtel, Georg, Radenthein, Austria, assignor to American Magnesium Metals Corporation, Pittsburgh, Pa. Production of refined magnesium and magnesium alloys. 2,101,919; Dec. 14.
Schildmeier, Henry C., Indianapolis, Ind. Wheel repairing mechanism. 2,102,439; Dec. 14.
Schleicher, Lawrence, Los Angeles, Calif. Pessary applicator. 2,101,875; Dec. 14.
Schmid, Alfred W., Springfield, Ohio. Fastening device. 2,102,096; Dec. 14.
Schmid, Franz, Lucerne, Switzerland. Change speed mechanism. 2,102,131; Dec. 14.
Schmidt, Fritz. (See Hopff, H., and Schmidt.)
Schmidt, Harry M., Chicago, Ill., assignor to Mitchell & Smith, Inc., Detroit, Mich. Producing crown caps. 2,102,285; Dec. 14.
Schmidtke, Albert H., assignor to St. Joseph Iron Works, St. Joseph, Mich. Machinery for marking hosiery or other articles. 2,102,132; Dec. 14.
Schmitt, William H., St. Paul, Minn. Hair curler. 2,102,286; Dec. 14.
Schneider & Cie. (See Fleux, Jean, assignor.)
Schock, Gusmer & Co. Inc. (See Schock, Robert C., assignor.)
Schock, Robert C., New Rochelle, N. Y., assignor to Schock, Gusmer & Co. Inc., Hoboken, N. J. Brewing device. 2,102,385; Dec. 14.
Schoenberger, Otto H., Long Beach, Calif. Fire tool. 2,102,133; Dec. 14.
Scholl Mfg. Co., The. (See Fotre, Harold C., assignor.)
Schroeder, Henry L., Chicago, Ill. Multi-ply wood baker's peel. 2,101,920; Dec. 14.
Schroeder, William B. (See Beck, E. J., and Schroeder.)
Schuftan, Paul, Munich, Germany. Freezing process for the separation of the constituents of liquids. 2,102,134; Dec. 14.
Schuler, George, & Co. (See Grailliat, Robert, assignor.)
Schulz, Walter F., assignor of one-half to J. Kahn, Youngstown, Ohio. Metal drawing apparatus. 2,101,959; Dec. 14.
Schwartz, Adolph, Brooklyn, N. Y. Removable-decorative-window shade attachment. 2,102,240; Dec. 14.
Schwartz, Morris. (See Lowenbraun, H., and Schwartz.)
Schwartz, Nathan, New York, N. Y. Filter type respirator. 2,102,037; Dec. 14.
Schwartz, R. Plato, Rochester, N. Y. Method of and apparatus for displaying shoe lasts and the like. 2,102,038; Dec. 14.
Schwarz, Alfred, Eisenach, Marienhohe, Germany; S. Schwarz, neé Kuhlhoff, sole heir of said A. Schwarz, deceased, assignor to Metallwerk Alfred Schwarz, G. m. b. H. Defrosting screen. 2,102,487; Dec. 14.
Schwarz, Sophie, neé Kuhlhoff. (See Schwarz, Alfred.)
Schwarze Electric Company. (See Durant, John D., assignor.)
Schweizer, Alfred, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Governor means for liquid injection internal combustion engines. 2,102,338; Dec. 14.
Scott, Clyde, Newark, N. J. Composite film and method of making. 2,101,876; Dec. 14.
Scott, Harry A., North Plainfield, and L. B. Case, assignors to John Waldron Corporation, New Brunswick, N. J. Pattern registration means for multiple cylinder printing machines. 2,102,386; Dec. 14.
Scoville Manufacturing Company. (See Summey, David L., assignor.)
Sealkote Corporation. (See Lauter, Felix, assignor.)
Sebell, Harry, Boston, assignor of one-half to Arthur H. Parker, Lexington, Mass. Container. 2,102,440; Dec. 14.
Sebrell, Lorin B., Silver Lake, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Accelerator of vulcanization. 2,102,547; Dec. 14.
Seeley, Stuart W., and G. Mountjoy, Jackson, Mich., assignors, by mesne assignments, to Radio Corporation of America, New York, N. Y. Radio receiving set. 2,102,168; Dec. 14.
Seitzer, John, Clarkia, Idaho. Chain coupling. 2,102,135; Dec. 14.
Service Devices, Incorporated. (See Van Deventer, H. R., and Shively, assignors.)
Shafer, Samuel, Jr., assignor to Chain Belt Company, Milwaukee, Wis. Scummer for settling tanks and the like. 2,102,575; Dec. 14.
Shanton, Ira A., St. Petersburg, Fla. Trap for animals. 2,102,563; Dec. 14.
Shapleigh, James H., assignor to Hercules Powder Company, Wilmington, Del. Process and apparatus for manufacturing ammonium nitrate. 2,102,136; Dec. 14.
Shapter, George H., Erie, Pa., assignor to General Electric Company. Electric power system. 2,102,387; Dec. 14.
Sharp, Nesby W. (See Elkins, Melvin A., assignor.)
Shaver, George D., Crown Point, Ind. Mineral wool insulation. 2,101,921; Dec. 14.
Shell Development Company. (See von Fuchs, George H., assignor.)
Sheppard, Samuel E., and J. H. Hudson, Rochester, N. Y., assignors, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Preparing photographic gelatin. 2,101,877; Dec. 14.
Sherman, Samuel D., Cleveland, Ohio, assignor to The Forestek Plating & Manufacturing Company. Cooking apparatus. 2,102,097; Dec. 14.
Shively, John J. (See Van Deventer, H. R., and Shively.)
Sickles, F. W., Company. (See Sickles, R. F., and Oliver, assignors.)
Sickles, Royal F., Springfield, and H. F. Oliver, West Springfield, assignors to F. W. Sickles Company, Springfield, Mass. Adjusting means. 2,102,098; Dec. 14.
Siehrs, Arthur E. (See Miller, C. O., and Siehrs.)
Siemens & Halske Aktiengesellschaft. (See Mayer, Hans, assignor.)
Simmonds Development Corporation Limited. (See Simmonds, Oliver E., assignor.)
Simmonds, Oliver E., assignor to Simmonds Development Corporation Limited, London, England. Self-locking nut and making the same. 2,102,489; Dec. 14.
Simpkins, Robert B., Edgbaston, Birmingham, England. Investigating, correcting, and developing the power of human vision. 2,102,490; Dec. 14.
Simplicity Engineering Company. (See Behnke, George W., assignor.)
Sinclair, William, assignor to Production Engineering Company, Detroit, Mich. Conveyer feed milling machine. 2,102,227; Dec. 14.
Singer, Fred J. (See Gardner, L. A., and Singer.)
Singer, Fritz, Nuremberg, Germany, assignor to Tubus A. G., Glarus, Switzerland. Enlarging the diameter of hollow metal articles. 2,102,099; Dec. 14.
Sinskey, Simon, assignor to Winer Manufacturing Company, Hammond, Ind. Garment. 2,102,039; Dec. 14.
Sirera, Abel G., New York, N. Y. Advertising strap hanger. 2,102,488; Dec. 14.
Sixt, Johann. (See Mugdan, M., and Sixt.)
Sjöström, Erik A. A., Gothenburg, Sweden. Centrifugal pump. 2,101,960; Dec. 14.
Skaer, Arthur H., Los Angeles, Calif., assignor to Independent Pneumatic Tool Company, Chicago, Ill. Rock drill sludge ejector. 2,102,576; Dec. 14.
Skarphol, George, Souris, N. Dak. Portable weed burning eradicator. 2,102,100; Dec. 14.
Skoop-A Corporation. (See Parker, Claude E., assignor.)

Slade, Leon D., assignor to Gleason Works, Rochester, N. Y. Method of and apparatus for hardening gears. 2,102,040; Dec. 14.
Slidell, Kemper, Madison, Wis., assignor to C. F. Burgess Laboratories, Inc., Chicago, Ill. Treatment of water. 2,101,961; Dec. 14.
Sloane, William W., assignor to Goodman Manufacturing Company, Chicago, Ill. Drive mechanism. 2,102,441; Dec. 14.
Smethers, James A., Andrews, Tex. Wire line twister. 2,102,287; Dec. 14.
Smith, Cyril S., Cheshire, assignor to The American Brass Company, Waterbury, Conn. Copper-sulphur alloy. 2,102,388; Dec. 14.
Smith, John C., assignor to Solar Laboratories, Beaver, Pa. Stencil. 2,102,228; Dec. 14.
Smith, Roland L., Belmont, Mass. Signaling means for vehicles. 2,102,288; Dec. 14.
Smith, Schley E., Rock Island, Ill. Window construction. 2,102,491; Dec. 14.
Smolensky, Michael, Cleveland, Ohio. Direct flow check valve. 2,102,289; Dec. 14.
Snodgrass, Benjamin W., Denver, Colo. Mechanical hammer. 2,101,878; Dec. 14.
Snyder, Carl J. (See Salzman, J. R., and Snyder.)
Société Anonyme des Etablissements Repusseau & Cie. (See Moittie, Lucien D. O., assignors.)
"Société Anonyme Solex." (See Menesseon, Marcel, assignor.)
Societe des Usines Chimiques Rhone-Poulenc. (See Roy, Cecile M., assignor.)
Solar Laboratories. (See Smith, John C., assignor.)
Soss, Joseph, Roselle, N. J. Covered joint hinge. 2,102,290; Dec. 14.
Soss, Joseph, Roselle, N. J. Concealed hinge. 2,102,291; Dec. 14.
Southern Kraft Corporation. (See Kondolf, Henry, assignor.)
Special Products Company. (See Coster, Henri J., assignor.)
Spelts, George A., Los Angeles, assignor of seven percent to W. F. Arndt, and thirty percent to L. J. Styskal, county of Los Angeles, Calif. Cylinder cooling system. 2,102,041; Dec. 14.
Spence, Le Roy U., Cheltenham, assignor to Röhm & Haas Company, Philadelphia, Pa. Manufacture chlorohydrines. 2,102,042; Dec. 14.
Sperry, Arthur B., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,102,137; Dec. 14.
Spitzel, Jean P. (See Schatz, Charles, assignor.)
Städtler, Ludwig R., New York, assignor of one-half to Leonard Quent, Brooklyn, N. Y. Cashier's protector. 2,102,169; Dec. 14.
Staley, Allen C., Birmingham, assignor to Chrysler Corporation, Highland Park, Mich. Valve mechanism. 2,102,389; Dec. 14.
Standard Brands Incorporated. (See Stokes, W. E., and Kennedy, assignors.)
Standard Oil Company (Ohio), The. (See Ambrosius, George M., assignor.)
Steenstrup, Christian, Schenectady, N. Y., assignor to General Electric Company. Refrigerating machine. 2,102,390; Dec. 14.
Steenstrup, Christian, Schenectady, N. Y., assignor to General Electric Company. Refrigerating machine. 2,102,391; Dec. 14.
Stehli, Henry J. (See Lloyd, R. L., and Stehli.)
Stemen, William R. (See Urbain, O. M., and Stemen.)
Stern, Isaac, New York, N. Y. Paper machinery. 2,102,170; Dec. 14.
Stern, Joseph M., Company, The. (See Elder, E. M., and Goodyear, assignors.)
Sternau, S., & Co. (See Jones, G., and Rymph, assignors.)
Stetson-Ross Machine Company. (See Nicholson, F. A., and Pritchard, assignors.)
Stimson, Percy G., Dayton, assignor, by mesne assignments, to Central National Bank of Cleveland, Cleveland, Ohio, Counter. 2,102,043; Dec. 14.
Stoesslig, Ludwig, Monrovia, Calif. Spraying apparatus. 2,101,922; Dec. 14.
Stokes and Smith Company. (See Rider, Ernest G., assignor.)
Stokes, William E., Brooklyn, and M. H. Kennedy, assignors, by mesne assignments, to Standard Brands Incorporated, New York, N. Y. Making fruit extract concentrates and flavors. 2,101,962; Dec. 14.
Stolley, William A., assignor to James Heddon's Sons, Dowagiac, Mich. Fish lure. 2,102,492; Dec. 14.
Stough, Charles R., assignor to Motor Wheel Corporation, Lansing, Mich. Vehicle wheel. 2,101,923; Dec. 14.
Stratford, Charles W., assignor to Stratford Development Corporation, Kansas City, Mo. Apparatus for treating hydrocarbon oils. 2,102,548; Dec. 14.
Stratford Development Corporation. (See Stratford, Charles W., assignor.)
Straubel, Frederick L. G., Green Bay, Wis. Panel and card carrier combination. 2,101,963; Dec. 14.
Striehy, Maurice E., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Transmission system. 2,102,138; Dec. 14.
Ströher, Georg, Rothenkirchen, Germany. Hair waving appliance. 2,102,241; Dec. 14.
Strouse Adler Company, The. (See Laguzzi, Mario, assignor.)
Strouse, George C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Para-hydroxy-para'-ethoxy diphenylamine. 2,101,879; Dec. 14.
Stupell, Leo K., New York, N. Y. Ornament and frame therefor. 2,102,242; Dec. 14.
Sullivan Machinery Company. (See Johansen, Harry C., assignor.)
Summey, David L., deceased; The Colonial Trust Company and R. P. W. Summey, executors of said D. L. Summey, assignor to Scovill Manufacturing Company, Waterbury, Conn. Electric induction furnace and operating the same. 2,102,582; Dec. 14.
Summey, Richard P. Weeks, et al., executor. (See Summey, David L.)
Sun Oil Company. (See Petty, Earl, assignor.)
Superior Yarn Mills, Incorporated. (See Suttenfield, W. H., York, and Howard, assignors.)
Suttenfield, William H., Statesville, O. L. York, and V. B. A. Howard, Longisland, assignors to Superior Yarn Mills, Incorporated, Statesville, N. C. Cotton conveyer. 2,102,442; Dec. 14.
Svenska Aktiebolaget Gasaccumulator. (See Dalén, Gustaf, assignor.)
Sweetland, Ernest J., Piedmont, assignor to Oliver United Filters Incorporated, San Francisco, Calif. Filter. 2,102,293; Dec. 14.
Styskal, L. J., et al. (See Spelts, George A., assignor.)
Sullivan Machinery Company. (See Noble, Warren, assignor.)
Sutcliffe, Arthur. (See Haynes, George F. R., assignor.)
Sylvania Industrial Corporation. (See Replogle, H. H., and Dalton, assignors.)
Symington-Gould Corporation, The. (See Townsend, Donald L., assignor.)
Sypher, Milford G., Belleville, assignor to The Chilton Pen Company, Inc., Long Island City, N. Y. Fountain pen and the like. 2,102,044; Dec. 14.
Szabo, George C., assignor to Holston Manufacturing Company, Knoxville, Tenn. Knitting machine. 2,102,549; Dec. 14.
Takamiya, Etsuo, Moji, Japan. Preparing fat and oil splitting enzyme from plant seeds. 2,102,101; Dec. 14.
Taliaferro, William R., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Control system. 2,101,880; Dec. 14.
Taliaferro, William R., C. C. Whittaker, and L. G. Riley, Pittsburgh, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Control system. 2,102,294; Dec. 14.
Tanning Process Company, The. (See Merritt, Matthew M., assignor.)
Taylor, William W. (See Loeber, Edgar O., assignor.)
Tea, Clark A., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Weather strip. 2,102,392; Dec. 14.
Tea, Clark A., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Weather strip. 2,102,393; Dec. 14.
Tebo, William A., Anthony, R. I. Method and apparatus for restoring fur in a shuttle to active position. 2,101,964; Dec. 14.
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Hammer, Arthur, assignor.)
Teletypesetter Corporation. (See Potts, Louis M., assignor.)
Terry, Matson C., New Rochelle, N. Y., and T. A. Buckley, Springfield, Mass., assignors to Westinghouse Electric and Manufacturing Company. Refrigeration apparatus. 2,101,881; Dec. 14.
Textile Machine Works. (See Meyer, Christian F., assignor.)
Thode, Adolf, Hamburg-Billbrook, Germany, assignor to Illinois Tool Works, Chicago, Ill. Production of fan-shaped screw locks. 2,102,493; Dec. 14.
Thomas, Albert G., Lynchburg, Va. Electron discharge tube. 2,102,045; Dec. 14.
Thompson Products Incorporated. (See Hufferd, George H., assignor.)
Thompson Products, Incorporated. (See McBride, Eugene A., assignor.)
Thompson, William F., and R. Whitten, assignors of thirty-three and one-third per cent to A. W. Tiska and M. Tiska, Alton, Ill. Water cooler for use in refrigerators. 2,102,496; Dec. 14.
Thomson, Alfred J., assignor to Bulldog Electric Products Company, Detroit, Mich. Circuit breaker. 2,102,295; Dec. 14.
Thorn, Lawrence T., Memphis, Tenn. Building construction. 2,102,443; Dec. 14.
Tinnerman, Albert H. (See Tinnerman, George A., assignor.)
Tinnerman, George A., Rocky River, assignor to Albert H. Tinnerman, Cleveland, Ohio. Fastening device. 2,102,229; Dec. 14.
Tiska, A. W., et al. (See Thompson, W. F., and Whitten, assignors.)
Tiska, Mary, et al. (See Thompson, W. F., and Whitten, assignors.)

Ruggles-Klingemann Mfg. Co. (See Kimball, James L., assignor.)
Rundblad, George J. (See St. Louis, C. V., and Rundblad.)
Ruppel, Ernst, Gotha, Germany. Electric lamp. 2,102,224; Dec. 14.
Russell, Edward A., Chicago, and D .W. Miller, Elmhurst, assignors to Vapor Car Heating Company, Inc., Chicago, Ill. Temperature control system for railway cars. 2,102,225; Dec. 14.
Rust, John B., Orange, N. J., assignor to Ellis-Foster Company. Oil-soluble phenolic resin and making same. 2,102,130; Dec. 14.
Rymph, Irving B. (See Jones, G., and Rymph.)
Sachsenröder, Gustav, Wuppertal Barmen, Allee, Germany. Artificial sausage casing and making same. 2,101,958; Dec. 14.
Sailstad, Edward J., Minneapolis, assignor to Van Duyne-Moran Fixtures, Co., St. Paul, Minn. Sectional refrigerant compressor. 2,101,956; Dec. 14.
St. Joseph Iron Works. (See Schmidtke, Albert H., assignor.)
St. Louis, Charles V., and G. J. Rundblad, assignors to Wilson-Jones Company, Chicago, Ill. Back gauge for punches. 2,102,292; Dec. 14.
Salves, Leon, assignor to L. Renault, Billancourt, France. Clutch control device. 2,102,036; Dec. 14.
Saklatwalla, Byramji D., Crafton, Pa. Alloy steel. 2,102,283; Dec. 14.
Salzman, Joseph R., and C. J. Snyder, Detroit, Mich. Airplane. 2,102,095; Dec. 14.
Samson United Corporation. (See Walder, Emil, assignor.)
Sandberg, Ray A., Waukegan, assignor to Oakes Products Corporation, North Chicago, Ill. Automobile lock structure. 2,102,438; Dec. 14.
Sanders Small Arms, Limited. (See Sanders, Thomas F., assignor.)
Sanders, Thomas F., Slough Trading Estate, assignor to Sanders Small Arms, Limited, London, England. Recoil loading firearm. 2,101,957; Dec. 14.
Sandin, Jerome M., Forest Hills, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Circuit interrupter. 2,102,284; Dec. 14.
Sanford, Selden B., Yonkers, assignor to Otis Elevator Company, New York, N. Y. Connecting device. 2,102,383; Dec. 14.
Saunders, Walter S., and T. A. McGregor, assignors to American Forging & Socket Company, Pontiac, Mich. Seat support. 2,102,226; Dec. 14.
Schaad, Raymond E. (See Ipatieff, V., and Schaad.)
Scantlebury, Francis H., Brooklyn, N. Y. Illuminated measuring device. 2,102,384; Dec. 14.
Schär, Fritz, Zurich, Switzerland. Device for dispensing measured quantities of liquid. 2,102,239; Dec. 14.
Schatz, Charles, assignor of one-half to J. P. Spitzel, Los Angeles, Calif. Finger-ring welding appliance. 2,102,346; Dec. 14.
Scheer, Richard H., New Holland, assignor to Vanity Fair Silk Mills, Reading, Pa. Hosiery with strain absorbing zone reinforced against curling. 2,102,486; Dec. 14.
Schenectady Trust Company, The, executor. (See Junggren, Oscar.)
Schichtel, Georg, Radenthein, Austria, assignor to American Magnesium Metals Corporation, Pittsburgh, Pa. Production of refined magnesium and magnesium alloys. 2,101,919; Dec. 14.
Schildmeier, Henry C., Indianapolis, Ind. Wheel repairing mechanism. 2,102,439; Dec. 14.
Schleicher, Lawrence, Los Angeles, Calif. Pessary applicator. 2,101,875; Dec. 14.
Schmid, Alfred W., Springfield, Ohio. Fastening device. 2,102,096; Dec. 14.
Schmid, Franz, Lucerne, Switzerland. Change speed mechanism. 2,102,131; Dec. 14.
Schmidt, Fritz. (See Hopf, H., and Schmidt.)
Schmidt, Harry M., Chicago, Ill., assignor to Mitchell & Smith, Inc., Detroit, Mich. Producing crown caps. 2,102,285; Dec. 14.
Schmidtke, Albert H., assignor to St. Joseph Iron Works, St. Joseph, Mich. Machinery for marking hosiery or other articles. 2,102,132; Dec. 14.
Schmitt, William H., St. Paul, Minn. Hair curler. 2,102,286; Dec. 14.
Schneider & Cie. (See Fleux, Jean, assignor.)
Schock, Gusmer & Co. Inc. (See Schock, Robert C., assignor.)
Schock, Robert C., New Rochelle, N. Y., assignor to Schock, Gusmer & Co. Inc., Hoboken, N. J. Brewing device. 2,102,385; Dec. 14.
Schoenberger, Otto H., Long Beach, Calif. Fire tool. 2,102,133; Dec. 14.
Scholl Mfg. Co., The. (See Fotre, Harold C., assignor.)
Schroeder, Henry L., Chicago, Ill. Multi-ply wood baker's peel. 2,101,920; Dec. 14.
Schroeder, William B. (See Beck, E. J., and Schroeder.)
Schuftan, Paul, Munich, Germany. Freezing process for the separation of the constituents of liquids. 2,102,134; Dec. 14.
Schuler, George, & Co. (See Grailliat, Robert, assignor.)
Schulz, Walter E., assignor of one-half to J. Kahn, Youngstown, Ohio. Metal drawing apparatus. 2,101,959; Dec. 14.
Schwartz, Adolph, Brooklyn, N. Y. Removable decorative window shade attachment. 2,102,240; Dec. 14.
Schwartz, Morris. (See Lowenbraun, H., and Schwartz.)
Schwartz, Nathan, New York, N. Y. Filter type respirator. 2,102,037; Dec. 14.
Schwartz, R. Plato, Rochester, N. Y. Method of and apparatus for displaying shoe lasts and the like. 2,102,038; Dec. 14.
Schwarz, Alfred, Eisenach, Marienhohe, Germany; S. Schwarz, neé Kuhlhoff, sole heir of said A. Schwarz, deceased, assignor to Metallwerk Alfred Schwarz, G. m. b. H. Defrosting screen. 2,102,487; Dec. 14.
Schwarz, Sophie, neé Kuhlhoff. (See Schwarz, Alfred.)
Schwarze Electric Company. (See Durant, John D., assignor.)
Schweizer, Alfred, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Governor means for liquid injection internal combustion engines. 2,102,338; Dec. 14.
Scott, Clyde, Newark, N. J. Composite film and method of making. 2,101,876; Dec. 14.
Scott, Harry A., North Plainfield, and L. B. Case, assignors to John Waldron Corporation, New Brunswick, N. J. Pattern registration means for multiple cylinder printing machines. 2,102,386; Dec. 14.
Scoville Manufacturing Company. (See Summey, David L., assignor.)
Sealkote Corporation. (See Lauter, Felix, assignor.)
Sebell, Harry, Boston, assignor of one-half to Arthur H. Parker, Lexington, Mass. Container. 2,102,440; Dec. 14.
Sebrell, Lorin B., Silver Lake, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Accelerator of vulcanization. 2,102,547; Dec. 14.
Seeley, Stuart W., and G. Mountjoy, Jackson, Mich., assignors, by mesne assignments, to Radio Corporation of America, New York, N. Y. Radio receiving set. 2,102,168; Dec. 14.
Seltzer, John, Clarkia, Idaho. Chain coupling. 2,102,135; Dec. 14.
Service Devices, Incorporated. (See Van Deventer, H. R., and Shively, assignors.)
Shafer, Samuel, Jr., assignor to Chain Belt Company, Milwaukee, Wis. Scummer for settling tanks and the like. 2,102,575; Dec. 14.
Shanton, Ira A., St. Petersburg, Fla. Trap for animals. 2,102,563; Dec. 14.
Shapleigh, James H., assignor to Hercules Powder Company, Wilmington, Del. Process and apparatus for manufacturing ammonium nitrate. 2,102,136; Dec. 14.
Shapter, George H., Erie, Pa., assignor to General Electric Company. Electric power system. 2,102,387; Dec. 14.
Sharp, Nesby W. (See Elkins, Melvin A., assignor.)
Shaver, George D., Crown Point, Ind. Mineral wool insulation. 2,101,921; Dec. 14.
Shell Development Company. (See von Fuchs, George H., assignor.)
Sheppard, Samuel E., and J. H. Hudson, Rochester, N. Y., assignors, by mesne assignments, to Eastman Kodak Company, Jersey City, N. J. Preparing photographic gelatin. 2,101,877; Dec. 14.
Sherman, Samuel D., Cleveland, Ohio, assignor to The Forestek Plating & Manufacturing Company. Cooking apparatus. 2,102,097; Dec. 14.
Shively, John J. (See Van Deventer, H. R., and Shively.)
Sickles, F. W., Company. (See Sickles, R. F., and Oliver, assignors.)
Sickles, Royal F., Springfield, and H. F. Oliver, West Springfield, assignors to F. W. Sickles Company, Springfield, Mass. Adjusting means. 2,102,098; Dec. 14.
Siehrs, Arthur E. (See Miller, C. O., and Siehrs.)
Siemens & Halske Aktiengesellschaft. (See Mayer, Hans, assignor.)
Simmonds Development Corporation Limited. (See Simmonds, Oliver E., assignor.)
Simmonds, Oliver E., assignor to Simmonds Development Corporation Limited, London, England. Self-locking nut and making the same. 2,102,489; Dec. 14.
Simpkins, Robert B., Edgbaston, Birmingham, England. Investigating, correcting, and developing the power of human vision. 2,102,490; Dec. 14.
Simplicity Engineering Company. (See Behnke, George W., assignor.)
Sinclair, William, assignor to Production Engineering Company, Detroit, Mich. Conveyer feed milling machine. 2,102,227; Dec. 14.
Singer, Fred J. (See Gardner, L. A., and Singer.)
Singer, Fritz, Nuremberg, Germany, assignor to Tubus A. G., Glarus, Switzerland. Enlarging the diameter of hollow metal articles. 2,102,099; Dec. 14.
Sinskey, Simon, assignor to Winer Manufacturing Company, Hammond, Ind. Garment. 2,102,039; Dec. 14.
Sirera, Abel G., New York, N. Y. Advertising strap hanger. 2,102,488; Dec. 14.
Sixt, Johann. (See Mugdan, M., and Sixt.)
Sjöström, Erik A. A., Gothenburg, Sweden. Centrifugal pump. 2,101,960; Dec. 14.
Skaer, Arthur H., Los Angeles, Calif., assignor to Independent Pneumatic Tool Company, Chicago, Ill. Rock drill sludge ejector. 2,102,576; Dec. 14.
Skarphol, George, Souris, N. Dak. Portable weed burning eradicator. 2,102,100; Dec. 14.
Skoop-A Corporation. (See Parker, Claude E., assignor.)

Slade, Leon D., assignor to Gleason Works, Rochester, N. Y. Method of and apparatus for hardening gears. 2,102,040; Dec. 14.
Slidell, Kemper, Madison, Wis., assignor to C. F. Burgess Laboratories, Inc., Chicago, Ill. Treatment of water. 2,101,961; Dec. 14.
Sloane, William W., assignor to Goodman Manufacturing Company, Chicago, Ill. Drive mechanism. 2,102,441; Dec. 14.
Smethers, James A., Andrews, Tex. Wire line twister. 2,102,287; Dec. 14.
Smith, Cyril S., Cheshire, assignor to The American Brass Company, Waterbury, Conn. Copper-sulphur alloy. 2,102,388; Dec. 14.
Smith, John C., assignor to Solar Laboratories, Beaver, Pa. Stencil. 2,102,228; Dec. 14.
Smith, Roland L., Belmont, Mass. Signaling means for vehicles. 2,102,288; Dec. 14.
Smith, Schley E., Rock Island, Ill. Window construction. 2,102,491; Dec. 14.
Smolensky, Michael, Cleveland, Ohio. Direct flow check valve. 2,102,289; Dec. 14.
Snodgrass, Benjamin W., Denver, Colo. Mechanical hammer. 2,101,878; Dec. 14.
Snyder, Carl J. (See Salzman, J. R., and Snyder.)
Société Anonyme des Etablissements Repusseau & Cie. (See Moittie, Lucien D. O., assignors.)
"Société Anonyme Solex." (See Menesseon, Marcel, assignor.)
Societe des Usines Chimiques Rhone-Poulenc. (See Roy, Cecile M., assignor.)
Solar Laboratories. (See Smith, John C., assignor.)
Soss, Joseph, Roselle, N. J. Covered joint hinge. 2,102,290; Dec. 14.
Soss, Joseph, Roselle, N. J. Concealed hinge. 2,102,291; Dec. 14.
Southern Kraft Corporation. (See Kondolf, Henry, assignor.)
Special Products Company. (See Coster, Henri J., assignor.)
Spelts, George A., Los Angeles, assignor of seven percent to W. F. Arndt, and thirty percent to L. J. Styskal, county of Los Angeles, Calif. Cylinder cooling system. 2,102,041; Dec. 14.
Spence, Le Roy U., Cheltenham, assignor to Röhm & Haas Company, Philadelphia, Pa. Manufacture chlorohydrines. 2,102,042; Dec. 14.
Sperry, Arthur B., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone system. 2,102,137; Dec. 14.
Spitzel, Jean P. (See Schatz, Charles, assignor.)
Städtler, Ludwig R., New York, assignor of one-half to Leonard Quent, Brooklyn, N. Y. Cashier's protector. 2,102,169; Dec. 14.
Staley, Allen C., Birmingham, assignor to Chrysler Corporation, Highland Park, Mich. Valve mechanism. 2,102,389; Dec. 14.
Standard Brands Incorporated. (See Stokes, W. E., and Kennedy, assignors.)
Standard Oil Company (Ohio), The. (See Ambrosius, George M., assignor.)
Steenstrup, Christian, Schenectady, N. Y., assignor to General Electric Company. Refrigerating machine. 2,102,390; Dec. 14.
Steenstrup, Christian, Schenectady, N. Y., assignor to General Electric Company. Refrigerating machine. 2,102,391; Dec. 14.
Stehli, Henry J. (See Lloyd, R. L., and Stehli.)
Stemen, William R. (See Urbain, O. M., and Stemen.)
Stern, Isaac, New York, N. Y. Paper machinery. 2,102,170; Dec. 14.
Stern, Joseph M., Company, The. (See Elder, E. M., and Goodyear, assignors.)
Sternau, S., & Co. (See Jones, G., and Rymph, assignors.)
Stetson-Ross Machine Company. (See Nicholson, F. A., and Pritchard, assignors.)
Stimson, Percy G., Dayton, assignor, by mesne assignments, to Central National Bank of Cleveland, Cleveland, Ohio. Counter. 2,102,043; Dec. 14.
Stoessling, Ludwig, Monrovia, Calif. Spraying apparatus. 2,101,922; Dec. 14.
Stokes and Smith Company. (See Rider, Ernest G., assignor.)
Stokes, William E., Brooklyn, and M. H. Kennedy, assignors, by mesne assignments, to Standard Brands Incorporated, New York, N. Y. Making fruit extract concentrates and flavors. 2,101,962; Dec. 14.
Stolley, William A., assignor to James Heddon's Sons, Dowagiac, Mich. Fish lure. 2,102,492; Dec. 14.
Stough, Charles R., assignor to Motor Wheel Corporation, Lansing, Mich. Vehicle wheel. 2,101,923; Dec. 14.
Stratford, Charles W., assignor to Stratford Development Corporation, Kansas City, Mo. Apparatus for treating hydrocarbon oils. 2,102,548; Dec. 14.
Stratford Development Corporation. (See Stratford, Charles W., assignor.)
Straubel, Frederick L. G., Green Bay, Wis. Panel and card carrier combination. 2,101,963; Dec. 14.
Strieby, Maurice E., Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Transmission system. 2,102,138; Dec. 14.
Ströher, Georg, Rothenkirchen, Germany. Hair waving appliance. 2,102,241; Dec. 14.
Strouse Adler Company, The. (See Laguzzi, Mario, assignor.)
Strouse, George C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Para-hydroxy-para'-ethoxy diphenylamine. 2,101,879; Dec. 14.
Stupell, Leo K., New York, N. Y. Ornament and frame therefor. 2,102,242; Dec. 14.
Sullivan Machinery Company. (See Johansen, Harry C., assignor.)
Summey, David L., deceased; The Colonial Trust Company and R. P. W. Summey, executors of said D. L. Summey, assignor to Scovill Manufacturing Company, Waterbury, Conn. Electric induction furnace and operating the same. 2,102,582; Dec. 14.
Summey, Richard P. Weeks, et al., executor. (See Summey, David L.)
Sun Oil Company. (See Petty, Earl, assignor.)
Superior Yarn Mills, Incorporated. (See Suttenfield, W. H., York, and Howard, assignors.)
Suttenfield, William H., Statesville, O. L. York, and V. B. A. Howard, Longisland, assignors to Superior Yarn Mills, Incorporated, Statesville, N. C. Cotton conveyer. 2,102,442; Dec. 14.
Svenska Aktiebolaget Gasaccumulator. (See Dalén, Gustaf, assignor.)
Sweetland, Ernest J., Piedmont, assignor to Oliver United Filters Incorporated, San Francisco, Calif. Filter. 2,102,293; Dec. 14.
Styskal, L. J., et al. (See Spelts, George A., assignor.)
Sullivan Machinery Company. (See Noble, Warren, assignor.)
Sutcliffe, Arthur. (See Haynes, George F. R., assignor.)
Sylvania Industrial Corporation. (See Replogle, H. H., and Dalton, assignors.)
Symington-Gould Corporation, The. (See Townsend, Donald L., assignor.)
Sypher, Milford G., Belleville, assignor to The Chilton Pen Company, Inc., Long Island City, N. Y. Fountain pen and the like. 2,102,044; Dec. 14.
Szabo, George C., assignor to Holston Manufacturing Company, Knoxville, Tenn. Knitting machine. 2,102,549; Dec. 14.
Takamiya, Etsuo, Moji, Japan. Preparing fat and oil splitting enzyme from plant seeds. 2,102,101; Dec. 14.
Taliaferro, William R., Pittsburgh, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Control system. 2,101,880; Dec. 14.
Taliaferro, William R., C. C. Whittaker, and L. G. Riley, Pittsburgh, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Control system. 2,102,294; Dec. 14.
Tanning Process Company, The. (See Merritt, Matthew M., assignor.)
Taylor, William W. (See Loeber, Edgar O., assignor.)
Tea, Clark A., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Weather strip. 2,102,392; Dec. 14.
Tea, Clark A., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Weather strip. 2,102,393; Dec. 14.
Tebo, William A., Anthony, R. I. Method and apparatus for restoring fur in a shuttle to active position. 2,101,964; Dec. 14.
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Hammer, Arthur, assignor.)
Teletypesetter Corporation. (See Potts, Louis M., assignor.)
Terry, Matson C., New Rochelle, N. Y., and T. A. Buckley, Springfield, Mass., assignors to Westinghouse Electric and Manufacturing Company. Refrigeration apparatus. 2,101,881; Dec. 14.
Textile Machine Works. (See Meyer, Christian F., assignor.)
Thode, Adolf, Hamburg-Billbrook, Germany, assignor to Illinois Tool Works, Chicago, Ill. Production of fan-shaped screw locks. 2,102,493; Dec. 14.
Thomas, Albert G., Lynchburg, Va. Electron discharge tube. 2,102,045; Dec. 14.
Thompson Products Incorporated. (See Hufferd, George H., assignor.)
Thompson Products, Incorporated. (See McBride, Eugene A., assignor.)
Thompson, William F., and R. Whitten, assignors of thirty-three and one-third per cent to A. W. Tiska and M. Tiska, Alton, Ill. Water cooler for use in refrigerators. 2,102,496; Dec. 14.
Thomson, Alfred J., assignor to Bulldog Electric Products Company, Detroit, Mich. Circuit breaker. 2,102,295; Dec. 14.
Thorn, Lawrence T., Memphis, Tenn. Building construction. 2,102,443; Dec. 14.
Tinnerman, Albert H. (See Tinnerman, George A., assignor.)
Tinnerman, George A., Rocky River, assignor to Albert H. Tinnerman, Cleveland, Ohio. Fastening device. 2,102,229; Dec. 14.
Tiska, A. W., et al. (See Thompson, W. F., and Whitten, assignors.)
Tiska, Mary, et al. (See Thompson, W. F., and Whitten, assignors.)

Titanium Alloy Manufacturing Company, The. (See Kinzie, Charles J., assignor.)
Tower Company, The. (See Anderson, Roger, assignor.)
Townsend, Donald L., Rochester, N. Y., assignor to The Symington-Gould Corporation. Railway truck. 2,102,102; Dec. 14.
Trans-Lux Corporation. (See Newman, David F., assignor.)
Trees, Clyde C., White Plains, assignor to Medallic Art Company, New York, N. Y. Metal panel. 2,101,965; Dec. 14.
Treesh, Morrison C., assignor of one-half to C. Carr, East St. Louis, Ill. Revolving sign. 2,102,550; Dec. 14.
Trembour, Max R., Beaver, assignor to Jessop Steel Company, Washington, Pa. Making composite ferrous metal articles. 2,102,394; Dec. 14.
Tregman, William, Chicago, Ill. Box. 2,102,497; Dec. 14.
Trojan Powder Company. (See Wyler, Joseph A., assignor.)
Trumbull Electric Manufacturing Company. (See Rowe, Raymond N., assignor.)
Tubus, A. G. (See Singer, Fritz, assignor.)
Turnquist, Edward, Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich. Riveting machine. 2,101,924; Dec. 14.
Twyman, B. Wickliffe, assignor to Layne Gear Company, Milwaukee, Wis. Steering gear. 2,102,296; Dec. 14.
Tyler, Barnwell S., assignor to National Postal Meter Company, Los Angeles, Calif. Locking system for registering machines. 2,102,046; Dec. 14.
Uline, Migiel J., Washington, D. C. Machine for squaring the ends of cakes of ice. 2,102,498; Dec. 14.
Ulmer, Paul F. (See Lauenstein, C. F., and Ulmer.)
Underpinning & Foundation Co. (See Raisch, William, assignor.)
Ungar, Gustave A., Pelham Manor, N. Y. System and apparatus for pumping hazardous liquids. 2,102,140; Dec. 14.
Union Carbide and Carbon Corporation. (See Wissler, William A., assignor.)
Union Switch & Signal Company, The. (See Place, Willard P., assignor.)
Union Switch & Signal Company, The. (See Vanhorn, James J., assignor.)
United Aircraft Corporation. (See Beardsley, G. E., Jr., and Parkins, assignors.)
United Carr Fastener Corporation. (See Churchill, Wilmer H., assignor.)
United Carr Fastener Corporation. (See Johnson, Gustav, assignor.)
United Engineering & Foundry Company. (See Montgomery, J. E., and Flaherty, assignors.)
United Metal Box Co. (See Hammer, Samuel, assignor.)
United Research Corporation. (See Ross, Ernest, assignor.)
United States Air Compressor Company, The. (See Pelouch, James J., assignor.)
United States Envelope Company. (See Heywood, Vincent E., assignor.)
United States Rubber Company. (See Hopkinson, Ernest, assignor.)
United States Rubber Products, Inc. (See Hurt, Victor H., assignor.)
Universal Oil Products Company. (See Huff, Lyman C., assignor.)
Universal Oil Products Company. (See Ipatieff, V., and Schaad, assignors.)
Upton, Albertus, Waveland, Ind. Stovepipe collar and anchor. 2,102,339; Dec. 14.
Urbain, Oliver M., and W. R. Stemen, Columbus, assignors to C. H. Lewis, Harpster, Ohio. Recovering acids. 2,102,103; Dec. 14.
Valentine, Thomas G., and E. J. Brennan, San Diego, Calif. Metal spraying apparatus. 2,102,395; Dec. 14.
Vana, Charles A. (See Haag, I. L., and Vana.)
Van Allen, George C., Maplewood, N. J., assignor to Baker & Company, Inc. Investment composition. 2,102,444; Dec. 14.
Vance, Arthur W., Camden, N. J., assignor to Radio Corporation of America. Television system. 2,102,139; Dec. 14.
Van den Bogaert, Alexander G. A., Surbiton, assignor to No-Nail Cases Proprietary Limited, London, England. Manufacture of boxes. 2,101,966; Dec. 14.
Van Deventer, Harry R., and J. J. Shively, assignors, by mesne assignments, to Service Devices, Incorporated, New York, N. Y. Animated sign. 2,102,243; Dec. 14.
Vandoren, Bernard J., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,102,171; Dec. 14.
Van Duyne-Moran Fixtures, Co. (See Sallstad, Edward J., assignor.)
Vanhorn, James J., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway signaling. 2,102,445; Dec. 14.
Van Horn, Junius B. (See Mendenhall, E., and Van Horn.)
Vanity Fair Silk Mills. (See Scheer, Richard H., assignor.)
Van Nader, Bert D., Berkeley, Calif. Cast cutter. 2,102,047; Dec. 14.
Van Wyk, Paul, Portland, Oreg., assignor to Food Machinery Corporation, San Jose, Calif. Removing spray residue and other accumulations from fruit and the like. 2,102,340; Dec. 14.
Vapor Car & Heating Company. (See Russell, E. A., and Miller, assignors.)
Versen, Kurt. (See Howell, Theodore L., assignor.)
Vessey, Elton W., Pasadena, Calif. Wagon. 2,101,882; Dec. 14.
Von Fuchs, George H., Wood River, Ill., assignor to Shell Development Company, San Francisco, Calif. Reactivation of spent clay. 2,102,341; Dec. 14.
Wagar, Harold N., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Battery charging system. 2,102,141; Dec. 14.
Wagner, Herbert W. (See Whitcomb, K. F., and Wagner.)
Wahlin, Fritz. (See Bramsen, S., and Wahlin.)
Wainwright, James A. (See Allan, J., and Wainwright.)
Wake, Walter A. (See Brill, A. K., and Wake.)
Walch, Henri, and J. Prélaz, Paris, France, assignors, by mesne assignments, to De Laval Separator Company, New York, N. Y. Process and apparatus for separation of the components of a mixture of more than two components. 2,102,297; Dec. 14.
Walder, Emil, assignor to Samson-United Corporation, Rochester, N. Y. Electrical cooking and heating apparatus. 2,102,342; Dec. 14.
Waldmann, Edmund. (See Chwala, A., Waldmann, and Martina.)
Waldron, John, Corporation. (See Scott, H. A., and Case, assignors.)
Walkup, Charles S., Jr., trustee. (See Field, Ernest E., assignor.)
Wallace, Henry, New York, N. Y. Ribbon reel. 2,102,446; Dec. 14.
Wallace, Henry A., as Secretary of Agriculture. (See Dorset, Marion.)
Wallace, Jeffrey J., assignor to Gullett Gin Company, Amite, La. Cotton handling apparatus. 2,102,499; Dec. 14.
Walle, Ludwig S., Lansdowne, Pa., assignor to General Electric Company. Circuit breaker. 2,102,396; Dec. 14.
Walsh, Thomas M., East Orange, N. J. Method and apparatus for steeping coffee, tea, and the like. 2,102,244; Dec. 14.
Walstrom, Axel M., Minneapolis, Minn., assignor to The Creamery Package Mfg. Company, Chicago, Ill. Collapsible container. 2,102,048; Dec. 14.
Walter, Ralph E. (See Fisher, O. W., and Walter.)
Walterspiel, Alfred, Munich, Germany. Roasting, toasting, grilling, and cooking apparatus. 2,101,967; Dec. 14.
Walthers, William A., Dalton, Wis. Antiskid device for shoes or the like. 2,102,500; Dec. 14.
Wappner, Ralph C., Springfield, Ohio. Thermometer. 2,102,172; Dec. 14.
Warner, Leroy E., Bond Hill, Ohio, assignor to The Philip Carey Manufacturing Company. Paving joint filler. 2,101,883; Dec. 14.
Warr, Harold G., Park Ridge, Ill., assignor, by mesne assignments, to Poor & Company. Rail anchor. 2,101,884; Dec. 14.
Warren, Thomas W., assignor to H. A. Budden, Montreal, Quebec, Canada. Illuminating apparatus and making same. 2,102,049; Dec. 14.
Waterman, George H., Wyomissing, Pa. Expansion bolt. 2,102,230; Dec. 14.
Webb, Arthur B., assignor to Cream City Boiler Company, Milwaukee, Wis. Valve. 2,101,925; Dec. 14.
Weber, Guillaume, Hayange, Moselle, assignor to Les Petits Fils de Francois de Wendel & Cie, Paris, France. Explosive charge and apparatus for the manufacture of the same. 2,102,245; Dec. 14.
Weis, John P., Nyack, assignor to Willcox & Gibbs Sewing Machine Co., New York, N. Y. Making seamed articles and apparatus therefor. 2,102,397; Dec. 14.
Weiss, Abraham, New York, N. Y. Time controlled electric switch for electric bulbs. 2,102,246; Dec. 14.
Wendel, Leo F., Ellinwood, Kans. Brake release. 2,102,501; Dec. 14.
Wendt, Terrence M. E. (See Hansen, S. S., and Wendt.)
Westinghouse Electric & Manufacturing Company. (See Arnold, Edwin E., assignor.)
Westinghouse Electric & Manufacturing Company. (See Leeds, Winthrop M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Sandin, Jerome M., assignor.)
Westinghouse Electric & Manufacturing Company. (See Tallaferro, W. R., Whittaker, and Riley, assignors.)
Westinghouse Electric and Manufacturing Company. (See Terry, M. C., and Buckley, assignors.)
Westinghouse Electric & Manufacturing Company. (See Tallaferro, William R., assignor.)
Wetstein, Jacob, deceased, by F. W. Winters and E. Korn, executrices, New York, N. Y. Preparing a liquid. 2,102,398; Dec. 14.
Wettig, Theodore A., Cincinnati, Ohio. Rail chuck for machine tools. 2,101,926; Dec. 14.
Wheeler, Earl H. (See Gridley, G. O., Montgomery, and Wheeler.)
Wheeler, Henry H., Brooklyn, N. Y., assignor to International Cigar Machinery Company. Cigar bunch shaper mechanism. 2,102,298; Dec. 14.

Whelan, John J., Washington, D. C., assignor to Copper Houses, Inc., New York, N. Y. Sheet material building construction. 2,102,247; Dec. 14.
Whitacre, Donald D., Waynesburg, Ohio. Building construction. 2,102,447; Dec. 14.
Whitbread, James B., Detroit, Mich. Nipple. 2,102,050; Dec. 14.
Whitcomb, Kenneth F., and H. W. Wagner, assignors to Norton Company, Worcester, Mass. Grinding wheel. 2,102,343; Dec. 14.
Whitehall Patents Corporation. (See Morin, L. H., and Marinsky, assignors.)
Whitehead, William, Cumberland, Md., assignor to Celanese Corporation of America. Straw product and treatment thereof. 2,102,885; Dec. 14.
Whitehead, William, Cumberland, Md., assignor to Celanese Corporation of America. Spinning solution. 2,101,886; Dec. 14.
Whitman, Henry L., Los Angeles, Calif. Preparing aluminum alloys. 2,102,448; Dec. 14.
Whitmore, William B., Oak Park, assignor to Ditto, Incorporated, Chicago, Ill. Treating hectograph bands. 2,102,399; Dec. 14.
Whittaker, Charles C. (See Tallaferro, W. R., Whittaker, and Riley.)
Whitten, Russell. (See Thompson, W. F., and Whitten.)
Wickersham, Harry P., Huntington Park, assignor of one-half to E. Burns, Los Angeles, Calif. Jar. 2,101,968; Dec. 14.
Wiggins, John H., Tulsa, Okla. Gasholder. 2,102,299; Dec. 14.
Willcox & Gibbs Sewing Machine Co. (See Weis, John P., assignor.)
Willey, Richard W. (See Rochardson, R. E., and Willey.)
Williams, Harry M., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation. Silicate insulating material. 2,101,969; Dec. 14.
Williams, Roy H., Taunton, Mass. Chair. 2,102,173; Dec. 14.
Wilson-Jones Company. (See St. Louis, C. V., and Runblad, assignors.)
Winer Manufacturing Company. (See Sinskey, Simon, assignor.)
Wingfoot Corporation. (See Campbell, John F., assignor.)
Wingfoot Corporation. (See Kimmich, Elmer G., assignor.)
Wingfoot Corporation. (See Sebrell, Lorin B., assignor.)
Wingfoot Corporation. (See Woodward, Alva W., assignor.)
Winters, Florence, et al., executrices. (See Wetstein, Jacob.)
Wired Radio, Inc. (See Duncan, Robert D., Jr., assignor.)
Wishart, William W., Chicago, Ill. Compressor. 2,102,344; Dec. 14.
Wishart, William W., Chicago, Ill. Compressor. 2,102,345; Dec. 14.
Wishart, William W., Chicago, Ill. Compressor. 2,102,346; Dec. 14.
Wisner, Charles E. (See Kysor, Karl D., assignor.)
Wissler, William A., Flushing, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Valve seat. 2,101,970; Dec. 14.
Wodack Electric Tool Corporation. (See Haas, Joseph F., assignor.)
Woelfin, William, Long Beach, assignor to Petroleum Rectifying Company of California, Los Angeles, Calif. Separating emulsions of the oil-in-water type. 2,102,051; Dec. 14.
Wolf, Abraham, Brooklyn, assignor to Noma Electric Corporation, New York, N. Y. Electrical illuminating device. 2,101,971; Dec. 14.
Woods, S. A., Machine Company. (See Blood, Laurence E., assignor.)
Woodman, Joseph C. (See Raisch, W., Woodman, Buffington, and Morris.)
Woodward, Alva W., Kent, Ohio, assignor to Wingfoot Corporation, Wilmington, Del. Safety ring for pneumatic tires. 2,102,551; Dec. 14.
Worthington Ball Company, The. (See Olin, Robert R., assignor.)
Wright, Carl. (See Cowdery, R. H., and Wright.)
Wünsche, Otto, Berlin-Friedenau, Germany, assignor to General Electric Company. Controller apparatus. 2,102,400; Dec. 14.
Wyler, Joseph A., assignor to Trojan Powder Company, Allentown, Pa. Nitrating sucrose. 2,101,927; Dec. 14.
Wyler, Max, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited. Manufacture of isatin derivatives. 2,102,104; Dec. 14.
Yale & Towne Mfg. Co., The. (See Heyer, Frederic K., assignor.)
Yankee Metal Products Corp. (See Putterman, Benjamin, assignor.)
Yeakel, Walter C., Battle Creek, assignor, by mesne assignments, to Clark Equipment Company, Buchanan, Mich. Conveyer. 2,102,248; Dec. 14.
Yearley, George W., Geneva, assignor to The American Fork & Hoe Company, Cleveland, Ohio. Fish bait and making the same. 2,102,052; Dec. 14.
Yolles, Jacob. (See Yolles, Jon J.)
Yolles, Jack. (See Yolles, Jon J.)
Yolles, Jon J., Paris, France, also known as Jack Yolles or Jacob Yolles, assignor to Radio Corporation of America. Superheterodyne receiver. 2,102,401; Dec. 14.
York Narrow Fabrics Co. (See Burns, W. E., and Miller, assignors.)
York, Olin L. (See Suttenfield, W. H., York, and Howard.)
Young, John L., Pittsburgh, and A. C. Jephson, Johnstown, Pa. Anode. 2,102,249; Dec. 14.
Zahm, Edward, assignor to Zahm & Nagel Co., Inc., Buffalo, N. Y. Determining the gas content of solutions. 2,102,105; Dec. 14.
Zahm & Nagel Co. (See Zahm, Edward, assignor.)
Zeder, James C., assignor to Chrysler Corporation, Detroit, Mich. Motor vehicle. 2,102,402; Dec. 14.
Zeeb, William J., New York, J. T. Dammes, Brooklyn, and A. C. Morris, assignors to Emergency Window and Exit Devices Corporation, New York, N. Y. Releasable window. 2,102,250; Dec. 14.
Zimmerman, Leo, New York, N. Y. Combination table. 2,102,449; Dec. 14.
Zimmerman, Rufus E., Short Hills, N. J., and C. D. King, Brooklyn, N. Y. Making rimmed steel. 2,102,502; Dec. 14.
Zocchi, Leon, Milford, Mass. Book supporter. 2,101,972; Dec. 14.
Zoettl, Robert, assignor of one-half to H. Knoll, Salzburg, Austria. Floor or ceiling structure. 2,102,231; Dec. 14.
Zuschlag, Theodor, Englewood, N. J., assignor to Magnetic Analysis Corporation, Long Island City, N. Y. Magnetic analysis. 2,102,450; Dec. 14.
Zuschlag, Theodor, West Englewood, N. J., assignor to Magnetic Analysis Corporation. Magnetic analysis. 2,102,451; Dec. 14.
Zuschlag, Theodor, West Englewood, N. J., assignor to Magnetic Analysis Corporation. Detection of flaws in magnetizable bodies. 2,102,452; Dec. 14.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 14TH DAY OF DECEMBER, 1937

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Ashtrays. A. A. Vuccino. 20,592; Dec. 14.
Blank conveying apparatus. W. W. Davidson. 20,581; Dec. 14.
Bucket, Elevator. L. C. Ponting and A. G. Kliwer. 20,586; Dec. 14.
Car and the like, Sidewise dumping mine. A. H. Stow. 20,591; Dec. 14.
Car, Mine and other. A. H. Stow. 20,590; Dec. 14.
Drive mechanism for shaker conveyers. W. W. Sloane. 20,589; Dec. 14.
Faucet connection. S. L. Weiss. 20,593; Dec. 14.
Food products and resulting product, Treating. S. H. Ayers and C. W. Lang. 20,578; Dec. 14.
Hydrocarbon vapors, Recovering. P. M. Raigorodsky. 20,587; Dec. 14.
Photography, Composite. C. B. Dreyer and H. F. Boeger. 20,582; Dec. 14.
Piston ring expander. H. Teetor. 20,588; Dec. 14.
Screw. F. K. Brown. 20,580; Dec. 14.
Socket and casing, Electric. F. C. Kollath. 20,585; Dec. 14.
Syrup, honey, and the like, Treating invert. R. S. Anthony. 20,594; Dec. 14.
Tapping device, Hand operated, electric controlled. B. S. T. Bishop and P. E. Dow. 20,579; Dec. 14.
Tubing, Flexible. S. Guarnaschelli. 20,583; Dec. 14.
Valve, Thermostatic. P. J. Jorgensen. 20,584; Dec. 14.

LIST OF DESIGN INVENTIONS

Air conditioning apparatus. F. C. McClellan. 107,436; Dec. 14.
Air conditioning apparatus. F. C. McClellan. 107,439; Dec. 14.
Air filtering device. F. C. McClellan. 107,437; Dec. 14.
Antenna, Automobile radio. J. L. Gilmore. 107,420; Dec. 14.
Ashtray and cigarette extinguishing device, Combined. J. T. McCreary. 107,440; Dec. 14.
Atomizer. F. W. Lohse. 107,431–2; Dec. 14.
Bedspread. C. M. Jones. 107,486; Dec. 14.
Bottle. A. I. Lorenzen. 107,433; Dec. 14.
Bottle, Toilet. R. Honnorat. 107,426; Dec. 14.
Brassière. E. B. H. Fisher. 107,417; Dec. 14.
Brush. L. Marder. 107,435; Dec. 14.
Cabinet, Radio. C. J. Manning. 107,434; Dec. 14.
Carriage, Orthopedic. A. J. Daniels. 107,407; Dec. 14.
Case, Clock. I. Bruce. 107,405–6; Dec. 14.
Case, Clock. J. M. Bars. 107,401; Dec. 14.
Casing, Clock. M. Schlenker. 107,458; Dec. 14.
Chime, Musical. E. G. Evans. 107,411; Dec. 14.
Compact or the like. A. Bates. 107,402; Dec. 14.
Container for perfumes, Compartment. R. B. Karoff. 107,428; Dec. 14.
Conveyer, Food. H. J. O'Brien. 107,444; Dec. 14.
Cup or similar article, Soup. K. Bayreuther. 107,403; Dec. 14.
Dress. J. Abbate. 107,475; Dec. 14.
Dress. M. R. Berger. 107,477; Dec. 14.
Dress. V. M. Berrick. 107,478; Dec. 14.
Dress. S. Chapman. 107,479; Dec. 14.
Dress. M. Efantes. 107,480–1; Dec. 14.
Dress. L. Fenaroli. 107,482; Dec. 14.
Dress. S. Kronenfeld. 107,487; Dec. 14.
Dress. H. Kushner. 107,488; Dec. 14.
Dress. D. Rosenthal. 107,490; Dec. 14.
Dress. P. Schlessel. 107,491; Dec. 14.
Dress. R. Schultze. 107,492; Dec. 14.
Dress. A. Waxberg. 107,494; Dec. 14.
Dress. I. Welch. 107,471; Dec. 14.
Dress. O. Zaretzky. 107,495; Dec. 14.
Dial and display stand, Combined color. M. Gorelick. 107,423; Dec. 14.
Dish. J. E. Spence. 107,460; Dec. 14.
Engine, Miniature airplane. I. G. Ohlsson. 107,448; Dec. 14.
Fabric, Textile. J. M. Balsam. 107,476; Dec. 14.
Fabric, Textile. J. E. Malsch. 107,489; Dec. 14.
Fabric, Woven. J. H. Hoffman. 107,485; Dec. 14.
Fish lure. S. F. Davenport. 107,408; Dec. 14.
Flusher, Gear case. J. W. Tucker. 107,465; Dec. 14.
Fountain, Drinking. H. R. Trout. 107,464; Dec. 14.
Frame for a bag or similar article. H. Rubin. 107,457; Dec. 14.
Guard, Bicycle chain. J. R. Morgan. 107,442; Dec. 14.
Handbag. H. Felmann. 107,415–6; Dec. 14.
Handkerchief. D. E. Schwab. 107,493; Dec. 14.
Handle, Insulated switch. T. J. Newman. 107,441; Dec. 14.
Handle or the like for doors and drawers. H. H. Raymond. 107,455; Dec. 14.
Lace for a jacket or similar article. L. E. Hart and H. E. Lewy. 107,484; Dec. 14.
Lantern, Electric. J. S. Pixley. 107,449; Dec. 14.
Model of an architectural unit. W. K. Harrison and J. A. Foulhoux. 107,425; Dec. 14.
Mold or the like, Waffle. E. S. Preston. 107,454; Dec. 14.
Pen and check protector or similar article, Combined fountain. C. J. MacNally. 107,438; Dec. 14.
Plaque. W. K. Harrison and J. A. Foulhoux. 107,424; Dec. 14.
Piano. W. Zaiser. 107,473–4; Dec. 14.
Platter, or the like. L. Farber. 107,412; Dec. 14.
Range, Combined coal and gas. W. D. Teague, Jr. 107,461; Dec. 14.
Receptacle, Tobacco ash. T. M. Dick and M. J. Fletcher. 107,409; Dec. 14.
Shirt and shorts, Combination. E. D. Haight. 107,483; Dec. 14.
Shoe. M. Kalmon. 107,427; Dec. 14.
Shoe. H. Odenerants. 107,445–7; Dec. 14.
Shoe. A. Turiansky. 107,466–9; Dec. 14.
Shoe or similar article. B. Feldman. 107,413–4; Dec. 14.
Shoe or similar article. S. A. Wood. 107,472; Dec. 14.
Shoe sole. A. S. Bannister. 107,400; Dec. 14.
Showcase. M. Rifkin. 107,456; Dec. 14.
Sinker, Fishing. J. E. Ganaway. 107,418; Dec. 14.
Spoon or similar article. F. W. Koonz. 107,429; Dec. 14.
Stand, Display. J. M. Brooks. 107,404; Dec. 14.
Stand, Jewelry display. R. J. Warner. 107,470; Dec. 14.
Station, Service. W. D. Teague. 107,462–3; Dec. 14.
Stove. E. S. Preston. 107,453; Dec. 14.
Tank, Bicycle. J. R. Morgan. 107,443; Dec. 14.
Teapot. E. San Giovanni. 107,422; Dec. 14.
Toaster. E. S. Preston. 107,452; Dec. 14.
Toaster, Bread. E. S. Preston. 107,450; Dec. 14.
Toaster or the like, Sandwich. E. S. Preston. 107,451; Dec. 14.
Tongs, Food. A. A. Ellopoulos. 107,410; Dec. 14.
Tool, Transplanting. G. W. Gasser. 107,419; Dec. 14.
Tray or similar article, Serving. E. San Giovanni. 107,421; Dec. 14.
Wheel and horn control device, Combined automobile steering. R. D. Snoke. 107,459; Dec. 14.
X-ray apparatus. W. M. Lee. 107,430; Dec. 14.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 14TH DAY OF DECEMBER, 1937

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrading tool. T. F. Quigley. 2,102,092; Dec. 14.
Accelerator of vulcanization. L. B. Sebrell. 2,102,547; Dec. 14.
Acetic anhydride, Manufacturing. M. Mugdan and J. Sixt. 2,101,868; Dec. 14.
Acetic anhydride, Producing. M. Mugdan and J. Sixt. 2,102,159; Dec. 14.
Acetylsalicylic acid products, Manufacture of water-soluble storage-stable. C. O. Miller and A. E. Siehrs. 2,101,867; Dec. 14.
Acid ester of cellulose from its reaction mixture, Separating an organic. C. J. Malm and C. R. Fordyce. 2,102,016; Dec. 14.
Acid, Manufacturing amino sulphonic. P. Baumgarten. 2,102,350; Dec. 14.
Acid, Purification of lactic. I. L. Haag and C. A. Vana. 2,101,998; Dec. 14.
Acids, Recovering. O. M. Urbain and W. R. Stemen. 2,102,103; Dec. 14.
Adjustable fixture support. S. Hammer. 2,101,852; Dec. 14.
Adjusting means. R. F. Sickles and H. F. Oliver. 2,102,098; Dec. 14.
Advertising sign. J. Jackson. 2,102,075; Dec. 14.
Air circulating and filtering apparatus, Warm. H. A. Phall. 2,101,916; Dec. 14.
Air circulator, Automotive. B. Kirsch. 2,102,418; Dec. 14.
Air conditioning system and apparatus. R. A. Brand. 2,102,507; Dec. 14.
Aircraft and sustaining rotor. R. H. Prewitt. 2,102,028; Dec. 14.
Aircraft rotor blade mounting mechanism. R. H. Prewitt. 2,102,027; Dec. 14.
Airplane. J. R. Salzman and C. J. Snyder. 2,102,095; Dec. 14.
Air resistance reducer. E. M. Hadley. 2,102,527; Dec. 14.
Alcohol, Sulphated selachyl. A. W. Baldwin and H. M. Bunbury. 2,101,831; Dec. 14.
Alkoxyanthraquinones, Manufacture of. F. Lodge and C. H. Lumsden. 2,101,910; Dec. 14.
Alloy, Copper base. C. H. Davis and E. L. Munson. 2,101,930; Dec. 14.
Alloy having corrosion resistance, Iron and steel. R. F. Passano. 2,102,215; Dec. 14.
Alloys and like materials, Preventing seizure of contacting surfaces of soft. A. L. Parker. 2,102,214; Dec. 14.
Alloys, Copper-nickel-titanium. N. B. Pilling and P. D. Merica. 2,102,238; Dec. 14.
Alloys, Preparing aluminum. H. L. Whitman. 2,102,448; Dec. 14.
Ammonia and boric acid, Producing. J. M. Peterson. 2,102,126; Dec. 14.
Ammonium nitrate, Process and apparatus for manufacturing. J. H. Shapleigh. 2,102,136; Dec. 14.
Ammonium sulphate, Production of. G. Berkhoff, Jr. 2,102,107; Dec. 14.
Amusement device. C. Gibson. 2,102,458; Dec. 14.
Anchor, Rail. H. G. Warr. 2,101,884; Dec. 14.
Animated sign. H. R. Van Deventer and J. J. Shively. 2,102,243; Dec. 14.
Anode. J. L. Young and A. C. Jephson. 2,102,249; Dec. 14.
Antenna system. G. W. Fyler. 2,102,410; Dec. 14.
Antiskid device for shoes or the like. W. A. Walthers. 2,102,500; Dec. 14.
Apparel and parts thereof. J. H. Lind. 2,102,014; Dec. 14.
Apparatus for discharging condensate from drying drums. W. S. Allen. 2,102,106; Dec. 14.
Apparatus for removing contents of flasks. E. J. Handler. 2,102,266; Dec. 14.
Applicator. E. McDannold. 2,102,209; Dec. 14.
Armature unit. C. R. Kinkaid. 2,102,538; Dec. 14.
Atomizer. W. C. Graham. 2,102,147; Dec. 14.
Automatic regulator. J. Fallou. 2,102,145; Dec. 14.
Automobile heater. A. W. McNeish. 2,102,581; Dec. 14.
Baby support. M. Pringle. 2,102,281; Dec. 14.
Bag: *See*—
Self closing bag.
Bait and making the same, Fish. G. W. Yearley. 2,102,052; Dec. 14.
Bait, Insect. H. M. Epstein. 2,101,988; Dec. 14.
Bar mat clip. A. E. Brickman and G. A. Gleason. 2,102,566; Dec. 14.
Barrier, Rock dust. J. E. Jones. 2,102,006; Dec. 14.
Bathtub hanger. W. B. Lucke. 2,102,082; Dec. 14.
Battery charging system. H. N. Wagar. 2,102,141; Dec. 14.
Bearing: *See*—
Propeller shaft bearing. Thrust bearing.
Bearing obstruction ejector. L. Kandarian. 2,102,320; Dec. 14.
Bearings, Making roller. L. R. Heim. 2,102,460; Dec. 14.
Beef carcasses, Method of and apparatus for treating. G. H. Miller. 2,102,084; Dec. 14.
Beer in open top metal containers, Packaging. A. L. Kronquest. 2,102,208; Dec. 14.
Beet-topping machine. J. G. Nutter. 2,102,379; Dec. 14.
Bench, Pipe cutting and welding. P. A. Edwards and M. G. J. Gross. 2,102,259; Dec. 14.
Bicycle lighting generator. P. Rathmann. 2,101,954; Dec. 14.
Binaural program system. R. D. Duncan, Jr. 2,102,144; Dec. 14.
Blood transfusion machine. S. J. Ferrara and W. E. Deen. 2,102,523; Dec. 14.
Boiler: *See*—
Water tube boiler.
Bolt, Expansion. G. H. Waterman. 2,102,230; Dec. 14.
Bolts and similar articles, Apparatus for manufacturing J. A. Kinney. 2,102,417; Dec. 14.
Bottle. J. M. Guthrie. 2,102,148; Dec. 14.
Box: *See*—
Carburizing box. Novelty box.
Display box.
Box. M. J. Nevins, Jr. 2,102,433; Dec. 14.
Box. M. W. Romig. 2,102,094; Dec. 14.
Box. W. Troginan. 2,102,497; Dec. 14.
Boxes, Manufacture of. A. G. A. van der Bogaert. 2,101,966; Dec. 14.
Brake actuating mechanism. W. I. Riley. 2,102,222; Dec. 14.
Brake controlling appliance. B. E. Howell and W. S. McKnight. 2,102,461; Dec. 14.
Brake release. L. F. Wendel. 2,102,501; Dec. 14.
Braking apparatus. A. Cohen. 2,102,406; Dec. 14.
Brewing device. R. C. Schock. 2,102,385; Dec. 14.
Brush. C. C. Gerhardt. 2,102,178; Dec. 14.
Brush, Commutator. J. C. Arnold. 2,102,347; Dec. 14.
Buffer core. J. C. Burkhardt. 2,102,193; Dec. 14.
Building construction. A. C. Olsen. 2,101,952; Dec. 14.
Building construction. L. T. Thorn. 2,102,443; Dec. 14.
Building construction. D. D. Whitacre. 2,102,447; Dec. 14.
Building construction, Sheet material. J. J. Whelan. 2,102,247; Dec. 14.
Bumper, Automobile. C. D. Hevenor. 2,102,120; Dec. 14.
Burner and fuel control mechanism. D. Lumsden. 2,102,367; Dec. 14.
Burner mechanism for gaseous fuel stoves. C. E. Parker. 2,102,482; Dec. 14.
Burners, Making. C. L. Hardwick. 2,102,530; Dec. 14.
Cabinet, Sheet paper. S. Magami. 2,101,863; Dec. 14.
Cabinet shell, Filing. F. D. Jonas. 2,102,272; Dec. 14.
Cable, Electric. S. J. Rosch. 2,102,129; Dec. 14.
Calculating and recording system. M. H. Loughridge. 2,101,861; Dec. 14.
Camera, Photographic roll-film. R. E. Reason and T. W. Clifford. 2,102,574; Dec. 14.
Camera, Self-erecting front. C. W. Crumrine. 2,101,986; Dec. 14.
Can opening device. H. B. Lloyd. 2,102,365; Dec. 14.
Cap for collapsible tubes, Self-opening and closing. G. L. Lateur. 2,101,909; Dec. 14.
Caps, Producing crown. H. M. Schmidt. 2,102,285; Dec. 14.
Capacitor. L. G. Burlingame. 2,101,896; Dec. 14.
Car, Refrigerator. J. H. McCormick. 2,102,182; Dec. 14.
Carbon black and the like, Apparatus for treating. E. W. Billings and H. H. Offutt. 2,102,054; Dec. 14.
Carburetor. Y. Djordjevitch. 2,102,113; Dec. 14.
Carburetor. A. W. D. Gladwell. 2,102,361–2; Dec. 14.
Carburetor, Floatless. M. Mennesson. 2,102,475; Dec. 14.
Carburizing box. A. M. Miller. 2,102,019; Dec. 14.
Card, Greeting. S. D. Cohen. 2,102,553; Dec. 14.
Cargo units, Apparatus for moving and stacking heavy. W. R. Pease. 2,101,871; Dec. 14.
Carline. W. P. Murphy. 2,102,277; Dec. 14.
Carrier: *See*—
Tool carrier.
Carrier and handler, Cuspidor. C. T. Balochi. 2,102,348; Dec. 14.

Carrier transmission system, Multichannel. H. Mayer. 2,102,472; Dec. 14.
Carton, and blank for forming the same. H. Kondolf. 2,102,009; Dec. 14.
Cartridge, Electric. G. A. Merchant and R. M. Pinckneyville. 2,102,477; Dec. 14.
Cashier's protector. L. R. Städtler. 2,102,169; Dec. 14.
Case: *See*—
Spectacle case.
Casing and making same, Artificial sausage. G. Sachsenröder. 2,101,958; Dec. 14.
Cast cutter. B. D. Van Nader. 2,102,047; Dec. 14.
Cathode ray oscillograph. H. P. Kuehni. 2,102,421; Dec. 14.
Cellulose acetate propionate butyrate, Preparation of. C. R. Fordyce. 2,101,994; Dec. 14.
Cellulose esters to render suitable for molding, Treatment of. F. R. Conklin and C. L. Fletcher. 2,101,984; Dec. 14.
Cellulose nitrate and liquid nitric esters and the product thereof, Acceleration of gelatinization of. J. T. Power and K. R. Brown. 2,102,187; Dec. 14.
Cement, Ceramic patching. J. M. McKinley and W. K. Carter. 2,102,327; Dec. 14.
Centrifugal clutch. J. Fleux. 2,102,524; Dec. 14.
Centrifugal pump. E. A. Sjöström. 2,101,960; Dec. 14.
Chain coupling. J. Seltzer. 2,102,135; Dec. 14.
Chain with readily detachable feed-lug, Conveyer. R. E. Johnson. 2,102,569; Dec. 14.
Chair: *See*—
Invalid chair.
Chair. R. H. Williams. 2,102,173; Dec. 14.
Check signer. H. I. Morris. 2,101,914; Dec. 14.
Cheese coating, Flexible. H. J. Coster. 2,102,516; Dec. 14.
Chlorohydrines, Manufacture of. L. U. Spence. 2,102,042; 2,102,042; Dec. 14.
Chucking machine. G. O. Gridley, D. H. Montgomery, and E. H. Wheeler. 2,102,412; Dec. 14.
Cigar bunch shaper mechanism. H. H. Wheeler. 2,102,298; Dec. 14.
Cigarette weigher for continuous-rod cigarette machines. G. W. Gwinn. 2,102,317; Dec. 14.
Circuit breaker. W. M. Leeds. 2,102,326; Dec. 14.
Circuit breaker. A. J. Thomson. 2,102,295; Dec. 14.
Circuit breaker. L. S. Walle. 2,102,396; Dec. 14.
Circuit for burner controls, Safety switch heater. L. M. Persons. 2,102,091; Dec. 14.
Circuit, Fuse protective. L. C. Hart. 2,102,204; Dec. 14.
Circuit interrupter. J. M. Sandin. 2,102,284; Dec. 14.
Circuits, Volume control. L. E. Barton. 2,101,832; Dec. 14.
Clay, Reactivation of spent. G. H. von Fuchs. 2,102,341; Dec. 14.
Cleaner: *See*—
Overhead rail cleaner. Vacuum cleaner.
Cleaner and hull extracting feeder for cotton. F. E. Deems. 2,102,408; Dec. 14.
Clip: *See*—
Bar mat clip. Tenter clip.
Clipper, Hair. J. A. Hanley. 2,102,520; Dec. 14.
Closure and powder ejector, Combined. W. C. Heatlie. 2,102,118; Dec. 14.
Closure, Bottle. J. C. Keaney and J. M. Guthrie. 2,102,157–8; Dec. 14.
Closure cap lock. C. M. Hurd. 2,102,464; Dec. 14.
Closure for containers. F. I. and B. P. Remy. 2,102,436; Dec. 14.
Closure for receptacles. C. S. Baron. 2,102,340; Dec. 14.
Clutch: *See*—
Centrifugal clutch. Universal joint controlled clutch.
Electromagnetic clutch.
Rotary fluid clutch.
Clutch control device. L. Salves. 2,102,036; Dec. 14.
Clutch for rotating machine elements, Centrifugal. G. E. Jonsson. 2,101,946; Dec. 14.
Clutch plate. G. E. Pope. 2,102,279; Dec. 14.
Clutch plate, Cushioned. G. E. Pope. 2,102,280; Dec. 14.
Coating substances with metals or alloys, Method of and apparatus for. C. F. Haunz. 2,101,854; Dec. 14.
Coatings to bundled shingles, Applying siccative. C. N. Perrin. 2,102,089; Dec. 14.
Coatings to wires, Device for applying. W. H. Convers. 2,102,059; Dec. 14.
Coffee, tea, and the like, Method and apparatus for steeping. T. M. Walsh. 2,102,244; Dec. 14.
Coils, Apparatus for handling. G. H. Rose. 2,102,337; Dec. 14.
Coin controlled machine. H. H. Hoke, Jr. 2,102,532; Dec. 14.
Cold, Method and apparatus for producing. E. Öman. 2,101,953; Dec. 14.
Collapsible container. A. M. Walstrom. 2,102,048; Dec. 14.
Collapsible hoisting frame. H. A. Pasternack. 2,102,163; Dec. 14.
Collar. A. Closmann. 2,102,058; Dec. 14.
Collar. H. Lowenbraun and M. Schwartz. 2,101,911; Dec. 14.
Collar supporting and ironing device. A. A. Myers. 2,102,210; Dec. 14.
Colorimeter. G. Fassin. 2,101,934; Dec. 14.
Colorimeter. G. Fassin and J. R. Miles. 2,101,933; Dec. 14.
Combination lock. F. K. Heyer. 2,102,579; Dec. 14.
Combination table. L. Zimmerman. 2,102,449; Dec. 14.
Commodities and preventing theft thereof, Receiving delivered. G. F. R. Haynes. 2,102,000; Dec. 14.
Components of a mixture of more than two components, Process and apparatus for separation of the. H. Walch and J. Prélaz. 2,102,297; Dec. 14.
Composite fabric. W. W. Rowe. 2,101,874; Dec. 14.
Composition of matter and method and steps of making and using the same. M. T. Harvey. 2,101,853; Dec. 14.
Compositions of matter for photographic processing baths. F. R. Bean. 2,101,834; Dec. 14.
Compressor. W. W. Wishart. 2,102,344–6; Dec. 14.
Concealed hinge. J. Soss. 2,102,291; Dec. 14.
Condensation product and producing same. H. Hönel. 2,101,944; Dec. 14.
Connecter: *See*—
Electrical connecter.
Connecting device. S. B. Sanford. 2,102,383; Dec. 14.
Container: *See*—
Collapsible container. Dispensing container.
Container. D. Henderson. 2,101,855; Dec. 14.
Container. H. Sebell. 2,102,440; Dec. 14.
Control device and the production thereof. C. W. Dann. 2,102,407; Dec. 14.
Control for automatic talking machines, Automatic. H. H. Hoke, Jr. 2,102,531; Dec. 14.
Control means. E. J. Dillman. 2,102,176; Dec. 14.
Control system. C. G. Kronmiller. 2,102,324; Dec. 14.
Control system. W. R. Taliaferro. 2,101,880; Dec. 14.
Control system. W. R. Taliaferro, C. C. Whittaker, and L. G. Riley. 2,102,294; Dec. 14.
Control system for submersible motors and the like. E. Mendenhall and J. B. Van Horn. 2,102,018; Dec. 14.
Controller apparatus. O. Wünsche. 2,102,400; Dec. 14.
Conveyer. C. E. Moore. 2,102,374; Dec. 14.
Conveyer. W. C. Yeakel. 2,102,248; Dec. 14.
Conveyer, Automatic plating. B. G. Daw. 2,102,308; Dec. 14.
Conveyer, Cotton. W. H. Suttenfield, O. L. York, and V. A. Howard. 2,102,442; Dec. 14.
Conveyer feed milling machine. W. Sinclair. 2,102,227; Dec. 14.
Conveying apparatus. V. K. Newcomer. 2,102,330; Dec. 14.
Cooking and heating apparatus, Electrical. E. Walder. 2,102,342; Dec. 14.
Cooking apparatus. S. D. Sherman. 2,102,097; Dec. 14.
Cooking or extracting process. M. Groeck. 2,101,939; Dec. 14.
Cooler: *See*—
Refrigerant condenser cooler.
Cooler for use in refrigerators, Water. W. F. Thompson and R. Whitten. 2,102,496; Dec. 14.
Copper-sulphur alloy. C. S. Smith. 2,102,388; Dec. 14.
Core and dry binder for the preparation thereof, Foundry. F. H. Lane. 2,102,122; Dec. 14.
Corset, girdle, and the like. M. Laguzzi. 2,102,273; Dec. 14.
Cosmetic in solid cake form, Dry make-up. F. Factor and P. E. Fisher. 2,101,843; Dec. 14.
Cotton handling apparatus. J. J. Wallace. 2,102,499; Dec. 14.
Cotton setting machine. R. Fox. 2,102,116; Dec. 14.
Counter. P. G. Stimson. 2,102,043; Dec. 14.
Coupling: *See*—
Chain coupling.
Coupling or other transmission device. G. H. Fraser. 2,102,312; Dec. 14.
Cover: *See*—
Spring cover. Tire cover.
Cover and hub guard, Combination tire. G. A. Lyon. 2,102,468; Dec. 14.
Covered joint hinge. J. Soss. 2,102,290; Dec. 14.
Covering, Road. H. P. K. T. Nielsen. 2,102,480; Dec. 14.
Cultivator. F. F. Powell. 2,102,483; Dec. 14.
Cup: *See*—
Paper drinking cup.
Cutter: *See*—
Cast cutter.
Cutting tool. F. P. Miller. 2,102,478; Dec. 14.
Cyclopropane, Producing. H. B. Hass and E. W. Gluesenkamp. 2,102,556; Dec. 14.
Cylinder cooling system. G. A. Spelts. 2,102,041; Dec. 14.
Defrosting screen. A. Schwarz. 2,102,487; Dec. 14.
D-glucono-delta-lactone, Crystallizing pure. R. Pasternack. 2,102,380; Dec. 14.
Degreasing apparatus. C. F. Dinley. 2,101,840–41; Dec. 14.
Diaphragm. A. Hammer. 2,102,150; Dec. 14.
Dictating machine. J. M. Lucarelle and J. E. Renholdt. 2,102,366; Dec. 14.
Die-rolling mill. A. C. Cummins. 2,102,356; Dec. 14.
Diffraction grating tool. R. D. Doner. 2,102,521; Dec. 14.
Diphenyl sulphide, Refining. G. Dougherty. 2,102,200; Dec. 14.
Direct flow check valve. M. Smolensky. 2,102,289; Dec. 14.
Discharge apparatus and method. R. E. Barclay. 2,102,190; Dec. 14.
Dispensing container. A. J. Chamberlain. 2,102,057; Dec. 14.

Display box. A. E. Keppler. 2,102,079; Dec. 14.
Display device, Animated luminous. V. and W. McKenna and S. Rouss. 2,102,474; Dec. 14.
Door closer. W. J. Keene. 2,102,321–2; Dec. 14.
Door, Refrigerator car. S. B. Haseltine. 2,101,942; Dec. 14.
Draft and buffer gear. G. A. Johnson. 2,101,945; Dec. 14.
Draft regulation. G. Dalén. 2,102,143; Dec. 14.
Drain, Floor. E. W. N. Boosey. 2,101,978; Dec. 14.
Drawer, Knock-down. B. E. Richardson and R. W. Willey. 2,102,437; Dec. 14.
Drill: *See*—
Rock drill.
Drilling implement. H. C. Johansen. 2,102,236; Dec. 14.
Drive and differential. G. H. Fraser. 2,102,313–14; Dec. 14.
Drive, Belt. E. G. Kimmich. 2,102,560; Dec. 14.
Drive, Föttinger. W. Lenz. 2,102,425; Dec. 14.
Drive mechanism. W. W. Sloane. 2,102,441; Dec. 14.
Drive, Rolling mill. A. C. Cummins. 2,102,355; Dec. 14.
Driving mechanism for internal combustion engines and the like. A. H. Craske. 2,102,196; Dec. 14.
Dynamo motor. C. W. Noel. 2,102,481; Dec. 14.
Edging for spring assemblies for upholstery. W. W. Gleason. 2,102,066; Dec. 14.
Effects on materials, Production of. J. Allan and J. A. Wainwright. 2,101,887; Dec. 14.
Electric heater elements, Making. E. E. Arnold. 2,102,301; Dec. 14.
Electric lamp. E. Ruppel. 2,102,224; Dec. 14.
Electric switch. R. N. Rowe. 2,102,545; Dec. 14.
Electrical condenser. S. S. Cramer. 2,101,985; Dec. 14.
Electrical illuminating device. A. Wolf. 2,101,971; Dec. 14.
Electrical-measuring instrument. H. T. Faus. 2,102,409; Dec. 14.
Electrical measuring system. J. F. Quereau. 2,102,030; Dec. 14.
Electromagnetic clutch. H. E. Hodgson. 2,102,318; Dec. 14.
Electron discharge tube. A. G. Thomas. 2,102,045; Dec. 14.
Electrosurgical device. M. N. Hyams. 2,102,270; Dec. 14.
Emulsions of the oil-in-water type, Separating. W. Woelflin. 2,102,051; Dec. 14.
Engine: *See*—
Free piston engine.
Engine fuel system, Internal combustion. J. B. Macauley, Jr., and A. J. Roualet. 2,102,428; Dec. 14.
Engine starter control apparatus. J. B. Dyer. 2,101,931; Dec. 14.
Engines, Apparatus for the analytical testing of internal combustion. J. D. Morgan and P. B. Levitt. 2,102,185; Dec. 14.
Envelopes, Manufacture of dry-sealing. V. E. Heywood. 2,102,001; Dec. 14.
Enzyme from mold, Preparing an. W. Grassmann and H. Rubenbauer. 2,102,315; Dec. 14.
Ethers and the preparation thereof, Cellulose mixed. J. F. Haskins and D. C. Ellsworth. 2,102,205; Dec. 14.
Expansion joint. E. E. Hall. 2,102,528; Dec. 14.
Explosive charge and apparatus for the manufacture of the same. G. Weber. 2,102,245; Dec. 14.
Explosion or internal combustion engine. M. Kadenacy. 2,102,559; Dec. 14.
Exposure control. J. Eggert and H. F. Nissen. 2,101,932; Dec. 14.
Fabric: *See*—
Composite fabric.
Fabric and machine for making the same, Pile. E. Hopkinson. 2,101,906; Dec. 14.
Fabric and making the same, Pile. E. Hopkinson. 2,101,905; Dec. 14.
Fabric for reinforcing insoles, Treating textile. E. A. Ellis. 2,101,987; Dec. 14.
Fabric treating machine. H. H. Belcher. 2,101,974; Dec. 14.
Fan economizer. W. Carpender. 2,101,983; Dec. 14.
Fastener: *See*—
Multiple fastener.
Fastener elements, Method and apparatus for the production of. B. Reiter. 2,102,031; Dec. 14.
Fasteners, Making thermoplastic. L. H. Morin and D. Marinsky. 2,102,328; Dec. 14.
Fastening device. A. W. Schmid. 2,102,096; Dec. 14.
Fastening device. G. A. Tinnerman. 2,102,229; Dec. 14.
Fastening means for bearing sleeves. F. C. Morton. 2,102,375; Dec. 14.
Fat and oil splitting enzyme from plant seeds, Preparing. E. Takamiya. 2,102,101; Dec. 14.
Faucet. J. Auger. 2,102,503; Dec. 14.
Ferrule for cigarette holders. G. R. McWane. 2,102,017; Dec. 14.

Garment, Hooded. M. Arst. 2,102,251; Dec. 14.
Garment, Sanitary. J. G. Frieman. 2,102,359; Dec. 14.
Garter. E. O. Loeber. 2,102,561; Dec. 14.
Gas content of solutions, Determining the. E. Zahm. 2,102,105; Dec. 14.
Gas detecting apparatus. R. A. Gandy. 2,102,457; Dec. 14.
Gaseous conduction device. R. E. Barclay. 2,102,189; Dec. 14.
Gaseous conduction device. R. E. Barclay. 2,102,191; Dec. 14.
Gaseous mixtures, Effecting. R. E. Barclay. 2,102,192; Dec. 14.
Gasholder. J. H. Wiggins. 2,102,299; Dec. 14.
Gate: *See*—
Sluice gate.
Gauge for punches, Back. C. V. St. Louis and G. J. Rundblad. 2,102,292; Dec. 14.
Gear: *See*—
Draft and buffer gear. Steering gear.
Gear broaching machine and method. W. A. Hart. 2,102,071; Dec. 14.
Gear drive. M. Rotter. 2,102,167; Dec. 14.
Gears, Method of and apparatus for hardening. L. D. Slade. 2,102,040; Dec. 14.
Gel formation. G. Jones and I. B. Rymph. 2,102,005; Dec. 14.
Gelatin, Preparing photographic. S. E. Sheppard and J. H. Hudson. 2,101,877; Dec. 14.
Generator: *See*—
Bicycle lighting generator. Oscillation generator.
Generator structure, Hand driven. W. G. Dunn. 2,102,309; Dec. 14.
Glass masonry. J. M. Guthrie. 2,102,149; Dec. 14.
Globe, Analemmic tellurian. W. H. Hall. 2,102,413; Dec. 14.
Glue products, Manufacture of composite. C. H. Campbell. 2,102,255; Dec. 14.
Golf shaft. R. H. Cowdery and C. Wright. 2,102,060; Dec. 14.
Governor means for liquid injection internal combustion engines. A. Schweizer. 2,102,338; Dec. 14.
Grave concealing device. E. M. Elder and W. D. Goodyear. 2,102,260; Dec. 14.
Grease trap. A. M. McLeod. 2,102,429–30; Dec. 14.
Grinding device. G. J. Batzer. 2,102,053; Dec. 14.
Grinding machine. G. Crompton, Jr. and C. J. Green. 2,102,517; Dec. 14.
Grinding machine. F. E. Johnson. 2,102,518; Dec. 14.
Grinding wheel. K. F. Whitcomb and H. W. Wagner. 2,102,343; Dec. 14.
Guard attachment for mixing machines. L. B. Brunner. 2,101,980; Dec. 14.

Gun. F. Dixon. 2,102,199; Dec. 14.
Gun, Gas-operated. S. H. MacGregor. 2,101,862; Dec. 14.
Gun, Grease. J. J. Pelouch. 2,102,025; Dec. 14.
Gyrating machine. G. W. Behnke. 2,102,252; Dec. 14.
Hair curler. W. H. Schmitt. 2,102,286; Dec. 14.
Hair waving appliance. G. Ströher. 2,102,241; Dec. 14.
Hammer, Mechanical. B. W. Snodgrass. 2,101,878; Dec. 14.
Handbag, Lady's. J. E. Goldberg. 2,101,997; Dec. 14.
Hanger: *See*—
Bathtub hanger. Tobacco hanger.
Strap hanger. Utility hanger.
Hanger. T. L. Howell. 2,102,462; Dec. 14.
Heat insulated receptacle. A. H. Payson and C. O. Duevel, Jr. 2,102,164; Dec. 14.
Heat transfer system. J. S. Alcorn. 2,101,835; Dec. 14.
Heater: *See*—
Automobile heater.
Heating device, Combustion chamber. M. S. Hall. 2,101,903; Dec. 14.
Hectograph bands, Treating. W. B. Whitmore. 2,102,399; Dec. 14.
Heel, Cushioned. G. W. Griffith. 2,102,067; Dec. 14.
Hides and skins, Softening. M. M. Merritt. 2,101,866; Dec. 14.
Hinge: *See*—
Concealed hinge. Covered joint hinge.
Hoist, Power. B. M. Crawford. 2,101,839; Dec. 14.
Holder: *See*—
Flower holder. Receptacle holder.
Holder for stenotype strips, Copy. J. McNamara. 2,102,431; Dec. 14.
Honing and lapping machine. T. F. Quigley. 2,102,093; Dec. 14.
Hosiery with strain absorbing zone reinforced against curling. R. H. Scheer. 2,102,486; Dec. 14.
Hydrocarbons, Treatment of. V. Ipatieff and R. E. Schaad. 2,102,073–4; Dec. 14.
Ignition apparatus for closed-system fluid-combustible burners. J. W. Hays. 2,102,153; Dec. 14.
Illuminating apparatus and making same. T. W. Warren. 2,102,049; Dec. 14.
Impulse rate meter. B. Miller. 2,102,371; Dec. 14.
Indicator. A. G. Rayburn. 2,101,955; Dec. 14.
Ingots, Producing. G. A. Dornin. 2,102,258; Dec. 14.
Ink to ink transfer members, Supplying. G. E. Pelton. 2,102,216; Dec. 14.
Insecticides and fungicides. R. J. Bonstein. 2,102,564; Dec. 14.
Insulating building unit, Thermal. E. L. Benedict. 2,101,836; Dec. 14.
Invalid chair. M. E. Roe. 2,102,336; Dec. 14.
Investment composition. G. C. Van Allen. 2,102,444; Dec. 14.
Iron, Soldering. W. R. Richardson. 2,102,032; Dec. 14.
Isatin derivatives, Manufacture of. M. Wyler. 2,102,104; Dec. 14.
Jar. H. P. Wickersham. 2,101,968; Dec. 14.
Joint: *See*—
Expansion joint. Rotary tool joint.
Pipe joint. Swivel pipe joint.
Joint for front wheel suspensions, Ball. G. H. Hufferd. 2,102,463; Dec. 14.
Jolting and squeeze control for molding machines. W. H. Nicholls and G. Anderson. 2,102,377; Dec. 14.
Keys for preserve cans, Manufacture of. E. Ljungstrom. 2,102,467; Dec. 14.
Knitting machine. G. C. Szabo. 2,102,540; Dec. 14.
Lacquers of the urea resin type. C. Ellis. 2,102,114; Dec. 14.
Lamp: *See*—
Electric lamp. Surgical lamp.
Lamp. B. Putterman. 2,102,029; Dec. 14.
Latch: *See*—
Stutter trigger latch.
Latch for doors of barns, sheds, etc. E. F. Groenewold. 2,102,203; Dec. 14.
Latching system for automobiles or other vehicles. L. D. O. Moitthé. 2,102,373; Dec. 14.
Lead, Refining. J. O. Betterton and Y. E. Lebedeff. 2,101,975; Dec. 14.
Level and mounting same, Spirit. A. Langsner. 2,102,364; Dec. 14.
Leveling device. L. E. Blanchett. 2,101,837; Dec. 14.
Lighter, Combustible liquid. L. Bolle. 2,102,108; Dec. 14.
Lighter construction. A. F. Reilly. 2,102,381; Dec. 14.
Liquid, Device for dispensing measured quantities of. F. Schär. 2,102,239; Dec. 14.
Liquid, Preparing a. J. Wetstein. 2,102,398; Dec. 14.
Liquids, System and apparatus for pumping hazardous. G. A. Ungar. 2,102,140; Dec. 14.
Liquids, Transportation of. J. Lithgow. 2,102,124; Dec. 14.
Lock: *See*—
Closure cap lock. Combination lock.
Lock structure, Automobile. R. A. Sandberg. 2,102,438; Dec. 14.
Lock washer. J. J. Connell. 2,102,404; Dec. 14.
Lock washer. F. W. England. 2,102,495; Dec. 14.
Locks, Making retainer. E. A. McBride. 2,102,473; Dec. 14.
Locks, Production of fan-shaped screw. A. Thode. 2,102,493; Dec. 14.
Locking system for registering machines. B. S. Tyler. 2,102,046; Dec. 14.
Machine and method for forming helical springs. R. F. Carlberg. 2,101,982; Dec. 14.
Machine for applying closures. S. C. Bond. 2,101,977; Dec. 14.
Machine for attaching welts to soles. E. E. Field. 2,101,990; Dec. 14.
Machine for enveloping articles. J. N. Pattison. 2,101,870; Dec. 14.
Machine for forming radiator ribbons. S. Przyborowski. 2,102,573; Dec. 14.
Machine for hobbing the teeth of worm wheels. G. Lechesne. 2,102,540; Dec. 14.
Machine for squaring the ends of cakes of ice. M. J. Uline. 2,102,498; Dec. 14.
Machine for the tooling of metallic screw propeller blades. C. W. Berthiez. 2,102,505; Dec. 14.
Machine for troweling. H. S. Boulton. 2,101,895; Dec. 14.
Machinery for marking hosiery or other articles. A. H. Schmidtke. 2,102,132; Dec. 14.
Magnesium and magnesium alloys, Production of refined. G. Schichtel. 2,101,919; Dec. 14.
Magnesium from magnesium in finely divided form, Recovery of compact metallic. F. Hansgirg. 2,101,904; Dec. 14.
Magnetic analysis. T. Zuschlag. 2,102,450–1; Dec. 14.
Mandrel, Self-gripping. E. O. Goordman. 2,101,846; Dec. 14.
Match folder. R. F. Mahon. 2,102,580; Dec. 14.
Material for use in preventing offset in printing. R. A. Habermaier. 2,101,999; Dec. 14.
Material, Treating waste wet organic. R. L. Lloyd and H. J. Stehli. 2,102,427; Dec. 14.
Measuring device, Illuminated. F. H. Scantlebury. 2,102,384; Dec. 14.
Mercury power plant. A. J. Larrecq. 2,102,424; Dec. 14.
Metal articles, Enlarging the diameter of hollow. F. Singer. 2,102,099; Dec. 14.
Metal articles, Making composite ferrous. M. R. Trembour. 2,102,394; Dec. 14.
Metal drawing apparatus. W. F. Schulz. 2,101,959; Dec. 14.
Metal for enameling, Preparing. G. W. McGohan. 2,101,950; Dec. 14.
Metal forming tool. F. J. Minkel. 2,102,572; Dec. 14.
Metal reinforcement for abrasive teeth. G. W. Chormann and H. J. Cowle. 2,102,306; Dec. 14.
Metal spraying apparatus. T. G. Valentine and E. J. Brennan. 2,102,395; Dec. 14.
Metal, Treating. C. F. Lauenstein and P. F. Ulmer. 2,102,539; Dec. 14.
Metalworking machine. D. H. Montgomery. 2,102,183; Dec. 14.
Meter: *See*—
Impulse rate meter. Tuning meter.
Microscope. W. Bausch. 2,101,928; Dec. 14.
Microscope. G. B. Gallasch. 2,101,936; Dec. 14.
Microscope for pathological research. L. D. Larimore. 2,102,274; Dec. 14.
Milking system, Pressure releaser. F. G. Hodsdon. 2,102,267; Dec. 14.
Mill: *See*—
Die-rolling mill.
Mineral wool insulation. G. D. Shaver. 2,101,921; Dec. 14.
Mixing apparatus and juice extractor. S. Ferbend. 2,101,989; Dec. 14.
Mixing valve, Thermostatically controlled. K. D. Kysor. 2,102,011.
Mixture control. G. E. Beardsley, Jr., and W. A. Parkins. 2,102,504; Dec. 14.
Mold breaker. J. F. Campbell. 2,102,552; Dec. 14.
Molder. L. E. Blood. 2,102,175; Dec. 14.
Molding machine, Roll-off. W. H. Nicholls. 2,102,378; Dec. 14.
Monoazodyestuffs. R. Fleischhauer and E. Fischer. 2,102,115; Dec. 14.
Mop, Combination. C. Huber. 2,102,319; Dec. 14.
Motor: *See*—
Dynamo motor.

Seal. S. C. Leonard, Jr. 2,102,013; Dec. 14.
Seal, Automatic safety. G. D. Palmer. 2,102,088; Dec. 14.
Seamed articles and apparatus therefor, Making. J. P. Weis. 2,102,397; Dec. 14.
Seat: *See*—
Valve seat.
Seat back. E. J. Beck and W. B. Schroeder. 2,102,351; Dec. 14.
Seat support. W. S. Saunders and T. A. McGregor. 2,102,226; Dec. 14.
Seed gatherer attachment for mowing machines. J. A. Gaylord. 2,102,065; Dec. 14.

Self closing bag. C. Rose. 2,102,035; Dec. 14.
Sewage screenings and the like, Incineration of. W. Ralsch, J. C. Woodman, J. R. Buffington, and J. E. Morris. 2,102,543; Dec. 14.
Sewers and sewer basins and receptacles for use in sewer basins, Construction of. G. F. Egan. 2,102,310; Dec. 14.
Sewing machines, Differential feed device for. F. Ebert. 2,102,202; Dec. 14.
Shade attachment, Removable-decorative-window. A. Schwartz. 2,102,240; Dec. 14.
Shaker, Cocktail. B. de Montmorency. 2,102,520; Dec. 14.
Sharpener, Razor blade. W. A. Campbell. 2,102,509; Dec. 14.
Sheets, Method of and apparatus for transporting and registering. E. G. Rider. 2,102,033; Dec. 14.
Shells and casings, Producing etched surfaced. A. Nierenberg. 2,102,162; Dec. 14.
Shield, Glare. J. H. Fletcher. 2,101,901; Dec. 14.
Shim, Rail joint. A. F. Fifield. 2,101,900; Dec. 14.
Shoe and making same. E. Quinn. 2,102,333; Dec. 14.
Shoe lasts and the like, Method of and apparatus for displaying. R. P. Schwartz. 2,102,038; Dec. 14.
Shoulder strap. S. M. Crewdson. 2,102,062; Dec. 14.
Shutter trigger latch. A. Nagel. 2,102,376; Dec. 14.
Shutter, Window. F. Kalb, Sr. 2,102,156; Dec. 14.
Shuttle driving mechanism for looms. W. E. Burns and E. N. Miller. 2,101,981; Dec. 14.
Sidetracking tool. W. Brauer. 2,102,055; Dec. 14.
Sign: *See*—
Advertising sign. Revolving sign.
Animated sign.
Signal for firearms, Safety. R. B. Conniffe. 2,102,195; Dec. 14.
Signal for milking machines, Audible. P. H. J. Martin. 2,102,275; Dec. 14.
Signaling apparatus, Mounting submarine. W. Kunze. 2,101,850; Dec. 14.
Signaling means for vehicles. R. L. Smith. 2,102,288; Dec. 14.
Signaling, Railway. J. J. Vanhorn. 2,102,445; Dec. 14.
Silicate insulating material. H. M. Williams. 2,101,969; Dec. 14.
Slicing machine. W. C. McNitt. 2,102,475; Dec. 14.
Sludge ejector, Rock drill. A. H. Skaer. 2,102,576; Dec. 14.
Sluice gate, Double walled. T. Becher. 2,101,973; Dec. 14.
Smoker's accessory. R. T. Booth. 2,102,565; Dec. 14.
Socket, Lamp. G. A. Johnson. 2,102,465; Dec. 14.
Sodium, Manufacturing metallic. R. Hara and S. Abe. 2,102,151; Dec. 14.
Soil conditioner, Producing a slag. L. C. Henkel. 2,102,119; Dec. 14.
Soldering machine. M. G. Boerger. 2,101,929; Dec. 14.
Solitaire contract bridge, Device for use in playing. C. H. Richardson. 2,102,220; Dec. 14.
Sound recording system. D. Canady. 2,102,194; Dec. 14.
Sound reproducing apparatus. H. F. Olson. 2,102,212; Dec. 14.
Spectacle case. J. T. Rakanskas. 2,102,218; Dec. 14.
Speed controller for hydraulic motors. J. K. Douglas. 2,102,177; Dec. 14.
Speed mechanism, Change. F. Schmid. 2,102,131; Dec. 14.
Speed reducer and other transmission. G. H. Fraser. 2,101,844; Dec. 14.
Spinning solution. W. Whitehead. 2,101,886; Dec. 14.
Splint, Cervical. P. W. Hanicke. 2,102,069; Dec. 14.
Splint, Fracture. R. Anderson. 2,101,889; Dec. 14.
Spray gun valve. S. Bramsen and F. Wahlin. 2,102,303; Dec. 14.
Spray head. H. A. Roselund. 2,102,382; Dec. 14.
Spray residue and other accumulations from fruit and the like, Removing. P. Van Wyk. 2,102,340; Dec. 14.
Spraying apparatus. L. Stoesling. 2,101,922; Dec. 14.
Spring cover. G. W. Crabtree. 2,102,061; Dec. 14.
Stabilizer for guns. S. G. Green. 2,101,848; Dec. 14.
Static tube sleeve. A. W. Knisley. 2,101,858; Dec. 14.
Steering gear. B. W. Twyman. 2,102,296; Dec. 14.
Steel, Alloy. B. D. Saklatwalla. 2,102,283; Dec. 14.
Steel, Making rimmed. R. E. Zimmerman and C. D. King. 2,102,502; Dec. 14.
Steering means. B. Chance. 2,102,513; Dec. 14.
Steering means, Automatic. B. Chance. 2,102,511–12; Dec. 14.
Stencil. J. C. Smith. 2,102,228; Dec. 14.
Stencil, Addressing. N. D. Luckie. 2,101,949; Dec. 14.
Stock take-off machine, Automatic. W. W. Benner and F. Leopold, Jr. 2,102,453; Dec. 14.
Stocking. C. C. Foster. 2,102,064; Dec. 14.
Stocking, Arch-supporting. E. J. Martel. 2,102,368; Dec. 14.
Stocking, Garter. E. J. Martel. 2,102,369; Dec. 14.
Stool, Chiropodist's. H. C. Fotre. 2,102,261; Dec. 14.
Storm sash ventilator. W. C. Hansen and H. J. Goelzer. 2,101,941; Dec. 14.
Stove. B. B. Kahn. 2,102,536; Dec. 14.
Stove, Cook. W. D. Harvey and A. P. Chester. 2,102,459; Dec. 14.
Stovepipe collar and anchor. A. Upton. 2,102,330; Dec. 14.
Straight edge, Parallel. L. H. Klitsche. 2,102,008; Dec. 14.
Strap: *See*—
Shoulder strap.
Strap hanger, Advertising. A. G. Sirera. 2,102,488; Dec. 14.
Straw product and treatment thereof. W. Whitehead. 2,101,885; Dec. 14.
Strip, Method and apparatus for rolling metallic. J. E. Montgomery and J. T. Flaherty. 2,102,184; Dec. 14.
Strip, Sealing. G. W. Gall. 2,102,578; Dec. 14.
Sucrose, Nitrating. J. A. Wyler. 2,101,927; Dec. 14.
Suit, Bathing. T. R. Kugler. 2,102,363; Dec. 14.
Sulphur dioxide to elemental sulphur by means of carbon, Reduction of. R. Lepsoe. 2,102,081; Dec. 14.
Superheterodyne receiver. J. J. Yolles. 2,102,401; Dec. 14.
Support: *See*—
Baby support. Seat support.
Support. W. La Hodny. 2,102,012; Dec. 14.
Support device. G. W. Kemp. 2,102,078; Dec. 14.
Support for lamps. M. Lager. 2,102,422; Dec. 14.
Support with resilient grip heads, Uniform arc, compensating chord conductor. A. O. Austin. 2,102,232; Dec. 14.
Supporter, Book. L. Zocchi. 2,101,972; Dec. 14.
Surgical lamp. A. A. Overbury. 2,102,023; Dec. 14.
Switch: *See*—
Electric switch. Fuse switch.
Switch for electric bulbs, Time controlled electric. A. Weiss. 2,102,240; Dec. 14.

Yarns, Manufacturing. W. Hollerung. 2,101,943; Dec. 14.
Zirconium silicates, Coherent porous. C. J. Kinzie. 2,101,947; Dec. 14.

CLASSIFICATION OF PATENTS

ISSUED DECEMBER 14, 1937

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, third number=patent number

Illinois Watch Case Company. (See Muller-Munk, Peter, assignor.)
Johnson, Alvin L., Ottawa Hills, assignor to The Logan Gear Company, Toledo, Ohio. Axle stand. 107,574; Dec. 21.
Johnson, John H., Toronto, Ontario, Canada, assignor to K & W Rubber Corporation, Delaware, Ohio. Cushion. 107,520; Dec. 21.
K & W Rubber Corporation. (See Johnson, John H., assignor.)
Kaptuller, Alexander F. (See Grange, E. A., Kaptuller, and Schmidt.)
Karpark Corporation, The. (See Loewy, Raymond, assignor.)
Kensington, Incorporated. (See Guild, Lurelle, assignor.)
Kihn, Lawrence J., Pittsburgh, Pa., assignor to J. T. & A. Hamilton Company. Glass bottle. 107,575; Dec. 21.
Koh-I-Noor Bleistiftfabrik L. & C. Hardtmuth. (See Kropsch, Richard, assignor.)
Koons, Benjamin H. (See Moore, J. E., and Koons.)
Krautheim, Albert. (See Gerth, W. H., and Krautheim.)
Kress, S. H., and Company. (See Sibbert, Edward F., assignor.)
Kropsch, Richard, assignor to Koh-I-Noor Bleistiftfabrik L. & C. Hardtmuth, Budweis, Czechoslovakia. Pencil. 107,521; Dec. 21.
Kruck, Ralph E., Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company. Electric fan. 107,522; Dec. 21.
Kurtz, Sol, New York, N. Y. Sweater. 107,600; Dec. 21.
Lampl, Walter, New York, N. Y. Charm or the like. 107,523; Dec. 21.
Lefrak, Benjamin, New York, N. Y. Cape. 107,524; Dec. 21.
Levine, Jacob, New York, N. Y. Shoe. 107,525; Dec. 21.
Little, John M., and H. L. van Doren, assignors to Toledo Scale Manufacturing Company, Toledo, Ohio. Scale casing. 107,526; Dec. 21.
Loewy, Raymond, assignor to The Karpark Corporation, New York, N. Y. Parking meter housing. 107,527; Dec. 21.
Loewy, Raymond, assignor to The Karpark Corporation, New York, N. Y. Parking meter housing. 107,528; Dec. 21.
Loewy, Raymond, assignor to The Karpark Corporation, New York, N. Y. Parking meter housing. 107,529; Dec. 21.
Loewy, Raymond, assignor to The Karpark Corporation, New York, N. Y. Parking meter housing. 107,530; Dec. 21.
Loewy, Raymond, assignor to The Karpark Corporation, New York, N. Y. Parking meter housing. 107,531; Dec. 21.
Loewy, Raymond, New York, N. Y., assignor to Heywood-Wakefield Company, Gardner, Mass. End standard for theater chairs. 107,532; Dec. 21.
Loewy, Raymond, New York, N. Y., assignor to Heywood-Wakefield Company, Gardner, Mass. End standard for theater chairs. 107,533; Dec. 21.
Loewy, Raymond, New York, N. Y., assignor to Heywood-Wakefield Company, Gardner, Mass. End standard for theater chairs. 107,534; Dec. 21.
Logan Gear Company, The. (See Johnson, Alvin L., assignor.)
Loney, Hugh W., assignor to C. G. Conn, Ltd., Elkhart, Ind. Mouthpipe key for a saxophone. 107,535; Dec. 21.
Long, Nelson A., Duluth, Minn. Statuette or similar article. 107,576; Dec. 21.
Lyon Metal Products, Incorporated. (See O'Connor, John B., assignor.)
Maywood Glass Co. (See Moore, James E., assignor.)
Maywood Glass Co. (See Moore, J. E., and Koons, assignors.)
McCain, Edwin W., St. Louis, Mo. Shoe. 107,536; Dec. 21.
McCain, Edwin W., St. Louis, Mo. Shoe. 107,537; Dec. 21.
McCann, Thomas, Brooklyn, N. Y. Telephone casing. 107,538; Dec. 21.
McCormick, Elmer, Waterloo, Iowa, assignor to Deere & Company, Moline, Ill. Tractor body. 107,539; Dec. 21.
McGay, John B., and G. E. Nicholson, Tulsa, assignors to Dual Parking Meter Company, Oklahoma City, Okla. Parking meter housing. 107,577; Dec. 21.
McHale, Thomas D., Los Angeles, Calif. Milk pail. 107,540; Dec. 21.
Miller, Henry, New York, N. Y. Coat. 107,601; Dec. 21.
Miller, Henry, New York, N. Y. Coat. 107,632; Dec. 21.
Moore, James E., assignor to Maywood Glass Co., Los Angeles, Calif. Bottle. 107,541; Dec. 21.
Moore, James E., and B. H. Koons, assignors to Maywood Glass Co., Los Angeles, Calif. Bottle. 107,542; Dec. 21.
Muller-Munk, Peter, Pittsburgh, Pa., assignor to Illinois Watch Case Company, Elgin, Ill. Mirror or similar article. 107,543; Dec. 21.
Muller-Munk, Peter, Pittsburgh, Pa., assignor to Illinois Watch Case Company, Elgin, Ill. Brush or similar article. 107,544; Dec. 21.
Nicholson, George E. (See McGay, J. B., and Nicholson.)
O'Connor, John B., assignor to Lyon Metal Products, Incorporated, Aurora, Ill. Chair. 107,545; Dec. 21.
Oneida, Limited. (See Gerth, W. H., and Krautheim, assignors.)
Owens-Illinois Glass Company. (See Toulouse, Julian H., assignor.)
Penn, Edgar V., Madison, N. C. Buckle. 107,546; Dec. 21.
Peters, Ralph, Clarksburg, assignor to Hazel-Atlas Glass Company, Wheeling, W. Va. Tumbler. 107,547; Dec. 21.
Petzold, William B. (See Holmgren, O. F., and Petzold.)
Planco, Murray, New York, N. Y. Shoe or similar article. 107,602; Dec. 21.
Price, Howard M., Toledo, Ohio, assignor to The Bridgeport Metal Goods Manufacturing Company, Bridgeport, Conn. Flashlight casing. 107,578; Dec. 21.
Ranney, Fred T., Kansas City, Mo. Highway marker. 107,579; Dec. 21.
Reed, E. P., & Co. (See Ebling, Walter, assignor.)
Reid, Elmer A., Morrisville, Pa. Humidifier. 107,548; Dec. 21.
Roach, Floyd I. (See Delf, George A., assignor.)
Robaczynski, Ladislaus. (See Cooper, Nathan, assignor.)
Rogers, Robert, Detroit, Mich. Automobile body. 107,549; Dec. 21.
Ross, Walter, New York, N. Y. Textile fabric. 107,603; Dec. 21.
Ruckdeschel, Elsa C., New York, and W. N. Brady, Piermont, assignors to American Hard Rubber Company, New York, N. Y. Curling comb. 107,550; Dec. 21.
Sakler, George, assignor to The Accessories Company, Inc., New York, N. Y. Combined lavatory and cabinet. 107,551; Dec. 21.
Scharfenberg, George T., assignor to Chicago Flexible Shaft Company, Chicago, Ill. Toaster. 107,552; Dec. 21.
Schiessel, Philip, New York, N. Y. Dress. 107,618; Dec. 21.
Schmidt, Erwin J. (See Grange, E. A., Kaptuller, and Schmidt.)
Schoen, Elizabeth, assignor to Debway Hats, Inc., New York, N. Y. Hat. 107,553; Dec. 21.
Scranton Lace Company, The. (See Erhard, Gustave F., assignor.)
Shoor, Julian, assignor to General Distilleries Corporation, Hartford, Conn. Bottle. 107,580; Dec. 21.
Sibbert, Edward F., Brooklyn, assignor to S. H. Kress and Company, New York, N. Y. Baffle element for lighting fixtures. 107,554; Dec. 21.
Sibbert, Edward F., Brooklyn, assignor to S. H. Kress and Company, New York, N. Y. Baffle element for lighting fixtures. 107,555; Dec. 21.
Sleverling, Mav M., Burdett, Kans. Pot holder or the like. 107,619; Dec. 21.
Smith, Marie E., New York, N. Y. Dress. 107,620; Dec. 21.
Snowden, John W., Philadelphia, Pa. Textile fabric. 107,604; Dec. 21.
Sobel, Harry, New York, N. Y. Shoe. 107,556; Dec. 21.
Sobel, Harry, New York, N. Y. Shoe. 107,557; Dec. 21.
Sobel, Harry, New York, N. Y. Shoe. 107,558; Dec. 21.
Solomon, Mortimer, New York, N. Y. Combination slacks and suspenders. 107,581; Dec. 21.
Stetson Shoe Company, The. (See Wales, Burton L., assignor.)

Stevens, Clifford B., assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Electric controlling device. 107,559; Dec. 21.
Stiglitz, Irving, New York, N. Y. Embroidered fabric. 107,621; Dec. 21.
Stone, Mollie, New York, N. Y. Dress. 107,633; Dec. 21.
Straub, Walter F., assignor to W. F. Straub & Company, Chicago, Ill. Jar or similar container. 107,582; Dec. 21.
Straub, W. F., & Company. (See Straub, Walter F., assignor.)
Swedlin, Jacob, Brooklyn, assignor to J. Swedlin, Inc., New York, N. Y. Toy doll. 107,583; Dec. 21.
Swedlin, J., Inc. (See Swedlin, Jacob, assignor.)
Taylor, Donald D., Duncannon, Pa. Power-driven hand tool unit. 107,560; Dec. 21.
Telser, Arthur R. (See Young, A. A., and Telser.)
Terrie, Daniel G., Rockville Centre, N. Y. Building. 107,635; Dec. 21.
Thacher, Sheldon P., Grosse Pointe Park, Mich., assignor to United States Rubber Products, Inc., New York, N. Y. Pneumatic tire. 107,584; Dec. 21.
Thompson, Van E., Dearborn, Mich. Automobile hood antenna. 107,562; Dec. 21.
Thwaits, Frederick G., Wauwatosa, assignor to The Heil Co., Milwaukee, Wis. Vehicular tank. 107,563; Dec. 21.
Titze, Walter K., San Francisco, Calif., assignor to Universal Potteries, Inc., Cambridge, Ohio. Pitcher or similar article. 107,564; Dec. 21.
Titze, Walter K., San Francisco, Calif., assignor to Universal Potteries, Inc., Cambridge, Ohio. Combined refrigerator dish and cover or similar article. 107,565; Dec. 21.
Titze, Walter K., San Francisco, Calif., assignor to Universal Potteries, Inc., Cambridge, Ohio. Combined bowl and cover or similar article. 107,585; Dec. 21.
Toledo Scale Manufacturing Company. (See Little, J. M., and van Doren, assignors.)
Tomshinsky, Victor, New York, N. Y. Dress. 107,622; Dec. 21.
Toulouse, Julian H., assignor to Owens-Illinois Glass Company, Toledo, Ohio. Bottle. 107,586; Dec. 21.
Treviño, Ramon J., Albuquerque, N. Mex. Burial casket. 107,587; Dec. 21.
Turpan, Mark, West New York, N. J. Textile fabric. 107,605; Dec. 21.
Turpan, Mark, West New York, N. J. Textile fabric. 107,623; Dec. 21.
Turpan, Mark, West New York, N. J. Textile fabric. 107,634; Dec. 21.
Turpan, Mark, West New York, N. J. Textile fabric. 107,635; Dec. 21.
United States Rubber Products, Inc. (See Thacher, Sheldon P., assignor.)
Universal Potteries, Inc. (See Titze, Walter K., assignor.)
Van Doren, Harold L. (See Little, J. M., and van Doren.)
Vaught, Karl R., Indianapolis, Ind. Walking support for invalids. 107,588; Dec. 21.
Vuillemenot, Frederic A., assignor to The De Vilbiss Company, Toledo, Ohio. Atomizer. 107,566; Dec. 21.
Waldron, Charles R., Norwalk, Ohio, and R. W. Faulhaber, Alma, Mich. Saddle. 107,589; Dec. 21.
Wales, Burton L., Abington, assignor to The Stetson Shoe Company, Inc., Weymouth, Mass. Shoe. 107,567; Dec. 21.
Walker, Chester E., Branson, Mo. Mailing novelty. 107,568; Dec. 21.
Waxberg, Augusta, New York, N. Y. Dress. 107,606; Dec. 21.
Welch, Irene, New York, N. Y. Dress. 107,569; Dec. 21.
Westinghouse Electric & Manufacturing Company. (See Kruck, Ralph E., assignor.)
Young, Arthur A., and A. R. Telser, Chicago, Ill. Theater lobby advertising device. 107,590; Dec. 21.
Young, Arthur A., and A. R. Telser, Chicago, Ill. Theater lobby advertising device. 107,591; Dec. 21.
Zell, David H., Brooklyn, N. Y. Coin bank. 107,592; Dec. 21.
Zinn, Harry, New York, N. Y. Dress. 107,624; Dec. 21.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 21ST DAY OF DECEMBER, 1937

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abbott Laboratories. (See Raiziss, G. W., and Clemence, assignors.)
Abercrombie Pump Company. (See Allen, Herbert, assignor.)
Acy, Harry A., Louisville, Ky. Automobile rear advertising carrier. 2,102,987; Dec. 21.
Adamson, Percy, Rye, assignor to United States Rubber Company, New York, N. Y. Elastic fabric and garment. 2,103,133; Dec. 21.
Addink, Nicolaas W. H., Eindhoven, Netherlands, assignor to General Electic Company. Gaseous electric discharge device. 2,103,053; Dec. 21.
Addressograph-Multigraph Corporation. (See Osborn, Henry C., assignor.)
Adirondack Foundries and Steel Incorporated. (See Akitt, Norman B., assignor.)
Adjustable Scaffold & Form Company. (See McDill, Rex D., assignor.)
Air Reduction Company. (See Faulkner, Lionel E., assignor.)
Akahira, Takeo, Takinogawa-ku, assignor to Zaidan Hojin Rikagaku Kenkyujo, Tokyo, Japan. Apparatus for manufacturing a coated insulated wire. 2,103,134; Dec. 21.
Akitt, Norman B., Troy, assignor to Adirondack Foundries and Steel Incorporated, Watervilet, N. Y. Hopper car construction. 2,103,132; Dec. 21.
Aktiebolaget Facit. (See Gustafsson, E. V., and Hellgren, assignors.)
Aktiebolaget Ljungstroms Angturbin. (See Lysholm, A., Horney, and Wahlsten, assignors.)
Aktiengesellschaft Brown Boveri & Cie. (See Hürlimann, Max., assignor.)
Alberg, Henry, Millstadt, Ill. Safety device for locks. 2,102,583; Dec. 21.
Alco Products Incorporated. (See Patton, Cuyler S., assignor.)
Alexander, James R., Jr., Lansdowne, Pa., assignor to General Electric Company. Control system. 2,102,664; Dec. 21.
All Steel Trailer Company. (See Byington, William C., assignor.)
Allen, Earl M., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway traffic controlling apparatus. 2,102,988; Dec. 21.
Allen, Herbert, assignor, by mesne assignments, to Abercrombie Pump Company, Houston, Tex. Pump. 2,102,665; Dec. 21.
Allis-Chalmers Manufacturing Company. (See Newhouse, R. C., and Puerner, assignors.)
Alterthum, Hans, Berlin-Wilmersdorf, and A. Lompe, Berlin, Germany, assignors to General Electric Company. Gaseous electric discharge lamp devices. 2,103,027; Dec. 21.
American Can Company. (See Bach, Neils P., assignor.)
American Smelting and Refining Company. (See Poland, Frank F., assignor.)
American Telephone and Telegraph Company. (See Howle, Louis W., assignor.)
American Telephone and Telegraph Company. (See Neiswinter, James T., assignor.)
Amsler, Alfred J., Schaffhouse, Switzerland. Measuring device, particularly for machines for testing materials. 2,102,872; Dec. 21.
Anderson, Clayton G., assignor of forty-nine per cent to C. P. Dougherty, Portland, Oreg. Automatic draft control. 2,102,873; Dec. 21.
Anderson, Howard P., Erie, Pa., assignor to The Standard Stoker Company, Inc., (1922). Stoker conveyer. 2,103,209; Dec. 21.
Anderson, Ralph W. (See McCoy, V. E., and Anderson.)
Andre, Gustaf E., Richmond, Ind. Wringer. 2,102,827; Dec. 21.
Andrews, Edward F., Chicago, Ill. Radio receiver. 2,103,135; Dec. 21.
Annen, James E., assignor to Sutherland Paper Company, Kalamazoo, Mich. Container. 2,102,666; Dec. 21.
Apollo Metal Works. (See Romanoff, Frank P., assignor.)
Argabrite, George M., deceased, Chicago, M. M. Argabrite, executrix, assignor to W. H. Argabrite, Desplaines, Ill. Leather processing. 2,102,667; Dec. 21.
Argabrite, Margaret M., executrix. (See Argabrite, George M.)
Argabrite, Wesley H. (See Argabrite, George M., assignor.)
Arkell, Bartlett. (See Du Bois, Alfred, assignor.)
Arkell, Bartlett. (See Tooker, John N., assignor.)
Arkell Safety Bag Company. (See Robinson, Francis T., assignor.)

Armstrong-Blum Mfg. Co. (See Blum, George J., assignor.)
Armstrong Siddeley Motors Limited. (See Cutler, Gerard M., assignor.)
Arndt, Kurt, Detroit, Mich. Package and package handling means for airplanes. 2,102,604; Dec. 21.
Arnold, Clarence F., Drexel Hill, Pa. Fringed rug. 2,102,934; Dec. 21.
Ateliers et Chantiers de la Manche. (See Berry, Francois J., assignor.)
Auerswald, Ralph R., San Diego, Calif. Butter-substitute mixing and molding device. 2,102,874; Dec. 21.
Automatic Instrument Company. (See Green, Clifford H., assignor.)
Automatic Truck Loader Corporation. (See Goodman, Joseph, assignor.)
Autoxygen Inc. (See Kokatnur, Vaman R., assignor.)
Bach, Neils P., Geneva, assignor to American Can Company, New York, N. Y. Can and cover feeding mechanism. 2,102,605; Dec. 21.
Bailey, David C., Amesbury, Mass. Window glass channel lining. 2,102,935; Dec. 21.
Bailey, David C., Amesbury, Mass. Window glass guide. 2,102,936; Dec. 21.
Bailey, George B., Sharon, Mass. Power transmitting apparatus and control means therefor. 2,102,606; Dec. 21.
Bakelite Building Products Co. Inc. (See Harshberger, Norman P. and K. M., assignors.)
Baker, David S., Greenwich, Conn. Method and apparatus for treating materials. 2,102,607; Dec. 21.
Baker, Judd O., Westmont, N. J., assignor to Radio Corporation of America. Sound recording apparatus. 2,102,776; Dec. 21.
Baker, Judd O., Westmont, and C. N. Batsel, Haddonfield, N. J. assignors to Radio Corporation of America. Photophonographic apparatus. 2,102,777; Dec. 21.
Baker, Lewis T., Jacksonville, Fla. Rosin sampler. 2,102,875; Dec. 21.
Ball Brothers Company. (See Ludington, Lawrence L., assignor.)
Ballantine, Stuart, Mountain Lakes, N. J., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Piezoelectric loudspeaker. 2,102,608; Dec. 21.
Bangert, Friedrich K. G., assignor to O. H. Dräger, Lubeck, Germany. Detecting chemically reactive gases. 2,103,136; Dec. 21.
Banks, Daniel B. (See Barton, P. D., and Banks.)
Barieau, Jerome E., Auburn, Calif. Ski binding. 2,102,669; Dec. 21.
Barnes, Marion W., assignor to Universal Oil Products Company, Chicago, Ill. Heating of fluids. 2,102,876; Dec. 21.
Barnett, Edward J., Compton, Calif. Device for dispensing measured quantities of divided solid material. 2,102,877; Dec. 21.
Barostat Company. (See Coffin, John R., assignor.)
Barton, Paul D., Scarsdale, N. Y., and D. B. Banks, Upper Darby, assignors, by mesne assignments, to Sun Oil Company, Philadelphia, Pa. Dewaxing hydrocarbon oils. 2,102,828; Dec. 21.
Basgan, Ion, Bucharest, Rumania. Rotary well drilling apparatus. 2,103,137; Dec. 21.
Batsell, Cecil N. (See Baker, J. O., and Batsell.)
Bauer, Jordan V., assignor to Stein, Hall Manufacturing Company, Chicago, Ill. Plyboard adhesive. 2,102,937; Dec. 21.
Bayer, Otto. (See Helberger, J. H., and Bayer.)
Becker, Bernard C., Canton, assignor to The Hoover Company, North Canton, Ohio. Suction cleaner. cleaner. 2,103,054; Dec. 21.
Becker, Christopher A., Nutley, and W. C. Seyter, Union City, N. J., assignors to The Torsion Balance Company, New York, N. Y. Keyboard balance. 2,102,938; Dec. 21.
Becker, Joseph, Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company. Coking retort oven. 2,102,608; Dec. 21.
Becker, Joseph, Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company. Coking retort oven. 2,102,609; Dec. 21.
Becker, Oskar W., Heidelberg, and E. Weiss, assignors to Naturin G. m. b. H., Weinheim, Germany. Hardening waterproofing artificial gut produced from animal fibrous material. 2,103,138; Dec. 21.
Beers, George L., Collingswood, N. J., assignor to Radio Corporation of America. Thermionic amplifier. 2,102,779; Dec. 21.
Bell Telephone Laboratories, Incorporated. (See Black, Harold S., assignor.)

Bell Telephone Laboratories, Incorporated. (See Kinkead, Fullerton S., assignor.)
Bell Telephone Laboratories, Incorporated. (See Stilwell, George R., assignor.)
Bell Telephone Laboratories, Incorporated. (See Ulrich, Horace W., assignor.)
Bendix Aviation Corporation. (See Carroll, Eugene G., assignor.)
Bendix Aviation Corporation. (See Hunt, Scott F., assignor.)
Bendix Aviation Corporation. (See McDonald, Eugene G., assignor.)
Bendix Brake Company. (See Carroll, Eugene G., assignor.)
Bendix Brake Company. (See Rosner, Adolph, assignor.)
Bendix Products Corporation. (See Koppel, Ernest R., assignor.)
Bendix Products Corporation. (See La Brie, Ludger E., assignor.)
Bendix Products Corporation. (See White, John W., assignor.)
Bendix Research Corporation. (See Johnson, Carl V., assignor.)
Benedict, Wayne L., assignor to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbon oils. 2,102,878; Dec. 21.
Benson, Bernhart A., assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Sandwich toaster with interchangeable grids. 2,102,879; Dec. 21.
Berch, Samuel H., Beverly Hills, Calif. Packing food products and the like. 2,102,716; Dec. 21.
Bergmann, Christian N., Pittsburgh, assignor of two-sixths to C. M. Clarke, Sewickley, Pa. Container conveyer and distributor. 2,103,107; Dec. 21.
Bergquist, Nils O., Alsten, Sweden. Map in book form. 2,103,139; Dec. 21.
Berry, Francois J., Lille (Nord), assignor to Ateliers et Chantiers de la Manche, Dieppe, France. Apparatus for dry separation of materials of different densities. 2,102,880; Dec. 21.
Bibb Manufacturing Company. (See Gwaltney, E. C., Graybill, and Newton, assignors.)
Bickley, Everett H., Bala-Cynwyd, Pa. Liquid level indicating valve. 2,103,055; Dec. 21.
Bielfeldt, Paul W., Grand Rapids, Mich., assignor to Swenson Evaporator Company, Harvey, Ill. Filtration. 2,102,780; Dec. 21.
Bieretz, Edward D., Baltimore, Md. Selective gearing mechanism and automatic fluid control therefor. 2,102,781; Dec. 21.
Birkenmaier, Theodore, assignor to W. N. Matthews Corporation, St. Louis, Mo. Cut-out and joint therefor. 2,103,056; Dec. 21.
Bishop, Richard E., South Orange, N. J., assignor to A. C. Horn & Company, Long Island City, N. Y. Calking gun. 2,102,939; Dec. 21.
Bishop, William T., assignor to Hercules Powder Company, Wilmington, Del. Production of xanthates of resin alcohols. 2,103,140; Dec. 21.
Black, Harold S., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave translation system. 2,102,670; Dec. 21.
Black, Harold S., Westfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave translation system. 2,102,671; Dec. 21.
Black, Irving E., F. J. Hoffer, and H. B. Silver, assignors to Plastic Seal Corporation, Brooklyn, N. Y. Container sealing machine. 2,103,213; Dec. 21.
Blackburn, Jasper, and J. A. Weaver, Jr., Webster Groves, Mo. Frictional wire connecter. 2,102,881; Dec. 21.
Blashill, Arthur E., Withington, Manchester, England. Method and apparatus for unwinding wire, thread, or the like. 2,102,610; Dec. 21.
Blocker, Jay D. (See Neel, T. W., and Blocker.)
Blum, George J., assignor to Armstrong-Blum Mfg. Co., Chicago, Ill. Hacksaw. 2,102,782; Dec. 21.
Blumer, Jacob C., Monroe, Wis., assignor to Freyn Engineering Company, Chicago, Ill. Gas and air trap. 2,103,057; Dec. 21.
Boehringer, C. F., & Soehne G. m. b. H. (See Müller, R., Schenck, and Wirbatz, assignors.)
Boivin, Peter H., Granby, Quebec, Canada. Braided article. 2,102,829; Dec. 21.
Bokovoy, Samuel A., Audubon, N. J., assignor to Radio Corporation of America. Constant temperature apparatus. 2,102,783; Dec. 21.
Bol, Cornelis. (See Druyvesteyn, M. J., Uyterhoeven, Bol., and van Dam.)
Bol, Cornelis, Eindhoven, Netherlands, assignor to General Electric Company. Electric conduction device. 2,103,028; Dec. 21.
Boothe, Eugene F., assignor to J. R. Kearney Corporation, St. Louis, Mo. Fuse link. 2,102,882; Dec. 21.
Bornfleith, Edward A., et al. (See Hester, John C., assignor.)
Bose, Theodore W., Santa Ana, Calif. Orchard heating system. 2,102,989; Dec. 21.
Bouwers, Albert, assignor to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Device for charging condensers. 2,102,883; Dec. 21.
Bowen, Herbert C., assignor to Hydraulic Brake Company, Detroit, Mich. Ironing machine. 2,103,141; Dec. 21.
Bowers, Thomas A., Boston, Mass. Compacting apparatus. 2,103,142; Dec. 21.
Bradley, Milton, Company. (See Ford, William H., assignor.)
Breese, James L., Santa Fe, N. Mex. Draft regulator. 2,102,884; Dec. 21.
Bridgeport Brass Company. (See Broecker, L. C., and Ferguson, assignors.)
Bridges, Kenneth L., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Making a wear indicating tire. 2,102,784; Dec. 21.
Briggs, Robert E., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Material treating apparatus. 2,102,990; Dec. 21.
Briggs, Robert E., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Sewage disposal apparatus. 2,102,991; Dec. 21.
Brill, John L., Newark, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Fertilizer manufacture. 2,102,830; Dec. 21.
Brill, John L., Newark, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Fertilizer manufacture. 2,102,831; Dec. 21.
Brill, Rudolf. (See Scheuermann, A., Brill, and Wietzel.)
Brixey, Austin D., Greenwich, Conn., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Remote controlled sound producing apparatus. 2,102,672; Dec. 21.
Broecker, Lewis C., Bridgeport, and J. Ferguson, Southbury, assignors to Bridgeport Brass Company, Bridgeport, Conn. Pneumatic valve. 2,103,108; Dec. 21.
Brooks, Clyde, New Orleans, La. Method of and apparatus for sedimentation testing of blood. 2,102,785; Dec. 21.
Brouwer, Benjamin W., Auburn, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Shuttle box construction for looms. 2,102,832; Dec. 21.
Brown, Carl D., assignor to Draper Corporation, Hopedale, Mass. Constant tension let-off mechanism. 2,103,200; Dec. 21.
Brown, Davis, Los Angeles, Calif. Automatic proportioning device. 2,102,584; Dec. 21.
Brown, Laverne S., Gaines, Pa. Differential gear. 2,103,143; Dec. 21.
Brown, Mortimer J., Niagara Falls, N. Y. Gasket. 2,102,673; Dec. 21.
Brown, William Y., Charlotte, assignor of one-third to W. C. Honeycutt, Black Mountain, and one-third to R. H. Garland, Charlotte, N. C. Wheel truck. 2,102,674; Dec. 21.
Browne, Edwin H. (See Otting, H. E., Browne, and Hull.)
Brunk, Harold J., Chicago, Ill., assignor to The C. F. Pease Company. Applying developer to a moving print. 2,102,585; Dec. 21.
Buchanan, David L., White Marsh, assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Water heating system. 2,102,940; Dec. 21.
Budd, Edward G., Manufacturing Company. (See Buchanan, David L., assignor.)
Budd Wheel Company. (See Eksergian, Carolus L., assignor.)
Bulldog Electric Products Company. (See Frank, William H., assignor.)
Burns, Claramae B. (See von Ledermann, Lucie, assignor.)
Burtenshaw, George H., Taumarunui, New Zealand, assignor to The Dentists' Supply Company of New York, New York, N. Y. Denture demonstrating device. 2,103,058; Dec. 21.
Bush, Paine L., Dallas, Tex. Holder for razor blades. 2,102,675; Dec. 21.
Buttolph, Leroy J., Grantwood, assignor to General Electric Vapor Lamp Company, Hoboken, N. J. Method of and apparatus for operating electric discharge devices. 2,103,059; Dec. 21.
Byington, William C., assignor to All Steel Trailer Company, Nacogdoches, Tex. Dump wagon. 2,102,676; Dec. 21.
Cadolle, Marcel, Paris, France. Brassière. 2,103,060; Dec. 21.
Cadwallader, Harry, Jr., Philadelphia, Pa. Forming bolt heads. 2,102,941; Dec. 21.
Callender's Cable and Construction Company Limited. (See Robinson, Denis M., assignor.)
Campbell, Frank D., Cedar Rapids, Iowa, assignor to The Quaker Oats Company, Chicago, Ill. Vented nozzle. 2,102,786; Dec. 21.
Campbell, Homer E., Fort Wayne, Ind. Gun sight. 2,102,677; Dec. 21.
Campbell, Max A., East Providence, R. I. Sealed tamperproof maximum and minimum thermometer for use particularly in brooding of chicks. 2,102,678; Dec. 21.
Card, William C., Jr., Winthrop, Mass., assignor to Compo Shoe Machinery Corporation, New York, N. Y. Roughing head. 2,102,992; Dec. 21.
Carlson, Frank P., New York, N. Y. Coating and stripping device. 2,102,679; Dec. 21.
Carothers, Wallace H., Arden, and A. M. Collins, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Dihalogen butenes and their preparation. 2,102,611; Dec. 21.

Carré, Jean, Leers, France. Apparatus for giving anesthetics. 2,103,144; Dec. 21.
Carroll, Eugene G., assignor to Bendix Aviation Corporation, South Bend, Ind. Brake. 2,102,833; Dec. 21.
Carroll, Eugene G., Los Angeles, Calif., assignor to Bendix Brake Company, South Bend, Ind. Brake. 2,102,834; Dec. 21.
Carroll, John O., Des Moines, Iowa. Individual cosmetic container structure. 2,102,885; Dec. 21.
Carter, Haskell C., assignor to Iron Fireman Manufacturing Company, Portland, Oreg. Coal worm drive. 2,103,145; Dec. 21.
Casco Products Corporation. (See Cohen, Joseph H., assignor.)
Castellani, Matilde. (See Peters, William E., assignor.)
Catalina, James R., Kansas City, Mo. Auxiliary wheel. 2,102,835; Dec. 21.
Celanese Corporation of America. (See Dreyfus, C., and Whitehead, assignors.)
Celanese Corporation of America. (See Gibbs, Bradford C., assignor.)
Celanese Corporation of America. (See Roberts, Robert P., assignor.)
Celluloid Corporation. (See Piperoux, Rene P., assignor.)
Chicago Electric Manufacturing Company. (See Benson, Bernhart A., assignor.)
Chicago Electric Manufacturing Company. (See Preston, Edward S., assignor.)
Chile Exploration Company. (See Hulme, Philip M., assignor.)
Christenson, George F., Boylston, assignor to J. A. Dunn, Worcester, Mass. Salesbook holder. 2,102,787; Dec. 21.
Clar, Friedrich K., Berlin-Hermsdorf, assignor to Rheinmetall-Borsig Aktiengesellschaft/Werk Borsig Berlin-Tegel, Berlin-Tegel, and C. Geissen, Berlin-Schoneberg, Germany. Brake system for trains. 2,103,061; Dec. 21.
Clark, George C., Beverly Hills, Calif. Shoe last construction. 2,103,062; Dec. 21.
Clark, Otto B., assignor to The Lubrication Corporation, Chicago, Ill. Lubricating device. 2,103,063; Dec. 21.
Clark, Rufus B., St. Louis, Mo. Stud tie. 2,103,064; Dec. 21.
Clarke, Charles M. (See Bergmann, Christian N., assignor.)
Claudel, André E., St. Bernard, La. Soda-spreading machine. 2,102,993; Dec. 21.
Claudel, André E., St. Bernard, La. Soda-spreading machine. 2,102,994; Dec. 21.
Clemence, LeRoy W. (See Raiziss, G. W., and Clemence.)
Cluett, Peabody & Co. (See Cluett, Sanford L., assignor.)
Cluett, Sanford L., assignor to Cluett, Peabody & Co., Inc., Troy, N. Y. Process and apparatus for shrinking fabrics. 2,102,942; Dec. 21.
Coates, Ray G., Pasadena, Calif. Motor car control mechanism. 2,102,586; Dec. 21.
Cocker, George B., Gastonia, N. C. Creel. 2,102,680; Dec. 21.
Coffin, John R., West Medford, assignor to Barostat Company, Boston, Mass. Fluid pressure responsive device. 2,103,214; Dec. 21.
Cohen, Joseph H., assignor to Casco Products Corporation, Bridgeport, Conn. Windshield heater. 2,103,146; Dec. 21.
Cole, Lyndon C., assignor to General Machinery Corporation, Hamilton, Ohio. Machine tool. 2,102,613; Dec. 21.
Cole, Lyndon C., assignor to General Machinery Corporation, Hamilton, Ohio. Machine tool. 2,103,147; Dec. 21.
Collier, Charles W., Alexandria, Va., assignor to Fairchild, Polley & Eliel, Inc., Los Angeles, Calif. Method and apparatus for making maps. 2,102,612; Dec. 21.
Collins, Arnold M. (See Carothers, W. H., and Collins.)
Compo Shoe Machinery Corporation. (See Card, William C., Jr., assignor.)
Conkling, Samuel G., Brooklyn, N. Y. Nonrefillable bottle. 2,103,005; Dec. 21.
Conner, Norman G., Oakland, Calif. Container for preserving eggs. 2,102,886; Dec. 21.
Conrad, George H., Great Bend, Pa. Baseball base. 2,103,148; Dec. 21.
Cook, Arnold M., assignor to Norton Company, Worcester, Mass. Press for molding shaped articles. 2,103,215; Dec. 21.
Cook, William H. (See Doxsee, J. H., Jr., and Cook.)
Cook, William H., Collier City, Fla., assignor to Fred Fear & Company, Brooklyn, N. Y. Steam box. 2,102,943; Dec. 21.
Coombs, James W., Whitehall, Mich. Article filing and delivery system. 2,102,995; Dec. 21.
Cornell, Elias S., Evanston, C. A. Koerner, and R. A. Sternaman, assignors to The Delta-Star Electric Company, Chicago, Ill. Electrical switch gear. 2,102,887; Dec. 21.
Couch, Howard H., Fairfield, Ohio. Producing and distinguishing frequency vibrations. 2,102,614; Dec. 21.
Cox, Edna P. (See McDonald, Gordon G., assignor.)
Cox, Harold E. (See Trencham, H., and Cox.)
Crompton & Knowles Loom Works. (See Brouwer, Benjamin W., assignor.)
Crompton & Knowles Loom Works. (See Verry, Irving H., assignor.)
Crown Cork & Seal Company. (See Weisenburg, assignor.)
Cryan, Joseph, Newtonville, Mass. Thead package. 2,102,996; Dec. 21.
Cubete, Joseph J., Pittsburg, Kans. Liquid measuring device. 2,102,615; Dec. 21.
Curtis, Herbert F., Berea, assignor to The Henry Furnace & Foundry Company, Cleveland, Ohio. Outlet for air circulating systems. 2,102,681; Dec. 21.
Curtiss-Wright Corporation. (See Weymouth, Frederick R., assignor.)
Cutler, Gerard M., assignor to Armstrong Siddeley Motors Limited, Coventry, England. Control of gearing for driving superchargers on aircraft engines. 2,103,149; Dec. 21.
Cyrex, Felix G., assignor to J. C. Miller Co., Grand Rapids, Mich. Polishing wheel. 2,102,836; Dec. 21.
Dall, Edward D., Waukegan, Ill., assignor to W. F. Wright, Shaker Heights, Ohio. Door locking device for automobiles and the like. 2,102,997; Dec. 21.
Darby, Ernest R., and P. J. Potter, assignors to Federal-Mogul Corporation, Detroit, Mich. Liner for bearings. 2,102,998; Dec. 21.
Davies, Leonard J., Rugby, England, assignor to General Electric Company. Electric gaseous discharge lamp. 2,103,029; Dec. 21.
Davis, Ernest W., Oak Park, assignor to Stewart-Warner Corporation, Chicago, Ill. Pistol grip oil can. 2,102,837; Dec. 21.
De Back, William. (See Thompson, A. R., and de Back.)
Deep Sea Rescue & Salvage Corporation et al. (See Justus, James W., assignor.)
Delta-Star Electric Company, The. (See Cornell, E. S., Koerner and Sternaman, assignors.)
De Mar, Michael, New York, N. Y. Animal garment. 2,103,109; Dec. 21.
Dentists' Supply Company of New York, The. (See Burtenshaw, George H., assignor.)
Deutsche Getriebe Gesellschaft mit beschrankter Haftung. (See Myllus, Otto, assignor.)
De Vore, Peter W., New York, N. Y. Bottle seal. 2,103,150; Dec. 21.
De Vries, Abraham, assignor to Naamlooze Vennootschap Ijzerhandel I. M. de Vries, Amsterdam, Netherlands. Fastener. 2,102,999; Dec. 21.
De Witt, William J., and P. A. Ross, assignors to Shoe Form Co., Inc., Auburn, N. Y. Snelled hook case. 2,102,682; Dec. 21.
Dickhaut, Charles A., and S. W. Warner, assignors to John Waldron Corporation, New Brunswick, N. J. Vertical drier. 2,103,110; Dec. 21.
Dietrich, Roy P., Bayside, N. Y. Game. 2,103,151; Dec. 21.
Dietrich, Wilhelm. (See Luther, M., and Dietrich.)
Dilg, Earl W. (See Evans, R. B., Dilg, and Germann.)
Dilks, James J., Jr., Philadelphia, Pa. Disk film motion picture. 2,102,788; Dec. 21.
Dill, Claude S., Lodge Grass, Mont. Bridge table. 2,102,888; Dec. 21.
Dillehay, Edward R., Glen Ellyn, Ill., assignor to The Richardson Company, Lockland, Ohio. Making thermoplastic compositions containing rubber and the like. 2,102,838; Dec. 21.
Ditchfield, Frank, assignor to The Youngstown Steel Door Company, Cleveland, Ohio. Lift door. 2,103,000; Dec. 21.
Dixon, Alfred L., Hollywood, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Heat treating nickel-iron alloys. 2,102,683; Dec. 21.
Doane, Leroy C., assignor to The Miller Company, Meriden, Conn. Lighting equipment for passenger vehicles. 2,102,944; Dec. 21.
Dohrman, Anna J., River Grove, Ill. Handle construction. 2,102,839; Dec. 21.
Dorgelo, Eduard G., Eindhoven, Netherlands, assignor to General Electric Company. Gaseous electric discharge device. 2,103,030; Dec. 21.
Dorward, Raymond B., assignor to Insley Manufacturing Corporation, Indianapolis, Ind. Rocker dump hand cart. 2,102,684; Dec. 21.
Dougherty, Charles P. (See Anderson, Clayton G., assignor.)
Douglass, Donald M., Wilton, Conn. Building structure. 2,103,152; Dec. 21.
Doxsee, James H., Jr., and W. H. Cook, Collier City, Fla., assignors to Fred Fear & Co., Brooklyn, N. Y. Shelling molluska. 2,102,945; Dec. 21.
Dräger, Otto H. (See Bangert, Friedrich K. G., assignor.)
Dräger, Otto H. (See Schröter, August G.-A., assignor.)
Draper Corporation. (See Brown, Carl D., assignor.)
Dreyfuss, Camille, New York, N. Y., and W. Whitehead, Cumberland, Md., assignors to Celanese Corporation of America. Manufacture of textile yarns and fabrics. 2,102,789; Dec. 21.
Drollinger, Howard B., South Pasadena, Calif. Therapeutic apparatus. 2,102,790; Dec. 21.
Druyvesteyn, Mari J., Eindhoven, Netherlands, assignor to General Electric Company. Gaseous electric discharge lamp device. 2,103,227; Dec. 21.
Druyvesteyn, Mari J., W. Uyterhoeven, C. Bol, and M. van Dam, Eindhoven, Netherlands, assignors to General Electric Company. Gaseous electric discharge lamp device. 2,103,226; Dec. 21.

Dubbs, Carbon P., assignor, by mesne assignments, to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbon oil. 2,102,889; Dec. 21.
Du Bois, Alfred, Paris, France, assignor to B. Arkell, New York, N. Y. Valve-closed bag. 2,102,685; Dec. 21.
Dugelay, Paul, assignor to Societe d'Exploitation de Brevets pour l'Industrie, l'Aviation et l'Automobile (Sebia), Paris, France. Internal combustion engine. 2,102,946; Dec. 21.
Dunham, Henry V., Bainbridge, N. Y. Casein compound and making. 2,103,153; Dec. 21.
Dunham, James W., Evanston, assignor to National Cylinder Gas Company, Chicago, Ill. Apparatus for the transportation of compressed or liquefied gases. 2,102,686; Dec. 21.
Dunn, John S., Norton-on-Tees, and V. Lefebure, London, England, assignors to Imperial Industries Limited. Calcium sulphate plasters. 2,103,216; Dec. 21.
Dunn, Joseph A. (See Christenson, George F., assignor.)
Du Pont, E. I., de Nemours & Company. (See Brill, John L., assignor.)
Du Pont, E. I., de Nemours & Company. (See Carothers, W. H., and Collins, assignors.)
Du Pont, E. I., de Nemours & Company. (See Hitt, M. V., Kennedy, and Priddy, assignors.)
Du Pont, E. I., de Nemours & Company. (See Jenemann, Harry J., assignor.)
Du Pont, E. I., de Nemours & Company. (See Kennedy, D. G., and Rulon, assignors.)
Du Pont, E. I., de Nemours & Company. (See Meuly, Walter C., assignor.)
Du Pont, E. I., de Nemours & Company. (See Moses, Douglas V., assignor.)
Du Pont, E. I., de Nemours & Company. (See Peck, F. W., and Waldron, assignors.)
Du Pont, E. I., de Nemours & Company. (See Woodhouse, J. C., and Weber, assignors.)
Durst, David L. (See Mizzy, D. D., and Durst.)
Dybvig, Henry G. (See Sherman, J. Q., and Dybvig.)
Eagle Engineering Company, The. (See Walter, James C., assignor.)
Eaton, Gerald L., Philadelphia, Pa., assignor, by mesne assignments, to The Polymerization Process Corporation, Jersey City, N. J. Treatment of hydrocarbons. 2,102,947; Dec. 21.
Economy Forms Corporation. (See Jennings, William A., assignor.)
Ehret, Clement, White Plains, N. Y. Stove. 2,102,616; Dec. 21.
Ehrlich, Samuel D. (See Palmieri, M., and Ehrlich.)
Eisenhauer, Warren F., Watertown, Mass., assignor, by mesne assignments, to F. L. Jacobs Company, Detroit, Mich. Spring cover. 2,102,890; Dec. 21.
Ekdahl, Edward B., Irvington, assignor to Sefco Inc., Newark, N. J. Package for plastic materials. 2,103,111; Dec. 21.
Eksergian, Carolus L., Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa. Vehicle wheel. 2,103,201; Dec. 21.
Electrolux Corporation. (See Lofgren, Gustaf E., assignor.)
Eliel, Leon T., Pasadena, Calif. Solar navigator. 2,102,587; Dec. 21.
Emery Industries, Inc. (See Myers, Latimer D., assignor.)
Emulsoids, Inc. (See Knight, Hugh, assignor.)
Engelbrektsson, Einar, Brooklyn, assignor of one-half to E. Gross, New York, N. Y. Beehive. 2,103,066; Dec. 21.
Evans Case Company. (See Reilly, Alfred F., assignor.)
Evans, E. S., and Sons. (See Evans, R. B., Dilg, and Germann, assignors.)
Evans, Richard A. J., Chicago, Ill. Mixing valve. 2,103,067; Dec. 21.
Evans, Robert B., Grosse Pointe, and E. W. Dilg and G. Germann, assignors to E. S. Evans and Sons, Detroit, Mich. Windshield wiper mechanism. 2,103,001; Dec. 21.
Faber, Ernst, Stuttgart, Germany. Vacuum cleaner. 2,103,154; Dec. 21.
Faber, John R., Flint, Mich. Snapping roller. 2,103,002; Dec. 21.
Fafnir Bearing Company, The. (See Hellyar, Charles H., assignor.)
Fairchild, Polley & Eliel, Inc. (See Collier, Charles W., assignor.)
Farber, John D., assignor to Management and Research, Inc., Philadelphia, Pa. Synthetic resins. 2,102,617; Dec. 21.
Farrell, Anna E., Seattle, Wash. Device for holding and curling hair. 2,102,687; Dec. 21.
Faulkner, Lionel E., Hillside, N. J., assignor, by mesne assignments, to Air Reduction Company, Incorporated. Material for arc welding. 2,102,891; Dec. 21.
Fear, Fred, & Company. (See Cook, William H., assignor.)
Fear, Fred, & Co. (See Doxsee, J. H., Jr., and Cook, assignors.)
Fechheimer, Paul R., assignor to The Karl Kiefer Machine Company, Cincinnati, Ohio. Closing and sealing of collapsible tubes. 2,102,840; Dec. 21.
Federal-Mogul Corporation. (See Darby, E. R., and Potter, assignors.)
Fehse, Adolf, Berlin, and M. Reger, Berlin-Charlottenburg, Germany, assignors to General Electric Company. Gaseous electric discharge device. 2,103,068; Dec. 21.
Ferguson, George A., New York, N. Y. Preventing flat wheels. 2,102,791; Dec. 21.
Ferguson, John. (See Broecker, L. C., and Ferguson.)
Fiberloid Corporation, The. (See Roberts, William F., assignor.)
Finn, Sidney J., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Apparatus for use in pressing soles. 2,102,688; Dec. 21.
Fischer, Albert C., Chicago, Ill. Composition strip. 2,103,003; Dec. 21.
Fischer, Albert T., Cleveland Heights, Ohio. Producing rubber bands. 2,102,689; Dec. 21.
Fischer, Albert T., Cleveland Heights, Ohio. Article holder. 2,102,690; Dec. 21.
Fisher, Lawrence E. (See Frank, W. H., Hollingsworth, and Fisher.)
Fitzgerald Manufacturing Company, The. (See Fitzgerald, Maurice F., assignor.)
Fitzgerald, Maurice F., Winsted, assignor to The Fitzgerald Manufacturing Company, Torrington, Conn. Electric flatiron. 2,102,892; Dec. 21.
Fluor Corporation, The. (See Henderson, E., and Reddick, assignors.)
Ford Machinery Corporation. (See Lewis, Harold R., assignor.)
Ford, William H., East Longmeadow, assignor to Milton Bradley Company, Springfield, Mass. Cutting apparatus. 2,103,217; Dec. 21.
Formfit Company, The. (See Kunstadter, Sigmund W., assignor.)
Forster, Percy M., Berkeley, Calif. Stove. 2,102,893; Dec. 21.
Forster, Samuel H. (See Walsh, W., and Forster.)
Foulke, Ted E., Nutley, assignor to General Electric Vapor Lamp Company, Hoboken, N. J. Electric gaseous discharge device. 2,103,031; Dec. 21.
Foulke, Willing B., Media, Pa., assignor to Hercules Powder Company, Wilmington, Del. Projectile. 2,103,155; Dec. 21.
Fox, Charles A., assignor to J. R. Kearney Corporation, St. Louis, Mo. Fuse link stick. 2,102,894; Dec. 21.
Foxall, William H. (See Hill, H., and Foxall.)
Francis, Earle V., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Fuel burning apparatus. 2,102,588; Dec. 21.
Francis, Earle V., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Automatic system for supplying pulverized fuel to furnaces. 2,102,618; Dec. 21.
Francis, Earle V., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Fuel feeder. 2,102,619; Dec. 21.
Francis, Earle V., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Automatic system for supplying pulverized fuel to furnaces. 2,102,691; Dec. 21.
Francis, Earle V., Columbus, Ohio, assignor to The Jeffrey Manufacturing Company. Mechanism for supplying pulverized fuel to furnaces. 2,102,948; Dec. 21.
Frank, William H., Detroit, Mich. Electrical connecter. 2,103,071; Dec. 21.
Frank, William H., Detroit, Mich. Distribution panel. 2,103,072; Dec. 21.
Frank, William H., assignor to Bulldog Electric Products Company, Detroit, Mich. Circuit breaker. 2,103,070; Dec. 21.
Frank, William H., C. T. Hollingsworth, and L. E. Fisher, Detroit, Mich. Panel board and parts thereof. 2,103,069; Dec. 21.
Franz, Erwin E., Cranford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Strand handling apparatus. 2,102,692; Dec. 21.
Fraser, Hugh, Burnside, Rutherglen, assignor to Inter Counties Limited, Glasgow, Scotland. Electric drive of air-screw propelled cars. 2,103,156; Dec. 21.
French, Gerthal. (See Shoemaker, W. E., and French.)
Freudenberg, Carl, G. m. b. H. (See Lange, Gustav, assignor.)
Frey, Vernon M., East Moline, Ill. Window structure. 2,102,589; Dec. 21.
Freyn Engineering Company. (See Blumer, Jacob C., assignor.)
Fritze, Otto, Berlin, A. Rüttenauer, Berlin-Halensee, and K. Wiegand, Berlin-Tempelhof, Germany, assignors to General Electric Company. Gaseous electric discharge lamp device. 2,103,032; Dec. 21.
Fuller, Rufus W., Deerfield, assignor to Production Machine Company, Greenfield, Mass. Wheel truing device. 2,102,841; Dec. 21.
Gaidies, Georg, Berlin-Pankow, Germany, assignor to General Electric Company. Gaseous electric discharge lamp device. 2,103,073; Dec. 21.
Gammeter, John R., assignor of one-half to S. G. Gammeter, Akron, Ohio. Making and applying caps to bottles. 2,102,949; Dec. 21.
Gammeter, Susan G. (See Gammeter, John R., assignor.)
Garbell, Max, assignor to Victor Adding Machine Company, Chicago, Ill. Adding machine. 2,102,693; Dec. 21.
Garbell, Max, assignor to Victor Adding Machine Company, Chicago, Ill. Paper cut-off and feeding mechanism. 2,102,694; Dec. 21.

Gardner, Ralph D., assignor to Whitney Metal Tool Company. Rockford, Ill. Clamping device. 2,103,074; Dec. 21.
Garland, Robert H., et al. (See Brown, William Y., assignor.)
Gaylord Container Corporation. (See George, Walter C., assignor.)
Gehne, Reinold E. (See Strano, S., and Gehne.)
Gelssen, Carl, et al. (See Clar, Friedrich K., assignor.)

General Electric Company. (See Weidhaas, Karl, assignor.)
General Electric Company. (See Wiegand, Kurt, assignor.)
General Electric Vapor Lamp Company. (See Buttolph, Leroy J., assignor.)
General Electric Vapor Lamp Company. (See Foulke, Ted E., assignor.)
General Electric Vapor Lamp Company. (See Radcliffe, Thomas J., assignor.)
General Machinery Corporation. (See Cole, Lyndon C., assignor.)
General Motors Corporation. (See Gould, Richard E., assignor.)
General Motors Corporation. (See Summers, Otto M., assignor.)
George, Jerome R., assignor to Morgan Construction Company, Worcester, Mass. Method of and apparatus for handling hot metal bars. 2,102,792; Dec. 21.
George, Walter C., assignor, by mesne assignments, to Gaylord Container Corporation, St. Louis, Mo. Web splicing device. 2,102,793; Dec. 21.
Germann, George. (See Evans, R. B., Dilg, and Germann.)
Gibbs, Bradford C., Cumberland, Md., assignor to Celanese Corporation of America. Method and device of treating articles containing organic derivatives of cellulose. 2,102,794; Dec. 21.
Gieskieng, Marion W., Little Rock, Ark., assignor to Radio Corporation of America. Recording and reproducing of electrical impulses. 2,102,695; Dec. 21.
Gilman, Henry S., Springfield, Mass. Mail box. 2,102,620; Dec. 21.
Gilmore, Michael J., Youngstown, Ohio. Highway torch. 2,102,696; Dec. 21.
Girard, Paul, Lyon, France. Mechanical time fuse. 2,102,950; Dec. 21.
Glasner, Rudolph W., Chicago, Ill. Press. 2,102,842; Dec. 21.
Gleason Works. (See Wildhaber, Ernest, assignor.)
Gloor, Walter E., Kennett Square, Pa., assignor to Hercules Powder Company, Wilmington, Del. Dehydration of nitrocellulose and the product thereof. 2,102,697; Dec. 21.
Gobelin Company, The. (See Petremont, Gordon A., assignor.)
Golec, Edward J. (See Sprankle, C. N., and Golec.)
Goodman, Joseph, assignor to Automatic Truck Loader Corporation, New York, N. Y. Refuse truck. 2,103,112; Dec. 21.
Goodman Manufacturing Company. (See Pray, Thomas E., assignor.)
Goodrich, B. F., Company, The. (See Goodwin, R. C., and Sloan, assignors.)
Goodrich, B. F., Company, The. (See Semon, W. L., and Yohe, assignors.)
Goodwin, Robert C., Lubbock, Tex., and A. W. Sloan, Akron, Ohio; said Sloan assignor to The B. F. Goodrich Company, New York, N. Y. Accelerator of vulcanization. 2,102,621; Dec. 21.
Gould, Richard E., Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation. Refrigerating apparatus. 2,102,698; Dec. 21.
Government of the United States of America, represented by the Secretary of War. (See Knerr, Lewis E., assignor.)
Granberg Meter Corporation. (See Saarinen, Armas J., assignor.)
Gray, Reid B., Dundalk, and E. L. Zivi, assignors to The Glenn L. Martin Company, Baltimore, Md. Aircraft construction. 2,102,590; Dec. 21.
Gray, Russell J., Minneapolis, Minn. Oil drain and supply system. 2,102,795; Dec. 21.
Graybill, Leon A. (See Gwaltney, E. C., Graybill, and Newton.)
Green, Arthur J., Marblehead, assignor to A. C. Lawrence Leather Company, Peabody, Mass. Tanning. 2,102,690; Dec. 21.
Green, Clifford H., Grand Rapids, Mich., assignor to Automatic Instrument Company. Leg adjuster. 2,103,202; Dec. 21.
Green, Samuel G., Gray, Ga. Gun barrel mounting. 2,102,622; Dec. 21.
Greenspon, Edward A., Montreal, Quebec, Canada. Therapeutic preparation and making it. 2,103,075; Dec. 21.
Greenview Manufacturing Company. (See Siemund, Herman, assignor.)
Gross, Eric. (See Engelbrektsson, Elnar, assignor.)
Guilford, Edward T. (See Rienks, G. W., and Guilford.)
Gustafsson, Ernst V., St. Essingen, and G. H. Hellgren, Malmo, assignors to Aktiebolaget Facit, Atvidaberg, Sweden. Calculating machine of the ten key type. 2,102,700; Dec. 21.
Gwaltney, Eugene C., and L. A. Graybill, Macon, and R. B. Newton, Columbus, assignors to Bibb Manufacturing Company, Macon, Ga. Heat-resistant yarn and heat-resistant cord and making same. 2,103,218; Dec. 21.
Gwynne, Hugh H., Los Angeles, Calif. Ribbon feeding mechanism. 2,102,843; Dec. 21.
Gyuris, Janos, New York, N. Y. Electric current producing unit or cell. 2,102,701; Dec. 21.
H & H Machine & Motor Parts Co. (See Holhut, Michael, assignor.)
Hackenberg, Edmund, Berlin-Charlottenburg, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Generator of electric relaxation oscillations. 2,102,951; Dec. 21.
Hagemeier, Heinrich, Hamburg, Germany. Dental syringe. 2,102,591; Dec. 21.
Halinka, George, Detroit, Mich. Door check. 2,103,004; Dec. 21.
Hall, Andrew M., Cambria, Va. Package. 2,102,702; Dec. 21.
Hall, De Lancey M., Montclair, N. J. Air treating unit. 2,102,703; Dec. 21.
Hallden, Frederick G. (See Vernam, G. S., and Hallden.)
Handley, John H., Des Moines, Iowa. Seamless grave vault and forming it. 2,103,005; Dec. 21.
Hanley, Stanley M. (See Jackson, J. G., and Hanley.)
Hansen, Donald W., Decatur, Ill., assignor, by mesne assignments, to Prolamine Products Incorporated, Dover, Del. Water-resistant prolamine base composition. 2,102,623; Dec. 21.
Happel, John, Brooklyn, and D. W. Robertson, Queens Village, assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Oil refining process. 2,102,796; Dec. 21.
Harris, Donald A., et al. (See Hester, John C., assignor.)
Harshaw Chemical Company, The. (See Long, Kenneth E., assignor.)
Harshberger, Kathleen M. (See Harshberger, Norman P. and K. M.)
Harshberger, Norman P. and K. M., Scarsdale, assignors to Bakelite Building Products Co. Inc., New York, N. Y. Shingle. 2,103,076; Dec. 21.
Hasbrouck, Harold J., Jr., Flushing, assignor to United Research Corporation, Long Island City, N. Y. Driving and guiding film. 2,102,895; Dec. 21.
Hasbrouck, Harold J., Merchantville, N. J., assignor to Radio Corporation of America. Photophonographic apparatus. 2,102,778; Dec. 21.

Hayne, William P., Natchitoches, La. Air heater. 2,102,592; Dec. 21.
Hazeltine Corporation. (See Johnson, John K., assignor.)
Hazeltine Corporation. (See Senauke, Alexander, assignor.)
Hazeltine Corporation. (See Singer, Benjamin, assignor.)
Heberlein Patent Corporation. (See Killars, John, Jr., assignor.)
Hedman Manufacturing Company, The. (See Slettevold, O., and Johnson, assignors.)
Hein, George N., San Francisco, Calif. Syringe cartridge. 2,102,704; Dec. 21.
Heinrich, Walter A., assignor to James R. Kearney Corporation, St. Louis, Mo. Electrical connecter. 2,102,896; Dec. 21.
Helberger, Johann H., Cologne-Mulheim, and O. Bayer, Leverkusen-I. G. Werk, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Azodyestuffs. 2,102,593; Dec. 21.
Helfenstein, Max, and F. M. Hirsig, Lucerne, Switzerland. Protective shield for electrical welders. 2,103,006; Dec. 21.
Hellgren, Gustaf H. (See Gustaffson, E. V., and Hellgren.)
Hellyar, Charles H., assignor to The Fafnir Bearing Company, New Britain, Conn. Bearing. 2,102,952; Dec. 21.
Helmer, Theodore K., Fellows, Calif. Piston rod protector. 2,102,797; Dec. 21.
Hemphill Company. (See Lawson, R. H., and Smith, assignors.)
Henderson, Elting, Huntington Park, and J. B. Reddick, Sierra Madre, assignors to The Fluor Corporation, Ltd., Los Angeles, Calif. Separator. 2,102,705; Dec. 21.
Henry Furnace & Foundry Company, The. (See Curtis, Herbert F., assignor.)
Hercules Powder Company. (See Bishop, William T., assignor.)
Hercules Powder Company. (See Foulke, Willing B., assignor.)
Hercules Powder Company. (See Gloor, Walter E., assignor.)
Hercules Powder Company. (See Lister, Donald A., assignor.)
Hercules Powder Company. (See Schantz, Jacob M., assignor.)
Herron, William L., Hudson, N. Y. Meter. 2,103,077; Dec. 21.
Hester, John C., assignor of one-fourth to D. A. Harris, one-fourth to E. A. Bornfleith, and one-fourth to G. Oestrich, Milwaukee, Wis. Apparatus for handling liquid products. 2,102,844; Dec. 21.
Heyduck, Alfred, Berlin-Neuenhagen, assignor to Mix & Genest Aktiengesellschaft, Berlin-Schoneberg, Germany. Automatic telephone system. 2,102,953; Dec. 21.
Hill, Hermann, and W. H. Foxall, Brighton, assignors to Hillfox Manufacturing Corporation, Rochester, N. Y. Clipper. 2,102,594; Dec. 21.
Hillfox Manufacturing Corporation. (See Hill, H., and Foxall, assignors.)
Hirschberg, Charles A., Mountain Lakes, assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Drill feeding mechanism. 2,102,706; Dec. 21.
Hirsig, Felix M. (See Helfenstein, M., and Hirsig.)
Hitt, Maurice V., Wilmington, Del., and D. G. Kennedy and H. L. Priddy, Parlin, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Coating composition and making the same. 2,102,595; Dec. 21.
Hoe, R., & Co. (See Lamatsch, Frederick, assignor.)
Hoesch-Köln Neuessen Aktiengesellschaft für Bergbau und Hüttenbetrieb. (See Stark, Helmuth, assignor.)
Hoffer, Frederick J. (See Black, I. E., Hoffer, and Silver.)
Hofstetter, Anton. (See Spirig, Josef, assignor.)
Hohmann, Richard K., Rosedale, N. Y. Rotary loop taker. 2,102,954; Dec. 21.
Holhut, Michael, Jennings, assignor to H & H Machine & Motor Parts Co., St. Louis, Mo. Valve-seat surfacing tool. 2,102,707; Dec. 21.
Holhut, Michael, Jennings, assignor to H & H Machine & Motor Parts Co., St. Louis, Mo. Bolt-setting tool. 2,102,897; Dec. 21.
Hollingsworth, Clarence T. (See Frank, W. H., Hollingsworth, and Fisher.)
Holophane Company. (See Rolph, Thomas W., assignor.)
Holst, Gilles, and W. Uyterhoeven, Eindhoven, Netherlands, assignors to General Electric Company. Gaseous electric discharge lamp. 2,103,078; Dec. 21.
Honeycutt, William C., et al. (See Brown, William Y., assignor.)
Hoover Company, The. (See Becker, Bernard C., assignor.)
Hoover Company, The. (See Shank, C. L., and Traut, assignors.)
Hoover Company, The. (See Taylor, Charles H., assignor.)
Hoover Company, The. (See Whitaker, Uncas A., assignor.)
Hoover Company, The. (See White, Harry B., assignor.)
Hopson, Clifford P., Bakersfield, Calif. Automatic transmission. 2,102,624; Dec. 21.
Horn, A. C., & Company. (See Bishop, Richard E., assignor.)
Horney, Fred. (See Lysholm, A., Horney, and Wahlsten.)
Hornung, John C., Glencoe, assignor to Illinois Engineering Company, Chicago, Ill. Regulating apparatus. 2,103,113; Dec. 21.
Houdry Process Corporation. (See Prickett, Thomas B., assignor.)
Howe, Nelson H., assignor to Lewis-Howe Company, St. Louis, Mo. Display device. 2,102,845; Dec. 21.
Howle, Louis W., Atlanta, Ga., assignor to American Telephone and Telegraph Company. Signal testing apparatus. 2,102,708; Dec. 21.
Hubbell, Harvey, Jr., Bridgeport, Conn. Interlocking receptacle, connecter, and cap. 2,102,625; Dec. 21.
Hull, Maurice E. (See Otting, H. E., Browne, and Hull.)
Hulme, Philip M., Chuquicamata, Chile, assignor to Chile Exploration Company, New York, N. Y. Temperature measuring installation. 2,102,955; Dec. 21.
Hume, Horace D., and J. E. Love, assignors to Hume-Love Company, Garfield, Wash. Harvester reel. 2,102,709; Dec. 21.
Hume, Horace D., and J. E. Love, assignors to Hume-Love Company, Garfield, Wash. Harvester. 2,102,710; Dec. 21.
Hume, Horace D., and J. E. Love, assignors to Hume-Love Company, Garfield, Wash. Harvesting machine. 2,102,711; Dec. 21.
Hume-Love Company. (See Hume, H. D., and Love, assignors.)
Hunsdiecker, Heinz, Cologne-Lindenthal, Germany. Lustrous pigment and manufacturing and using it. 2,103,007; Dec. 21.
Hunt, Scott F., Detroit, Mich., assignor to Bendix Aviation Corporation, South Bend, Ind. Carburetor. 2,102,846; Dec. 21.
Hürlimann, Max, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland. Electric valve starting system. 2,102,956; Dec. 21.
Huseby, Albert A., Oak Park, Ill. Piano. 2,102,898; Dec. 21.
Hydraulic Brake Company. (See Bowen, Herbert C., assignor.)
I. G. Farbenindustrie Aktiengesellschaft. (See Luther, M., and Dietrich, assignors.)
I. G. Farbenindustrie Aktiengesellschaft. (See Scheuermann, A., Brill, and Wietzel, assignors.)
I. G. Farbenindustrie Aktiengesellshaft. (See Schweitzer, E., and Kiesskalt, assignors.)
Illinois Engineering Company. (See Hornung, John C., assignor.)
Imperial Chemical Industries Limited. (See Dunn, J. S., and Lefebure, assignors.)
Indexo Finger Tooth Brush, Inc. (See Lynch, Frances I., assignor.)
Industrial Patents Corporation. (See Walter, Charles T., assignor.)
Ingersoll Milling Machine Company, The. (See Strawn, Marion L., assignor.)
Inman, George E., East Cleveland, Ohio, assignor to General Electric Company. Electron emissive electrode. 2,103,033; Dec. 21.
Inman, George E., East Cleveland, Ohio, assignor to General Electric Company. Gaseous and vapor electric discharge device. 2,103,034; Dec. 21.
Insley Manufacturing Corporation. (See Dorward, Raymond B., assignor.)
Inter Counties Limited. (See Fraser, Hugh, assignor.)
Intermetal Corporation. (See Jenness, Leslie G., assignor.)
Iron Fireman Manufacturing Company. (See Carter, Haskell C., assignor.)
Irsugo Consolidated Mines, Limited. (See Wolf, Harry C., assignor.)
Isermann, Samuel, Summit, E. Ohlsson, Jersey City, and J. W. Orelup, Summit, N. J. Protective cosmetics. 2,102,712; Dec. 21.
Jackes-Evans Manufacturing Company. (See Strano, S., and Gehne, assignors.)
Jackson, John G., Detroit, and S. M. Hanley, Grosse Pointe Farms, Mich., assignors, by mesne assignments to Raytheon Manufacturing Company, Newton, Mass. Rectifier. 2,102,713; Dec. 21.
Jacobs, F. L., Company. (See Eisenhauer, Warren F., assignor.)
Jakeway, Gerald V., assignor to Keeler Brass Company, Grand Rapids, Mich. Door handle mounting. 2,102,714; Dec. 21.
Jaumandreu, Bienvenido, Buenos Aires, Argentina. Manufacture of rubber-soled slippers, sandals, and footwear. 2,103,157; Dec. 21.
Jeffrey Manufacturing Company, The. (See Briggs, Robert E., assignor.)
Jeffrey Manufacturing Company, The. (See Briggs, Robert E., assignor.)
Jeffrey Manufacturing Company, The. (See Francis, Earle V., assignor.)
Jenemann, Harry J., Newburgh, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Decorative coated fabric. 2,102,715; Dec. 21.
Jenness, Leslie G., Brooklyn, N. Y. Controlled catalytic oxidation. 2,103,219; Dec. 21.

Jenness, Leslie G., Brooklyn, N. Y. Controlled oxidation. 2,103,220; Dec. 21.

Jenness, Leslie G., Brooklyn, N. Y., assignor to Intermetal Corporation, Newark, N. J. Oxidation catalysts and process. 2,103,221; Dec. 21.

Jennings, William A., assignor to Economy Forms Corporation, Des Moines, Iowa. Metal form clamping device. 2,102,717; Dec. 21.

Jerabek, Charles, deceased, by T. Jerabek, administratrix, Philadelphia, Pa. Advertising device. 2,102,798; Dec. 21.

Jerabek, Theresa, administratrix. (See Jerabek, Charles.)

Johnson, Carl V., assignor to Bendix Research Corporation, South Bend, Ind. Shock absorber strut. 2,102,847; Dec. 21.

Johnson, Clarence W. (See Slettvold, O., and Johnson.)

Johnson, John K., Rye, N. Y., assignor to Hazeltine Corportion, Jersey City, N. J. Wave signaling system. 2,103,079; Dec. 21.

Jolly, Oscar W., assignor to Springfield Photomount Company, Holyoke, Mass. Portfolio. 2,103,203; Dec. 21.

Jones, Howard A., Washington, D. C., dedicated to the free use of the People of the United States of America. Insecticide. 2,103,195; Dec. 21.

Josserand, Louis P., Houston, Tex. Theater. 2,102,718; Dec. 21.

Justus, James W., assignor of four eightieths to J. B. Owens, and seventy-six eightieths to Deep Sea Rescue & Salvage Corporation, Birmingham, Ala. Rescue apparatus. 2,102,626; Dec. 21.

Kane, Frank A. (See Killmeyer, C. A., and Reichhelm, assignors.)

Kantor, James, assignor to The Liquid Carbonic Corporation, Chicago, Ill. Bottle filling machine. 2,103,158; Dec. 21.

Kaufler, Felix, and H. P. Schmitz, assignors to Dr. Alexander Wacker Gesellschaft für Electrochemische Industrie, G. m. b. H., Munich, Germany. Asphalt solution. 2,102,957; Dec. 21.

Kaumagraph Company. (See Lawrence, Winthrop S., assignor.)

Kearney, James R., Corporation. (See Boothe, Eugene F., assignor.)

Kearney, James R., Corporation. (See Fox, Charles A., assignor.)

Kearney, James R., Corporation. (See Heinrich, Walter A., assignor.)

Kearney, James R., Corporation. (See Tipsord, Melvin T., assignor.)

Keeler Brass Company. (See Jakeway, Gerald V., assignor.)

Kelsey-Hayes Wheel Company. (See Sawtelle, Charles A., assignor.)

Kelsey-Hayes Wheel Company. (See Sinclair, Charles W., assignor.)

Kennedy, Benjamin H., Rochester, N. Y. Infant's bathing device. 2,102,958; Dec. 21.

Kennedy, David G. (See Hitt, M. V., Kennedy, and Priddy.)

Kennedy, David G., and J. K. Rulon, Parlin, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Dehydrating cellulose nitrate. 2,102,709; Dec. 21.

Kennedy, Dewey M., Rochester, N. Y. Infant's bathtub and foot actuated dressing table therefor. 2,102,959; Dec. 21.

Kern, John A., Chicago, Ill., assignor to The W. J. McCahan Sugar Refining & Molasses Co., Philadelphia, Pa. Display device. 2,102,596; Dec. 21.

Kerr, John D. (See Talbert, G. W., and Kerr.)

Kiefer, Karl, Machine Company, The. (See Fechheimer, Paul R., assignor.)

Kiesakalt, Siegfried. (See Schweitzer, E., and Kiesakalt.)

Killars, John, Jr., Spartansburg, S. C., assignor, by mesne assignments, to Heberlein Patent Corporation, New York, N. Y. Producing linen-like materials and products therefrom. 2,103,080; Dec. 21.

Killmeyer, Chester A., New York, N. Y., and G. L. Reichhelm, Short Beach, Conn., assignors to F. A. Kane, Long Island City, N. Y. Apparatus for gasifying a liquid fuel. 2,102,800; Dec. 21.

Kinast, John J., Beloit, Wis. Combination tool. 2,103,008; Dec. 21.

Kingdon, Kenneth H., Schenectady, N. Y., assignor to General Electric Company. Electric discharge device. 2,103,159; Dec. 21.

Kinkead, Fullerton S., Ridgefield Park, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signal distortion indicating and measuring device. 2,102,719; Dec. 21.

Kinzie, Charles J., Niagara Falls, assignor to The Titanium Alloy Manufacturing Company, New York, N. Y. Zirconium oxide vitreous enamel opacifier. 2,102,627; Dec. 21.

Kinzie, Charles J., Niagara Falls, assignor to The Titanium Alloy Manufacturing Company, New York, N. Y. Opaque vitreous enamel. 2,102,720; Dec. 21.

Kircher, Adolf, and M. Sienz, Frankfort-on-the-Main, Germany, assignors to Winthrop Chemical Company Inc., New York, N. Y. Stable aqueous solutions of anesthetic substances and preparing them. 2,103,160; Dec. 21.

Kivley, Ray C., Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Material working apparatus. 2,102,721; Dec. 21.

Kjær, Viggo A., Copenhagen, Denmark. Lubricating device for driving chains. 2,103,161; Dec. 21.

Klangfilm G. m. b. H. (See Schwarz, Karl, assignor.)

Klein, Charles F., Baltimore, Md. Agitator for game elements. 2,103,009; Dec. 21.

Kleinschmidt, Edward E., Highland Park, assignor to Teletype Corporation, Chicago, Ill. Printing telegraph system and apparatus. 2,102,899; Dec. 21.

Knerr, Lewis E., Portland, Oreg., assignor to the Government of the United States of America, represented by the Secretary of War. Telescopic barrier in connection with exit portal in fish lifts. 2,102,628; Dec. 21.

Knerr, Lewis E., Portland, Orge., assignor to the Government of the United States of America, represented by the Secretary of War. Fish trap for fish lifts. 2,102,629; Dec. 21.

Knickerbocker, Karl. (See Stoner, H. B., and Knickerbocker.)

Knight, Hugh, Claremont, assignor to Emulsolds, Inc., San Francisco, Calif. Insecticidal oil spray. 2,103,196; Dec. 21.

Kocour, Emil J., assignor to Sloan Valve Company, Chicago, Ill. Vacuum breaking device. 2,102,848; Dec. 21.

Koerner, Charles A. (See Cornell, E. S., Koerner, and Sternaman.)

Köhnke, Johan F., Haarlem, Netherlands. Wall connector. 2,103,010; Dec. 21.

Kokatnur, Vaman R., assignor to Autoxygen Inc., New York, N. Y. Making soap beads or the like. 2,102,849; Dec. 21.

Konkel, William, assignor to Milcor Steel Company, Milwaukee, Wis. Resilient conductor fastening. 2,102,900; Dec. 21.

Konold, Clyde H. (See Wurzbach, H. E., and Konold.)

Koppel, Ernest R., assignor to Bendix Products Corporation, South Bend, Ind. Universal joint. 2,102,850; Dec. 21.

Koppers Company. (See Becker, Joseph, assignor.)

Kortering, Justin H., Holland, Mich. Tractor hitch device. 2,102,722; Dec. 21.

Kotzebue, Melnhard H., assignor to Worthington Machinery Corporation of Oklahoma, Tulsa, Okla. Cooler. 2,102,723; Dec. 21.

Krefft, Hermann, Berlin-Friedrichshagen, Germany, assignor to General Electric Company. Gaseous electric discharge lamp device. 2,103,081; Dec. 21.

Kreidl, Ignaz, Vienna, Austria. Clouded vitreous enamel. 2,102,630; Dec. 21.

Kreidl, Ignaz, Vienna, Austria. White clouded vitreous enamel. 2,103,228; Dec. 21.

Kreidl, Ignaz, Vienna, Austria. Making white clouded iron enamel. 2,103,229; Dec. 21.

Kress, Claude W., New York, N. Y. Store display. 2,102,960; Dec. 21.

Kunstadter, Sigmund W., assignor to The Formfit Company, Chicago, Ill. Garment. 2,102,801; Dec. 21.

La Brie, Ludger E., assignor to Bendix Products Corporation, South Bend, Ind. Brake. 2,102,851; Dec. 21.

La Brie, Ludger E., assignor to Bendix Aviation Corporation, South Bend, Ind. Brake. 2,102,852; Dec. 21.

Lamatsch, Frederick, Grantwood, N. J., assignor, by mesne assignments, to R. Hoe & Co., Inc., New York, N. Y. Drive for printing machines. 2,102,631; Dec. 21.

Land, Edwin H., Wellesley Farms, Mass., assignor to Sheet Polarizer Company, Inc., Union City, N. J. Viewing screen for use in optical systems employing polarized light. 2,102,632; Dec. 21.

Lane, Harry W., Syracuse, N. Y. Window stop strip mounting. 2,103,162; Dec. 21.

Lange, Gustav, assignor to the firm Carl Freudenberg G. m. b. H., Weinheim, Germany. Rendering fibers or threads from animal collagen ironproof. 2,103,163; Dec. 21.

Laursen, Laurits A., assignor of one-half to T. K. Seiberling, Akron, Ohio. Insert for rubber heels or the like. 2,102,901; Dec. 21.

Lavino, E. J., and Company. (See Seil, Gilbert E., assignor.)

Lawrence, A. C., Leather Company. (See Green, Arthur J., assignor.)

Lawrence, Winthrop S., Rego Park, assignor to Kaumagraph Company, New York, N. Y. Transfer. 2,103,082; Dec. 21.

Lawson, Robert H., and W. L. Smith, Jr., Pawtucket, assignors to Hemphill Company, Central Falls, R. I. Deflector for knitting machines. 2,103,197; Dec. 21.

Lear, William P., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Switching and supporting device for electrical apparatus. 2,103,035; Dec. 21.

Leechgrip Company. (See Spencer, Herman J., assignor.)

Lefebure, Victor. (See Dunn, J. S., and Lefebure.)

Lenke, George H., Elmhurst, assignor of one-half to J. J. Ohlis, Oak Park, Ill. Skylight construction. 2,102,902; Dec. 21.

Lesinski, Walter, assignor to L. A. Young Spring and Wire Corporation, Detroit, Mich. Spring cushion structure. 2,102,724; Dec. 21.

Le Telephone Prive National Société Anonyme. (See Leveque, Emile, assignor.)

Leveque, Emile, assignor to firm Le Telephone Prive National Société Anonyme, Paris, France. Loud-speaking and amplified microphone telephone exchange. 2,102,903; Dec. 21.

Levy, Sol J., New York, N. Y. Radio receiving system for aeroplanes. 2,102,904; Dec. 21.

Lewis, Harold R., Baltimore, Md., assignor to Food Machinery Corporation, San Jose, Calif. Pulping machine. 2,102,961; Dec. 21.

Lewis-Howe Company. (See Howe, Nelson H., assignor.)

Line Material Company. (See Smith, James P., assignor.)

Liquid Carbonic Corporation, The. (See Kantor, James, assignor.)

Lister, Donald A., Brunswick, Ga., assignor to Hercules Powder Company, Wilmington, Del. Lubricating grease and its production. 2,103,204; Dec. 21.

Lithgow, John, Blue Island, assignor to North American Car Corporation, Chicago, Ill. Refrigerator car. 2,102,725; Dec. 21.

Lofgren, Gustaf E., Riverside, Conn., assignor to Electrolux Corporation, Dover, Del. Coupling. 2,102,802; Dec. 21.

Lompe, Arved. (See Alterthum, H., and Lompe.)

Long, Kenneth E., South Euclid, assignor to The Harshaw Chemical Company, Elyria, Ohio. Production of metallic driers. 2,102,633; Dec. 21.

Lorenz, C., Aktiengesellschaft. (See Hackenberg, Edmund, assignor.)

Lorraine, Richard G., Scotia, N. Y., assignor to General Electric Company. Electric valve circuit. 2,103,164; Dec. 21.

Love, James E. (See Hume, H. D., and Love.)

Loveland, Curtis A., Youngstown, Ohio. Milking stool. 2,103,114; Dec. 21.

Lubrication Corporation, The. (See Clark, Otto B., assignor.)

Lubrication Corporation, The. (See Tear, Harry R., assignor.)

Ludington, Lawrence L., assignor to Ball Brothers Company, Muncie, Ind. Pressure cooker. 2,102,962; Dec. 21.

Luther, Martin, Mannheim, and W. Dietrich, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of alcohols. 2,102,726; Dec. 21.

Lynch, Frances I., Yonkers, assignor to Indexo Finger Tooth Brush, Inc., New York, N. Y. Teeth cleaning and gum massaging device. 2,103,083; Dec. 21.

Lysholm, Alf, F. Horney, and G. Wahlsten, assignors to Aktiebolaget Ljungstroms Angturbin, Stockholm, Sweden. Variable speed power transmission. 2,102,634; Dec. 21.

Lysholm, Alf, F. Horney, and G. Wahlsten, assignors to Aktiebolaget Ljungstroms Angturbin, Stockholm, Sweden. Variable speed power transmission. 2,102,635; Dec. 21.

M. & R. Dietetic Laboratories, Inc. (See Otting, H. E., Browne, and Hull, assignors.)

Mable, William, Fort Collins, Colo., assignor of forty-one per cent to W. B. Morris, New York, N. Y. Windshield attachment. 2,102,597; Dec. 21.

Madsen, Soren, Bergenfield, assignor of one-fourth to J. F. O'Brien, Englewood, N. J. Fare register. 2,103,084; Dec. 21.

Ma Gee, Frank B., West Hollywood, Calif., assignor to United Research Corporation, Long Island City, N. Y. Signaling apparatus. 2,102,905; Dec. 21.

Maher, James H., Montreal, Quebec, Canada. Heating system. 2,102,727; Dec. 21.

Management and Research, Inc. (See Farber, John D., assignor.)

March, Albert T., and W. E. Remmers, Western Springs, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y. Refining copper. 2,102,728; Dec. 21.

Marinsky, Davis, Bronx, assignor to Whitehall Patents Corporation, New York, N. Y. Slider for separable fasteners. 2,103,036; Dec. 21.

Marinsky, Davis, assignor to Whitehall Patents Corporation, Bronx, N. Y. Separable fastener. 2,103,037; Dec. 21.

Martin, Glenn L., Company, The. (See Gray, R. B., and Zivl, assignors.)

Marvel Shoe Machinery Corporation. (See Sabo, L., and Polkovics, assignors.)

Mathieson Alkali Works, Inc., The. (See Petroe, Gregory A., assignor.)

Matthews, W. N., Corporation. (See Birkenmaier, Theodore, assignor.)

McCahan, W. J., Sugar Refining & Molasses Co., The. (See Kern, John A., assignor.)

McCoy, Verl E., Chicago, Ill., and R. W. Anderson, Wauwatosa, Wis.; said McCoy assignor to Wilson Engineering Corporation, Chicago, Ill. Boiler feed apparatus. 2,103,225; Dec. 21.

McDill, Rex D., East Cleveland, assignor to Adjustable Scaffold & Form Company, Cleveland, Ohio. Controlling apparatus. 2,102,598; Dec. 21.

McDonald, Eugene G., assignor to Bendix Aviation Corporation, South Bend, Ind. Brake. 2,102,853; Dec. 21.

McDonald, Gorden G., Nova Scotia, assignor to E. P. Cox, Halifax, Nova Scotia, Canada. Combination door protector and lock. 2,102,729; Dec. 21.

McDonald, Leonard, El Campo, Tex. Drafting machine. 2,102,636; Dec. 21.

McDonough, Everett G., Mount Vernon, assignor to Zotos Corporation, New York, N. Y. Hair waving pad. 2,102,803; Dec. 21.

McKeag, Alfred H., and J. T. Randall, Middlesex, England, assignors to General Electric Company. Electric lamp. 2,103,085; Dec. 21.

McKinney, Robert H. (See Rennau, Albert M., assignor.)

McMahon, John V., Ness City, Kans. Tire deflation signal. 2,103,011; Dec. 21.

Meininghaus, Ulrich, Mulheim-Ruhr, Germany. Arrangement of radially traversed blades in rotary machines. 2,102,637; Dec. 21.

Mellor, Albert D., Flushing, N. Y. Radiator inclosure. 2,102,599; Dec. 21.

Merchant, Thomas, Castleton, England. Detecting metallic and other substances in textile or fibrous material. 2,102,906; Dec. 21.

Merrill, Frank W., Fort Wayne, Ind., assignor to General Electric Company. Self starting synchronous inductor motor. 2,103,165; Dec. 21.

Meuly, Walter C., New Brunswick, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Manufacture of unsaturated aldehydes. 2,102,965; Dec. 21.

Meyer, Andrew C. (See Weasler, A. V., and Meyer.)

Meyers, Clarence L., & Co. (See Meyers, Milton M., assignor.)

Meyers, Milton M., Elkins Park, assignor to Clarence L. Meyers & Co., Philadelphia, Pa. Stocking. 2,102,730; Dec. 21.

Midgley, Albert H., Wembley, England. Apparatus for producing sounds of a musical character. 2,103,169; Dec. 21.

Milcor Steel Company. (See Konkel, William, assignor.)

Miller, Charles, deceased, Long Island City, N. Y., I. G. Miller, executrix. Applying protective coatings to shoes and other objects. 2,102,804; Dec. 21.

Miller Company, The. (See Doane, Leroy C., assignor.)

Miller, George L., Canton, Ohio. Manufacture of armor plates. 2,102,963; Dec. 21.

Miller, Ida G., executrix. (See Miller, Charles.)

Miller, J. C., Co. (See Cyrex, Felix G., assignor.)

Miller, Lillian M., Fort Harrison, Mont. Flexible knitting needle. 2,102,600; Dec. 21.

Miller, Max. (See White, Chester R., assignor.)

Miller, William J., Swissvale, Pa. Apparatus for manufacturing pottery ware. 2,103,086; Dec. 21.

Miner, George A., Goffstown, N. H., assignor to United Shoe Machinery Corporation, Paterson, N. J. Lip laying device. 2,102,731; Dec. 21.

Missouri Holding and Investment Company. (See Schmidt, Hermann H., assignor.)

Mitsubishi Jukogyo Kabushiki Kaisha. (See Sugihara, Shuichi, assignor.)

Mix & Genest Aktiengesellschaft. (See Heyduck, Alfred, assignor.)

Mizzy, Dan D., and D. L. Durst, Sacramento, Calif. Dental jack. 2,103,115; Dec. 21.

Moers, Kurt, Berlin-Steglitz, Germany, assignor to General Electric Company. Gaseous electric arc discharge lamp device. 2,103,038; Dec. 21.

Morberg, Ivar A., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Forming sheet metal articles. 2,102,732; Dec. 21.

Morgan Construction Company. (See George, Jerome R., assignor.)

Morrill, Wayne J., Fort Wayne, Ind., assignor to General Electric Company. Commutating type armature. 2,103,166; Dec. 21.

Morris, Benjamin W., Jr., Essex, Conn. Power boat. 2,103,087; Dec. 21.

Morris, Robert. (See Stein, E. P., Thornton, and Morris.)

Morris, Winthrop B. (See Mable, William, assignor.)

Morrison, James, Trenton, N. J. Game apparatus. 2,103,167; Dec. 21.

Moses, Douglas V., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Hydraulic fluid. 2,102,638; Dec. 21.

Mossberg, O. F., and Sons, Inc. (See Mossberg, Oscar F., assignor.)

Mossberg, Oscar F., assignor to O. F. Mossberg and Sons, Inc., New Haven, Conn. Sling strap connecting device. 2,102,964; Dec. 21.

Mourraille, Jean P. L., assignor to Sté dite Satujo Sté Anme de Construction de Tuyaux sans Joints Systeme Cravetto Breveté S. G. D. G., Paris, France. Apparatus for constructing monolithic canalized structures. 2,102,639; Dec. 21.

Mueller, Robert, Decatur, Ill. Bathtub. 2,102,733; Dec. 21.

Mullen, Edwin J., New Rochelle, assignor to General Chemical Company, New York, N. Y. Apparatus for treating ores. 2,103,088; Dec. 21.

Müller, Richard, Mannheim-Neuostheim, M. Schenck, Mannheim, and W. Wirbatz, assignors to C. F. Boehringer & Soehne G. m. b. H., Mannheim-Waldhof, Germany. Cellulose esters. 2,103,012; Dec. 21.

Murber, George E., San Francisco, Calif. Golf overshoe. 2,102,601; Dec. 21.

Myers, John W., Roanoke, Va., assignor, by mesne assignments, to The Standard Stoker Company, Inc. (1922). Locomotive stoker. 2,103,210; Dec. 21.

Myers, Latimer D., assignor to Emery Industries, Inc., Cincinnati, Ohio. Shrinking fabrics. 2,103,205; Dec. 21.

Myers, Roy H., and L. Sandoz, Ventura, Calif. Interior finishing structure and fastener. 2,103,168; Dec. 21.

Mylius, Otto, assignor to Deutsche Getriebe Gesellschaft mit beschrankter Haftung, Berlin, Germany. Damping the oscillations of vehicles, in particular rail vehicles. 2,102,907; Dec. 21.

N. V. Philips' Gloeilampenfabrieken. (See Bouwers, Albert, assignor.)

Naamlooze Vennootschap Ijzerhandel I. M. de Vries. (See de Vries, Abraham, assignor.)

Nash-Kelvinator Corporation. (See Philipp, Lawrence A., assignor.)

Nash, Paul H., assignor of one-third to G. M. Walters, Pampa, Tex. Combination rod hanger and tubing rack. 2,102,966; Dec. 21.

Nash, Samuel T., Woden Works, assignor to The Steel Nut & Joseph Hampton Limited, Wednesbury, England. Vise. 2,102,602; Dec. 21.

National Aniline & Chemical Company. (See Talbert, G. W., and Kerr, assignors.)

National Cylinder Gas Company. (See Dunham, James W., assignor.)

National Pressure Cooker Company. (See Nelson, Carl, assignor.)

Naturin G. m. b. H. (See Becker, O. W., and Weiss, assignors.)

Naus, Edward P., Minneapolis, Minn. Preparation for treating plants. 2,102,734; Dec. 21.

Neel, Thomas W., and J. D. Blocker, Ventura, Calif. Concealable spot lamp. 2,102,967; Dec. 21.

Neiswinter, James T., Cleveland, Ohio, assignor to American Telephone and Telegraph Company. Carrier telegraph system. 2,102,735; Dec. 21.

Nelson, Carl, assignor to National Pressure Cooker Company, Eau Claire, Wis. Pressure cooker. 2,102,908; Dec. 21.

Nelson, Moses F., Highland Falls, N. Y. Fishing float. 2,103,222; Dec. 21.

New Jersey Machine Corporation. (See von Hofe, George W., assignor.)

New Jersey Zinc Company, The. (See Winter, Herbert, assignor.)

Newhouse, Ray C., Wauwatosa, and B. H. Puerner, West Allis, assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Clinker cooler. 2,103,170; Dec. 21.

Newton, Russell B. (See Gwaltney, E. C., Graybill, and Newton.)

Nichols, Edward L. (See Nichols, Robert P., assignor.)

Nichols, Robert P., Miami, assignor to E. L. Nichols, Hollywood, Fla. Recovery of the unsaponifiable fractions of oils. 2,103,193; Dec. 21.

Nicolson, James G. (See Southgate, G. T., and Nicolson.)

Nilson, Oliver C., Carthage, Mo. Fireplace air blasting. 2,103,171; Dec. 21.

Nirdlinger, Patrick A., assignor, by mesne assignments, to Scanlon-Morris Company, Madison, Wis. Portable surgical lamp. 2,103,013; Dec. 21.

North American Car Corporation. (See Lithgow, John, assignor.)

Norton Company. (See Cook, Arnold M., assignor.)

Novotny, Anton, assignor, by mesne assignments, to Tivoli Brewing Company, Detroit, Mich. Packing machine. 2,102,640; Dec. 21.

Ober, William T., Marblehead, assignor to Thomson-Gibb Electric Welding Company, Lynn, Mass. Apparatus for welding nails to a metal body. 2,103,206; Dec. 21.

O'Brien, Joseph F. (See Madsen, Soren, assignor.)

O'Donovan, Daniel E., Chelmsford, England, assignor to Radio Corporation of America. Electrical tuned circuit. 2,102,805; Dec. 21.

Oestrich, Godfrey, et al. (See Hester, John C., assignor.)

Ohio Citizens Trust Company, The, trustee. (See Replogle, Daniel B., assignor.)

Ohlis, Julius J. (See Lenke, George H., assignor.)

Ohlsson, Ernst. (See Isermann, S., Ohlsson, and Orelup.)

Olson, Harry F., Collingswood, N. J., assignor to Radio Corporation of America. Acoustical device. 2,102,736; Dec. 21.

Orelup, John W. (See Isermann, S., Ohlsson, and Orelup.)

Osborn, Henry C., assignor, by mesne assignments, to Addressograph-Multigraph Corporation, Cleveland, Ohio. Method of and apparatus for planographic printing. 2,102,641; Dec. 21.

Ostermann, Rudolf M., Kenilworth, Ill., and A. Williams, Munster, Ind., assignors to The Superheater Company, New York, N. Y. Locomotive. 2,102,806; Dec. 21.

Otting, Herbert E., Westerville, and E. H. Browne and M. E. Hull, Columbus, Ohio, assignors to M. & R. Dietetic Laboratories, Inc. Treatment of milk products. 2,102,642; Dec. 21.

Overvad, Marius, Aarhus, Denmark. Manufacture of concrete pipes. 2,102,968; Dec. 21.

Owens, J. B., et al. (See Justus, James W., assignor.)

Packard Motor Car Company. (See Paton, Clyde R., assignor.)

Palmieri, Mario, South Glastonbury, and S. D. Ehrlich, Glastonbury, Conn. Delay blasting cap. 2,103,014; Dec. 21.

Patjens, Henry K., Yeadon, Pa. Articulated locomotive. 2,103,172; Dec. 21.

Paton, Clyde R., Birmingham, assignor to Packard Motor Car Company, Detroit, Mich. Internal combustion engine. 2,102,909; Dec. 21.

Patton, Cuyler S., Scarsdale, assignor to Alco Products Incorporated, New York, N. Y. Pipe and making the same. 2,102,969; Dec. 21.

Payne, Eugene, Chattanooga, Tenn. Feed gauge for printing presses. 2,102,910; Dec. 21.

Peacock, Charles T., Arriba, Colo. Dam forming device for listers. 2,103,116; Dec. 21.

Pearlman, Abraham, Brooklyn, N. Y. Jack attachment for motor vehicles. 2,103,117; Dec. 21.

Pease, C. F., Company, The. (See Brunk, Harold J., assignor.)

Peck, Ferdinand W., Penns Grove, N. J., and W. R. Waldron, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of antimony chlorides. 2,102,737; Dec. 21.

Pellegrini, Domenick, New York, N. Y. Denture cleaning device. 2,102,643; Dec. 21.

People of the United States of America. (See Jones, Howard A.)

Perkins, Albert G., Warsaw, N. Y. Pipe coating apparatus. 2,102,738; Dec. 21.

Perks, George W., Akron, Ohio. Game. 2,102,807; Dec. 21.

Perry, William R., assignor to Reeves Pulley Company, Columbus, Ind. Motor control system. 2,102,911; Dec. 21.

Peters, Frank J., Portland, Oreg. Fish bait. 2,102,739; Dec. 21.

Peters, William E., Watervliet, assignor of two-fifths to M. Castellani, Albany, N. Y. Reversible sash attachment. 2,103,015; Dec. 21.

Peterson, Juel L., assignor to C. Smith, Seneca Falls, N. Y. Machine for applying transfers. 2,102,970; Dec. 21.

Petremont, Gordon A., Boston, assignor to The Gobelin Company, Inc., Cambridge, Mass. Packaging candy. 2,102,971; Dec. 21.

Petroe, Gregory A., Niagara Falls, assignor to The Mathieson Alkali Works, Inc., New York, N. Y. Vacuum valve. 2,103,118; Dec. 21.

Petroleum Heat and Power Company. (See Thoresen, Ralph S., assignor.)

Pflasterer, George R., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway signaling. 2,103,016; Dec. 21.

Philipp, Lawrence A., assignor, by mesne assignments, to Nash-Kelvinator Corporation, Detroit, Mich. Refrigerating apparatus. 2,102,740; Dec. 21.

Phillips, Benjamin, Cincinnati, assignor to The Phillips Pump & Tank Company. Sign. 2,102,972; Dec. 21.

Phillips Petroleum Company. (See Snow, Robert D., assignor.)

Phillips Pump & Tank Company, The. (See Phillips, Benjamin, assignor.)

Pichucki, Antoni, Sydney, Nova Scotia, Canada. Automobile brake controlling device. 2,103,089; Dec. 21.

Pick Manufacturing Company. (See Weasler, A. V., and Meyer, assignors.)

Pickett, Francis N., London, England, assignor to United States Rubber Products, Inc., New York, N. Y. Treating vulcanized rubber. 2,102,741; Dec. 21.

Pinazza, Giosuè, Milan, Italy. Percussion apparatus. 2,102,603; Dec. 21.

Piperoux, Rene P., Radburn, N. J., assignor to Celluloid Corporation. Multicolor printing on articles of irregular shape. 2,102,808; Dec. 21.

Pirani, Marcello, Berlin-Wilmersdorf, and M. Reger, Berlin, Germany, assignors to General Electric Company, Gaseous electric discharge device. 2,103,039; Dec. 21.

Pison, Antonio T., Molo, Iloilo, P. I. Sofa bedstead. 2,103,173; Dec. 21.

Pittman, Herbert C., Tyler, Tex. Dispensing apparatus for liquefied gas. 2,102,912; Dec. 21.

Plastic Seal Corporation. (See Black, I. E., Hoffer, and Silver, assignors.)

Plebanski, Jozef, Warsaw, Poland, assignor to Radio Patents Corporation, New York, N. Y. Generating electrical currents. 2,103,090; Dec. 21.

Poland, Frank F., New Brunswick, N. J., assignor to American Smelting and Refining Company, New York, N. Y. High conductivity, phosphorus-deoxidized copper and making the same. 2,102,742; Dec. 21.

Polkovics, Julius. (See Sabo, L., and Polkovics.)

Polymerization Process Corporation, The. (See Eaton, Gerald L., assignor.)

Porsche, Ferdinand, Stuttgart, Germany. Universal joint. 2,102,973; Dec. 21.

Posada, Victor M., San Salvador, El Salvador. Surgical instrument. 2,103,174; Dec. 21.

Postal Telegraph-Cable Company (New York). (See Vernam, G. S., and Halliden, assignors.)

Potter, Philip J. (See Darby, E. R., and Potter.)

Pray, Thomas E., assignor to Goodman Manufacturing Company, Chicago, Ill. Kerf-cutting machine. 2,102,743; Dec. 21.

Preston, Edward S., assignor to Chicago Electric Manufacturing Company, Chicago, Ill. Fan with flexible blades. 2,102,913; Dec. 21.

Prickett, Thomas B., Woodbury, N. J., assignor to Houdry Process Corporation, Dover, Del. Temperature control of reaction vessels. 2,102,644; Dec. 21.

Priddy, Harry L. (See Hitt, M. V., Kennedy, and Priddy.)

Prins, Leendert, Port Washington, N. Y. Advertising or display device. 2,103,175; Dec. 21.

Production Machine Company. (See Fuller, Rufus W., assignor.)

Prolamine Products Incorporated. (See Hansen, Donald W., assignor.)

Puerner, Bertram H. (See Newhouse, R. C., and Puerner.)

Pützer, Bruno, and F. Schönhöfer, Wuppertal-Elberfeld, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y. Basic derivatives of cyclic ether-like compounds. 2,103,017; Dec. 21.

Quaker Oats Company, The. (See Campbell, Frank D., assignor.)

Radcliffe, Thomas J., Belleville, assignor to General Electric Vapor Lamp Company, Hoboken, N. J. Manufacture of resistance bodies. 2,103,040; Dec. 21.

Radio Corporation of America. (See Baker, Judd O., assignor.)

Radio Corporation of America. (See Baker, J. O., and Batsell, assignors.)

Radio Corporation of America. (See Ballantine, Stuart, assignor.)

Radio Corporation of America. (See Beers, George L., assignor.)

Radio Corporation of America. (See Bokovoy, Samuel A., assignor.)

Radio Corporation of America. (See Brixey, Austin D., assignor.)

Radio Corporation of America. (See Gleskieng, Marion W., assignor.)

Radio Corporation of America. (See Hasbrouck, Harold J., assignor.)

Radio Corporation of America. (See Lear, William P., assignor.)

Radio Corporation of America. (See O'Donovan, Daniel E., assignor.)

Radio Corporation of America. (See Olson, Harry F., assignor.)

Radio Corporation of America. (See Sachtleben, Lawrence T., assignor.)

Radio Patents Corporation. (See Plebanski, Jozef, assignor.)

Raiziss, George W., and L. W. Clemence, Philadelphia, Pa., assignors to Abbott Laboratories, North Chicago, Ill. Halogen derivatives of n-amyl cresols. 2,102,854; Dec. 21.

Randall Company, The. (See Randall, Howard D., assignor.)

Randall, Howard D., assignor to The Randall Company, Cincinnati, Ohio. Making staples. 2,103,176; Dec. 21.

Randall, Howard D., Cincinnati, Ohio. Paneling. 2,103,177; Dec. 21.

Randall, John T. (See McKeag, A. H., and Randall.)

Ratcliffe, Harry, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Tool. 2,102,744; Dec. 21.

Raymond, Fred I., River Forest, Ill. Steam heating system and supplying steam to the radiators thereof. 2,103,178; Dec. 21.

Raytheon Manufacturing Company. (See Jackson, J. G., and Hanley, assignors.)

Read, Merwin F., Detroit, Mich. Abrasive pad. 2,102,745; Dec. 21.

Reddick, John B. (See Henderson, E., and Reddick.)

Reeves Pulley Company. (See Perry, William R., assignor.)

Reger, Martin. (See Fehse, A., and Reger.)

Reger, Martin. (See Pirani, M., and Reger.)

Reichhelm, George L. (See Killmeyer, C. A., and Reichhelm.)

Reilly, Alfred F., assignor to Evans Case Company, North Attleboro, Mass. Ornamentation. 2,102,746; Dec. 21.

Remington Arms Company. (See Wharton, Thomas E., assignor.)

Remmen, Jorgen, Pittsburgh, Pa. Rolling mill housing. 2,102,818; Dec. 21.

Remmers, Walter E. (See March, A. T., and Remmers.)

Rennau, Albert M., assignor of forty per cent to R. H. McKinney, Hannibal, Mo. Testing device. 2,103,179; Dec. 21.

Replogle, Daniel B., Berkeley, Calif., assignor to The Ohio Citizens Trust Company, Toledo, Ohio, as trustee. Double brush type floor tool for air-method cleaners. 2,102,645; Dec. 21.

Rheinmetall-Borsig Aktiengesellschaft / Werk Borsig Berlin-Tegel, et al. (See Clar, Friedrich K., assignor.)

Rhew, Norman C., Rougemont, N. C. Frankfurter holder. 2,102,818; Dec. 21.

Rice, Edwin L., Silver Spring, Md., assignor to Rice Manufacturing and Aerial Transport Corporation. Rotary motor. 2,103,180; Dec. 21.

Rice Manufacturing and Aerial Transport Corporation. (See Rice, Edwin L., assignor.)

Richardson Company, The. (See Dillehay, Edward R., assignor.)

Richmond, Thomas G., Glasgow, Scotland. Snap action mechanism for operating electric switches. 2,103,181; Dec. 21.

Rider, Herbert E., New York, N. Y., assignor, by mesne assignments, to H. L. Rosenfeld, Jr. Making gas. 2,103,182; Dec. 21.

Rienks, George W., and E. T. Guilford, Denver, Colo. Garbage can. 2,102,914; Dec. 21.

Rishel, Luther C., Los Angeles, Calif. Universal brake shoe grinder guide. 2,102,915; Dec. 21.

Rivenburgh, Frederick L., Springfield, Ohio. Method and apparatus for testing eggs. 2,102,646; Dec. 21.

Robert, Ramon C., Barcelona, Spain. Cabinet for the use and storage of an instrument. 2,103,091; Dec. 21.

Roberts, Robert P., Spondon, near Derby, England, assignor to Celanese Corporation of America. Artificial effect material. 2,102,647; Dec. 21.

Roberts, Robert P., Spondon, near Derby, England, assignor to Celanese Corporation of America. Fabrics and other material and their manufacture. 2,102,648; Dec. 21.

Roberts, William F., assignor to The Fiberloid Corporation, Indian Orchard, Mass. Making ornamented plastic material. 2,102,747; Dec. 21.

Robertson, Donald W. (See Happel, J., and Robertson.)

Robinson, Denis M., assignor to Callender's Cable and Construction Company Limited, London, England. Electric cable. 2,102,974; Dec. 21.

Robinson, Francis T., Rockville Centre, assignor to Arkell Safety Bag Company, New York, N. Y. Bag and producing the same. 2,103,092; Dec. 21.

Rochford, Michael J., Chicago, Ill. Ice skates. 2,102,916; Dec. 21.

Rockwell, Hugh M., Freeport, N. Y. Water buoyed engine and mounting for motor boats and the like. 2,103,183; Dec. 21.

Rocquin, Camille J., New Orleans, La. Theft-preventing device for plants. 2,102,748; Dec. 21.

Roethel, John H., Detroit, Mich. Window control mechanism. 2,103,223; Dec. 21.

Roggero, Carlo, Arenzano, Italy. Leveling and squaring device. 2,103,184; Dec. 21.

Rolland, Samuel V., Flint, Mich. Sewer rod. 2,102,917; Dec. 21.

Rolph, Thomas W., Newark, Ohio, assignor to Holophane Company, Inc., New York, N. Y. Visible signal. 2,102,975; Dec. 21.

Romanelli, George, Des Moines, Iowa. Combining resorcinol with iodine. 2,102,918; Dec. 21.

Romanoff, Frank P., assignor to Apollo Metal Works, Chicago, Ill. Noncorrodible object and producing same. 2,103,119; Dec. 21.

Rompe, Robert, Berlin, and W. Thouret, Berlin-Wilmersdorf, Germany, assignors to General Electric Company. Gaseous electric discharge lamp device. 2,103,041; Dec. 21.

Ronci, Fernando M., Providence, R. I. Immersing and drying machine. 2,102,819; Dec. 21.

Rosenfeld, Henry L., Jr. (See Rider, Herbert E., assignor.)

Rosner, Adolph, Rockton, Ill., assignor to Bendix Brake Company, South Bend, Ind. Brake lining. 2,102,855; Dec. 21.

Ross, Paul A. (See De Witt, W. J., and Ross.)

Rulon, Joseph K. (See Kennedy, D. G., and Rulon.)

Rumpler, Edmund, Berlin-Charlottenburg, Germany. Crankshaft. 2,103,185; Dec. 21.

Ruperti, Andreas, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Enhancing the stability to water of effects produced mechanically on textiles containing cellulose. 2,103,018; Dec. 21.

Rusoff, Samuel, Longmeadow, Mass. Segmental grinding wheel. 2,102,919; Dec. 21.

Russell, Irving H., assignor to Sloan Valve Company, Chicago, Ill. Valve. 2,102,856; Dec. 21.

Russell, John A. (See Stein, E. P., Thornton, and Morris, assignors.)

Rüttenauer, Alfred. (See Fritze, O., Rüttenauer, and Wiegand.)

Ruttenauer, Alfred, Berlin-Halensee, Germany, assignor to General Electric Company. Gaseous electric discharge lamp device. 2,103,093; Dec. 21.

Rydin, Norval, Chicago, Ill. Toy train coupler. 2,102,649; Dec. 21.

Rypinski, Albert B., Laurelton, Long Island, N. Y. Slow electromagnetic device. 2,103,019; Dec. 21.

Saarinen, Armas J., assignor to Granberg Meter Corporation, San Francisco, Calif. Siphon-breaking means for liquid metering systems. 2,103,020; Dec. 21.

Sabo, Louis, and J. Polkovics, Bronx, assignors to Marvel Shoe Machinery Corporation, New York, N. Y. Heelbreast cover cutting and skiving device. 2,103,120; Dec. 21.

Sachtleben, Lawrence T., Camden, N. J., assignor to Radio Corporation of America. Film handling apparatus. 2,103,042; Dec. 21.

Salsman, George W., La Junta, Colo. Chiropractic demonstrating device. 2,103,021; Dec. 21.

Salvesen, Richard E., Forest City, Iowa. Dispensing cap. 2,102,749; Dec. 21.

Sanders, Thomas H., Leeds, England. Laminated springs. 2,102,750; Dec. 21.

Sandoz, Louis. (See Myers, R. H., and Sandoz.)

Savage, Eros M., San Jose, Calif. Drink preparing means. 2,102,920; Dec. 21.
Sawtelle, Charles A., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Brake mechanism. 2,102,810; Dec. 21.
Scanlon-Morris Company. (See Nirdlinger, Patrick A., assignor.)
Schafer, William J., San Jose, Calif. Woodworking machine. 2,102,857; Dec. 21.
Schantz, Jacob M., assignor to Hercules Powder Company, Wilmington, Del. Chlorinated rubber coating composition. 2,103,186; Dec. 21.
Scharlin, Alfred, Brooklyn, N. Y. Four-in-hand necktie. 2,103,094; Dec. 21.
Scheinman, Sol, White Plains, N. Y. File. 2,102,820; Dec. 21.
Schenck, Martin. (See Müller, R., Schenck, and Wirbatz.)
Schermerhorn, George D., Reading, Mich. Cushion foot for chairs. 2,103,095; Dec. 21.
Scheuermann, Arno, Ludwigshafen-on-the-Rhine, R. Brill, Heidelberg, and G. Wietzel, Mannheim, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of acetaldehyde. 2,102,751; Dec. 21.
Schlesinger, Harry. (See Yoerg, Alfred F., assignor.)
Schlumbohm, Peter, New York, N. Y. Capsule for storing fluids. 2,102,858; Dec. 21.
Schmidt, Hermann H., Hanover, Kans., assignor to Missouri Holding and Investment Company, St. Joseph, Mo. Vaporizing and spraying thick liquids. 2,102,650; Dec. 21.
Schmitt, William C., Portland, Oreg. Pile shoe. 2,102,921; Dec. 21.
Schmitz, Hilger P. (See Kaufler, F., and Schmitz.)
Schoenfeld, Frank H., Cleveland Heights, Ohio. Valve mechanism. 2,102,752; Dec. 21.
Schönhöfer, Fritz. (See Pützer, B., and Schönhöfer, assignors.)
Schoonenberg, Pancras, and J. A. M. Smelt, Eindhoven, Netherlands, assignors to General Electric Company. Gaseous electric discharge device. 2,103,043; Dec. 21.
Schröter, August G.-A., Hamburg, assignor to O. H. Dräger, Lubeck, Germany. Detecting small quantities of gas. 2,103,187; Dec. 21.
Schwab, Earl H., Pittsburgh, Pa. Metal fitting for glass globes. 2,102,922; Dec. 21.
Schwarz, Karl, assignor to Klangfilm G. m. b. H., Berlin, Germany. Recording of electrical impulses. 2,102,753; Dec. 21.
Schweitzer, Eugen, Wiesbaden-Biebrich, and S. Kiesskalt, Frankfort-on-the-Main-Hochst, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Apparatus for testing magnetizable workpieces. 2,103,224; Dec. 21.
Scovill Manufacturing Company. (See Williams, Selden T., assignor.)
Sears, Roebuck and Co. (See Sprankle, C. N., and Golec, assignors.)
Sefco Inc. (See Ekdahl, Edward B., assignor.)
Selberling, Theophilus K. (See Laursen, Laurits A., assignor.)
Sell, Gilbert E., Cynwyd, assignor to E. J. Lavino and Company, Philadelphia, Pa. Making refractory bricks. 2,102,976; Dec. 21.
Semon, Waldo L., Silver Lake, and R. V. Yohe, Cuyahoga Falls, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Antioxidant. 2,103,188; Dec. 21.
Senauke, Alexander, New York, N. Y., assignor to Hazeltine Corporation, Jersey City, N. J. Gaseous discharge tube. 2,103,022; Dec. 21.
Seyferth, Carl G., assignor to West Michigan Steel Foundry Co., Muskegon, Mich. Coupling device for trailers and tractors. 2,102,821; Dec. 21.
Seyter, William C. (See Becker, C. A., and Seyter.)
Shank, Charles L., and C. W. Traut, assignors to The Hoover Company, North Canton, Ohio. Suction cleaner. 2,103,099; Dec. 21.
Shannon, Baker L., Houston, Tex. Jar. 2,102,754; Dec. 21.
Sheet Polarizer Company. (See Land, Edwin H., assignor.)
Shepard, Samuel D., Chevy Chase, Md. Gun sight. 2,103,189; Dec. 21.
Sherman, John Q., and H. G. Dybvig, Dayton, Ohio; said Dybvig assignor to said Sherman. Pinwheel feed. 2,102,651; Dec. 21.
Sherwood Brass Works. (See Sherwood, David, assignor.)
Sherwood, David, Grosse Pointe Park, assignor to Sherwood Brass Works, Detroit, Mich. Water pump thrust bearing. 2,103,096; Dec. 21.
Sherwood, Walter E., Pepperell, assignor to Waltham Watch Company, Waltham, Mass. Odometer reset. 2,103,023; Dec. 21.
Shimmin, Daisy M., administratrix. (See Shimmin, John T.)
Shimmin, John T., deceased, Buchana, Newfoundland, D. M. Shimmin, administratrix. Traveling mat concentrator. 2,102,652; Dec. 21.
Shoe Form Co. (See De Witt, W. J., and Ross, assignors.)
Shoemaker, William E., Freeport, and G. French, Manhasset, assignors to Sinclair Refining Company, New York, N. Y. Display rack. 2,102,977; Dec. 21.
Shozaburo Hashino. (See Yamamoto, Samuro, assignor.)
Siemund, Herman, assignor to Greenview Manufacturing Company, Chicago, Ill. Cleaning tool. 2,103,198; Dec. 21.
Sienz, Max. (See Kircher, A., and Sienz.)
Silver, Henry B. (See Black, I. E., Hoffer, and Silver.)
Simplex Time Recorder Company. (See Watkins, Edward G., assignor.)
Sinclair, Charles W., assignor to Kelsey-Hayes Wheel Company, Detroit, Mich. Vehicle wheel. 2,102,811; Dec. 21.
Sinclair, Harold, Surbiton Hill, England. Power transmission mechanism. 2,102,755; Dec. 21.
Sinclair Refining Company. (See Shoemaker, W. E., and French, assignors.)
Singer, Benjamin, Bronx, N. Y., assignor to Hazeltine Corporation. Power supply system for signal receivers. 2,103,097; Dec. 21.
Slepian, Joseph, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Circuit interrupter. 2,103,121; Dec. 21.
Slettevold, Ole, and C. W. Johnson, assignors to The Hedman Manufacturing Company, Chicago, Ill. Check writer. 2,103,098; Dec. 21.
Sliming, Henry G., Huntington Park, Calif. Dispenser. 2,102,978; Dec. 21.
Sloan, Arthur W. (See Goodwin, R. C., and Sloan.)
Sloan Valve Company. (See Kocour, Emil J., assignor.)
Sloan Valve Company. (See Russell, Irving H., assignor.)
Smelt, Josephus A. M. (See Schoonenberg, P., and Smelt.)
Smith, Caleb. (See Peterson, Juel L., assignor.)
Smith, George A., Chevy Chase, Md., and M. S. Van Dusen, Washington, D. C. Building block. 2,102,756; Dec. 21.
Smith, Gertrude L., Los Angeles, Calif. Molded handled receptacle. 2,102,653; Dec. 21.
Smith, Harry M., San Francisco, Calif. Motor vehicle safety seat. 2,102,979; Dec. 21.
Smith, James F., West Orange, N. J., assignor to Line Material Company, South Milwaukee, Wis. Combined housed electrical device and cable sealing means. 2,102,757; Dec. 21.
Smith, Thomas N., San Antonio, Tex. Internal combustion engine. 2,103,024; Dec. 21.
Smith, William L., Jr. (See Lawson, R. H., and Smith.)
Snow, Robert D., Bartlesville, Okla., assignor to Phillips Petroleum Company. Producing decomposition products from olefine-SO_2 complexes. 2,102,654; Dec. 21.
Societe d'Exploitation de Brevets pour l'Industrie l'Aviation et l'Automobile (Sebia). (See Dugelay, Paul, assignor.)
Society of Chemical Industry in Basle. (See Ruperti, Andreas, assignor.)
Socony-Vacuum Oil Company. (See Bridges, Kenneth L., assignor.)
Socony-Vacuum Oil Company. (See Happel, J., and Robertson, assignors.)
Solar Sturges Mfg. Co. (See Sturges, Lee, assignor.)
Southgate, George T., Forest Hills, and J. G. Nicolson, Niagara Falls, N. Y., assignors, by mesne assignments, to Union Carbide and Carbon Corporation. Method of and apparatus for making welding rods. 2,102,812; Dec. 21.
Southgate, George T., Forest Hills, and J. G. Nocolson, Niagara Falls, N. Y., assignors, by mesne assignments, to Union Carbide and Carbon Company. Welding rod. 2,102,813; Dec. 21.
Spanglet, Ben, Brooklyn, N. Y. Combination bed, table, and sofa. 2,102,980; Dec. 21.
Spayd, Walker H., Van Wert, Ohio. Cleaner for vegetables. 2,102,758; Dec. 21.
Spencer, Herman J., West View, assignor, by mesne assignments, to Leechgrip Company, O'Hara Township, Pa. Strap tensioning and sealing device. 2,102,981; Dec. 21.
Spirig, Josef, Hard, near Bregenz, Vorarlberg, Austria, assignor to A. Hofstetter, Widnau, Switzerland. Burner for liquid fuel. 2,102,759; Dec. 21.
Spousta, George W., Oak Park, Ill. Cheese slicing and dispensing apparatus. 2,102,859; Dec. 21.
Sprankle, Cortes N., Oak Park, and E. J. Golec, assignors to Sears, Roebuck and Co., Chicago, Ill. Metal coloring. 2,102,925; Dec. 21.
Springfield Photomount Company. (See Jolly, Oscar W., assignor.)
Squire, Nathen E., Chicago, Ill. Drive mechanism. 2,103,190; Dec. 21.
Standard Stoker Company, Inc., (1922), The. (See Surdykowski, Charles J., assignor.)
Standard Stoker Company, Inc., (1922), The. (See Anderson, Howard P., assignor.)
Standard Stoker Company, Inc., (1922), The. (See Myers, John W., assignor.)
Standard Stoker Company, Inc., (1922), The. (See Turner, E. A., and Surdy, assignors.)
Standard Stoker Company, (1922), The. (See Turner, Edwin A., assignor.)
Stark, Helmuth, Berlin-Charlottenburg, assignor to Hoesch-KölnNeuessen Aktiengesellschaft für Bergbau und Hüttenbetrieb, Dortmund, Germany. Laminated spring. 2,103,122; Dec. 21.
Sté dite Satujo Sté Anma de Construction de, Tuyaux sans Joints Systems Cravetto Breveté S. G. D. G. (See Mourraille, Jean P. L., assignor.)
Steel Nut & Joseph Hampton Limited, The. (See Nash, Samuel T., assignor.)
Stein, Edward P., F. D. Thornton, and R. Morris, assignors of one-half to J. A. Russell, Chicago, Ill. Amusement game. 2,103,191; Dec. 21.

Stein, Edward P., F. D. Thornton, and R. Morris, assignors of one-half to J. A. Russell, Chicago, Ill. Amusement game. 2,103,192; Dec. 21.
Stein, Hall Manufacturing Company. (See Bauer, Jordan V., assignor.)
Sternaman, Roy A. (See Cornell, E. S., Koerner, and Sternaman.)
Stevens, Leo J., San Francisco, Calif. Annunciator. 2,103,123; Dec. 21.
Stewart-Warner Corporation. (See Davis, Ernest W., assignor.)
Stilwell, George R., Plainfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Photoelectric tube. 2,102,760; Dec. 21.
Stires, William H., assignor to Taylor-Wharton Iron & Steel Company, High Bridge, N. J. Cutter head for suction dredges. 2,103,124; Dec. 21.
Stoddard, Nicholas, Durham, N. C. Magnetic thread cleaner. 2,103,125; Dec. 21.
Stoner, Harry B., and K. Knickerbocker, assignors to Stoner Mfg. Corp., Aurora, Ill. Game apparatus. 2,102,860; Dec. 21.
Stoner Mfg. Corp. (See Stoner, H. B., and Knickerbocker, assignors.)
Strano, Sam, and R. E. Gehne, assignors to Jackes-Evans Manufacturing Company, St. Louis, Mo. Stove top. 2,103,100; Dec. 21.
Strawn, Marion L., assignor to The Ingersoll Milling Machine Company, Rockford, Ill. Machine tool. 2,102,655; Dec. 21.
Strobel, Karl, Corporation. (See Strobel, Karl, assignor.)
Strobel, Karl, Whittier, assignor to Karl Strobel Corporation, Los Angeles, Calif. Welding generator. 2,102,761; Dec. 21.
Stuart, Henry B., assignor to Whitin Machine Works, Whitinsville, Mass. Lubricated twister ring. 2,102,861; Dec. 21.
Sturges, Lee, Elmhurst, assignor to Solar Sturges Mfg. Co., Bellwood, Ill. Reinforcing a milk-can neck. 2,102,862; Dec. 21.
Sugihara, Shuichi, Toda-machi, Naka-ku, Nagoya, assignor to Mitsubishi Jukogyo Kabushiki Kaisha, Tokyo, Japan. Device for automatically regulating the amount of fuel injection. 2,103,126; Dec. 21.
Sullivan, Frank J., Oshkosh, Wis. Traveling bag. 2,103,207; Dec. 21.
Summers, Otto M., assignor to General Motors Corporation, Dayton, Ohio. Refrigerating apparatus. 2,102,762; Dec. 21.
Sun Oil Company. (See Barton, Paul D., and Banks, assignors.)
Superheater Company, The. (See Ostermann, R. M., and Williams, assignors.)
Surdy, Charles J. (See Surdykowski, Charles J.)
Surdy, Charles J. (See Turner, E. A., and Surdy.)
Surdykowski, Charles J., Tuchahoe, N. Y., now, by Judicial change of name, to C. J. Surdy, assignor to Standard Stoker Company, Inc., (1922). Locomotive stoker. 2,103,211; Dec. 21.
Sutherland Paper Company. (See Annen, James E., assignor.)
Sutterfield, Noel H., assignor to The Timken-Detroit Axle Company, Detroit, Mich. Liquid fuel burning apparatus. 2,102,763; Dec. 21.
Swenson Evaporator Company. (See Bielfeldt, Paul W., assignor.)
Szekely, Otto E., Elmira, N. Y. Driving and supporting assembly for automotive vehicles. 2,102,923; Dec. 21.
Talbert, Guy W., Summit, N. J., and J. D. Kerr, Forest Hills, assignors to National Aniline & Chemical Company, Inc., New York, N. Y. Manufacture of partial oxidation products. 2,102,863; Dec. 21.
Taylor, Charles H., assignor to The Hoover Company, North Canton, Ohio. Suction cleaner. 2,103,101; Dec. 21.
Taylor, Fred C., assignor to The Taylor Wine Company, Hammondsport, N. Y. Illuminated rotatable display stand. 2,102,982; Dec. 21.
Taylor, Vernon F., San Antonio, Tex. Illuminating device. 2,102,764; Dec. 21.
Taylor-Wharton Iron & Steel Company. (See Stires, William H., assignor.)
Taylor Wine Company, The. (See Taylor, Fred C., assignor.)
Tear, Harry R., Evanston, Ill., assignor to The Lubrication Corporation, South Bend, Ind. Lubricating device. 2,103,044; Dec. 21.
Teletype Corporation. (See Kleinschmidt, Edward E., assignor.)
Thomas, Albert R., Phoenix, Ariz. Vase. 2,102,924; Dec. 21.
Thompson, Albert R., Los Gatos, Calif., and W. de Back, Niagara Falls, N. Y. Fruit dividing mechanism for fruit preparation machines. 2,102,765; Dec. 21.
Thomson-Gibb Electric Welding Company. (See Ober, William T., assignor.)
Thoresen, Ralph S., Darien, Conn., assignor to Petroleum Heat and Power Company, New York, N. Y. Heat exchanger. 2,103,102; Dec. 21.
Thornton, Fulton D. (See Stein, E. P., Thornton, and Morris.)
Thorsen, James W., Bronxville, N. Y. Liquid dispenser and dispensing liquids. 2,103,194; Dec. 21.
Thouret, Wolfgang. (See Rompe, R., and Thouret.)
Timken-Detroit Axle Company, The. (See Sutterfield, Noel H., assignor.)
Tipsord, Melvin T., assignor to James R. Kearney Corporation, St. Louis, Mo. Pin and bolt holder. 2,102,926; Dec. 21.
Titanium Alloy Manufacturing Company, The. (See Kinzie, Charles J., assignor.)
Tivoli Brewing Company. (See Novotny, Anton, assignor.)
Tooker, John N., Canajoharie, assignor to B. Arkell, New York, N. Y. Forming valve bags. 2,102,766; Dec. 21.
Tooker, John N., Canajoharie, assignor to B. Arkell, New York, N. Y. Machine for forming valve bags. 2,102,767; Dec. 21.
Torsion Balance Company, The. (See Becker, C. A., and Seyter, assignors.)
Traut, Conrad W. (See Shank, C. L., and Traut.)
Treger, Aron S., Independence, Kans. Eyeglasses. 2,103,025; Dec. 21.
Trencham, Henry, Ruislip, and H. E. Cox, Dollis Hill, London, England, assignors to General Electric Company. Liquid break circuit breaker. 2,102,768; Dec. 21.
Tropsch, Hans, assignor to Universal Oil Products Company, Chicago, Ill. Treatment of hydrocarbon gases. 2,102,927; Dec. 21.
Turner, Edwin A., assignor, by mesne assignments, to The Standard Stoker Company, (1922), New York, N. Y. Locomotive stoker. 2,103,045; Dec. 21.
Turner, Edwin A., New York, and C. J. Surdy, Tuckahoe, assignors, by mesne assignments, to The Standard Stoker Company Inc., (1922), New York, N. Y. Conveyer. 2,103,212; Dec. 21.
Ulrich, Horace W., Newark, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Service observing system. 2,102,769; Dec. 21.
Union Carbide and Carbon Company. (See Southgate, G. T., and Nicolson, assignors.)
Union Carbide and Carbon Corporation. (See Southgate, G. T., and Nicolson, assignors.)
Union Switch & Signal Company, The. (See Allen, Earl M., assignor.)
Union Switch & Signal Company, The. (See Pfiasterer, George R., assignor.)
United Research Corporation. (See Hasbrouck, Harold J., Jr., assignor.)
United Research Corporation. (See Ma Gee, Frank B., assignor.)
United Shoe Machinery Corporation. (See Finn, Sidney J., assignor.)
United Shoe Machinery Corporation. (See Miner, George A., assignor.)
United Shoe Machinery Corporation. (See Winkley, Erastus E., assignor.)
United States Rubber Company. (See Adamson, Percy, assignor.)
United States Rubber Products, Inc. (See Pickett, Francis N., assignor.)
Universal Oil Products Company. (See Barnes, Merion W., assignor.)
Universal Oil Products Company. (See Benedict, Wayne L., assignor.)
Universal Oil Products Company. (See Dubbs, Carbon P., assignor.)
Universal Oil Products Company. (See Tropsch, Hans, assignor.)
Uyterhoeven, Willem. (See Druyvesteyn, M. J., Uyterhoeven, Bol, and van Dam.)
Uyterhoeven, Willem. (See Holst, G., and Uyterhoeven.)
Uyterhoeven, Willem, and C. Verburg, Eindhoven, Netherlands, assignors to General Electric Company. Gaseous electric discharge lamp device. 2,103,046; Dec. 21.
Uyterhoeven, Willem, and C. Verburg, Eindhoven, Netherlands, assignors to General Electric Company. Gaseous electric discharge device. 2,103,047; Dec. 21.
van Dam, Martinus. (See Druyvesteyn, M. J., Uyterhoeven, Bol, and van Dam.)
Van Dusen, Milton S. (See Smith, G. A., and Van Dusen.)
Van Enkevoort, Albert J., Milwaukee, Wis. Flowerpot holder. 2,103,127; Dec. 21.
Van Leunen, Harry D., Wichita, Kans. Illuminating device. 2,102,928; Dec. 21.
Van Valkenburg, Richard M., Fulton, N. Y. Golf tee. 2,103,026; Dec. 21.
Vaughn, Sidney P., U. S. Navy. Ackerman, Miss. Thermostatic device. 2,102,656; Dec. 21.
Verburg, Cornelis. (See Uyterhoeven, W., and Verburg.)
Vernam, Gilbert S., Hackensack, N. J., and F. G. Halsden, Bellerose, assignors to Postal Telegraph-Cable Company (New York), New York, N. Y. Telegraph system. 2,102,983; Dec. 21.
Verry, Irving H., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Support for weft replenishing magazines. 2,102,864; Dec. 21.
Viau, Charles T., Fresno, Calif. Bearing for disk harrows. 2,102,822; Dec. 21.
Vickers, Harry F., assignor to Vickers Incorporated, Detroit, Mich. Combined flow control and relief valve. 2,102,865; Dec. 21.
Vickers Incorporated. (See Vickers, Harry F., assignor.)
Victor Adding Machine Company. (See Garbell, Max, assignor.)
Von Hofe, George W., Bound Brook, assignor to New Jersey Machine Corporation, Hoboken, N. J. Machine for applying adhesive. 2,102,984; Dec. 21.

Von Ledermann, Lucie, Beverly Hills, Calif., assignor of one-half to C. B. Burns, New York, N. Y. Halter. 2,102,770; Dec. 21.
Von Palmenberg, Raymond T., New York, N. Y. Clip. 2,102,857; Dec. 21.
Von Wald, John A., Los Angeles, Calif. Nonglare headlight. 2,103,208; Dec. 21.
Wacker, Dr. Alexander, Gesellschaft für Electrochemische Industrie, G. m. b. H. (See Kaufler, F., and Schmitz, assignors.)
Wadel, Josef, Hamburg, Germany. Apparatus for loosening the scalp. 2,102,985; Dec. 21.
Wahlsten, Gösta. (See Lysholm, A., Horney, and Wahlsten.)
Waldron, John, Corporation. (See Dickhaut, C. A., and Warner, assignors.)
Waldron, William R. (See Peck, F. W., and Waldron.)
Wallace, James H., Wenatchee, Wash. Brace. 2,102,929; Dec. 21.
Walsh, John J., Maple Shade, N. J. Elevator guide rail lubricator. 2,102,814; Dec. 21.
Walsh, Walter, and S. H. Forster, Menomonie, Wis., assignors of one-half to said Walsh and one-half to said Forster. Combination furnace. 2,102,823; Dec. 21.
Walter, Charles T., assignor to Industrial Patents Corporation, Chicago, Ill. Chilling device. 2,102,866; Dec. 21.
Walter, James C., Warwick, assignor to The Eagle Engineering Company, Limited, Eagle Works, England. Refuse collecting vehicle. 2,103,128; Dec. 21.
Walters, G. M. (See Nash, Paul H., assignor.)
Waltham Watch Company. (See Sherwood, Walter E., assignor.)
Warner, Sterling W. (See Dickhaut, C. A., and Warner.)
Waters, Sidney J., Santa Monica, Calif. Internal combustion engine. 2,103,103; Dec. 21.
Watkins, Edward G., assignor to Simplex Time Recorder Company, Gardner, Mass. Workman's time recorder. 2,102,771; Dec. 21.
Watts, James G., Vancouver, British Columbia, Canada. Dispensing and measuring closure. 2,102,772; Dec. 21.
Waugh, Arthur L., Chicago, Ill. Ligature treating apparatus. 2,102,868; Dec. 21.
Weasler, Anthony V., and A. C. Meyer, assignors to Pick Manufacturing Company, West Bend, Wis. Grille guard. 2,102,815; Dec. 21.
Weaver, James A., Jr. (See Blackburn, J., and Weaver.)
Weaver, Leo L., Cranford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Method of and apparatus for handling strands. 2,102,773; Dec. 21.
Weber, Arthur G. (See Woodhouse, J. C., and Weber.)
Weidhaas, Karl, Berlin-Treptow, Germany, assignor to General Electric Company. Gaseous electric discharge lamp device. 2,103,048; Dec. 21.
Weisenburg, Andrew, assignor to Crown Cork & Seal Company, Inc., Baltimore, Md. Window channel. 2,102,858; Dec. 21.
Weiss, Emil. (See Becker, O. W., and Weiss.)
Wendel, Rudolf, Rosyln Heights, N. Y. Lighting fixture. 2,102,816; Dec. 21.
West Michigan Steel Foundry Co. (See Seyferth, Carl G., assignor.)
Western Electric Company. (See Dixon, Alfred L., assignor.)
Western Electric Company. (See Franz, Erwin E., assignor.)
Western Electric Company. (See Kivley, Ray C., assignor.)
Western Electric Company. (See March, A. T., and Remmers, assignors.)
Western Electric Company. (See Morberg, Ivar A., assignor.)
Western Electric Company. (See Ratcliffe, Harry, assignor.)
Western Electric Company. (See Weaver, Leo L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Slepian, Joseph, assignor.)
Weymouth, Frederick R., Buffalo, N. Y., assignor, by mesne assignments, to Curtiss-Wright Corporation. Fuselage construction. 2,102,817; Dec. 21.
Wharton, Thomas E., Fairfield, Conn., assignor to Remington Arms Company, Inc. Cutlery. 2,102,930; Dec. 21.
Whitaker, Uncas A., Canton, assignor to The Hoover Company, North Canton, Ohio. Suction cleaner. 2,103,049; Dec. 21.
White Cap Company. (See White, William P., assignor.)
White, Chester R., assignor of one-half to M. Miller, Mount Carmel, Ill. Corn planter. 2,103,129; Dec. 21.
White, Ezekiel F., West Hartford, Conn. Adjustable gun choke. 2,102,931; Dec. 21.
White, Harry B., Canton, assignor to The Hoover Company, North Canton, Ohio. Dusting tool for suction cleaners. 2,103,050; Dec. 21.
White, John F., Bloomington, Ill. Buffing wheel and manufacture. 2,102,867; Dec. 21.
White John W., Detroit, Mich., assignor, by mesne assignments, to Bendix Products Corporation. Breathing seal. 2,102,824; Dec. 21.
White, William P., Glencoe, assignor to White Cap Company, Chicago, Ill. Package sealing apparatus. 2,103,051; Dec. 21.
Whitehall Patents Corporation. (See Marinsky, Davis, assignor.)
Whitehead, William. (See Dreyfus, C., and Whitehead.)
Whitin Machine Works. (See Stuart, Henry B., assignor.)
Whitney Metal Tool Company. (See Gardner, Ralph D., assignor.)
Wiegand, Kurt. (See Fritze, O., Rüttenauer, and Wiegand.)
Wiegand, Kurt, Berlin-Tempelhof, Germany, assignor to General Electric Company. Gaseous electric discharge lamp device. 2,103,052; Dec. 21.
Wietzel, Gustav. (See Scheuermann, A., Brill, and Wietzel.)
Wildhaber, Ernest, assignor to Gleason Works, Rochester, N. Y. Producing gears. 2,102,659; Dec. 21.
Wilkening Manufacturing Company. (See Wuerfel, William, assignor.)
Wilkinson, Lester F., Garrett Park, Md. Sensing mechanism for tabulating machines. 2,102,932; Dec. 21.
Williams, Arthur. (See Ostermann, R. M., and Williams.)
Williams, Selden T., Bellerose, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn. Coupling. 2,102,774; Dec. 21.
Wilson Engineering Corporation. (See McCoy, V. E., assignor, and Anderson.)
Windle, Randolph T., New York, N. Y. Safety bar or grating. 2,103,130; Dec. 21.
Winkley, Erastus E., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for operating on sheet material. 2,102,660; Dec. 21.
Winter, Herbert, Buchschlag in Hessia, Germany, assignor to The New Jersey Zinc Company, New York, N. Y. Zinc alloys. 2,102,869; Dec. 21.
Winthrop Chemical Company. (See Pützer, B., and Schönhöfer, assignors.)
Winthrop Chemical Company Inc. (See Kircher, A., and Siens, assignors.)
Wirbatz, Wilhelm. (See Müller, R., Schenck, and Wirbatz.)
Witzel, Ernst, assignor to Young Radiator Company, Racine, Wis. Evaporator. 2,102,870; Dec. 21.
Wolf Brothers. (See Wolf, Howard A., assignor.)
Wolf, Harry C., assignor to Irsugo Consolidated Mines, Limited, Indianapolis, Ind. Unlocking ore bodies to extract sulphur and iron therefrom. 2,103,131; Dec. 21.
Wolf, Howard A., assignor to Wolf Brothers, Philadelphia, Pa. Bag. 2,103,199; Dec. 21.
Woodhead, Hannah C., Darby, Pa. Automobile gas tank cap lock. 2,102,775; Dec. 21.
Woodhouse, John C., Cragmere, and A. G. Weber, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Hydraulic fluids. 2,102,825; Dec. 21.
Worthington Machinery Corporation of Oklahoma. (See Kotzebue, Meinhard H., assignor.)
Worthington Pump and Machinery Corporation. (See Hirschberg, Charles A., assignor.)
Wright, Walter F. (See Dall, Edward D., assignor.)
Wuerfel, William, assignor to Wilkening Manufacturing Company, Philadelphia, Pa. Piston construction. 2,102,661; Dec. 21.
Wurtele, Allan R., New Roads, La. Internal combustion engine. 2,102,662; Dec. 21.
Wurzbach, Hugh E., and C. H. Konold, Magna, Utah. Vibratory apparatus. 2,102,826; Dec. 21.
Wynne, Tillet H., Sr., Griffin, Ga. Eyeglass. 2,102,986; Dec. 21.
Yamamoto, Samuro, assignor to Shozaburo Hashino, Iriaral Machi, Ebara-gun, Tokyo-fu, Japan. Spinning liquor for artificial silks. 2,102,933; Dec. 21.
Yoerg, Alfred F., assignor of one-half to H. Schlesinger, Des Moines, Iowa. Electric rotary laundry iron. 2,102,871; Dec. 21.
Yohe, Robert V. (See Semon, W. L., and Yohe.)
Yosyk, Thomas, Ridgewood, N. Y. Garment pressing machine. 2,102,663; Dec. 21.
Young, Fred M., Racine, Wis. Radiator. 2,103,105; Dec. 21.
Young, Fred M., assignor to Young Radiator Company, Racine, Wis. Air conditioner for vehicle bodies. 2,103,104; Dec. 21.
Young, L. A., Spring and Wire Corporation. (See Lesinski, Walter, assignor.)
Young Radiator Company. (See Witzel, Ernst, assignor.)
Young Radiator Company. (See Young, Fred M., assignor.)
Youngstown Steel Door Company, The. (See Ditchfield, Frank, assignor.)
Yurkovitch, Anton, Pittsburgh, Pa. Bracket device. 2,103,106; Dec. 21.
Zaidan Hojin Rikagaku Kenkyujo. (See Akahira, Takeo, assignor.)
Zivi, Edwin L. (See Gray, R. B., and Zivi.)
Zotos Corporation. (See McDonough, Everett G., assignor.)

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 21ST DAY OF DECEMBER, 1937

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Display device. L. E. Shaw. 20,599; Dec. 21.
Fastener, Snap. F. Thiele. 20,601; Dec. 21.
Film magazine. N. Bouveng. 20,595; Dec. 21.
Fluid power controlling mechanism. E. G. Staude. 20,600; Dec. 21.
Fuel, Manufacturing motor. J. F. M. Taylor, B. S. Greensfelder, and R. N. Shiras. 20,596; Dec. 21.
Internal combustion engine. L. C. Jackson. 20,597; Dec. 21.
Packing container. M. P. Mosesian. 20,598; Dec. 21.
Vacuum tube. S. Ruben. 20,602; Dec. 21.

LIST OF DESIGN INVENTIONS

Advertising device, Theater lobby. A. A. Young and A. R. Telser. 107,590–91; Dec. 21.
Antenna, Automobile hood. V. E. Thompson. 107,562; Dec. 21.
Atomizer. F. A. Vuillemenot. 107,566; Dec. 21.
Automobile. D. W. Graber. 107,512; Dec. 21.
Baffle element for lighting fixtures. E. F. Sibbert. 107,554–5; Dec. 21.
Bank, Coin. D. H. Zell. 107,592; Dec. 21.
Belt. A. I. Beldoch. 107,607; Dec. 21.
Body, Automobile. R. Rogers. 107,549; Dec. 21.
Bottle. J. E. Moore. 107,541; Dec. 21.
Bottle. J. E. Moore and B. H. Koons. 107,542; Dec. 21.
Bottle. J. Shoor. 107,580; Dec. 21.
Bottle. J. H. Toulouse. 107,586; Dec. 21.
Bottle, Glass. L. J. Kihn. 107,575; Dec. 21.
Bowl. L. Farber. 107,504; Dec. 21.
Bowl and cover or similar article, Combined. W. K. Titze. 107,585; Dec. 21.
Brush or similar article. P. Muller-Munk. 107,544; Dec. 21.
Buckle. E. V. Penn. 107,546; Dec. 21.
Building. D. G. Terrie. 107,561; Dec. 21.
Cape. B. Lefrak. 107,524; Dec. 21.
Case, Corn popping machine. G. A. Delf. 107,502; Dec. 21.
Casing, Flashlight. H. M. Price . 107,578; Dec. 21.
Casing, Scale. J. M. Little and H. L. van Doren. 107,526; Dec. 21.
Casing, Telephone. T. McCann. 107,538; Dec. 21.
Casing, Toilet odor expeller. G. H. Davis. 107,501; Dec. 21.
Casket, Burial. R. J. Treviño. 107,587; Dec. 21.
Chair. J. B. O'Connor. 107,545; Dec. 21.
Charm or the like. W. Lampl. 107,523; Dec. 21.
Chimney and lamp shade, Combined. S. A. Baker. 107,496; Dec. 21.
Coat. H. Miller. 107,601; Dec. 21.
Coat. H. Miller. 107,632; Dec. 21.
Comb, Curling. E. C. Ruckdeschel and W. N. Brady. 107,550; Dec. 21.
Curtain. G. F. Erhard. 107,614; Dec. 21.
Cushion. J. H. Johnson. 107,520; Dec. 21.
Desk unit, Combination. R. H. Cromwell. 107,594; Dec. 21.
Dish and cover or similar article, Combined refrigerator. W. K. Titze. 107,565; Dec. 21.
Dish or similar article. W. H. Gerth and A. Krautheim. 107,598; Dec. 21.
Doll, Toy. J. Swedlin. 107,583; Dec. 21.
Dress. S. Cicardo. 107,609; Dec. 21.
Dress. T. Coleman. 107,611–12; Dec. 21.
Dress. S. Comolli. 107,626; Dec. 21.
Dress. J. Greenman. 107,627–9; Dec. 21.
Dress. M. Hall. 107,599; Dec. 21.
Dress. M. Hall. 107,630–31; Dec. 21.
Dress. P. Schlessel. 107,618; Dec. 21.
Dress. M. E. Smith. 107,620; Dec. 21.
Dress. M. Stone. 107,633; Dec. 21.
Dress. V. Tomshinsky. 107,622; Dec. 21.
Dress. A. Waxberg. 107,606; Dec. 21.
Dress. I. Welch. 107,569; Dec. 21.
Dress. H. Zinn. 107,624; Dec. 21.
Dress ensemble. C. Colcord. 107,610; Dec. 21.
Electric controlling device. C. B. Stevens. 107,559; Dec. 21.
Fabric, Embroidered. I. Stiglitz. 107,621; Dec. 21.
Fabric, Textile. J. W. H. Brooks. 107,593; Dec. 21.
Fabric, Textile. J. W. H. Brooks. 107,608; Dec. 21.
Fabric, Textile. J. W. H. Brooks. 107,625; Dec. 21.
Fabric, Textile. M. Forman. 107,615; Dec. 21.
Fabric, Textile. R. S. Gentile. 107,597; Dec. 21.
Fabric, Textile. R. S. Gentile. 107,616; Dec. 21.
Fabric, Textile. E. P. Hullings. 107,617; Dec. 21.
Fabric, Textile. W. Ross. 107,603; Dec. 21.
Fabric, Textile. J. W. Snowden. 107,604; Dec. 21.
Fabric, Textile. M. Turpan. 107,605; Dec. 21.
Fabric, Textile. M. Turpan. 107,623; Dec. 21.
Fabric, Textile. M. Turpan. 107,634–5; Dec. 21.
Fan, Electric. R. E. Kruck. 107,522; Dec. 21.
Food server or similar article. L. Guild. 107,516; Dec. 21.
Handbag. H. Felmann. 107,505–10; Dec. 21.
Handbag. H. Felmann. 107,595–6; Dec. 21.
Hat. E. Schoen. 107,553; Dec. 21.
Heater or the like, Automobile. G. R. Graff. 107,513–14; Dec. 21.
Holder, Desk memorandum sheet. O. F. Holmgreen and W. B. Petzold. 107,518; Dec. 21.
Holder or the like, Pot. M. M. Sieverling. 107,619; Dec. 21.
Housing, Parking meter. R. Loewy. 107,527–31; Dec. 21.
Housing, Parking meter. J. B. McGay and G. E. Nicholson. 107,577; Dec. 21.
Humidifier. E. A. Reid. 107,548; Dec. 21.
Jar or similar container. W. F. Straub. 107,582; Dec. 21.
Lamp. F. F. Holstein. 107,519; Dec. 21.
Lavatory and cabinet, Combined. G. Sakier. 107,551; Dec. 21.
Letter opener and ruler, Combined educational. R. V. Erk. 107,570; Dec. 21.
Marker, Highway. F. T. Ranney. 107,579; Dec. 21.
Mirror or similar article. P. Muller-Munk. 107,543; Dec. 21.
Mouthpipe key for a saxophone. H. W. Loney. 107,535; Dec. 21.
Novelty, Mailing. C. E. Walker. 107,568; Dec. 21.
Pail, Milk. T. D. McHale. 107,540; Dec. 21.
Pencil. R. Kropsch. 107,521; Dec. 21.
Pencil tip. W. Cook. 107,498–500; Dec. 21.
Pitcher or similar article. W. K. Titze. 107,564; Dec. 21.
Refrigerator cabinet body. C. A. Frick. 107,571; Dec. 21.
Ring, Monogram napkin. P. Brady. 107,497; Dec. 21.
Saddle. C. R. Waldron and R. W. Faulhaber. 107,589; Dec. 21.
Shoe. W. Ebling. 107,503; Dec. 21.
Shoe. J. Levine. 107,525; Dec. 21.
Shoe. E. W. McCain. 107,536–7; Dec. 21.
Shoe. H. Sobel. 107,556–8; Dec. 21.
Shoe. B. L. Wales. 107,567; Dec. 21.
Shoe or similar article. M. Pianco. 107,602; Dec. 21.
Slacks and suspenders, Combination. M. Solomon. 107,581; Dec. 21.
Slip. S. B. Hochman. 107,572–3; Dec. 21.
Stand, Axle. A. L. Johnson. 107,574; Dec. 21.
Standard for theater chairs, End. R. Loewy. 107,532–4; Dec. 21.
Statuette or similar article. N. A. Long. 107,576; Dec. 21.
Support for invalids, Walking. E. R. Vaught. 107,588; Dec. 21.
Sweater. S. Kurtz. 107,600; Dec. 21.
Tank, Trailer. R. D. George. 107,511; Dec. 21.
Tank, Vehicular. F. G. Thwaits. 107,563; Dec. 21.
Tire, Pneumatic. S. P. Thacher. 107,584; Dec. 21.
Toaster. G. T. Scharfenberg. 107,552; Dec. 21.
Tool, Glass cutting. H. G. Hamilton. 107,517; Dec. 21.
Tool unit, Power-driven hand. D. D. Taylor. 107,560; Dec. 21.
Tractor body. E. McCormick. 107,539; Dec. 21.
Tumbler. R. Peters. 107,547; Dec. 21.
Vest, Knitted. N. Cooper. 107,613; Dec. 21.
Wheel for a roller skate or the like. E. A. Grange, A. F. Kaptuller, and E. J. Schmidt. 107,515; Dec. 21.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 21ST DAY OF DECEMBER, 1937

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive pad. M. F. Read. 2,102,745; Dec. 21.
Acetaldehyde, Production of. A. Scheuermann, R. Brill, and G. Wietzel. 2,102,751; Dec. 21.
Acoustical device. H. F. Olson. 2,102,736; Dec. 21.
Adding machine. M. Garbell. 2,102,693; Dec. 21.
Adhesive, Plyboard. J. V. Bauer. 2,102,937; Dec. 21.
Advertising carrier, Automobile rear. H. A. Acy. 2,102,987; Dec. 21.
Advertising device. C. Jerabek. 2,102,798; Dec. 21.
Advertising or display device. L. Prins. 2,103,175; Dec. 21.
Agitator for game elements. C. F. Klein. 2,103,009; Dec. 21.
Air conditioner for vehicle bodies. F. M. Young. 2,103,104; Dec. 21.
Air heater. W. P. Hayne. 2,102,592; Dec. 21.
Air treating unit. D. M. Hall. 2,102,703; Dec. 21.
Aircraft construction. R. B. Gray and E. L. Zivl. 2,102,590; Dec. 21.
Alcohols, Production of. M. Luther and W. Dietrich. 2,102,726; Dec. 21.
Aldehydes, Manufacture of unsaturated. W. C. Meuly. 2,102,965; Dec. 21.
Alloys, Heat treating nickel-iron. A. L. Dixon. 2,102,683; Dec. 21.
Alloys, Zinc. H. Winter. 2,102,869; Dec. 21.
Amplifier, Thermionic. G. L. Beers. 2,102,779; Dec. 21.
Anesthetics, Apparatus for giving. J. Carré. 2,103,144; Dec. 21.
Annunciator. L. J. Stevens. 2,103,123; Dec. 21.
Antimony chlorides, Preparation of. F. W. Peck and W. R. Waldron. 2,102,737; Dec. 21.
Antioxidant. W. L. Semon and R. V. Yohe. 2,103,188; Dec. 21.
Armature, Commutating type. W. J. Morrill. 2,103,166; Dec. 21.
Armor plates, Manufacture of. G. L. Miller. 2,102,963; Dec. 21.
Article filing and delivery system. J. W. Coombs. 2,102,995; Dec. 21.
Article holder. A. T. Fischer. 2,102,690; Dec. 21.
Articles containing organic derivatives of cellulose, Method and device of treating. B. C. Gibbs. 2,102,794; Dec. 21.
Articles, Forming sheet metal. I. A. Morberg. 2,102,732; Dec. 21.
Artificial effect material. R. P. Roberts. 2,102,647; Dec. 21.
Asphalt solution. F. Kaufler and H. P. Schmitz. 2,102,957; Dec. 21.
Assembly for automotive vehicles, Driving and supporting. O. E. Szekely. 2,102,923; Dec. 21.
Automatic system for supplying pulverized fuel to furnaces. E. V. Francis. 2,102,691; Dec. 21.
Auxiliary wheel. J. R. Catalina. 2,102,835; Dec. 21.
Azo dyestuffs. J. H. Helberger and O. Bayer. 2,102,593; Dec. 21.
Bag: *See*—
  Traveling bag. Valve-closed bag.
Bag. H. A. Wolf. 2,103,199; Dec. 21.
Bag and producing the same. F. T. Robinson. 2,103,092; Dec. 21.
Bait, Fish. F. J. Peters. 2,102,739; Dec. 21.
Bar or grating, Safety. R. T. Windle. 2,103,130; Dec. 21.
Barrier in connection with exit portal in fish lifts, Telescopic. L. E. Knerr. 2,102,628; Dec. 21.
Bars, Method of and apparatus for handling hot metal. J. R. George. 2,102,792; Dec. 21.
Base, Baseball. G. H. Conrad. 2,103,148; Dec. 21.
Bathtub. R. Mueller. 2,102,733; Dec. 21.
Bathing device, Infant's. B. H. Kennedy. 2,102,958; Dec. 21.
Bathtub and foot actuated dressing table therefor, Infant's. D. M. Kennedy. 2,102,959; Dec. 21.
Bearing: *See*—
  Pump thrust bearing
Bearing. C. H. Hellyar. 2,102,952; Dec. 21.
Bearing for disk harrows. C. T. Vian. 2,102,822; Dec. 21.
Bed, table, and sofa, Combination. B. Spanglet. 2,102,980; Dec. 21.
Beehive. E. Engelbrektsson. 2,103,066; Dec. 21.
Binding, Ski. J. E. Barieau. 2,102,669; Dec. 21.
Blades in rotary machines, Arrangement of radially traversed. U. Meininghaus. 2,102,637; Dec. 21.
Block: *See*—
  Building block.
Blood, Method of and apparatus for sedimentation testing of. C. Brooks. 2,102,785; Dec. 21.
Board and parts thereof, Panel. W. H. Frank, C. T. Hollingsworth, and L. E. Fisher. 2,103,069; Dec. 21.
Boat, Power. B. W. Morris, Jr. 2,103,087; Dec. 21.
Boiler feed apparatus. V. E. McCoy and R. W. Anderson. 2,103,225; Dec. 21.
Bolt heads, Forming. H. Cadwallader, Jr. 2,102,941; Dec. 21.
Bolt-setting tool. M. Holhut. 2,102,897; Dec. 21.
Bottle filling machine. J. Kantor. 2,103,158; Dec. 21.
Bottle, Nonrefillable. S. G. Conkling. 2,103,065; Dec. 21.
Box: *See*—
  Mail box. Steam box.
Brace. J. H. Wallace. 2,102,929; Dec. 21.
Bracket device. A. Yurkovitch. 2,103,106; Dec. 21.
Braided article. P. H. Boivin. 2,102,829; Dec. 21.
Brake. E. G. Carroll. 2,102,833–4; Dec. 21.
Brake. L. E. La Brie. 2,102,851–2; Dec. 21.
Brake. E. G. McDonald. 2,102,853; Dec. 21.
Brake controlling device, Automobile. A. Pichuckl. 2,103,089; Dec. 21.
Brake lining. A. Rosner. 2,102,855; Dec. 21.
Brake mechanism. C. A. Sawtelle. 2,102,810; Dec. 21.
Brake system for trains. F. K. Clar. 2,103,061; Dec. 21.
Brassière. M. Cadolle. 2,103,060; Dec. 21.
Bricks, Making refractory. G. E. Sell. 2,102,976; Dec. 21.
Bridge table. C. S. Dill. 2,102,888; Dec. 21.
Bulling wheel and manufacture. J. F. White. 2,102,867; Dec. 21.
Building block. G. A. Smith and M. S. Van Dusen. 2,102,756; Dec. 21.
Building structure. D. M. Douglass. 2,103,152; Dec. 21.
Burner for liquid fuel. J. Spirig. 2,102,759; Dec. 21.
Butter-substitute mixing and molding device. R. R. Auerswald. 2,102,874; Dec. 21.
Cabinet for the use and storage of an instrument. R. C. Robert. 2,103,091; Dec. 21.
Cable, Electric. D. M. Robinson. 2,102,974; Dec. 21.
Calculating machine of the ten key type. E. V. Gustafsson and G. H. Hellgren. 2,102,700; Dec. 21.
Caiking gun. R. E. Bishop. 2,102,939; Dec. 21.
Can: *See*—
  Garbage can. Oil can.
Can and cover feeding mechanism. N. P. Bach. 2,102,605; Dec. 21.
Can neck, Reinforcing a milk. L. Sturges. 2,102,862; Dec. 21.
Canalized structures, Apparatus for constructing monolithic. J. P. L. Mourraille. 2,102,639; Dec. 21.
Candy, Packaging. G. A. Petremont. 2,102,971; Dec. 21.
Cap, Delay blasting. M. Palmieri and S. D. Ehrlich. 2,103,014; Dec. 21.
Cap, Dispensing. R. E. Salvesen. 2,102,749; Dec. 21.
Caps to bottles, Making and applying. J. R. Gammeter. 2,102,949; Dec. 21.
Capsule or storing fluids. P. Schlumbohm. 2,102,858; Dec. 21.
Car control mechanism, Motor. R. G. Coates. 2,102,586; Dec. 21.
Car construction, Hopper. N. B. Akitt. 2,103,132; Dec. 21.
Car, Refrigerator. J. Lithgow. 2,102,725; Dec. 21.
Carburetor. S. F. Hunt. 2,102,846; Dec. 21.
Carrier: *See*—
  Advertising carrier.
Carrier telegraph system. J. T. Nelswinter. 2,102,735; Dec. 21.
Cart, Rocker dump hand. R. B. Dorward. 2,102,684; Dec. 21.
Case: *See*—
  Snelled hook case.
Casein compound and process of making. H. V. Dunham. 2,103,153; Dec. 21.
Catalytic oxidation, Controlled. L. G. Jenness. 2,103,219; Dec. 21.
Cellulose esters. R. Müller, M. Schenck, and W. Wirbatz. 2,103,012; Dec. 21.
Cellulose nitrate, Dehydrating. D. G. Kennedy and J. K. Rulon. 2,102,799; Dec. 21.
Check writer. O. Slettevold and C. W. Johnson. 2,103,098; Dec. 21.
Cheese slicing and dispensing apparatus. G. W. Spousta. 2,102,859; Dec. 21.
Chilling device. C. T. Walter. 2,102,866; Dec. 21.
Chiropractic demonstrating device. G. W. Salsman. 2,103,021; Dec. 21.
Circuit breaker. W. H. Frank. 2,103,070; Dec. 21.
Circuit breaker, Liquid break. H. Trencham and H. E. Cox. 2,102,768; Dec. 21.

Circuit, Electric valve. R. G. Lorraine. 2,103,164; Dec. 21.
Circuit, Electrical tuned. D. E. O'Donovan. 2,102,805; Dec. 21.
Circuit interrupter. J. Slepian. 2,103,121; Dec. 21.
Clamping device. R. D. Gardner. 2,103,074; Dec. 21.
Cleaner: *See*—
  Magnetic thread cleaner. Vacuum cleaner.
  Suction cleaner.
Cleaner for vegetables. W. H. Spayd. 2,102,758; Dec. 21.
Cleaning tool. H. Siemund. 2,103,198; Dec. 21.
Clinker cooler. R. C. Newhouse and B. H. Puerner. 2,103,170; Dec. 21.
Clip. R. T. von Palmenberg. 2,102,657; Dec. 21.
Clipper. H. Hill and W. H. Foxall. 2,102,594; Dec. 21.
Closure, Dispensing and measuring. J. G. Watts. 2,102,772; Dec. 21.
Coating and stripping device. F. P. Carlson. 2,102,679; Dec. 21.
Coating composition and making the same. M. V. Hitt, D. G. Kennedy, and H. L. Priddy. 2,102,595; Dec. 21.
Coatings to shoes and other objects, Applying protective. C. Miller. 2,102,804; Dec. 21.
Combination furnace. W. Walsh and S. H. Forster. 2,102,823; Dec. 21.
Combination tool. J. J. Kinast. 2,103,008; Dec. 21.
Compacting apparatus. T. A. Bowers. 2,103,142; Dec. 21.
Concealable spot lamp. T. W. Neel and J. D. Blocker. 2,102,967; Dec. 21.
Condensers, Device for charging. A. Bouwers. 2,102,883; Dec. 21.
Connecter: *See*—
  Electrical connecter. Wire connecter.
  Wall connecter.
Constant temperature apparatus. S. A. Bokovoy. 2,102,783; Dec. 21.
Container. J. E. Annen. 2,102,666; Dec. 21.
Container conveyer and distributor. C. N. Bergmann. 2,103,107; Dec. 21.
Container for preserving eggs. N. G. Conner. 2,102,886; Dec. 21.
Container sealing machine. I. E. Black, F. J. Hoffer, and H. B. Silver. 2,103,213; Dec. 21.
Container structure, Individual cosmetic. J. O. Carroll. 2,102,885; Dec. 21.
Control of gearing for driving superchargers on aircraft engines. G. M. Cutler. 2,103,149; Dec. 21.
Control system. J. R. Alexander, Jr. 2,102,664; Dec. 21.
Controlling apparatus. R. D. McDill. 2,102,598; Dec. 21.
Conveyer. E. A. Turner and C. J. Surdy. 2,103,212; Dec. 21.
Cooker, Pressure. L. L. Ludington. 2,102,962; Dec. 21.
Cooker, Pressure. C. Nelson. 2,102,908; Dec. 21.
Cooler: *See*—
  Clinker cooler.
Cooler. M. H. Kotzebue. 2,102,723; Dec. 21.
Copper and making the same, High conductivity, phosphorus-deoxidized. F. F. Poland. 2,102,742; Dec. 21.
Copper, Refining. A. T. March and W. E. Remmers. 2,102,728; Dec. 21.
Cosmetics, Protective. S. Isermann, E. Ohlsson, and J. W. Orelup. 2,102,712; Dec. 21.
Coupler, Toy train. N. Rydin. 2,102,649; Dec. 21.
Coupling. G. E. Lofgren. 2,102,802; Dec. 21.
Coupling. S. T. Williams. 2,102,774; Dec. 21.
Coupling device for trailers and tractors. C. G. Seyferth. 2,102,821; Dec. 21.
Cover: *See*—
  Spring cover.
Cover cutting and skiving device, Heel-breast. L. Sabo and J. Polkovics. 2,103,120; Dec. 21.
Crankshaft. E. Rumpler. 2,103,185; Dec. 21.
Creel. G. B. Cocker. 2,102,680; Dec. 21.
Current producing unit or cell, Electric. J. Gyuris. 2,102,701; Dec. 21.
Cushion foot for chairs. G. D. Schermerhorn. 2,103,095; Dec. 21.
Cut-out and joint therefor. T. Birkenmaier. 2,103,056; Dec. 21.
Cutlery. T. E. Wharton. 2,102,930; Dec. 21.
Cutter head for suction dredges. W. H. Stires. 2,103,124; Dec. 21.
Cutting apparatus. W. H. Ford. 2,103,217; Dec. 21.
Dam forming device for listers. C. T. Peacock. 2,103,116; Dec. 21.
Decomposition products from olefine-SO_2 complexes, Producing. R. D. Snow. 2,102,654; Dec. 21.
Decorative coated fabric. H. J. Jenemann. 2,102,715; Dec. 21.
Deflector for knitting machines. R. H. Lawson and W. L. Smith, Jr. 2,103,197; Dec. 21.
Dental jack. D. D. Mizzy and D. L. Durst. 2,103,115; Dec. 21.
Denture cleaning device. D. Pellegrini. 2,102,643; Dec. 21.
Denture demonstrating device. G. H. Burtenshaw. 2,103,058; Dec. 21.
Derivatives of cyclic ether-like compounds, Basic. B. Pützer and F. Schönhöfer. 2,103,017; Dec. 21.
Developer to a moving print, Applying. H. J. Brunk. 2,102,585; Dec. 21.
Device for dispensing measured quantities of divided solid material. E. J. Barnett. 2,102,877; Dec. 21.
Differential gear. L. S. Brown. 2,103,143; Dec. 21.
Dihalogen butenes and their preparation. W. H. Carothers and A. M. Collins. 2,102,611; Dec. 21.
Discharge device, Gaseous and vapor electric. G. E. Inman. 2,103,034; Dec. 21.
Dispenser. H. G. Slining. 2,102,978; Dec. 21.
Dispenser and method for dispensing liquids, Liquid. J. W. Thorsen. 2,103,194; Dec. 21.
Dispensing apparatus for liquefied gas. H. C. Pittman. 2,102,912; Dec. 21.
Display device. N. H. Howe. 2,102,845; Dec. 21.
Display device. J. A. Kern. 2,102,596; Dec. 21.
Display rack. W. E. Shoemaker and G. French. 2,102,977; Dec. 21.
Door check. G. Halinka. 2,103,004; Dec. 21.
Door, Lift. F. Ditchfield. 2,103,000; Dec. 21.
Draft control, Automatic. C. G. Anderson. 2,102,873; Dec. 21.
Draft regulator. J. L. Breese. 2,102,884; Dec. 21.
Drafting machine. L. McDonald. 2,102,636; Dec. 21.
Drain and supply system, Oil. R. J. Gray. 2,102,795; Dec. 21.
Drier: *See*—
  Vertical drier.
Driers, Production of metallic. K. E. Long. 2,102,633; Dec. 21.
Drill feeding mechanism. C. A. Hirschberg. 2,102,706; Dec. 21.
Drink preparing means. E. M. Savage. 2,102,920; Dec. 21.
Drive, Coal worm. H. C. Carter. 2,103,145; Dec. 21.
Drive for printing machines. F. Lamatsch. 2,102,631; Dec. 21.
Drive mechanism. N. E. Squire. 2,103,190; Dec. 21.
Drive of air-screen propelled cars, Electric. H. Fraser. 2,103,156; Dec. 21.
Eggs, Method and apparatus for testing. F. L. Rivenburgh. 2,102,646; Dec. 21.
Electric conduction device. C. Bol. 2,103,028; Dec. 21.
Electric discharge device. K. H. Kingdon. 2,103,159; Dec. 21.
Electric discharge device, Gaseous. N. W. H. Addink. 2,103,053; Dec. 21.
Electric discharge device, Gaseous. E. G. Dorgelo. 2,103,030; Dec. 21.
Electric discharge device, Gaseous. A. Fehse and M. Reger. 2,103,068; Dec. 21.
Electric discharge device, Gaseous. M. Pirani and M. Reger. 2,103,039; Dec. 21.
Electric discharge device, Gaseous. P. Schoonenberg and J. A. M. Smelt. 2,103,043; Dec. 21.
Electric discharge device, Gaseous. W. Uyterhoeven and C. Verburg. 2,103,047; Dec. 21.
Electric discharge devices, Method of and apparatus for operating. L. J. Buttolph. 2,103,059; Dec. 21.
Electric discharge lamp, Gaseous. G. Holst and W. Uyterhoeven. 2,103,078; Dec. 21.
Electric lamp. A. H. McKeag and J. T. Randall. 2,103,085; Dec. 21.
Electrical connecter. W. H. Frank. 2,103,071; Dec. 21.
Electrical connecter. W. A. Heinrich. 2,102,896; Dec. 21.
Electrical currents, Generating. J. Plebanski. 2,103,090; Dec. 21.
Electrical device and cable sealing means, Combined housed. J. P. Smith. 2,102,757; Dec. 21.
Electrical impulses, Recording and reproducing of. M. W. Gleskieng. 2,102,695; Dec. 21.
Electrical impulses, Recording of. K. Schwarz. 2,102,753; Dec. 21.
Electrical switch gear. E. S. Cornell, C. A. Koerner, and R. A. Sternaman. 2,102,887; Dec. 21.
Electrode, Electron emissive. G. E. Inman. 2,103,033; Dec. 21.
Electromagnetic device, Slow. A. B. Rypinski. 2,103,019; Dec. 21.
Enamel, Clouded vitreous. I. Kreidl. 2,102,630; Dec. 21.
Enamel, Making white clouded iron. I. Kreidl. 2,103,229; Dec. 21.
Enamel, Opaque vitreous. C. J. Kinzie. 2,102,720; Dec. 21.
Enamel, White clouded vitreous. I. Kreidl. 2,103,228; Dec. 21.

Lighting equipment for passenger vehicles. L. C. Doane. 2,102,944; Dec. 21.
Lighting fixture. R. Wendel. 2,102,816; Dec. 21.
Liner for bearings. E. R. Darby and P. J. Potter. 2,102,998; Dec. 21.
Lip laying device. G. A. Miner. 2,102,731; Dec. 21.
Liquid level indicating valve. E. H. Bickley. 2,103,055; Dec. 21.
Liquid measuring device. J. J. Cubete. 2,102,615; Dec. 21.
Liquid products, Apparatus for handling. J. C. Hester. 2,102,844; Dec. 21.
Liquids, Vaporizing and spraying thick. H. H. Schmidt. 2,102,650; Dec. 21.
Liquor for artificial silks, Spinning. S. Yamamoto. 2,102,933. Dec. 21.
Lock: *See*—
Tank cap lock.
Locking device for automobile and the like, Door. E. D. Dall. 2,102,997; Dec. 21.
Locomotive. R. M. Ostermann and A. Williams. 2,102,806; Dec. 21.
Locomotive, Articulated. H. K. Patjens. 2,103,172; Dec. 21.
Loop taker, Rotary. R. K. Hohmann. 2,102,954; Dec. 21.
Loudspeaker, Piezoelectric. S. Ballantine. 2,102,668; Dec. 21.
Lubricated twister ring. H. B. Stuart. 2,102,861; Dec. 21.
Lubricating device. O. B. Clark. 2,103,063; Dec. 21.
Lubricating device. H. R. Tear. 2,103,044; Dec. 21.
Lubricating device for driving chains. V. A. Kjaer. 2,103,161; Dec. 21.
Lubricator: *See*—
Rail lubricator.
Machine for applying adhesive. G. W. von Hofe. 2,102,984; Dec. 21.
Machine for applying transfers. J. L. Peterson. 2,102,970; Dec. 21.
Machine for forming valve bags. J. N. Tooker. 2,102,767; Dec. 21.
Machine for operating on sheet material. E. E. Winkley. 2,102,660; Dec. 21.
Machine tool. L. C. Cole. 2,102,613; Dec. 21.
Machine tool. L. C. Cole. 2,103,147; Dec. 21.
Machine tool. M. L. Strawn. 2,102,655; Dec. 21.
Magnetic thread cleaner. N. Stoddard. 2,103,125; Dec. 21.
Mail box. H. S. Gilman. 2,102,620; Dec. 21.
Map in book form. N. P. Bergquist. 2,103,139; Dec. 21.
Maps, Method and apparatus for making. C. W. Collier. 2,102,612; Dec. 21.
Mat concentrator, Traveling. J. T. Shimmin. 2,102,652; Dec. 21.
Material for arc welding. L. E. Faulkner. 2,102,891; Dec. 21.
Material, Making ornamented plastic. W. F. Roberts. 2,102,747; Dec. 21.
Material treating apparatus. R. E. Briggs. 2,102,990; Dec. 21.
Material working apparatus. R. C. Kivley. 2,102,721; Dec. 21.
Materials and products therefrom, Producing linen-like. J. Killars, Jr. 2,103,080; Dec. 21.
Materials, Method and apparatus for treating. D. S. Baker. 2,102,607; Dec. 21.
Materials of different densities, Apparatus for dry separation of. F. J. Berry. 2,102,880; Dec. 21.
Measuring device, particularly for machines for testing materials. S. J. Amsler. 2,102,872; Dec. 21.
Metal coloring. C. N. Sprankle and E. J. Golec. 2,102,925; Dec. 21.
Metallic and other substances in textile or fibrous material, Detecting. T. Merchant. 2,102,906; Dec. 21.
Meter. W. L. Herron. 2,103,077; Dec. 21.
Milk products, Treatment of. H. E. Otting, E. H. Browne, and M. E. Hull. 2,102,642; Dec. 21.
Mixing valve. R. A. J. Evans. 2,103,067; Dec. 21.
Molded handled receptacle. G. L. Smith. 2,102,653; Dec. 21.
Mollusks, Shelling. J. H. Doxsee, Jr., and W. H. Cook. 2,102,945; Dec. 21.
Motor: *See*—
Rotary motor.
Synchronous induction motor.
Motor control system. W. R. Perry. 2,102,911; Dec. 21.
Mounting, Door handle. G. V. Jakeway. 2,102,714; Dec. 21.
Mounting, Gun barrel. S. G. Green. 2,102,622; Dec. 21.
Mounting, Window stop strip. H. W. Lane. 2,103,162; Dec. 21.
Nails to a metal body, Apparatus for welding. W. T. Ober. 2,103,206; Dec. 21.
Navigator, Solar. L. T. Eliel. 2,102,587; Dec. 21.
Necktie, Four-in-hand. A. Scharlin. 2,103,094; Dec. 21.
Needle, Flexible knitting. L. M. Miller. 2,102,600; Dec. 21.
Nitrocelluiose and to the product thereof, Dehydration of. W. E. Gloor. 2,102,697; Dec. 21.
Noncorrodible object and producing same. F. P. Romanoff. 2,103,119; Dec. 21.
Nozzle, Vented. F. D. Campbell. 2,102,786; Dec. 21.
Odometer reset. W. E. Sherwood. 2,103,023; Dec. 21.
Oil can, Pistol grip. E. W. Davis. 2,102,837; Dec. 21.
Oil refining process. J. Happel and D. W. Robertson. 2,102,796; Dec. 21.
Oil, Treatment of hydrocarbon. C. P. Dubbs. 2,102,889; Dec. 21.
Oils, Dewaxing hydrocarbon. P. D. Barton and D. B. Banks. 2,102,828; Dec. 21.
Oils, Recovery of the unsaponifiable fractions of. R. P. Nichols. 2,103,193; Dec. 21.
Oils, Treatment of hydrocarbon. W. L. Benedict. 2,102,878; Dec. 21.
Orchard heating system. T. W. Bose. 2,102,989; Dec. 21.
Ore bodies to extract sulphur and iron therefroin, Unlocking. H. C. Wolf. 2,103,131; Dec. 21.
Ores, Apparatus for treating. E. J. Mullen. 2,103,088; Dec. 21.
Ornamentation. A. F. Reilly. 2,102,746; Dec. 21.
Oscillations of vehicles, in particular rail vehicles, Damping the. O. Mylius. 2,102,907; Dec. 21.
Outlet for air circulating systems. H. F. Curtis. 2,102,681; Dec. 21.
Overshoe, Golf. G. E. Murber. 2,102,604; Dec. 21.
Oven, Coking retort. J. Becker. 2,102,608–9; Dec. 21.
Oxidation catalysts and process. L. G. Jenness. 2,103,221; Dec. 21.
Oxidation, Controlled. L. G. Jenness. 2,103,220; Dec. 21.
Oxidation products, Manufacture of partial. G. W. Talbert and J. D. Kerr. 2,102,863; Dec. 21.
Package. A. M. Hall. 2,102,702; Dec. 21.
Package and package handling means for airplanes. K. Arndt. 2,102,604; Dec. 21.
Package for plastic materials. E. B. Ekdahl. 2,103,111; Dec. 21.
Packing machine. A. Novotny. 2,102,640; Dec. 21.
Package sealing apparatus. W. P. White. 2,103,051; Dec. 21.
Pad: *See*—
Abrasive pad.
Hair waving pad.
Panel, Distribution. W. H. Frank. 2,103,072; Dec. 21.
Paneling. H. D. Randall. 2,103,177; Dec. 21.
Paper cut-off and feeding mechanism. M. Garbell. 2,102,694; Dec. 21.
Percussion apparatus. G. Pinazza. 2,102,603; Dec. 21.
Photoelectric tube. G. R. Stilwell. 2,102,760; Dec. 21.
Photophonographic apparatus. J. O. Baker and C. N. Batsell. 2,102,777; Dec. 21.
Photophonographic apparatus. H. J. Hasbrouck. 2,102,778; Dec. 21.
Piano. A. A. Huseby. 2,102,898; Dec. 21.
Picture, Disk film motion. J. J. Dilks, Jr. 2,102,788; Dec. 21.
Pigment and manufacturing and using it, Lustrous. H. Hunsdiecker. 2,103,007; Dec. 21.
Pin and bolt holder. M. T. Tipsord. 2,102,926; Dec. 21.
Pinwheel feed. J. Q. Sherman and H. G. Dybvig. 2,102,651; Dec. 21.
Pipe and making the same. C. S. Patton. 2,102,969; Dec. 21.
Pipe coating apparatus. A. G. Perkins. 2,102,738; Dec. 21.
Pipes, Manufacture of concrete. M. Overvad. 2,102,968; Dec. 21.
Piston construction. W. Wuerfel. 2,102,661; Dec. 21.
Piston rod protector. T. K. Helmer. 2,102,797; Dec. 21.
Planter, Corn. C. R. White. 2,103,129; Dec. 21.
Plasters, Calcium sulphate. J. S. Dunn and V. Lefebure. 2,103,216; Dec. 21.
Pneumatic valve. L. C. Broecker and J. Ferguson. 2,103,108; Dec. 21.
Polishing wheel. F. G. Cyrex. 2,102,836; Dec. 21.
Portfolio. O. W. Jolly. 2,103,203; Dec. 21.
Pottery ware, Apparatus for manufacturing. W. J. Miller. 2,103,086; Dec. 21.
Power supply system for signal receivers. B. Singer. 2,103,097; Dec. 21.
Power transmission mechanism. H. Sinclair. 2,102,755; Dec. 21.
Power transmitting apparatus and control means therefor. G. B. Bailey. 2,102,606; Dec. 21.
Preparation for treating plants. E. P. Naus. 2,102,734; Dec. 21.
Press. R. W. Glasner. 2,102,842; Dec. 21.
Press for molding shaped articles. A. M. Cook. 2,103,215; Dec. 21.
Printing, Method of and apparatus for planographic. H. C. Osborn. 2,102,641; Dec. 21.
Printing on articles of irregular shape, Multicolor. R. P. Piperoux. 2,102,808; Dec. 21.

Printing telegraph system and apparatus. E. E. Kleinschmidt. 2,102,899; Dec. 21.
Projectile. W. B. Foulke. 2,103,155; Dec. 21.
Prolamine base composition, Water-resistant. D. W. Hansen. 2,102,623; Dec. 21.
Proportioning device, Automatic. D. Brown. 2,102,584; Dec. 21.
Protector: *See*—
Piston rod protector.
Protector and lock, Combination door. G. G. McDonald. 2,102,729; Dec. 21.
Pulping machine. H. R. Lewis. 2,102,961; Dec. 21.
Pump. H. Allen. 2,102,665; Dec. 21.
Pump thrust bearing, Water. D. Sherwood. 2,103,096; Dec. 21.
Rack: *See*—
Display rack.
Radiator. F. M. Young. 2,103,105; Dec. 21.
Radiator inclosure. A. D. Mellor. 2,102,599; Dec. 21.
Radio receiver. E. F. Andrews. 2,103,135; Dec. 21.
Radio receiving system for aeroplanes. S. J. Levy. 2,102,904; Dec. 21.
Rail lubricator, Elevator guide. J. J. Walsh. 2,102,814; Dec. 21.
Receptacle: *See*—
Molded handled receptacle.
Receptacle, connecter, and cap, Interlocking. H. Hubbell, Jr. 2,102,625; Dec. 21.
Recorder: *See*—
Workman's time recorder.
Rectifier. J. G. Jackson and S. M. Hanley. 2,102,713; Dec. 21.
Reel: *See*—
Harvester reel.
Refrigerating apparatus. R. E. Gould. 2,102,698; Dec. 21.
Refrigerating apparatus. L. A. Philipp. 2,102,740; Dec. 21.
Refrigerating apparatus. O. M. Summers. 2,102,762; Dec. 21.
Register, Fare. S. Madsen. 2,103,084; Dec. 21.
Regulating apparatus. J. C. Hornung. 2,103,113; Dec. 21.
Regulator: *See*—
Draft regulator.
Rescue apparatus. J. W. Justus. 2,102,626; Dec. 21.
Resins, Synthetic. J. D. Farber. 2,102,617; Dec. 21.
Resistance bodies, Manufacture of. T. J. Radcliffe. 2,103,040; Dec. 21.
Resorcinol with iodine, Combining. G. Romanelli. 2,102,918; Dec. 21.
Ribbon feeding mechanism. H. H. Gwynne. 2,102,843; Dec. 21.
Ring: *See*—
Lubricated twister ring.
Rod: *See*—
Sewer rod. Welding rod.
Rod hanger and tubing rack, Combined. P. H. Nash. 2,102,966; Dec. 21.
Roller: *See*—
Snapping roller.
Rosin sampler. L. T. Baker. 2,102,875; Dec. 21.
Rotary motor. E. L. Rice. 2,103,180; Dec. 21.
Rotatable display stand, Illuminated. F. C. Taylor. 2,102,982; Dec. 21.
Roughing head. W. C. Card, Jr. 2,102,992; Dec. 21.
Rubber bands, Producing. A. T. Fischer. 2,102,689; Dec. 21.
Rubber coating composition, Chlorinated. J. M. Schantz. 2,103,186; Dec. 21.
Rubber, Treating vulcanized. F. N. Pickett. 2,102,741; Dec. 21.
Rug, Fringed. C. F. Arnold. 2,102,934; Dec. 21.
Safety device for locks. H. Alberg. 2,102,583; Dec. 21.
Salesbook holder. G. F. Christenson. 2,102,787; Dec. 21.
Sash attachment, Reversible. W. E. Peters. 2,103,015; Dec. 21.
Scalp, Apparatus for loosening the scalp. J. Wadel. 2,102,955; Dec. 21.
Screen for use in optical systems employing polarized light, Viewing. E. H. Land. 2,102,632; Dec. 21.
Seal, Bottle. P. W. De Vore. 2,103,150; Dec. 21.
Seal, Breathing. J. W. White. 2,102,824; Dec. 21.
Seat: *See*—
Vehicle safety seat.
Separable fastener. D. Marinsky. 2,103,037; Dec. 21.
Separator. E. Henderson and J. B. Reddick. 2,102,705; Dec. 21.
Service observing system. H. W. Ulrich. 2,102,769; Dec. 21.
Sewage disposal apparatus. R. E. Briggs. 2,102,991; Dec. 21.
Sewer rod. S. V. Rolland. 2,102,917; Dec. 21.
Shield for electrical welders, Protective. M. Helfenstein and F. M. Hirsig. 2,103,006; Dec. 21.
Shingle, N. P., and K. M. Harshberger. 2,103,076; Dec. 21.
Shoe last construction. G. C. Clark. 2,103,062; Dec. 21.
Shoe, Pile. W. C. Schmitt. 2,102,921; Dec. 21.
Shuttle box construction for looms. B. W. Brouwer. 2,102,832; Dec. 21.
Sight, Gun. H. E. Campbell. 2,102,677; Dec. 21.
Sign. B. Phillips. 2,102,972; Dec. 21.
Signal: *See*—
Tire deflation signal. Visible signal.
Signal distortion indicating and measuring device. F. S. Kinkead. 2,102,719; Dec. 21.
Signal testing apparatus. L. W. Howle. 2,102,708; Dec. 21.
Signaling apparatus. F. B. Ma Gee. 2,102,905; Dec. 21.
Signaling, Railway. G. R. Pflasterer. 2,103,016; Dec. 21.
Siphon-breaking means for liquid metering systems. A. J. Saarinen. 2,103,020; Dec. 21.
Skates, Ice. M. J. Rochford. 2,102,916; Dec. 21.
Skylight construction. G. H. Lemke. 2,102,902; Dec. 21.
Slider for separable fasteners. D. Marinsky. 2,103,036; Dec. 21.
Slippers, sandals, and footwear, Manufacture of rubber-soled. B. Jaumandreu. 2,103,157; Dec. 21.
Snap action mechanism for operating electric switches. T. G. Richmond. 2,103,181; Dec. 21.
Snapping roller. J. R. Faber. 2,103,002; Dec. 21.
Snelled hook case. W. J. DeWitt and P. A. Ross. 2,102,682; Dec. 21.
Soap beads or the like, Making. V. R. Kokatnur. 2,102,849; Dec. 21.
Soda-spreading machine. A. E. Claudel. 2,102,993–4; Dec. 21.
Sofa bedstead. A. T. Pison. 2,103,173; Dec. 21.
Soles, Apparatus for use in pressing. S. J. Finn. 2,102,688; Dec. 21.
Solutions of anesthetic substances and preparing them, Stable aqueous. A. Kircher and M. Sienz. 2,103,160; Dec. 21.
Sound producing apparatus, Remote controlled. A. D. Brixey. 2,102,672; Dec. 21.
Sound recording apparatus. J. O. Baker. 2,102,776; Dec. 21.
Sounds of a musical character, Apparatus for producing. A. H. Midgley. 2,103,169; Dec. 21.
Spray, Insecticidal oil. H. Knight. 2,103,196; Dec. 21.
Staples, Making. H. D. Randall. 2,103,176; Dec. 21.
Spring cover. W. F. Eisenhauer. 2,102,890; Dec. 21.
Stand: *See*—
Rotatable display stand.
Steam box. W. H. Cook. 2,102,943; Dec. 21.
Steam heating system and supplying steam to the radiators thereof. F. I. Raymond. 2,103,178; Dec. 21.
Stoker conveyer. H. P. Anderson. 2,103,209; Dec. 21.
Stoker, Locomotive. J. W. Myers. 2,103,210; Dec. 21.
Stoker, Locomotive. C. J. Surdykowski, now by change of name C. J. Surdy. 2,103,211; Dec. 21.
Stoker, Locomotive. E. A. Turner. 2,103,045; Dec. 21.
Stool, Milking. C. A. Loveland. 2,103,114; Dec. 21.
Store display. C. W. Kress. 2,102,960; Dec. 21.
Stove. C. Ehret. 2,102,616; Dec. 21.
Stove. P. M. Forster. 2,102,893; Dec. 21.
Stove top. S. Strano and R. E. Gehne. 2,103,100; Dec. 21.
Strap tensioning and sealing device. H. J. Spencer. 2,102,981; Dec. 21.
Spring cushion structure. W. Lesinski. 2,102,724; Dec. 21.
Strip, Composition. A. C. Fischer. 2,103,003; Dec. 21.
Stocking. M. M. Meyers. 2,102,730; Dec. 21.
Strand handling apparatus. E. E. Franz. 2,102,692; Dec. 21.
Strands, Method of and apparatus for handling. L. L. Weaver. 2,102,773; Dec. 21.
Strap connecting device, Sling. O. F. Mossberg. 2,102,964; Dec. 21.
Strut, Shock absorber. C. V. Johnson. 2,102,847; Dec. 21.
Suction cleaner. B. C. Becker. 2,103,054; Dec. 21.
Suction cleaner. C. L. Shank and C. W. Traut. 2,103,099; Dec. 21.

Gas and air trap.
Trap for fish lifts, Fish. L. E. Knerr. 2,102,629; Dec. 21.
Traveling bag. F. J. Sullivan. 2,103,207; Dec. 21.
Truck, Refuse. J. Goodman. 2,103,112; Dec. 21.
Truck, Wheel. W. Y. Brown. 2,102,674; Dec. 21.
Tube: *See*—
Gaseous discharge tube. Photoelectric tube.
Tubes, Closing and sealing of collapsible. P. R. Fechheimer. 2,102,840; Dec. 21.
Universal joint. E. R. Koppel. 2,102,850; Dec. 21.
Universal joint. F. Porsche. 2,102,973; Dec. 21.
Vacuum breaking device. E. J. Kocour. 2,102,848; Dec. 21.
Vacuum cleaner. E. Faber. 2,103,154; Dec. 21.
Vacuum valve. G. A. Petroe. 2,103,118; Dec. 21.
Valve: *See*—
Flow control and relief valve. Mixing valve.
Pneumatic valve.
Liquid level indicating valve. Vacuum valve.
Valve. I. H. Russell. 2,102,856; Dec. 21.
Valve bags, Forming. J. N. Tooker. 2,102,766; Dec. 21.
Valve-closed bag. A. Du Bois. 2,102,685; Dec. 21.
Valve mechanism. F. H. Schoenfeld. 2,102,752; Dec. 21.
Valve-seat surfacing tool. M. Holhut. 2,102,707; Dec. 21.
Valve starting system, Electric. M. Hürlimann. 2,102,956; Dec. 21.
Vase. A. R. Thomas. 2,102,924; Dec. 21.
Vault and forming it, Seamless grave. J. H. Handley. 2,103,005; Dec. 21.
Vehicle, Refuse collecting. J. C. Walter. 2,103,128; Dec. 21.
Vehicle safety seat, Motor. H. M. Smith. 2,102,979; Dec. 21.
Vehicle wheel. C. L. Eksergian. 2,103,201; Dec. 21.
Vehicle wheel. C. W. Sinclair. 2,102,811; Dec. 21.
Vertical drier. C. A. Dickhaut and S. W. Warner. 2,103,110; Dec. 21.
Vibrations, Producing and distinguishing frequency. H. H. Couch. 2,102,614; Dec. 21.
Vibratory apparatus. H. E. Wurzbach and C. H. Konold. 2,102,826; Dec. 21.
Vise. S. T. Nash. 2,102,602; Dec. 21.
Visible signal. T. W. Rolph. 2,102,975; Dec. 21.
Vulcanization, Accelerator of. R. C. Goodwin and A. W. Sloan. 2,102,621; Dec. 21.
Wagon, Dump. W. C. Byington. 2,102,676; Dec. 21.
Wall connecter. J. F. Köhnke. 2,103,010; Dec. 21.
Water heating system. D. L. Buchanan. 2,102,940; Dec. 21.
Wave signaling system. J. K. Johnson. 2,103,079; Dec. 21.
Wave translation system. H. S. Black. 2,102,670–1; Dec. 21.
Web splicing device. W. C. George. 2,102,793; Dec. 21.
Welding generator. K. Strobel. 2,102,761; Dec. 21.
Welding rod. G. T. Southgate and J. G. Nicolson. 2,102,813; Dec. 21.
Welding rods, Method of and apparatus for making. G. T. Southgate and J. G. Nicolson. 2,102,812; Dec. 21.
Well Drilling apparatus, Rotary. I. Basgan. 2,103,137; Dec. 21.
Wheel: *See*—
Auxiliary wheel. Polishing wheel.
Grinding wheel. Vehicle wheel.
Wheel truing device. R. W. Fuller. 2,102,841; Dec. 21.
Wheels, Preventing Flat. G. A. Ferguson. 2,102,791; Dec. 21.
Window channel. A. Weisenburg. 2,102,658; Dec. 21.
Window control mechanism. J. H. Roethel. 2,103,223; Dec. 21.
Window glass channel lining. D. C. Bailey. 2,102,935; Dec. 21.
Window structure. V. M. Frey. 2,102,589; Dec. 21.
Windshield attachment. W. Mable. 2,102,597; Dec. 21.
Windshield heater. J. H. Cohen. 2,103,146; Dec. 21.
Wiper mechanism, Windshield. R. B. Evans, E. W. Dilg, and G. Germann. 2,103,001; Dec. 21.
Wire, Apparatus for manufacturing a coated insulated. T. Akahira. 2,103,134; Dec. 21.
Wire connecter, Frictional. J. Blackburn and J. A. Weaver, Jr. 2,102,881; Dec. 21.
Wire, thread or the like, Method and apparatus for unwinding. A. E. Blashill. 2,102,610; Dec. 21.
Woodworking machine. W. J. Schafer. 2,102,857; Dec. 21.
Workman's time recorder. E. G. Watkins. 2,102,771; Dec. 21.
Workpieces, Apparatus for testing magnetizable. E. Schweitzer and S. Klesskalt. 2,103,224; Dec. 21.
Wringer. G. E. Andre. 2,102,827; Dec. 21.
Xanthates of resin alcohols, Production of. W. T. Bishop. 2,103,140; Dec. 21.
Yarn and heat-resistant cord and making same, Heat-resistant. E. C. Gwaltney, L. A. Graybill, and R. B. Newton. 2,103,218; Dec. 21.
Yarns and fabrics, Manufacture of textile. C. Dreyfuss and W. Whitehead. 2,102,789; Dec. 21.
Zirconium oxide vitreous enamel opacifier. C. J. Kinzie. 2,102,627; Dec. 21.

CLASSIFICATION OF PATENTS

ISSUED DECEMBER 21, 1937

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

American Floor Surfacing Machine Company, The. (See Atkin, Kenneth C., assignor.)
American Gasaccumulator Company. (See Oestnaes, V. L., and Swanstrom, assignors.)
American Laundry Machinery Company, The. (See Dewey, James M., assignor.)
American Locomotive Company. (See Blanchard, Everett W., assignor.)
American Plastics Corporation. (See Vawter, Will E., assignor.)
American Rock Wool Corporation. (See Drill, Daniel C., assignor.)
American Sheet and Tin Plate Company. (See Lorig, Edwin T., assignor.)
American Smelting and Refining Company, The. (See Betterton, J. O., and Waterman, assignors.)
American Stay Company. (See Merrick, Frank W., assignor.)
American Telephone and Telegraph Company. (See Maurer, K. L., and Swart, assignors.)
American Telephone and Telegraph Company. (See Swart, Leland K., assignor.)
Andale Company. (See McNeal, Daniel R., assignor.)
Andersen, Carl N., Wellesley Hills, Mass., assignor to Lever Brothers Company. Organic mercury compounds. 2,103,657; Dec. 28.
Anderson, Annie G., executrix. (See Anderson, James C.)
Anderson, James C., deceased, by A. G. Anderson, executrix, Elmhurst, assignor, by mesne assignments, to Alcet Electro Products Corporation, New York, N. Y. Winding machine. 2,103,239; Dec. 28.
Anderson, James L., Closter, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y. Tube welding. 2,103,346; Dec. 28.
Anderson, Nils H., assignor to The Shelton Tack Co., Shelton, Conn. Machine for capping tack heads. 2,103,508; Dec. 28.
Angier, Edward H., trustee. (See Brown, Harry W., assignor.)
Angier Laboratories. (See Brown, Harry W.)
Apex Electrical Manufacturing Company, The. (See Seyfried, Arthur W., assignor.)
Ardco Manufacturing Company. (See Stern, Charles, assignor.)
Armistead, George, Jr., Scarsdale, N. Y., assignor to Gasoline Products Company, Inc., Newark, N. J. Treatment of hydrocarbon oils. 2,103,977; Dec. 28.
Arrow-Hart & Hegeman Electric Company, The. (See Hawkinson, John L., assignor.)
Ashbaugh, John H., Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Refrigeration apparatus. 2,103,682; Dec. 28.
Aspenleiter, Joseph W., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Ophthmalic mounting. 2,103,421; Dec. 28.
Associated Electric Laboratories, Inc. (See Nelson, M. L., Robinson, and Bellamy, assignors.)
Associated Electric Laboratories, Inc. (See Saunders, Norman H., assignor.)
Athey Truss Wheel Co. (See Kuchar, Joseph, assignor.)
Atkin, Kenneth C., assignor to The American Floor Surfacing Machine Company, Toledo, Ohio. Drive ring for floor maintenance machine brushes. 2,103,311; Dec. 28.
Atlas Agoe, Chemische Fabrik A. G. (See Teubner, Kurt, assignor.)
Audubon Wire Cloth Corporation. (See Guba, Raymond J., assignor.)
Audubon Wire Cloth Corporation. (See Scherfel, Otto C., assignor.)
Aulsbrook, Harry E., Detroit, Mich. Furniture. 2,103,422; Dec. 28.
Auto Flagger Corporation, The. (See Gregory, Oscar T., assignor.)
Babcock & Wilcox Company, The. (See Luly, Edgar L., assignor.)
Babcock & Wilcox Company, The. (See Stillman, Thomas B., assignor.)
Bach, Anton M., Palo Alto, Calif. Hose coupling. 2,103,838; Dec. 28.
Back, Sydney. (See Clayton, W., Back, Morse, and Johnson.)
Bailey, Archie S., Albert Lea, assignor of one-half to J. P. Donahue, Twin Lakes, Minn. Animal poking implement. 2,103,401; Dec. 28.
Baldwin-Duckworth Chain Corporation. (See Klaucke, Hermann, assignor.)
Bale, Lester S., Shaker Heights, assignor to The Standard Oil Company (Ohio), Cleveland, Ohio. Nongumming motor fuel. 2,103,927; Dec. 28.
Balsiger, Harold E., assignor to Landis Tool Company, Waynesboro, Pa. Cylindrical grinding machine. 2,103,808; Dec. 28.
Balls, Arnold K., and W. S. Hale, Washington, D. C., dedicated to the free use of the people of the United States. Softening of dough. 2,103,443; Dec. 28.
Baltimore Paint and Color Works, Inc. (See Shuger, Leroy W., assignor.)
Baltimore Salesbook Company, The. (See Gorton, Elidore H., assignor.)
Banca, Maggio C., Magnolia, N. J., assignor to Radio Corporation of America, New York, N. Y. Cathode ray device. 2,103,312; Dec. 28.
Bancroft, Joseph, & Sons Co. (See Lippert, Arnold L., assignor.)
Barber, George W., New Haven, Conn., dedicated to the free use of the public. Preventing caterpillar injury to ear corn. 2,103,607; Dec. 28.
Barbieri, Cesare. (See Heard, Joseph R., Jr., assignor.)
Bardell, Nicholas J., Chicago Heights, assignor to Mid-West Forging Company, Chicago, Ill. Making posts. 2,103,839; Dec. 28.
Barnes, Walter P., Chicago, Ill. Swimming cap. 2,103,886; Dec. 28.
Bartholomew, Robert J., Germantown, Pa. Winding machine. 2,103,347; Dec. 28.
Bartosz, Joseph A., assignor of one-half to A. C. Burk, Salem, Oreg. Handle and shank therefor. 2,103,442; Dec. 28.
Basic Dolomite, Incorporated. (See Eells, Howard P., Jr., assignor.)
Baskin, Morris J., Denver, Colo. Nonspecific spermatoxic vaccine and producing same. 2,103,240; Dec. 28.
Battermann, Ludwig A. (See Conklin, J. W., and Battermann.)
Bauer, Hans A., assignor to B. F. Gump Co., Chicago, Ill. Package fastening means. 2,103,840; Dec. 28.
Bausch & Lomb Optical Company. (See Aspenleiter, Joseph W., assignor.)
Bausch & Lomb Optical Company. (See Benford, J. R., and Foster, assignors.)
Bausch & Lomb Optical Company. (See Diggins, Bartholomew A., assignor.)
Bausch & Lomb Optical Company. (See Ellestad, Gerhard A., assignor.)
Bausch & Lomb Optical Company. (See Gallasch, George B., assignor.)

Bausch & Lomb Optical Company. (See Kolb, Frank P., assignor.)
Bausch & Lomb Optical Company. (See Wilkinson, Ralph E., assignor.)
Bauch, William H., Shelbyville, Ind. Abrading, polishing, and buffing device. 2,103,444; Dec. 28.
Beamer, Charles W., Mojave, Calif. Drill steel sharpener. 2,103,705; Dec. 28.
Bean, Robert F., Bridgeport, Conn., assignor to General Electric Company. Mixing device. 2,103,928; Dec. 82.
Bear, Paul S., Dowagiac, Mich., assignor, by mesne assignments, of three-fourths to H. E. Bucklen, Elkhart, Ind., and one-fourth to said P. S. Bear. Switch. 2,103,929; Dec. 28.
Beaumont Iron Works Company. (See Kitchel, G. B., and Roach, assignors.)
Beckley, Pendleton, Paris, France. Safety razor. 2,103,402; Dec. 28.
Bedford, Burnice D., Schenectady, N. Y., assignor to General Electric Company. Constant-current magnetic bridge. 2,103,996; Dec. 28.
Bedford, Burnice D., Schenectady, N. Y., assignor to General Electric Company. Electric control circuit. 2,103,997; Dec. 28.
Behan, Thomas W., Binghamton, N. Y. Washing machine. 2,103,966; Dec. 28.
Behr, Siegfried, Flushing, assignor to Ben Hur Products, Inc., New York, N. Y. Comb and casing. 2,103,930; Dec. 28.
Bell & Howell Company, The. (See Howell, Albert S., assignor.)
Bell, John, Yonkers, assignor to The Spool Cotton Company, New York, N. Y. Display device. 2,103,241; Dec. 28.
Bell Telephone Laboratories, Incorporated. (See Kreer, John G., Jr., assignor.)
Bell Telephone Laboratories, Incorporated. (See Lucek, Charles W., assignor.)
Bell Telephone Laboratories, Incorporated. (See Mathes, Robert C., assignor.)
Bell Telephone Laboratories, Incorporated. (See Peterson, Eugene, assignor.)
Bell Telephone Laboratories, Incorporated. (See Waldron, F. D., and Wier, assignors.)
Bell Telephone Laboratories, Incorporated. (See Yeutter, Clyde S., assignor.)
Bellamy, John I. (See Nelson, M. L., Robinson, and Bellamy.)
Ben Hur Products, Inc. (See Behr, Siegfried, assignor.)
Bencowitz, Isaac, New York, N. Y., assignor to Texas Gulf Sulphur Company. Flowmeter. 2,103,741; Dec. 28.
Bendix Aviation Corporation. (See Heintz, Ralph M., assignor.)
Bendix Products Corporation. (See Whittington, Ralph S., assignor.)
Bendix-Westinghouse Automotive Air Brake Company. (See Sanford, Roy S., assignor.)
Benedek, Elek K., Bucyrus, Ohio. Hydraulic pump or motor. 2,103,313; Dec. 28.
Benedek, Elek K., Bucyrus, Ohio. Variable delivery pump or motor. 2,103,314; Dec. 28.
Benedict, T. N., Manufacturing Company. (See Saunders, Albert F., assignor.)
Benford, James R., Rochester, and L. V. Foster, Irondequoit, assignors to Bausch & Lomb Optical Company, Rochester, N. Y. Microscope illuminator. 2,103,230; Dec. 28.
Berger, Clarence E., Shrewsbury, assignor to Hanson-Van Winkle-Munning Company, Matawan, N. J. Insulated homopolar generator. 2,103,931; Dec. 28.
Bernhardt, Rudolph, Chicago, Ill. Container and pump. 2,103,932; Dec. 28.
Bethlehem Shipbuilding Corporation. (See Frear, Hugo P., assignor.)
Bethlehem Steel Company. (See Lewis, R. A., and Schenck, assignors.)
Betterton, Jesse O., Metuchen, N. J., and C. N. Waterman, Monterrey, Mexico, assignors to American Smelting and Refining Company, New York, N. Y. Refining metals. 2,103,762; Dec. 28.
Bibee, Jennings W. (See Goodman, E. J., and Bibee.)
Bisth, Tom C., Hedemora, Sweden. Separator. 2,103,809; Dec. 28.
Birkebak, Christian A., Detroit, Mich., assignor to Ex-Cell-O Corporation. Lathe. 2,103,315; Dec. 28.
Birkhead, Frank G., assignor to S. L. Allen & Co., Inc., Philadelphia, Pa. Wheeled coaster. 2,103,998; Dec. 28.
Birr, Rudolph G., Lombard, Ill., assignor to Steiner Sales Company, Salt Lake City, Utah. Towel dispensing apparatus. 2,103,403; Dec. 28.
Bitter, Howard L., et al. (See Doty, Arthur A., assignor.)
Blake, Henry W., assignor to W. F. Kirk, Kansas City, Mo. Transportable anchorable refrigerator. 2,103,231; Dec. 28.
Blanchard, Everett W., Schenectady, assignor to American Locomotive Company, New York, N. Y. Valve gear for three-cylinder locomotives. 2,103,658; Dec. 28.
Blanchard, Frederick C., Brookline, Mass. Fluid pressure responsive feeder. 2,103,763; Dec. 28.
Blauer, Louis, Brookline, Mass. Combination hood and double back for garments. 2,103,608; Dec. 28.
Bliss, Harvey N., West Hartford, and E. Wild, and W. L. Tancred, assignors to Veeder-Root Incorporated, Hartford, Conn. Multiplex counting machine. 2,103,659; Dec. 28.
Böhm, Hugo, Munich, Germany. Leather and process for the manufacture thereof. 2,103,232; Dec. 28.
Bolton, John W., & Sons, Inc. (See Stuck, H. D., and De Nault, assignors.)
Bolyard, Charles C., assignor to Paper Supply Company, Los Angeles, Calif. Ornamental structure. 2,103,404; Dec. 28.
Bommer, Emil, deceased, Brooklyn, N. Y., G. Bommer, J. F. Voelkel, and C. F. Gehrmann, executors of said E. Bommer. Door check and closer. 2,103,660; Dec. 28.
Bommer, Gustav, et al., executor. (See Bommer, Emil.)
Bone, Herbert L., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Speed responsive apparatus. 2,103,706; Dec. 28.
Boosey, Edward W. N., Detroit, Mich. Grease trap. 2,103,316; Dec. 28.
Booth, Roland. (See Hargreaves, C., and Booth.)
Borglin, Joseph N., assignor to Hercules Powder Company, Wilmington, Del. Refining of rosin esters. 2,103,445; Dec. 28.
Borgwardt, Erich. (See Schoeller, W., and Borgwardt.)
Botta, Alboino. (See Romano, A., and Botta.)
Boulton, Berthoud C. (See Klemm, H. G., and Boulton.)
Boutwell, Clarence E., Birmingham, Ala. Making level faced matrices. 2,103,764; Dec. 28.
Bowdil Company, The. (See Bowman, Charles L., assignor.)
Bowen, William S., and J. Freeman, Westfield, N. J. Homogenizing mechanism. 2,103,887; Dec. 28.
Bowen, William S., Westfield, N. J. Homogenizing apparatus. 2,103,888; Dec. 28.
Bowman, Charles L., Bowdil, assignor to The Bowdil Company, Canton, Ohio. Mining machine. 2,103,509; Dec. 28.
Boyce, Leonard D., Maplewood, Mo. Ignition timer controlling device. 2,103,348; Dec. 28.
Boyett, Jesse B., Nashville, Ga. Combined oscillatory reciprocatory self-centering pump. 2,103,967; Dec. 28.
Boyle, Eugene G., San Francisco, Calif. Cushioned stocking supporter guard. 2,103,446; Dec. 28.
Bradburn, Curtis E., assignor to H. L. Divine, Garden City, Kans. Car odorizer. 2,103,609; Dec. 28.
Bradford, William W., Jr., Bel Air, assignor to H. R. Hyle, Catonsville, E. H. Young, Baltimore, and S. T. Holmes, Harford County, Md. Aircraft propeller. 2,103,242; Dec. 28.
Bradford, William W., Jr., Bel Air, assignor to H. R. Hyle, Catonsville, E. H. Young, Baltimore, and S. T. Holmes, Hartford County, Md. Aircraft propeller. 2,103,243; Dec. 28.
Brenner, Samuel L. (See De Verter, Walton, assignor.)
Briscoe, Frederick Y., Newton, Mass. Mattress protector. 2,103,244; Dec. 28.
Brisick, Joseph C., Irvington, N. J., assignor to The Kroydon Company. Golf club handle. 2,103,889; Dec. 28.
Brower, Elbert O., Philadelphia, Pa. Cigarette holder. 2,103,662; Dec. 28.
Brown, Charles S., Syracuse, N. Y. Motor snow plow. 2,103,510; Dec. 28.
Brown Company. (See Richter, George A., assignor.)
Brown Company. (See Schur, Milton O., assignor.)
Brown, Harry W., Saxonville, assignor to E. H. Angier, Framingham, Mass., trustee. Wrapper. 2,103,892; Dec. 28.
Brown, Rudolph K., Morristown, N. J. Artificial body member and making the same. 2,103,511; Dec. 28.
Brown, Thomas E., Jr., Tuxedo, N. Y. Counterbalancing mechanism for lift bridges. 2,103,661; Dec. 28.
Brown, William H., Bedford, Ohio. Permanent waving device. 2,103,890; Dec. 28.
Brown, William H., Bedford, Ohio. Permanent waving device. 2,103,891; Dec. 28.
Brubaker, William A. (See Kline, W., and Brubaker.)
Brush, John G. (See Davis, C. F., Brush, and Mayne.)
Bryce, David A. (See Aldrich, R. H., and Bryce.)
Bucklen, Herbert E., et al. (See Bear, Paul S., assignor.)
Buckwalter, Tracy V., assignor to The Timken Roller Bearing Company, Canton, Ohio. Locomotive running gear. 2,103,978; Dec. 28.
Budd, Edward G., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Rubberized product. 2,103,245; Dec. 28.
Budd, Edward G., Manufacturing Company. (See Budd, Edward G., assignor.)
Budd, Edward G., Manufacturing Company. (See Mayer, William J., assignor.)
Bunker, Herbert H., Jersey City, N. J. Slab. 2,103,765; Dec. 28.
Burden, William MacC., R. Genders, and R. Harrison, Woolwich, assignors to Sofal Limited, London, England. Alloy steels. 2,103,610; Dec. 28.
Burk, A. C. (See Bartosz, Joseph A., assignor.)
Burns, A. Newton. (See Pool, Melvin, assignor.)
Burton, Frank F., Mount Carmel, assignor to Winchester Repeating Arms Company, New Haven, Conn. Bolt action firearm. 2,103,512; Dec. 28.
Buskirk, Elmore E., Adrian, Mich. Portable air purifier unit. 2,103,893; Dec. 28.

Bussmann, Herman, Englewood, N. J. Joint for concrete building units. 2,103,894; Dec. 28.
Cahill, Arthur T., et al., executor. (See Cahill, Thaddeus.)
Cahill, Eleanor, et al., executor. (See Cahill, Thaddeus.)
Cahill, George F., et al., executor. (See Cahill, Thaddeus.)
Cahill, Thaddeus, deceased, New York, N. Y., A. T., E., and G. F. Cahill, executors of the estate of said Thaddeus Cahill. Synchronized sound and picture control. 2,103,766; Dec. 28.
Calco Chemical Company. (See Aldrich, R. H., and Bryce, assignors.)
Calico Printers' Association Limited, The. (See Lantz, L. A., Morrison, and Miller, assignors.)
California Packing Corporation. (See Russell, Clyde D., assignor.)
Calvert, John F., Ames, Iowa, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Insulating conductors. 2,103,841; Dec. 28.
Campbell, Huntly M., Detroit, Mich. Cooking foods. 2,103,513; Dec. 28.
Campbell, Willard, Los Angeles, Calif. Device for handling boats and other loads. 2,103,708; Dec. 28.
Cann, Harry E., West Chester, Pa. Sterilizer. 2,103,709; Dec. 28.
Carl, Ludwig, assignor to Ernst Horn, Nuremberg, Germany. Toy. 2,103,447; Dec. 28.
Carner, John J., Cloudcroft, N. Mex. Combined plant setting and fertilizing implement. 2,103,710; Dec. 28.
Carr, Richard H., assignor to The Pure Oil Company, Chicago, Ill. Motor apparatus for pumping and other purposes. 2,103,742; Dec. 28.
Caspar, Eduard, Zurich, Switzerland. Silencer for the exhaust gases of internal combustion engines. 2,103,810; Dec. 28.
Castledine, Charles O., Windom, Minn. Gasoline tank for motor vehicles. 2,103,448; Dec. 28.
Catland, Alfred C. (See Howard, J. H., and Catland.)
Catland, Alfred C., Alhambra, and P. C. Efromson, Whittier, assignors to Globe Oil Tools Company, Los Nietos, Calif. Core catcher. 2,103,611; Dec. 28.
Cavagnaro, Nicholas J., Richmond Hill, assignor to Consolidated Macaroni Machinery Corporation, Brooklyn, N. Y. Cutting machine for spaghetti, macaroni, etc. 2,103,317; Dec. 28.
Cederlund, Albert, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Color selector for shuttle changing looms. 2,103,767; Dec. 28.
Celanese Corporation of America. (See Ellis, G. H., and Kirk, assignors.)
Celanese Corporation of America. (See Hargreaves, C., and Booth, assignors.)
Celanese Corporation of America. (See Schneider, George, assignor.)
Celian-Jones, Gwynne, Linthorpe, Middlesbrough, England. Coke oven. 2,103,620; Dec. 28.
Chain Products Company, The. (See Olmstead, Frederick A., assignor.)
Charter Drive, Inc. (See Charter, James A., assignor.)
Charter, James A., assignor to Charter Drive, Inc., Chicago, Ill. Engine starter. 2,103,233; Dec. 28.
Chemical Works, Formerly Sandoz. (See Lier, Heinrich, assignor.)
Chemical Works, Formerly Sandoz. (See Wehrli, Walter, assignor.)
Christian, Frank T., assignor to Eclipse Machine Company, Elmira, N. Y. Automatic starting mechanism for internal combustion engines. 2,103,405; Dec. 28.
Christensen, Alfred C., assignor to H. S. Simpson, Chicago, Ill. Muller. 2,103,895; Dec. 28.
Clapp, Albert L., Danvers, Mass. Culinary utensil of fibrous structure and making same. 2,103,318; Dec. 28.
Clark, George A., Filer, Idaho. Aeroplane control. 2,103,933; Dec. 28.
Clark, Louis T. (See Whelan, H. J., and Clark.)
Clark, Percy L., Jr., Chicago, Ill. Applicator for pessaries. 2,103,319; Dec. 28.
Clauss, Julius A., Detroit, and D. E. McGuire, Wyandotte, Mich. Furnace structure. 2,103,234; Dec. 28.
Clayton, William, S. Back, J. F. Morse, and R. I. Johnson, assignors to Crosse & Blackwell Limited, London, England. Treatment of chocolate. 2,103,612; Dec. 28.
Cloutier, Arthur N. (See Lawson, R. H., and Cloutier.)
Cogswell, Julia A., Jackson, Mich. Hair waver. 2,103,934; Dec. 28.
Cole, Eben W., Littleton, N. H. Timer's mitten. 2,103,711; Dec. 28.
Cole, Robert E., Highland Creek, Ontario, Canada. Snow plow. 2,103,514; Dec. 28.
Colegrove, Nathaniel E. (See Sawdey, N. T., and Colegrove.)
Conant, Willard I., Decatur, Ill., and C. C. Farmer, Pittsburgh, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Check valve device. 2,103,349; Dec. 28.
Conklin, James W., and L. A. Battermann, Rocky Point, N. Y., assignors to Radio Corporation of America. Low power factor line resonator. 2,103,515; Dec. 28.
Conley, Arthur W., Shaker Heights, Ohio. Air conditioning device. 2,103,844; Dec. 28.
Conner, Guy O., assignor to Wheeling Steel Corporation, Wheeling, W. Va. Container and spout construction. 2,103,406; Dec. 28.
Conover Company, The. (See Stoddard, Edgar S., assignor.)
Conrad, Joshua C., Oklahoma City, Okla. Instrument for determining the deviation of bore holes. 2,103,235; Dec. 28.
Consolidated Car Heating Company. (See Touceda, Enrique G., assignor.)
Consolidated Macaroni Machinery Corporation. (See Ambrette, Conrad, assignor.)
Consolidated Macaroni Machinery Corporation. (See Cavagnaro, Nicholas J., assignor.)
Continental Oil Company. (See Fellows, Fred G., assignor.)
Cooper Oven Thermometer Company, The. (See Nodine, Frederick A., assignor.)
Corning Glass Works. (See Smith, Rowland D., assignor.)
Corning Glass Works. (See Ticknor, Winton A., assignor.)
Corff, Edward V., Chicago, Ill. Abrasive holder. 2,103,320; Dec. 28.
Coshow, Chester L., assignor of thirty-five per cent to L. A. Huguley and thirty-five per cent to J. E. Lucas, Oklahoma City, Okla. Sucker rod stabilizer. 2,103,236; Dec. 28.
Cossais, Raoul E., Maisons-Alfort, France. Device for preventing evaporation of volatile products. 2,103,935; Dec. 28.
Coulson, Charles H., Hanover, Pa. Heel building machine. 2,103,712; Dec. 28.
Coustette, Henry P., San Francisco, Calif. Protective base for poles. 2,103,246; Dec. 28.
Cranford, Victor, San Fernando, Calif. Signal means. 2,103,247; Dec. 28.
Crooks, Ralph K., Pittsburgh, assignor to The Union Switch & Signal Company, Swissvale, Pa. Speed responsive apparatus. 2,103,707; Dec. 28.
Crompton & Knowles Loom Works. (See Cederlund, Albert, assignor.)
Crompton & Knowles Loom Works. (See Holmes, Elbridge R., assignor.)
Crompton & Knowles Loom Works. (See Howard, Charles R., assignor.)
Crompton & Knowles Loom Works. (See Payne, Oscar V., assignor.)
Crompton & Knowles Loom Works. (See Robertson, William W., assignor.)
Crompton & Knowles Loom Works. (See Turner, Richard G., assignor.)
Crompton & Knowles Loom Works. (See Vose, Lewis S., assignor.)
Crompton & Knowles Loom Works. (See Wakefield, Walter H., assignor.)
Crompton & Knowles Jacquard & Supply Company. (See Foster, Herbert V., assignor.)
Crosse & Blackwell Limited. (See Clayton, W., Back, Morse, and Johnson, assignors.)
Crutchfield, Chambers L., Wailuku, and J. P. Foster, assignors to Maui Pineapple Company, Ltd., Paia, Hawaii. Producing brandy. 2,103,449; Dec. 28.
Curtis, Edward S., Los Angeles, Calif. Concentrating minerals. 2,103,663; Dec. 28.
Dalmo Sales Corporation. (See Moseley, Tomlinson I., assignor.)
Dargis, Otis L., Jr., Cincinnati, Ohio. Safety brake control. 2,103,613; Dec. 28.
Davis, Anthony E., Philadelphia, Pa. Adjustable chair and roller for pipes. 2,103,811; Dec. 28.
Davis, Clarke F., Short Hills, J. G. Brush, Westfield, and L. K. Mayne, Linden, assignors to American Cyanamid & Chemical Corporation, New York, N. Y. Ceiling construction and slab therefor. 2,103,969; Dec. 28.
Day, George J., Buffalo, N. Y. Thermostatic valve. 2,103,614; Dec. 28.
Dean, William T., Gary, Ind. Steel house construction and the like. 2,103,407; Dec. 28.
Decker, Josef B., Elkton, Md. Multiple effect pyrotechnic. 2,103,936; Dec. 28.
Deckert, Danvers O. C., St. Louis, Mo. Making sanctuary candle. 2,103,237; Dec. 28.
Decorative Fabrics Company. (See Thackeray, Norman C., assignor.)
De Deza, Francisco S., and R. B. M. Trabazo, Buenos Aires, Argentina. Apparatus for producing optical illusions. 2,103,321; Dec. 28.
Deere, John, Tractor Company. (See McCormick, E., and Worthington, assignors.)
De Florez, Luis, assignor to National Aviation Research Corporation, New York, N. Y. Binaural flying. 2,103,248; Dec. 28.
Delamere Company. (See Goodman, Jacob, assignor.)
Delamere Company. (See Huppert, William, assignor.)
Dempsey, Charles J., Chicago, Ill. Auxiliary fuel supply for automobile engines. 2,103,516; Dec. 28.
De Nault, Philip A. (See Stuck, H. D., and De Nault.)
De Sherbinin, William N., Hastings on Hudson, N. Y. Lamp shade adapter. 2,103,322; Dec. 28.
De Tar, Donald R., Stratford, Conn., assignor to General Electric Company. Drive mechanism. 2,103,517; Dec. 28.
De Tar, Donald R., Stratford, Conn., assignor to General Electric Company. Drive mechanism. 2,103,518; Dec. 28.

Detroit Edison Company, The. (See Matthews, George A., assignor.)
De Verter, Walton, assignor of one-third to S. L. Brenner, Chicago, Ill. Tube testing device. 2,103,450; Dec. 28.
Dewey, James M., Cincinnati, assignor to The American Laundry Machinery Company, Norwood, Ohio. Pressing machine control. 2,103,519; Dec. 28.
Diamond Power Specialty Corporation. (See Schieffer, Johann, assignor.)
Dickey, Joseph B. (See McNally, J. G., and Dickey.)
Dietrich, William S., Greenville, Pa. Car truck. 2,103,713; Dec. 28.
Dietz, Karl, Frankfort-on-the-Main, and K. Frank, Bad Soden in Taunus, Germany, assignors, by mesne assignments, to Pen-Chlor, Inc., Philadelphia, Pa. Acid-proof self-hardening compositions. 2,103,768; Dec. 28.
Diggins, Bartholomew A., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Goggles. 2,103,575; Dec. 28.
Divine, Harry L. (See Bradburn, Curtis E., assignor.)
Dockson, Charles H., Detroit, Mich. Pressure regulator. 2,103,576; Dec. 28.
Dodge, H. B., and Company. (See Pratt, Raymond C., assignor.)
Doering, Henry H. (See Teller, George L., and W. K., assignors.)
Dominion Electric Protection Company. (See Hamilton, William R., and R. W., assignors.)
Donahue, John P. (See Bailey, Archie S., assignor.)
Donnelly, John H., Elmhurst, assignor of one-half to S. E. Witt, New York, N. Y. Dispenser for tablets or the like. 2,103,520; Dec. 28.
D'Ornellas, Manuel L. J., Talence, France. Antifrost device. 2,103,666; Dec. 28.
Doty, Arthur A., assignor of one-third to R. S. Holcomb, East Hartford, and one-third to H. L. Bitter, West Hartford, Conn. Sealed fastening device. 2,103,743; Dec. 28.
Down, Sidney G., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Brake system for high speed trains. 2,103,323; Dec. 28.
Down, Sidney G., Edgewood, assignor to Westinghouse Air Brake Company, Wilmerding, Pa. Door closing warning signal. 2,103,324; Dec. 28.
Doyle, William T., Boston, and T. J. Sturtevant, Wellesley, assignors to Sturtevant Mill Company, Boston, Mass. Machine for disintegrating, screening, and pumping fibrous or paper making stocks. 2,103,896; Dec. 28.
Drake, Harcourt C., Hempstead, assignor to Sperry Products, Inc., Brooklyn, N. Y. Vehicle washing machine. 2,103,842; Dec. 28.
Drill, Daniel C., Wabash, assignor to American Rock Wood Corporation, Wabash County, Ind. Forming felted strips. 2,103,769; Dec. 28.
Driscoll, Oris M., assignor of one-half to Geo. J. Perlman Co., Trenton, N. J. Automobile lock. 2,103,937; Dec. 28.
Drissner, Alfred E., assignor to The National Acme Company, Cleveland, Ohio. Drawbar mechanism for electric chucking machines. 2,103,350; Dec. 28.
Drummond, Price, Rocky River, Ohio, assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Metal top for dry cells. 2,103,714; Dec. 28.
Drysdale, William D., Mount Clemens, Mich., assignor to Walter J. Sugden, West Roxbury, Mass. Liquid cooler. 2,103,970; Dec. 28.
Dudding, Bernard P., and R. E. Leeds, Middlesex, England, assignors to General Electric Company. Manufacture of electric incandescent lamps having coiled-coil filaments. 2,103,938; Dec. 28.
Dudley Lock Corporation. (See Machinist, Harold, assignor.)
Duke, James B. (See Tartaron, F. X., and Duke.)
Dumble, Clifford R., Arlington, Mass., assignor, by mesne assignments, to Joseph L. Zelaskow, New York, N. Y. Machine for game playing. 2,103,744; Dec. 28.
Dunham, Aubra R. (See Dunham, Clayton A., and A. R.)
Dunham, Clayton A., and A. R. Dunham, Glencoe, assignors to Experimental Laboratories Incorporated, Chicago, Ill. Method and apparatus for generating heating medium. 2,103,770; Dec. 28.
Du Pont, E. I., de Nemours & Company. (See Albrecht, H. O., McGlone, and Roskosky, assignors.)
Du Pont, E. I., de Nemours & Company. (See Strout, Ralph C., assignor.)
Du Pont, Peyton, Incorporated. (See Graham, Frank F., assignor.)
Durham, James, Warsaw, Ind. Fish bobber. 2,103,451; Dec. 28.
Eames, William F., Pittsburgh, Pa., assignor to Westinghouse Electric Elevator Company, Chicago, Ill. Control system. 2,103,771; Dec. 28.
Eastburg, Clifford L., assignor to The Timken Roller Bearing Company, Canton, Ohio. Truck. 2,103,979; Dec. 28.
Eastman Kodak Company. (See McNally, J. G., and Dickey, assignors.)
Ebert, Joseph, Westmont, N. J., assignor to The Farastan Company, Philadelphia, Pa. Therapeutic composition. 2,103,522; Dec. 28.
Eckardt, Rudolf, Leipzig, Germany, assignor to The National Acme Company, Cleveland, Ohio. Metalworking machine. 2,103,351; Dec. 28.
Eclipse Machine Company. (See Christian, Frank T., assignor.)
Eclipse Machine Company. (See Morris, Marion W., assignor.)
Eddy, Mildred L., Omaha, Nebr. Classroom committee table. 2,103,408; Dec. 28.
Edge, Walter S., assignor to Pittsburgh Steel Company, Pittsburgh, Pa. Reinforcement mesh. 2,103,897; Dec. 28.
Eells, Howard P., Jr., Willoughby, assignor to Basic Dolomite, Incorporated, Cleveland, Ohio. Production of refractories. 2,103,249; Dec. 28.
Efromson, Philip C. (See Catland, A. C., and Efromson.)
Egedal, Lawrence E. (See Lee, R., and Egedal.)
Elchelsdoerfer, Robert M., Governor's Island, N. Y. Place indicator. 2,103,250; Dec. 28.
Elnson-Freeman Co. (See Horr, John V., assignor.)
Electrical Research Laboratories, Inc. (See Diessmann, Frederick, assignor.)
Ellestad, Gerhard A., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Ophthalmic mounting and attaching same. 2,103,523; Dec. 28.
Ellis, George H. and E. W. Kirk, Spondon, near Derby, England, assignors to Celanese Corporation of America. Treatment of textile materials. 2,103,452; Dec. 28.
Ericksson, Emil, assignor to Standard Process Corporation, Chicago, Ill. Multiple impression printing apparatus and method. 2,103,812; Dec. 28.
Ernst, Walter, Mount Gilead, Ohio, assignor, by mesne assignments, to The Hydraulic Press Corporation, Inc., Wilmington, Del. Gear pump. 2,103,524; Dec. 28.
Evans Case Company. (See Reilly, Alfred F., assignor.)
Excel Auto Radiator Company. (See Sperry, P. F., and Lake, assignors.)
Ex-Cell-O-Corporation. (See Birkebak, Christian A., assignor.)
Experimental Laboratories Incorporated. (See Dunham, Clayton A., and A. R., assignors.)
Fairfield Engineering Company, The. (See Thumlert, Edgar A., assignor.)
Farastan Company, The. (See Ebert, Joseph, assignor.)
Farmer, Clyde C. (See Conant, W. I., and Farmer.)
Farmer, Clyde C., Pittsburgh, and E. E. Hewitt, Edgewood, assignors to The Westinghouse Air Brake Company, Wilmerding, Pa. Automatic train control device. 2,103,352; Dec. 28.
Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Load brake mechanism. 2,103,353; Dec. 28.
Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Magnetic brake shoe. 2,103,354; Dec. 28.
Farmer, Clyde C., Pittsburgh, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Insect excluder. 2,103,355; Dec. 28.
Farrell, Joseph K. O'M., New York, N. Y. Cosmetic device. 2,103,577; Dec. 28.
Feiler, Edmond J., Madison, Wis. Combined weather strip and window guide. 2,103,772; Dec. 28.
Fellows, Fred G., assignor to Continental Oil Company, Ponca City, Okla. Distilling lubricating oils. 2,103,898; Dec. 28.
Fellows Gear Shaper Company, The. (See Miller, Edward W., assignor.)
Fenton, Paul E., Thomaston, assignor to Scovill Manufacturing Company, Waterbury, Conn. Button or the like. 2,103,615; Dec. 28.
Ferrero, Paul, Tertre, and C. Vandendries, Baudour, assignors to Societe Carbochimique, Société Anonyme, Brussels, Belgium. Preparation of chlorhydrins. 2,103,813; Dec. 28.
Field, Oscar S., assignor to General Railway Signal Company, Rochester, N. Y. Light signal. 2,103,251; Dec. 28.
Fillon, Melanie, née Le Compte, Montreal, Quebec, Canada. Ventilator. 2,103,843; Dec. 28.
Fisher, Robert H., New York, N. Y., assignor to Whiting Holding Company, Minneapolis, Minn. Electric motor. 2,103,356; Dec. 28.
Fitton, Cyrus J. (See Yingling, Frank B., assignor.)
Flanagan, William M., Philadelphia, Pa. Ornamental base for Christmas trees. 2,103,939; Dec. 28.
Flath, Otto S., Chicago, Ill. Parkway cable outlet top member. 2,103,773; Dec. 28.
Fleckenstein, George A., Stratford, and M. L. Waterman, Fairfield, Conn., assignors to The Singer Manufacturing Company, Elizabeth, N. J. Lubricating device for sewing machines. 2,103,899; Dec. 28.
Fletcher, Allen H., assignor of three-ninths to G. D. Slusher, two-ninths to B. W. McCune, and two-ninths to B. P. Meyer, Bakersfield, Calif. Well tester. 2,103,940; Dec. 28.
Flint & Walling Manufacturing Company. (See Lung, Kenneth R., assignor.)
Foll, Clifton C. (See Schaeffer, C. A., and Foll.)
Ford, Harry S., Cleburne, Tex. Display holder. 2,103,578; Dec. 28.
Ford, Major R., Mill Port, N. Y. Tool construction. 2,103,409; Dec. 28.
Fossa, Joseph, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for removing lacings from shoe uppers. 2,103,667; Dec. 28.

Foster, Herbert V., Providence, assignor to Crompton & Knowles Jacquard & Supply Company, Pawtucket, R. I. Jacquard needle spring guide. 2,103,814; Dec. 28.
Foster, Herbert V., Providence, assignor to Crompton & Knowles Jacquard & Supply Company, Pawtucket, R. I. Jacquard cylinder motion. 2,103,815; Dec. 28.
Foster, John P. (See Crutchfield, C. L., and Foster.)
Foster, Leon V. (See Benford, J. R., and Foster.)
Fowler, William A., Lincoln, Nebr. Typewriter. 2,103,668; Dec. 28.
Francis, Lynn M., Birmingham, assignor to Mechanical Handling Systems, Inc., Detroit, Mich. Vehicle construction. 2,103,669; Dec. 28.
Franey, Arthur E., Ecorse, Mich. Electrical switch. 2,103,941; Dec. 28.
Frank, Karl. (See Dietz, K., and Frank.)
Frank, William H., and J. W. Harper, Detroit, Mich. Panel board. 2,103,325; Dec. 28.
Frantz, Samuel G., and B. S. McCutchen, Princeton, N. J., assignors to Radio Corporation of America. Transmission and reception of intelligence. 2,103,745; Dec. 28.
Frear, Hugo P., New York, N. Y., assignor to Bethlehem Shipbuilding Corporation, Ltd. Ship construction. 2,103,715; Dec. 28.
Freeman, Julius. (See Bowen, W. S., and Freeman.)
Frei, John, Jr., Chicago, Ill. Post construction. 2,103,410; Dec. 28.
Freund, Herman R., assignor to Intertype Corporation, Brooklyn, N. Y. Typographical machine. 2,103,980; Dec. 28.
Frickey, Royal E., assignor to Welding Service, Inc., San Francisco, Calif. Rail treatment method. 2,103,716; Dec. 28.
Frieden, Alexander, New Rochelle, and S. J. Werbin, Woodhaven, assignors to Stein, Hall & Company, Inc., New York, N. Y. Milk products and stabilizer therefor. 2,103,411; Dec. 28.
Friedländer, Erich, Berlin-Siemensstadt, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Regulating system. 2,103,774; Dec. 28.
Frink, Carl H., Clayton, N. Y. Snow plow. 2,103,775; Dec. 28.
Gaertner, Frederick J. Maplewood, N. J. Finger ring. 2,103,412; Dec. 28.
Gaertner, Frederick J., Maplewood, N. J. Making finger rings. 2,103,413; Dec. 28.
Gagnier, George E. (See Place, Bion C., assignor.)
Galiasch, George B., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Microscope. 2,103,525; Dec. 28.
Ganoe, Ernst A. G. Rochester, assignor to National Electric Products Corporation, Pittsburgh, Pa. Plug fuse. 2,103,717; Dec. 28.
Gardner, Delamere B., Los Angeles, Calif. Solid weave scanning device. 2,103,253; Dec. 28.
Garshman, Morris J., Brooklyn, N. Y. Making an appliquéd article. 2,103,414; Dec. 28.
Gartin, Elmer G., Claremont, N. H., assignor to Sullivan Machinery Company. Rock drill. 2,103,252; Dec. 28.
Gartner, George W., Houston, Tex. Perambulator. 2,103,616; Dec. 28.
Gasoline Products Company. (See Armistead, George, Jr., assignor.)
Gay, Robert E., Tewksbury, Mass. Automobile snow plow. 2,103,900; Dec. 28.
Gehrmann, Charles F., et al., executor. (See Bommer, Emil.)
Geistlich, Edouard, Wolhusen, Switzerland. Novel glue product for glueing veneers and cross-ply sheets. 2,103,776; Dec. 28.
Genders, Reginald. (See Burden, W. MacC., Genders, and Harrison.)
General Aniline Works, Inc. (See Glietenberg, E., and Schubert, assignors.)
General Aniline Works, Inc. (See Grotowsky, Hans, assignor.)
General Auto Parts Corporation. (See Rockell, Edward A., assignor.)
General Electric Company. (See Bean, Robert F., assignor.)
General Electric Company. See Bedford, Burnice D., assignor.)
General Electric Company. (See De Tar, Donald R., assignor.)
General Electric Company. (See Dudding, B. P., and Leeds, assignors.)
General Electric Company. (See Herskind, Carl C., assignor.)
General Electric Company. (See Hillner, Rudolph, assignor.)
General Electric Company. (See Kearsley, William K., assignor.)
General Electric Company. (See Van Guilder, Walter, assignor.)
General Electric X-ray Corporation. (See Mesick, H. F., Jr., and Gross, assignors.)
General Motors Corporation. (See Probst, Karl K., assignor.)
General Railway Signal Company. (See Field, Oscar S., assignor.)
General Register Corporation. (See Helsel, Reuben H., assignor.)
Gerhard, Ernst, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie G. m. b. H., Berlin, Germany. Ultrashort wave system. 2,103,357; Dec. 28.
Gericke, Erich, Berlin-Pankow, assignor to the firm Rotaprint Akt.-Ges., Berlin, Germany. Stretching bridge for metal sheets of rotary printing machines. 2,103,617; Dec. 28.
Getaz, James L., Maryville, Tenn. Gear shift mechanism for automobile transmissions. 2,103,326; Dec. 28.
Gier, John R., Jr., Penn Township, Allegheny County, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Ductilizing process. 2,103,777; Dec. 28.
Gillette Safety Razor Company. (See Muros, Joseph, assignor.)
Gillin, Harry M., Millville, N. J. Detachable plaster cast. 2,103,942; Dec. 28.
Gleason, Anthony H. (See Wiezevich, P. J., and Gleason.)
Glietenberg, Eugen, and F. Schubert, Leverkusen-I. G. Werk, Germany, assignors to General Aniline Works, Inc., New York, N. Y. Azodyestuffs. 2,103,778; Dec. 28.
Globe American Corporation. (See Hill, Dewey H., assignor.)
Globe Oil Tools Company. (See Catland, A. C., and Efromson, assignors.)
Globe Oil Tools Company. (See Howard, J. H., and Catland, assignors.)
Glück, Emil, Burkhardtsdorf, Germany. Elastic band. 2,103,579; Dec. 28.
Goedike, John G., San Antonio, Tex. Dual dampening and inking mechanism for planographic and analogous presses. 2,103,254; Dec. 28.
Gohr, Edwin J., Elizabeth, N. J., assignor to Standard Oil Development Company. Improved process for preparation of sulphuric derivatives. 2,103,255; Dec. 28.
Goldsmith, John, Sunnyside, N. Y., assignor to Mack Manufacturing Corporation. Enclosed drive for pumps. 2,103,971; Dec. 28.
Goodbody, Edmund M. (See Willis, L. R. W., and Goodbody.)
Goodman, Eddie J., and J. W. Bibee, Lynchburg, Va. Flush tank attachment. 2,103,580; Dec. 28.
Goodman, Jacob, Brooklyn, N. Y., assignor to Delamere Company, Inc. Hair curler. 2,103,526; Dec. 28.
Goodstein, Charles B., New York, N. Y. Trouser cuff and fastening same. 2,103,845; Dec. 28.
Goodwin, Joseph A., Lexington, Ky. Horseshoe. 2,103,718; Dec. 28.
Goodyear, Charles Y., Waterloo, Iowa. Parting wax. 2,103,527; Dec. 28.
Gordon, Robert H., Detroit, Mich., assignor to Parker Rust Proof Company. Conveyer mechanism. 2,103,901; Dec. 28.
Gorton, Elidore H., assignor to The Baltimore Salesbook Company, Baltimore, Md. Drawing book. 2,103,943; Dec. 28.
Gothe, Albrecht, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Eliminating reradiation. 2,103,358; Dec. 28.
Graemiger, Benjamin, Zollikon, and W. Ludin, Winterthur, assignors to Hephaest A.-G. für motorische Kraftzeugung, Zurich, Switzerland. Impact-crusher for comminuting hard materials. 2,103,454; Dec. 28.
Graham, Frank F., Cardiff, Md., assignor to Peyton du Pont, Incorporated. Rock drill. 2,103,359; Dec. 28.
Graemiger, Benjamin, Zollikon, assignor to Hephaest A.-G. für motorische Krafterzengung, Zurich, Switzerland. Burning pulverized fuel. 2,103,453; Dec. 28.
Gray, Daniel M., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va. Vinyl resins. 2,103,581; Dec. 28.
Greenslade, Grover R., Scott Township, Allegheny County, Pa., assignor to Pittsburgh Dry Stencil Company. Testing staybolts. 2,103,256; Dec. 28.
Greenwald, Herman, Brooklyn, assignor to H. Greenwald and E. Koenig, doing business as Hygrade Novelty Co., New York, N. Y. Abrasive mitt. 2,103,455; Dec. 28.
Greenway, Erwin C., assignor to Wilson-Jones Company, Chicago, Ill. Making equalizer sheets. 2,103,360; Dec. 28.
Greenwood, Harold, Ozone Park, N. Y. Paste dispensing device. 2,103,415; Dec. 28.
Gregory, Lon S., assignor to The Refinery Supply Company, Tulsa, Okla. Method and apparatus for testing hydrocarbon gases. 2,103,582; Dec. 28.
Gregory, Oscar T., Mobile, Ala., assignor to The Auto Flagger Corporation, Atlanta, Ga. Railroad crossing signal. 2,103,416; Dec. 28.
Gross, Malvern J. (See Mesick, H. F., Jr., and Gross.)
Grotowsky, Hans, Krefeld-Uerdingen, Germany, assignor to General Aniline Works, Inc., New York, N. Y. Triphenylmethane dyestuffs. 2,103,846; Dec. 28.
Guba, Raymond J., assignor to Audubon Wire Cloth Corporation, Philadelphia, Pa. Wire fabric and making the same. 2,103,918; Dec. 28.
Guba, Raymond J., assignor to Audubon Wire Cloth Corporation, Philadelphia, Pa. Wire fabric and making the same. 2,103,919; Dec. 28.
Guba, Raymond J., assignor to Audubon Wire Cloth Corporation, Philadelphia, Pa. Conveyer belt. 2,103,920; Dec. 28.

Guedon, Emile C., Audubon, N. J., assignor to Radio Corporation of America. Signal translating apparatus. 2,103,361; Dec. 28.

Guilliams, Donald. (See Magee, William, assignor.)

Gullborg, Arthur V., Chicago, Ill. Screw part and driver. 2,103,944; Dec. 28.

Gulliksen, Finn H., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electric discharge apparatus. 2,103,779; Dec. 28.

Gump, B. F., Co. (See Bauer, Hans A., assignor.)

Guth, Henry, assignor to one-twelfth to H. A. Maerlender, Cleveland, Ohio. Light weight construction composition. 2,103,746; Dec. 28.

Gylden Tone A/S. (See Johannessen, Jim, assignor.)

H & H Machine & Motor Parts Co. (See Holhut, M., and Vollmer, assignors.)

H & H Machine & Motor Parts Company. (See Michener, Edward R., assignor.)

H & H Machine & Motor Parts Co. (See Vollmer, Walter G., assignor.)

Haack, Friedrich W., Berlin, Germany. Pencil. 2,103,417; Dec. 28.

Hadley, Donald L., Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Self-measuring coffee basket. 2,103,780; Dec. 28.

Haegele, Otto P., assignor to Streeter-Amet Company, Chicago, Ill. Coupled weighing. 2,103,618; Dec. 28.

Hagebeuker, Karl, Solingen, Germany. Device for regulating cutting height. 2,103,418; Dec. 28.

Hale, Walter S. (See Balls, A. K., and Hale.)

Hall, Harvey C., Toronto, Ontario, Canada. Necktie. 2,103,456; Dec. 28.

Hall, Robert, Lockport, assignor to American District Steam Company, North Tonawanda, N. Y. Expansion joint structure. 2,103,981; Dec. 28.

Hallmark, Clyde E., Camden, N. J., assignor to Radio Corporation of America. Constant voltage generator. 2,103,619; Dec. 28.

Hamilton, Robert W. (See Hamilton, William R., and R. W.)

Hamilton Watch Company. (See Lodge, Alvin, assignor.)

Hamilton, William R., and R. W. Hamilton, assignors to Dominion Electric Protection Company, Montreal, Quebec, Canada. Flow controlled switch. 2,103,747; Dec. 28.

Hammar, Victor, E. E. Jansson, and O. Olsson, assignors to Aktiebolaget Bofors, Bofors, Sweden. Wheeled firearm. 2,103,670; Dec. 28.

Hammond, Lee C., assignor to Hammond Machinery Builders, Inc., Kalamazoo, Mich. Tool setting gauge. 2,103,528; Dec. 28.

Hammond Machinery Builders, Inc. (See Hammond, Lee C., assignor.)

Handy, Arthur E., Lynbrook, assignor to Otis Elevator Company, New York, N. Y. Moving stairway. 2,103,327; Dec. 28.

Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Ultrahigh frequency magnetron oscillator. 2,103,362; Dec. 28.

Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Frequency control line and circuit. 2,103,457; Dec. 28.

Hansell, Clarence W., Rocky Point, N. Y., assignor to Radio Corporation of America. Signaling. 2,103,847; Dec. 28.

Hansen, Lorrin L., Rapid City, S. Dak. Indicator for multiple lock sets. 2,103,363; Dec. 28.

Hanson, Casper F., assignor to Olson Manufacturing Company, Albert Lea, Minn. Window. 2,103,364; Dec. 28.

Hanson, Hans C., and W. Olsen, Albert Lee, Minn. Fuel feeding system with thermostatic air control. 2,103,328; Dec. 28.

Hanson, Harold F., Forest Hills, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Yieldable gear. 2,103,781; Dec. 28.

Hanson-Van Winkle-Munning Company. (See Berger, Clarence E., assignor.)

Harder, Edwin L., Forest Hills, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Regulator. 2,103,782; Dec. 28.

Hargreaves, Clifford, and R. Booth, Drummondville, Quebec, Canada, assignors to Celanese Corporation of America. Warping artificial yarns. 2,103,458; Dec. 28.

Harju, Andrew A., Ashtabula, Ohio. Combined chair and stepladder. 2,103,671; Dec. 28.

Harnsberger, Audley E., Winnetka, assignor to The Pure Oil Company, Chicago, Ill. Method of and apparatus for heating oil. 2,103,719; Dec. 28.

Harper, Joseph W. (See Frank, W. H., and Harper.)

Harris, John M., Jr., Baton Rouge, La., assignor to Standard Oil Development Company. Mercoid switch. 2,103,459; Dec. 28.

Harris, Leonard T., Chicago Heights, Ill., assignor, by mesne assignments, to The American Brake Shoe & Foundry Co., New York, N. Y. Heavy duty abrasion resisting chain. 2,103,972; Dec. 28.

Harrison, Reginald. (See Burden, W. M., Genders, and Harrison.)

Harsch, John W., Gwynedd, assignor to Leeds & Northrup Company, Philadelphia, Pa. Heat treatment of steels. 2,103,848; Dec. 28.

Hart, Richard C., Brighton, N. Y. Device for playing cards. 2,103,460; Dec. 28.

Hart, Stanley, Berlin, Conn., and L. Zavorski, Easthampton, Mass., assignors to Tuttle & Bailey, Inc., New Britain, Conn. Adjustable register. 2,103,982; Dec. 28.

Hart, William J., Sharon, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electrical apparatus. 2,103,816; Dec. 28.

Hartwig, William G., assignor to Railway Utility Co., Chicago, Ill. Automatic control for burners. 2,103,529; Dec. 28.

Hastings, Herbert, Brighton, N. Y. Timing device. 2,103,257; Dec. 28.

Hawkinson, John L., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn. Display box. 2,103,419; Dec. 28.

Hazard, Frank A. (See Weimont, J., and Hazard.)

Hazel-Atlas Glass Company. (See Gray, Daniel M., assignor.)

Headland, Edwin A., Beaver, assignor to Ingram-Richardson Manufacturing Company, Beaver Falls, Pa. Tanning board. 2,103,983; Dec. 28.

Heard, Joseph R., Jr., assignor to Cesare Barbieri, New York, N. Y. Making glycols. 2,103,849; Dec. 28.

Heintz Manufacturing Company. (See Lambert, Albert L., and F. M., assignors.)

Heintz, Ralph M., Palo Alto, Calif., assignor, by mesne assignments, to Bendix Aviation Corporation, South Bend, Ind. Carburetor temperature control. 2,103,902; Dec. 28.

Helsel, Reuben H., Long Island City, assignor to General Register Corporation, New York, N. Y. Ticket issuing machine. 2,103,720; Dec. 28.

Hemphill Company. (See Lawson, R. H., and Cloutier, assignors.)

Henley, Norris B., Fort Myers, Fla. Electric bag sealer. 2,103,945; Dec. 28.

Henry, Carle D., assignor to Maine Steel, Inc., South Portland, Maine. System of equalizing the lifting speed of differently loaded hydraulic jacks. 2,103,530; Dec. 28.

Hensel, Henry A., Milwaukee, Wis., assignor to The Viking Corporation, Chicago, Ill. Sausage casing and effecting closure thereof. 2,103,258; Dec. 28.

Haphaest A.-G. für motorische Krafterzeugung. (See Graemiger, Benjamin, assignor.)

Hephaest A.-G. für motorische Krafterzeugung. (See Graemiger, B., and Ludin, assignors.)

Heraeus, W. C., G. m. b. H. (See Heraeus, Wilhelm H., assignor.)

Heraeus, Wilhelm H., assignor to the firm W. C. Heraeus, G. m. b. H., Hanau, Germany. Metal Gauze. 2,103,672; Dec. 28.

Hercules Powder Company. (See Alexander, Harvey B., assignor.)

Hercules Powder Company. (See Borglin, Joseph N., assignor.)

Hercules Powder Company. (See Martin, Robert W., assignor.)

Hercules Powder Company. (See Milliken, Mahlon G., assignor.)

Hercules Powder Company. (See Nash, Henry E., assignor.)

Herr, John H., Palisades, N. J. Shock absorber. 2,103,946; Dec. 28.

Herrmann, Paul J., assignor to "Universelle" Cigarettenmaschinenfabrik J. C. Mueller & Co., Dresden, Germany. Cigarette machine. 2,103,721; Dec. 28.

Herskind, Carl C., Scotia, N. Y., assignor to General Electric Company. Electric valve converting system. 2,103,903; Dec. 28.

Hess, Fred, Tredyffryn Township, Chester County, assignor to The Selas Company, Philadelphia, Pa. Gas burner. 2,103,365; Dec. 28.

Hewitt, Ellis E. (See Farmer, C. C., and Hewitt.)

Hiering, William C., assignor to The J. E. Mergott Company, Newark, N. J. Handbag frame. 2,103,724; Dec. 28.

Hibberd, Frederick H., Bayside, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J. Refrigerating apparatus and method. 2,103,722; Dec. 28.

Hibberd, Frederick H., Bayside, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J. Refrigerating construction. 2,103,723; Dec. 28.

Higgins, Ralph, Akron, assignor to The Ohio Brass Company, Mansfield, Ohio. Arcing gap. 2,103,366; Dec. 28.

Hildebrandt, Friedrich. (See Schoeller, W., Schwenk, and Hildebrandt.)

Hildreth, Harold F. (See Mosshart, Donald J., assignor.)

Hill, Dewey H., Macomb, Ill., assignor to Globe American Corporation, Kokomo, Ind. Humidity and temperature control system. 2,103,904; Dec. 28.

Hillner, Rudolph, Schenectady, N. Y., assignor to General Electric Company. Turbine bucket wheel notch block. 2,103,905; Dec. 28.

Hinsey, Robert S., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Apparatus for supporting glass sheets. 2,103,850; Dec. 28.

Hitt, Henry C., Bremerton, Wash. Epicyclic gear train. 2,103,259; Dec. 28.

Hoban, Fairfield W., assignor to Stewart & McGuire, Inc., New York, N. Y. Dispensing machine. 2,103,367; Dec. 28.

Hock, Alfred L., A. Kirkham, and H. Spence, assignors to Peter Spence & Sons, Limited, Manchester, England. Vulcanization of rubber or other materials. 2,103,461; Dec. 28.

Hoferer, Daniel W., Long Beach, Calif. Pump valve. 2,103,673; Dec. 28.

Hogg, William J., assignor to The National Acme Company, Cleveland, Ohio. Chaser supporting block. 2,103,462; Dec. 28.

Holcomb, Raymond S., et al. (See Doty, Arthur A., assignor.)

Holhut, Michael, and W. G. Vollmer, assignors to H & H Machine & Motor Parts Co., St. Louis, Mo. Pouring jig. 2,103,531; Dec. 28.

Holmes, Elbridge R., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Slackener control for loom warps. 2,103,783; Dec. 28.

Holmes, Elbridge R., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Loom dobby. 2,103,784; Dec. 28.

Holmes, Frederick J., Detroit, Mich. Fuel heater for internal combustion engines. 2,103,947; Dec. 28.

Holmes, Stanley T., et al. (See Bradford, William W., Jr., assignor.)

Hood, Charles E., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Welt-treating machine. 2,103,260; Dec. 28.

Hoof, Addison C., Hinsdale, Ill. Fuel control mechanism. 2,103,368; Dec. 28.

Horn, Ernst. (See Carl, Ludwig, assignor.)

Horr, John V., Hastings on Hudson, assignor to Einson-Freeman Co., Inc., Long Island City, N. Y. Cardboard display device. 2,103,748; Dec. 28.

Horton, Erwin C., Hamburg, assignor to Trico Products Corporation, Buffalo, N. Y. Windshield wiper. 2,103,973; Dec. 28.

Hosmer, Emery N. (See Verzi, Linus A., assignor.)

Howard, Charles R., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Warp beam. 2,103,785; Dec. 28.

Howard, Clarence B., Oakland, Calif., assignor to E. H. Kueffer. Double circuit rotary switch. 2,103,287; Dec. 28.

Howard, John H., Huntington Park, and A. C. Catland, Alhambra; said Catland assignor to Globe Oil Tools Company, Los Nietos, Calif. Well reamer. 2,103,583; Dec. 28.

Howell, Albert S., assignor to The Bell & Howell Company, Chicago, Ill. Strip feed mechanism. 2,103,369; Dec. 28.

Hughes, Stewart W., Evanston, Ill. Applicator. 2,103,261; Dec. 28.

Huguley, Lucille A., et al. (See Coshow, Chester L., assignor.)

Hunt, Wilber V., North Acton, Mass. Method and apparatus for killing poultry. 2,103,288; Dec. 28.

Hunter, Fenley, assignor to Hunter Sash Company, Incorporated, Flushing, N. Y. Mounting for double panels. 2,103,532; Dec. 28.

Hunter Sash Company. (See Hunter, Fenley.)

Huppert, William, New York, N. Y., assignor to Delamere Company, Inc. Hair curler. 2,103,533; Dec. 28.

Huppert, William, New York, N. Y., assignor to Delamere Company, Inc. Hair curler. 2,103,534; Dec. 28.

Huppert, William, New York, N. Y., assignor to Delamere Company, Inc. Hair curler. 2,103,535; Dec. 28.

Hydraulic Press Corporation, Inc., The. (See Ernst, Walter, assignor.)

Hygrade Novelty Co. (See Greenwald, Herman.)

Hyle, Howard R., et al. (See Bradford, William W., Jr., assignor.)

I. G. Farbenindustrie Aktiengesellschaft. (See Reppe, W., and Schlichting, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Schoeller, C., and Koerding, assignors.)

I. G. Farbenindustrie Aktiengesellschaft. (See Ufer, Hanns, assignor.)

I. G. Farbenindustrie Aktiengesellschaft. (See Wilmanns, Gustav, assignor.)

Illinois Clay Products Company, The, et al. (See Jones, Otis L., assignor.)

Indge, Herbert S., Westboro, assignor to Norton Company, Worcester, Mass. Lapping machine. 2,103,984; Dec. 28.

Infant Socks Company. (See Longtin, William J., assignor.)

Inge, Melvin C., Brea, Calif. Stopcock. 2,103,536; Dec. 28.

Ingersoll-Rand Company. (See Hibberd, Frederick H., assignor.)

Ingersoll-Rand Company. (See Karr, Alfred D., assignor.)

Ingersoll-Rand Company. (See Kirgan, John, assignor.)

Ingram-Richardson Manufacturing Company. (See Headland, Edwin A., assignor.)

International Banding Machine Company. (See Malocsay, Francis X., assignor.)

Intertype Corporation. (See Freund, Herman R., assignor.)

Intertype Corporation. (See Willis, L. R. W., and Goodbody, assignors.)

Ion Corporation. (See Kott, Hermann, assignor.)

Ireks Aktiengesellschaft. (See Ruckdeschel, Hans, assignor.)

Ivers-Lee Company. (See Salfisberg, Leroy L., assignor.)

Jackson, Andrew, Memphis, Tenn. Steering gear lock for motor vehicles. 2,103,674; Dec. 28.

Jacobs, Michael, Toronto, Ontario, Canada, assignor, by mesne assignments, to Talon, Inc. Trousers and making the same. 2,103,985; Dec. 28.

Jacobson, Wilgot J., Buffalo, N. Y., assignor, by mesne assignments, to Union Carbide and Carbon Corporation. Valve. 2,103,725; Dec. 28.

Jamba, Michael, Stamford, N. Y. Cowtail garter. 2,103,584; Dec. 28.

Janetschke, Erwin, Berlin-Charlottenburg, Germany, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Electrical conversion system. 2,103,786; Dec. 28.

Jansson, Edvin E. (See Hammer, V. Jansson, and Olsson.)

Johannessen, Jim, assignor to Gylden Tone A/S., Bergen, Norway. Bridge foot piece for stringed musical instruments. 2,103,675; Dec. 28.

Johnson, Albert C., assignor to The Louden Machinery Company, Fairfield, Iowa. Hay fork. 2,103,370; Dec. 28.

Johnson, Bror E., Ålsten, assignor to Aktiebolaget Gerh. Arehns Mekaniska Verkstad, Stockholm, Sweden. Apparatus for filling containers. 2,103,817; Dec. 28.

Johnson, Gustaf A., New Bedford, Mass. Electric switch. 2,103,986; Dec. 28.

Johnson Motor Company. (See Tanner, Philip A., assignor.)

Johnson, Robert I. (See Clayton, W., Back, Morse, and Johnson.)

Jones, Elmer, Los Angeles, Calif. Beach umbrella point. 2,103,948; Dec. 28.

Jones, George L., Garden City, and A. Winburn, assignors to Sperry Products, Inc., Brooklyn, N. Y. Rail flaw detector mechanism. 2,103,851; Dec. 28.

Jones, Ira M. (See Kissel, William L., assignor.)

Jones, Lloyd T. (See Kennedy, H. E., Rotermund, and Jones.)

Jones, Otis L., assignor, by direct and mesne assignments of one-half to The Illinois Clay Products Company, and one-half to F. E. Schundler & Company, Inc., Joliet, Ill. High temperature insulating composition. 2,103,463; Dec. 28.

Judelshon, Oscar I., Park Ridge, N. J. Drive for lathes and other machines. 2,103,464; Dec. 28.

Kallscher, Milton, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Refrigeration apparatus. 2,103,683; Dec. 28.

Kapteyn, Paul, Berlin, assignor to Radioaktiengesellschaft D. S. Loewe, Berlin-Steglitz, Germany. Device employing electronic tubes. 2,103,621; Dec. 28.

Karasiewicz, Cornelia, Detroit, Mich. Curling and crimping device. 2,103,676; Dec. 28.

Karlson, Julius H., Chicago, Ill. Guard for paring knives. 2,103,320; Dec. 28.

Karr, Alfred D., Newark, assignor to Ingersoll-Rand Company, Jersey City, N. J. Refrigerating apparatus. 2,103,726; Dec. 28.

Katzin, Martin. (See Peterson, H. O., and Katzin.)

Kaupp, Henry, Long Island, assignor to U. S. Galvanizing & Plating Equipment Corporation, Brooklyn, N. Y. Conveyer mechanism. 2,103,906; Dec. 28.

Kay Brunner Steel Products, Inc. (See Kay, Lloyd D., assignor.)

Kay-Brunner Steel Products, Inc. (See Low, John J., assignor.)

Kay, Lloyd D., Alhambra, Calif., assignor to Kay Brunner Steel Products, Inc. Brake and anchoring means therefor. 2,103,750; Dec. 28.

Kearsley, William K., Schenectady, N. Y., assignor to General Electric Company. Time switch. 2,103,907; Dec. 28.

Kellett, William P., New York, N. Y. Locking goods containers on transportation vehicles. 2,103,751; Dec. 28.

Kennedy, Harry E., M. A. Rotermund, and L. T. Jones, Berkeley, Calif., assignors, by mesne assignments, to Union Carbide and Carbon Corporation. Electric welding. 2,103,727; Dec. 28.

Kessler, Julius, Brooklyn, N. Y. Knitting machine. 2,103,852; Dec. 28.

Killman, Robert T. (See Killman, Thomas A. and R. T.)

Killman, Thomas A. and R. T., Nashville, Tenn. Vegetable slicer. 2,103,537; Dec. 28.

Kimball, A., Company. (See Weimont, J., and Hazard, assignors.)

Kimble Glass Company. (See Kimble, H. K., and Richter, assignors.)

Kimble, Herman K., and H. Richter, assignors to Kimble Glass Company, Vineland, N. J. Method and apparatus for shaping bodies. 2,103,585; Dec. 28.

Kinzbach, Robert B., Houston, Tex. Side tracking apparatus. 2,103,622; Dec. 28.

Kinzie, Phillip A., assignor to Universal Hydraulic Corporation, Denver, Colo. Bearing. 2,103,465; Dec. 28.

Kirgan, John, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Refrigerating system. 2,103,728; Dec. 28.

Kirk, Ernest W. (See Ellis, G. H., and Kirk.)

Kirk, William F. (See Blake, Henry W., assignor.)

Kirkham, Alfred. (See Hock, A. L., Kirkham, and Spence.)

Kirkwood, Loren R., Collingswood, N. J., assignor to Radio Corporation of America. Multirange tunable oscillator. 2,103,853; Dec. 28.

Kissel, William L., Hartford, assignor to I. M. Jones, Thiensville, Wis. Vending machine. 2,103,289; Dec. 28.

Kistner, Herman H., Baltimore, Md., assignor to Kistner Lock & Appliance Company. Sash lock securing device. 2,103,987; Dec. 28.

Kistner Lock & Appliance Company. (See Kistner, Herman H., assignor.)

Kitchel, George B., Houston, and E. J. Roach, Beaumont, assignors to Beaumont Iron Works Company, Beaumont, Tex. Tubing head. 2,103,586; Dec. 28.

Klasing, Augustus F. (See Stolpe, Frederick J., assignor.)

Klaucke, Hermann, assignor to Baldwin-Duckworth Chain Corporation, Worcester, Mass. Conveyer. 2,103,680; Dec. 28.

Klaucke, Hermann, assignor to Baldwin-Duckworth Chain Corporation, Worcester, Mass. Chuck. 2,103,681; Dec. 28.

Kleckner, Arthur C., Racine, Wis. Therapeutic device. 2,103,471; Dec. 28.

Klemm, Herman G., Baltimore, and B. C. Boulton, Towson, assignors to Glenn L. Martin Company, Baltimore, Md. Aircraft construction. 2,103,466; Dec. 28.

Kline, Walter, Wellington, and W. A. Brubaker, Akron; said Kline assignor to E. H. Morrison, Wellington, Ohio. Spaced wall receptacle. 2,103,677; Dec. 28.

Kline, Walter, Wellington, and W. A. Brubaker, Akron; said Kline assignor to E. H. Morrison, Wellington, Ohio. Refrigerated shipping and/or storing vessel. 2,103,678; Dec. 28.

Kline, Walter, Wellington, and W. A. Brubaker, Akron; said Kline assignor to E. H. Morrison, Wellington, Ohio. Shipping and/or storing carboy. 2,103,679; Dec. 28.

Knerr, Hugh J., Osborn, Ohio. Flowmeter. 2,103,262; Dec. 28.

Knoebel, Walter C., assignor to D. M. Smith, Kirkwood, Mo. Piston expander. 2,103,665; Dec. 28.

Knol, Clarence, Grand Rapids, Mich. Garment supporting attachment. 2,103,854; Dec. 28.

Koch, Lydia B., New York, N. Y. Container. 2,103,290; Dec. 28.

Koenig, Emanuel, et al. (See Greenwald, Herman, assignor.)

Koehler, Maxemilian E., Washington, D. C. Scalp-Treating device. 2,103,949; Dec. 28.

Koerding, Paul. (See Schoeller, C., and Koerding.)

Kolb, Frank P., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Reflector. 2,103,538; Dec. 28.

Kolozsy, Louis W., Astoria, assignor to Television and Electric Corporation of America, New York, N. Y. Method of and apparatus for producing television pictures. 2,103,420; Dec. 28.

Konikoff, Robert H., Astoria, assignor to Schranz & Bieber Co. Inc., New York, N. Y. Game apparatus. 2,103,467; Dec. 28.

Knott, Hermann, New York, N. Y., assignor by mesne assignments, to Ion Corporation, Short Hills, N. J. Electron discharge device for electronically bombarding materials. 2,103,623; Dec. 28.

Kreer, John G., Jr., Bloomfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave translating system. 2,103,468; Dec. 28.

Kremer, John, Southport, Conn. Apparatus for baking dough products and the like. 2,103,469; Dec. 28.

Kroydon Company, The. (See Brisick, Joseph C., assignor.)

Kucera, Frank A., assignor to Union Special Machine Company, Chicago, Ill. Presser mechanism for sewing machines. 2,103,470; Dec. 28.

Kucera, Jaroslav, Prague, Czechoslovakia, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Regulating system. 2,103,818; Dec. 28.

Kuehar, Joseph, assignor to Athey Truss Wheel Co., Chicago, Ill. Spring wind-up for wagons. 2,103,471; Dec. 28.

Kueffer, E. H. (See Howard, Clarence B., assignor.)

Kuhn, Frederick A., Meriden, assignor to The Lyman Gun Sight Corporation, Middlefield, Conn. Telescope sight mounting. 2,103,539; Dec. 28.

Kuhner, Max H., assignor to Riley Stoker Corporation, Worcester, Mass. Power plant. 2,103,685; Dec. 28.

La Bour Company, The. (See La Bour, Harry E., assignor.)

La Bour, Harry E., assignor to The La Bour Company, Inc., Elkart, Ind. Alloy. 2,103,855; Dec. 28.

La Fetra, Harry L., New York, N. Y. Collapsible table unit. 2,103,330; Dec. 28.

Lake, Donald W. (See Sperry, P. F., and Lake.)

Lambert, Albert L., and F. M. Narberth, assignors to Heintz Manufacturing Company, Philadelphia, Pa. Watertight door. 2,103,291; Dec. 28.

Lambert, Francis M. (See Lambert, Albert L., and F. M.)

Landis Tool Company. (See Balsiger, Harold E., assignor.)

Lang, Franz, Munich, Germany, assignor by mesne assignments, to Lanova Corporation, New York, N. Y. Air chamber Diesel engine. 2,103,423; Dec. 28.

Lange, Hermann, Erlenbach, Switzerland. Sliding hood. 2,103,372; Dec. 28.

Lanova Corporation. (See Lang, Franz, assignor.)

Lantz, Louis A., A. L. Morrison, and W. S. Miller, assignors to The Calico Printers' Association Limited, Manchester, England. Ornamentation of textile fabrics. 2,103,587; Dec. 28.

Lascari, John, Unionville, Conn. Shoe cleat. 2,103,472; Dec. 28.

Lawson, Robert H., Pawtucket, and A. N. Cloutier, Lonsdale, assignors to Hemphill Company, Central Falls, R. I. Knitted fabric and knitting the same. 2,103,908; Dec. 28.

Leach, Harry, Providence, R. I. Seal. 2,103,292; Dec. 28.

Le Bleu, Charles, Los Angeles, Calif. Scraper. 2,103,588; Dec. 28.

Le Blond, R. K., Machine Tool Company, The. (See Pierle, Henry C., assignor.)

Le Bus, George E., Longview, Tex. Fishing tool for well drilling. 2,103,988; Dec. 28.

Lee Engineering Research Corporation. (See Lee, R., and Egedal, assignors.)

Lee, Royal, and L. E. Egedal, assignors to Lee Engineering Research Corporation, Milwaukee, Wis. Motor speed regulator. 2,103,589; Dec. 28.

Leeds & Northrup Company. (See Harsch, John W., assignor.)

Leeds, Reginald E. (See Dudding, B. P., and Leeds.)

Le Compte, Melanie. (See Filion, Melanie, née La Compte.)

Lefevre, André R., assignor to Société Anonyme Andre Citroen, Paris, France. Resilient suspension device for motor cars or other vehicles. 2,103,590; Dec. 28.

Lehman, Carl E., Chicago, Ill. Faucet attachment spray plate and process for making the same. 2,103,424; Dec. 28.

Lehman, Carl E., Chicago, Ill. Faucet attachment. 2,103,425; Dec. 28.

Leighton, John W., Port Huron, Mich. Spring or shackle mounting. 2,103,729; Dec. 28.

Le Masson, Marcel, Paris, France. Grilling and toasting device. 2,103,426; Dec. 28.

Lester, Hugh L. P., Greens Norton, Towcester, England. Motor road vehicle. 2,103,624; Dec. 28.

Leukert, Wilhelm, Berlin-Siemensstadt, Germany, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Converting system for reversible alternating current-direct current conversion. 2,103,950; Dec. 28.

Lever Brothers Company. (See Andersen, Carl N., assignor.)

Le Vesconte, Harold J., Western Springs, and A. M. Schweda, assignors to Union Special Machine Company, Chicago, Ill. Lubricating system for sewing machines. 2,103,473; Dec. 28.

Lewis, Everett M., Tulsa, Okla. Apparatus for making burial coffins. 2,103,951; Dec. 28.

Lewis, Roy A., Bethlehem, and C. Schenck, Coopersburg, Pa., assignors to Bethlehem Steel Company. Welded car underframe. 2,103,730; Dec. 28.

Libbey-Owens-Ford Glass Company. (See Hinsey, Robert S., assignor.)

Libby-Owens-Ford Glass Company. (See Lowry, Clyde D., assignor.)

Libbey-Owens-Ford Glass Company. (See Shock, Harry C., assignor.)

Libbey-Owens-Ford Glass Company. (See Watkins, G. B., and Wampler, assignors.)

Lier, Henrich, assignor to the firm of Chemical Works, formerly Sandoz, Basel, Switzerland. Manufacture and use of wetting preparations. 2,103,819; Dec. 28.

Liessmann, Frederick, assignor to Electrical Research Laboratories, Inc., Chicago, Ill. Dial. 2,103,856; Dec. 28.

Lilienfeld, Leon, Vienna, Austria. Carbohydrate derivatives and making the same. 2,103,952; Dec. 28.

Lindberg, Gustav R., Overum, Sweden. Reversible planetary piston pump. 2,103,474; Dec. 28.

Lindsey, William D., South Orange, N. J., assignor, by mesne assignments, to The Sealand Corporation. Signal system. 2,103,857; Dec. 28.

Lindsly, Ben E., Washington, D. C. Apparatus for taking fluid samples. 2,103,475; Dec. 28.

Linton, Irwin H., et al. (See McCrary, Pierce R., assignor.)

Lippard, Herman I., Lansdowne, Pa. Tag printing device. 2,103,752; Dec. 28.

Lippert, Arnold L., assignor to Joseph Bancroft & Sons Co., Wilmington, Del. Chintz. 2,103,293; Dec. 28.

Lipson, John, and N. Lipson, Toronto, Ontario, Canada. Hosiery drying and pressing device. 2,103,909; Dec. 28.

Lipson, Nathaniel. (See Lipson, John, and N.)

Livermore, William T., Westfield, N. J. Change speed transmission. 2,103,540; Dec. 28.

Lodge, Alvin, assignor to Hamilton Watch Company, Lancaster, Pa. Dial for watches and other instruments. 2,103,263; Dec. 28.

Loeffler, Bruno, Plainfield, N. J., assignor to Mack Manufacturing Corporation. Supercharging mechanism for diesel engines. 2,103,974; Dec. 28.

Long, Fred R., Catawissa, Pa. Combined pipe union and ball check valve. 2,103,427; Dec. 28.

Long, Leonard D., Charleston, S. C. Display stand. 2,103,684; Dec. 28.

Longtin, William J., assignor to Infant Socks Company, Reading, Pa. Hosiery. 2,103,625; Dec. 28.

Lorig, Edwin T., Gary, Ind., assignor to American Sheet and Tin Plate Company. Feed device. 2,103,264; Dec. 28.

Lott, William A., Newark, N. J., assignor to E. R. Squibb & Sons, New York, N. Y. Acrylic acid derivatives. 2,103,265; Dec. 28.

Lott, William A., Newark, N. J., assignor to E. R. Squibb & Sons, New York, N. Y. Acylated diols. 2,103,266; Dec. 28.

Louden Machinery Company, The. (See Johnson, Albert C., assignor.)

Low, John J., Los Angeles, Calif., assignor to Kay-Brunner Steel Products, Inc. Winch. 2,103,541; Dec. 28.

Lowry, Clyde D., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Sash and store front construction. 2,103,731; Dec. 28.

Lowry, Clyde D., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Sash and store front construction. 2,103,732; Dec. 28.

Lucek, Charles W., Forest Hills, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telegraph test board circuit. 2,103,476; Dec. 28.

Lucas, John E., et al (See Coshow, Chester L., assignor.)

Lucking, David F., Felixstowe, England. Anchor for ships or the like. 2,103,477; Dec. 28.

Ludin, Werner. (See Graemiger, B., and Ludin.)

Luly, Edgar L., London, England, assignor to The Babcock & Wilcox Company, Newark, N. J. Evaporator. 2,103,521; Dec. 28.

Lung, Kenneth R., assignor to Flint & Walling Manufacturing Company, Kendallville, Ind. Windmill. 2,103,910; Dec. 28.

Luschinsky, Eugen, Vienna, Austria. Automobile vehicle for forward and backward travel. 2,103,858; Dec. 28.

Lutes, Cecil C., Bellingham, Wash. Game apparatus. 2,103,428; Dec. 28.

Lutz, Frederick, assignor to Union Special Maschinenfabrik, G. m. b. H., Stuttgart, Germany. Sewing machine. 2,103,478; Dec. 28.

Lyman Gun Sight Corporation, The. (See Kuhn, Frederick A., assignor.)

MacFarren, Walter W., Los Angeles, Calif. Building construction. 2,103,859; Dec. 28.

Machinist, Harold, Sunnyside, Long Island, N. Y., assignor to Dudley Lock Corporation, Chicago, Ill. Bar lock. 2,103,989; Dec. 28.

Mack Manufacturing Corporation. (See Goldsmith, John, assignor.)

Mack Manufacturing Corporation. (See Loeffler, Bruno, assignor.)

MacLean-Fogg Lock Nut Company. (See Rowe, Lawrence A., assignor.)

Madison-Kipp Corporation. (See Schultz, Raymond J., assignor.)

Maerlender, Hugo A. (See Guth, Henry, assignor.)

Magee, William, Park Ridge, assignor, by mesne assignments, of ten per cent to D. Guilliams, Evanston, Ill. Household carbonator. 2,103,479; Dec. 28.

Magnesium Development Corporation. (See Suchy, R., and Seliger, assignors.)

Maine Steel, Inc. (See Henry, Carle D., assignor.)

Malocsay, Francis X., Upper Saddle River, N. J., assignor to International Banding Machine Company. Cigar labeling and wrapping machine. 2,103,626; Dec. 28.

Mandell, Ambrose J., deceased, Westfield, N. J.; E. Mandell, administrator of said A. J. Mandell, assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y. Alloy for vacuum tube elements. 2,103,267; Dec. 28.

Mandel, Edward, administrator. (See Mandell, Ambrose J.)

Marley Company, The. (See Mart, Leon T., assignor.)

Mart, Leon T., Johnson County, Kans., assignor to The Marley Company, Kansas City, Mo. Cooling liquids. 2,103,542; Dec. 28.

Martin, George D., Nitro, W. Va., assignor, by mesne assignments, to Monsanto Chemical Company, Wilmington, Del. Rubber composition and preservation of rubber. 2,103,686; Dec. 28.

Martin, Glenn L., Company, The. (See Klemm, H. G., and Boulton, assignors.)

Martin, Robert W., assignor to Hercules Powder Company, Wilmington, Del. Dehydrating pine oil. 2,103,429; Dec. 28.

Mason, Howard F., Los Angeles, Calif. Gib for elevator guide shoes. 2,103,480; Dec. 28.

Mason, John M., Washington, D. C. Starting gate. 2,103,968; Dec. 28.

Mathes, Robert C., Wyoming, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signaling system and method. 2,103,481; Dec. 28.

Mathews, Edward F., Weymouth, Mass. Welting and making the same. 2,103,331; Dec. 28.

Matthews, George A., assignor to The Detroit-Edison Company, Detroit, Mich. Circuit breaker operating means. 2,103,268; Dec. 28.

Maul Pineapple Company. (See Crutchfield, C. L., and Foster, assignors.)

Maurer, Keith L., Rockville Centre, N. Y., and L. K. Swart, Mountain Lakes, N. J., assignors to American Telephone and Telegraph Company. Electrical protective system. 2,103,430; Dec. 28.

Mauro, Frances P., et al. (See McCrary, Pierce R., assignor.)

Mayer, William J., Glenside, assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa. Vehicle ventilating system. 2,103,990; Dec. 28.

Mayne, Lyle K. (See Davis, C. F., Brush, and Mayne.)

Maxmoor Corporation. (See Moore, Arlington, assignor.)

Mayfield, Walter W., Jefferson City, Mo. Pole and guy calculator. 2,103,332; Dec. 28.

Mazzeo, Hector, Buenos Aires, Argentina. Machine for producing rubber and similar articles. 2,103,860; Dec. 28.

McCandless, Lyon, Beaver Falls, Pa. Liquid measuring device. 2,103,482; Dec. 28.

McClure, Martin J., El Paso, Ill. Box. 2,103,373; Dec. 28.

McCord Radiator & Mfg. Co. (See Powers, William J., assignor.)

McCormick, Elmer, and W. H. Worthington, assignors to John Deere Tractor Company, Waterloo, Iowa. Transmission. 2,103,543; Dec. 28.

McCrary, Pierce R., York, Pa., assignor of twenty-five per cent to I. H. Linton and ten per cent to F. P. Mauro, Washington, D. C. Internal combustion engine. 2,103,787; Dec. 28.

McCune, Burton W., et al. (See Fletcher, Allen H., assignor.)

McCutchen, Brunson S. (See Frantz, S. G., and McCutchen.)

McGlone, Ronald A. (See Albrecht, H. O., McGlone, and Roskosky.)

McGuire, Donald E. (See Clauss, J. A., and McGuire.)

McKenney, Maurice L., Syracuse, N. Y. Liquid dispensing device. 2,103,687; Dec. 28.

McNally, James G., and J. B. Dickey, assignors to Eastman Kodak Company, Rochester, N. Y. Azo compounds and dyeing therewith. 2,103,269; Dec. 28.

McNeal, Daniel R., Abington, assignor to Andale Company, Philadelphia, Pa. Rotary strainer. 2,103,483; Dec. 28.

McQuoid, Frank. (See Roberts, Bruce, assignor.)

McWade, Walter N., Overland Park, Kans., assignor of one-half to M. A. Sticelber, Kansas City, Mo. Refrigerated sealing equipment. 2,103,544; Dec. 28.

McWeeny, John L., Chicago, Ill. Projecting and magnifying tuning indicia. 2,103,333; Dec. 28.

McWeeny, John L., Chicago, Ill. Dimming radio lights. 2,103,334; Dec. 28.

Mechanical Handling Systems, Inc. (See Francis, Lynn M., assignor.)

Melcher, Lee W., assignor to Waukesha Motor Company, Waukesha, Wis. Motor and compressor unit. 2,103,861; Dec. 28.

Melcher, Lee W., assignor to Waukesha Motor Company, Waukesha, Wis. Refrigerating unit. 2,103,862; Dec. 28.

Meller, William O., Monroe, assignor to Woodall Industries Incorporated, Detroit, Mich. Visor construction. 2,103,863; Dec. 28.

Merck & Co. Inc. (See Roeder, Georg, assignor.)

Mergott, J. E., Company, The. (See Hiering, William C., assignor.)

Merrick, Frank W., Boston, assignor to American Stay Company, East Boston, Mass. Loom picker. 2,103,991; Dec. 28.

Merrill, David R., Long Beach, and P. Subkow, assignors to Union Oil Company of California, Los Angeles, Calif. Production of lubricating oil. 2,103,591; Dec. 28.

Mertens, Cyril P. (See Sullivan, William J., assignor.)

Mesick, Harry F., Jr., and M. J. Gross, assignors to General Electric X-Ray Corporation, Chicago, Ill. X-ray tube. 2,103,335; Dec. 28.

Meyer, Bernard P., et al. (See Fletcher, Allen H., assignor.)

Meyer, Pierre H., New York, N. Y. Angular display shelf. 2,103,484; Dec. 28.

Meyer, Pierre H., Mount Vernon, N. Y. Variable inclination supporting bracket. 2,103,485; Dec. 28.

Meyerstein, Anthony M., Inc., et al. (See Meyerstein, Anthony M., assignor.)

Meyerstein, Anthony M., Nutley, N. J., assignor of three-fourths to Rosoff Bros., Inc., Brooklyn, and one-fourth to Anthony M. Meyerstein, Inc., New York, N. Y. Water sealed door for bottom-discharging receptacles. 2,103,975; Dec. 28.

Michener, Edward R., assignor to H & H Machine & Motor Parts Company, St. Louis, Mo. Cylinder reboring-plate. 2,103,294; Dec. 28.

Mid-West Forging Company. (See Bardell, Nicholas J., assignor.)

Mikan, Victor, Durand, Mich. Apparatus for eliminating soft stone from gravel. 2,103,374; Dec. 28.

Miller, Edward W., assignor to The Fellows Gear Shaper Company, Springfield, Vt. Helical gear shaping machine. 2,103,911; Dec. 28.

Miller, William S. (See Lantz, L. A., Morrison, and Miller.)

Milliken, Mahlon G., assignor to Hercules Powder Company, Wilmington, Del. Stabilizing nitrocellulose. 2,103,592; Dec. 28.

Milliken, Mahlon G., assignor to Hercules Powder Company, Wilmington, Del. Apparatus for stabilizing nitrocellulose. 2,103,593; Dec. 28.
Mills, Hubert E. (See Perkins, E. H., and Mills.)
Milutin, Theodore A., Dearborn, Mich. Brake adjusting tool. 2,103,688; Dec. 28.
Miollis, Raymond, Barron, Wis. Apparatus for making cheese. 2,103,545. Dec. 28.
Mirenta, August, Tacoma, Wash. Arch support. 2,103,627; Dec. 28.
Mohrfeld, Herbert H., Collingswood, N. J. Venetian blind. 2,103,788; Dec. 28.
Molson, Hartland de M. (See Algarsson, Grettir, assignor.)
Monsanto Chemical Company. (See Martin, George D., assignor.)
Montgomery, Donald H., West Hartford, assignor to The New Britain Machine Company, New Britain, Conn. Bearing. 2,103,912; Dec. 28.
Moohl, Johan G. (See Motch, E. R., Jr., and Moohl.)
Moon, Herbert J. (See Smith, A. T., and Moon.)
Moore, Arlington, assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y. Supplying fuel for engine idling. 2,103,628; Dec. 28.
Moore, Arlington, assignor, by mesne assignments, to Maxmoor Corporation, New York, N. Y. Anterior throttle carburetor. 2,103,629; Dec. 28.
Morin, Paul G., Apponaug, R. I. Cleat. 2,103,630; Dec. 28.
Morrell, George, Corporation. (See Morrell, George, assignor.)
Morrell, George, Muskegon, assignor to George Morrell Corporation, Muskegon Heights, Mich. Producing varicolored casein. 2,103,546; Dec. 28.
Morris, Marion W., Logansport, Ind., assignor, by mesne assignments, to Eclipse Machine Company, Elmira Heights, N. Y. Automatic starting system. 2,103,375; Dec. 28.
Morris, Roy H., Brownwood, Tex. Burial vault. 2,103,547; Dec. 28.
Morrison, Alexander L. (See Lantz, L. A., Morrison, and Miller.)
Morrison, Ethel H. (See Kline W., assignor, and Brubaker.)
Morse, James F. (See Clayton, W., Back, Morse, and Johnson.)
Morton, Harold S., St. Paul, Minn. Stoker control and maintaining desired fuel bed resistance. 2,103,913; Dec. 28.
Moseley, Tomlinson L., assignor to Dalmo Sales Corporation, San Francisco, Calif. Window construction. 2,103,864; Dec. 28.
Mosshart, Donald J., Springfield, Pa., assignor of one-half to H. F. Hilldreth, Mansfield, Ohio. Domestic heater. 2,103,789; Dec. 28.
Motch and Merryweather Machinery Company, The. (See Motch, E. R., Jr., and Moohl, assignors.)
Motch, Edwin R., Jr., Cleveland, and J. G. Moohl, South Euclid, assignors to The Motch and Merryweather Machinery Company, Cleveland, Ohio. Rotary tool machine. 2,103,486; Dec. 28.
Mucha, Joseph, Neenah, Wis. Antiskidding device for motor vehicles. 2,103,295; Dec. 28.
Mueller, Robert A., Houston, Tex. Controlling wells. 2,103,431; Dec. 28.
Mullen, James F., Jr., Lincoln Park, Mich. Carburetor. 2,103,689; Dec. 28.
Müller, Anna L., et al., executors. (See Müller, John H.)
Müller, John H., deceased, Secane, Pa.; A. L. Müller and Provident Trust Co., executors of said J. H. Müller, assignors to Silver Oxide Products Company, Incorporated. Disinfective and antiseptic compounds for the treatment of ulcers, sores, and the like. 2,103,999; Dec. 28.
Müller, Paul, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie G. m. b. H., Berlin, Germany. Rectifying and filtering system. 2,103,487; Dec. 28.
Murch, John H., East Orange, N. J., assignor to American Can Company, New York, N. Y. Can spraying machine. 2,103,270; Dec. 28.
Muros, Joseph, Cambridge, assignor to Gillette Safety Razor Company, Boston, Mass. Shaving implement. 2,103,753; Dec. 28.
Murray, Homer R., Fairfield, Iowa. Appliance for preparing bodies for burial. 2,103,376; Dec. 28.
Murray, John M., New York, N. Y. Glove. 2,103,594; Dec. 28.
Myers, Walter, Bridgeport, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Beaded edged article and method. 2,103,631; Dec. 28.
N. V. Philips' Gloeilampenfabrieken. (See Posthumus, K., and Nordlohne, assignors.)
Nash, Henry E., assignor to Hercules Powder Company, Wilmington, Del. Electrical firing device. 2,103,432; Dec. 28.
Nason, Horace E., Berwyn, Ill., assignor to Westinghouse Electric & Manufactnring Company, East Pittsburgh, Pa. Control system. 2,103,790; Dec. 28.
National Acme Company, The. (See Drissner, Alfred E., assignor.)
National Acme Company, The. (See Eckardt, Rudolf, assignor.)
National Acme Company, The. (See Hogg, William J., assignor.)
National Acme Company, The. (See Simpson, Charlie W., assignor.)
National Aviation Research Corporation. (See De Florez, Luis, assignor.)
National Electric Products Corporation. (See Ganoe, Ernst A. G., assignor.)
National Enameling & Stamping Company. (See Smith, A. T., and Moon, assignors.)
National Lock Co. (See Wade, William, assignor.)
National Lock Co. (See Wade, W., and North, assignors.)
National Twist Drill & Tool Company. (See Oxford, Carl J., assignor.)
Neidich, Samuel A., Burlington, N. J., assignor, by mesne assignments, to Underwood Elliott Fisher Company, New York, N. Y. Communicating transfer medium. 2,103,690; Dec. 28.
Neldner, Stephen W., Milwaukee, Wis. Meat tenderer. 2,103,914; Dec. 28.
Nelson, Alfred W., Camden, N. J. Iternal combustion engine. 2,103,595; Dec. 28.
Nelson, Martin L., Park Ridge, H. C. Robinson, Chicago, and J. I. Bellamy, Brookfield, assignors, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill. Transmitting and receiving system. 2,103,296; Dec. 28.
Nelson, Martin L., Park Ridge, Ill., H. C. Robinson, Baltimore, Md., and J. I. Bellamy, Brookfield, assignors, by mesne assignments, to Associated Electric Laboratories, Inc., Chicago, Ill. Stock-quotation system. 2,103,297; Dec. 28.
New Britain Machine Company, The. (See Montgomery, Donald H., assignor.)
Newton, Noel B., Acton, London, England. Friction clutch. 2,103,433; Dec. 28.
Nichols, Thomas W., London, assignor of one-half to Tilghman's Patent Sand Blast Company, Limited, Broadheath, near Manchester, England. Cooling system for rotary machines. 2,103,632; Dec. 28.
Nodine, Frederick A., Terryville, assignor to The Cooper Oven Thermometer Company, Pequabuck, Conn. Thermometer. 2,103,633; Dec. 28.
Nodine, Frederick A., Terryville, assignor to The Cooper Oven Thermometer Company, Pequabuck, Conn. Thermometer. 2,103,634; Dec. 28.
Nonnekens, Jacobus C., Eindhoven, Netherlands, assignor to Radio Corporation of America. Superheterodyne automatic gain control system. 2,103,865; Dec. 28.
Nordlohne, Pierre J. H. A. (See Posthumus, K., and Nordlohne.)
Norris, Kathleen, Palo Alto, Calif. Hand cart. 2,103,866; Dec. 28.
North, Edwin. (See Wade, W., and North.)
Northen, Charles, Orlando, Fla. Colloidal plant food and stimulant. 2,103,953; Dec. 28.
Norton Company. (See Indge, Herbert S., assignor.)
Norton, Raymond P., Algona, Iowa. Valve reseating tool. 2,103,377; Dec. 28.
Novoveszky, Stefan, St. Louis, Mo. Portable light. 2,103,336; Dec. 28.
Obermaier, John A., Chicago, Ill. Electric connecter. 2,103,548; Dec. 28.
Oestnaes, Victor L., Westfield, and C. A. Swanstrom, Irvington, N. J., assignors to American Gasaccumulator Company. Time delay apparatus. 2,103,378; Dec. 28.
Ohio Brass Company, The. (See Higgins, Ralph, assignor.)
Ohio Brass Company, The. (See Walker, Robert H., assignor.)
Ohlsen, Niels, Chicago, Ill. Apparatus for treating garbage. 2,103,488; Dec. 28.
Oil Well Manufacturing Corporation. (See White, Clarence, assignor.)
Olmstead, Frederick A., Cleveland Heights, assignor to The Chain Products Company, Cleveland, Ohio. Tire lug. 2,103,550; Dec. 28.
Olsen, Walter. (See Hanson, H. C., and Olsen.)
Olson Manufacturing Company. (See Hanson, Casper F., assignor.)
Olsson, Otto. (See Hammer, V., Jansson, and Olsson.)
O'Neil, Donald. (See O'Neil, Matthew G., assignor.)
O'Neil, Matthew G., assignor to D. O'Neil, Dallas, Tex. Apparatus for making emulsions of bituminous materials. 2,103,549; Dec. 28.
Oswego Falls Corporation. (See Sidon, Max, assignor.)
Otis Elevator Company. (See Handy, Arthur E., assignor.)
Oury, John F., Chicago, Ill. Expansion joint. 2,103,337; Dec. 28.
Oxford, Carl J., assignor to National Twist Drill & Tool Company, Detroit, Mich. Forming a rotary tool. 2,103,379; Dec. 28.
Packard Motor Car Company. (See Tibbetts, Milton, assignor.)
Palmer, DeWitt H., Elkhart, Ind. Apparatus for purifying oil. 2,103,635; Dec. 28.
Palmer, Edward E., Fitzwilliam, N. H. Coat and vest hanger. 2,103,691; Dec. 28.
Pankonin, William G., Chicago, Ill. Stapling device. 2,103,551; Dec. 28.
Paper Supply Company. (See Bolyard, Charles C., assignor.)
Park, Andrew J., Pueblo, Colo. Resilient wheel. 2,103,867; Dec. 28.

Parker Rust Proof Company. (See Gordon, Robert H., assignor.)
Pavelka, Frank E., San Antonio, Tex. Amusement apparatus. 2,103,954; Dec. 28.
Payne, Oscar V., Leicester, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Picking motion for looms. 2,103,820; Dec. 28.
Payne, Oscar V., Leicester, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Let-off for looms. 2,103,821; Dec. 28.
Pearce, Austin W., Memphis, Tenn. Ashtray. 2,103,754; Dec. 28.
Pearson, John M., Aldan, assignor to Sun Oil Company, Philadelphia, Pa. Electrical measuring method and apparatus. 2,103,636; Dec. 28.
Pen-Chlor, Inc. (See Dietz, K., and Frank, assignors.)
Pennebaker, Robert H., Baton Rouge, La. Oil filter. 2,103,434; Dec. 28.
People of the United States, Free use of the. (See Balls, A. K., and Hale, assignors.)
Pepper, Robert K. and S. C. V., Syracuse, N. Y. Power transmission apparatus. 2,103,791; Dec. 28.
Pepper, Samuel C. V. (See Pepper, Robert K. and S. C. V.)
Perkins, Edward H., and H. E. Mills, Midland, assignors, by mesne assignments, to Whitehead & Kales Company, River Rouge, Mich. Vehicle running gear. 2,103,381; Dec. 28.
Perlman, Geo. J., Co. (See Driscoll, Oris M., assignor.)
Perry, Ira D., Muskegon, Mich. Tire valve and the like. 2,103,822; Dec. 28.
Perry, Walter M., assignor to Sperry Products, Inc., Brooklyn, N. Y. Rail flaw detector mechanism. 2,103,868; Dec. 28.
Peterson, Alfred J. A., and C. E. Valentine, Wilkinsburg, assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Control switch. 2,103,792; Dec. 28.
Peterson, Eugene, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Amplifier circuit. 2,103,489; Dec. 28.
Peterson, Eugene, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave translating circuits. 2,103,490; Dec. 28.
Peterson, Harold O., and M. Katzin, Riverhead, N. Y., assignors to Radio Corporation of America. Signaling circuit. 2,103,869; Dec. 28.
Petter, Noel A., Los Angeles, Calif. Egg carton. 2,103,382; Dec. 28.
Philpott, La Verne R., Wilkinsburg, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Facsimile transmission. 2,103,793; Dec. 28.
Phosphate Recovery Corporation. (See Tartaron, F. X., and Duke, assignors.)
Pierle, Henry C., assignor to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Multiple spindle center drive crank shaft lathe. 2,103,298; Dec. 28.
Piotrowski, Waclaw J., and J. Winkler, Drohobycz, Poland. Production of secondary and tertiary alkyl monochlorides. 2,103,692; Dec. 28.
Pittsburgh Dry Stencil Company. (See Greenslade, Grover R., assignor.)
Pittsburgh Steel Company. (See Edge, Walter S., assignor.)
Place, Blon C., assignor of one-half to G. E. Gagnier, Detroit, Mich. Upholstery button. 2,103,955; Dec. 28.
Poch, Waldemar J., Collingswood, N. J., assignor to Radio Corporation of America. Automatic volume control circuit. 2,103,637; Dec. 28.
Pohl, Ernst, Kiel, Germany. Radiographic couch. 2,103,693; Dec. 28.
Pool, Melvin, assignor to A. N. Burns, Oklahoma City, Okla. Game. 2,103,435; Dec. 28.
Posthumus, Klaas, Eindhoven, Netherlands, assignor to Radio Corporation of America. Oscillation generator. 2,103,638; Dec. 28.
Posthumus, Klaas, and P. J. H. A. Nordlohne, assignors to N. V. Philips Gloeilampenfabrieken, Eindhoven, Netherlands. Ultrahigh frequency oscillator. 2,103,338; Dec. 28.
Powers, William J., assignor to McCord Radiator & Mfg. Co., Detroit, Mich. Sight feed device. 2,103,733; Dec. 28.
Pratt, Raymond C., assignor to H. B. Dodge and Company, Chicago, Ill. Venetian blind slat and making. 2,103,271; Dec. 28.
Probst, Karl K., Toledo, Ohio, assignor to General Motors Corporation, Detroit, Mich. Vehicle construction. 2,103,915; Dec. 28.
Provident Trust Co. et al., executors. (See Müller, John H.)
Public, Dedicated to the free use of the. (See Barber, George W.)
Pure Oil Company, The. (See Carr, Richard H., assignor.)
Pure Oil Company, The. (See Harnsberger, Audley E., assignor.)
Radioaktiengesellschaft D. S. Loewe. (See Kapteyn, Paul, assignor.)
Radio Corporation of America. (See Banca, Maggio C., assignor.)
Radio Corporation of America. (See Conklin, J. W., and Battermann, assignors.)
Radio Corporation of America. (See Frantz, S. G., and McCutchen, assignors.)

Radio Corporation of America. (See Hallmark, Clyde E., assignor.)
Radio Corporation of America. (See Hansell, Clarence W., assignor.)
Radio Corporation of America. (See Kirkwood, Loren R., assignor.)
Radio Corporation of America. (See Mandell, Ambrose J., assignor.)
Radio Corporation of America. (See Nonnekens, Jacobus C., assignor.)
Radio Corporation of America. (See Peterson, H. O., and Katzin, assignors.)
Radio Corporation of America. (See Poch, Waldemar J., assignor.)
Radio Corporation of America. (See Posthumus, Klaas, assignor.)
Radio Corporation of America. (See Schrader, Harold J., assignor.)
Radio Corporation of America. (See Thompson, Leland E., assignor.)
Radio Corporation of America. (See Whitaker, James N., assignor.)
Radio Corporation of America. (See Zworykin, Vladimir K., assignor.)
Radyx, Alexander, Denver, Colo. Combined cabinet, table, and seat. 2,103,552; Dec. 28.
Raigorodsky, Paul M., Tulsa, Okla. Air conditioning system. 2,103,596; Dec. 28.
Railway Utility Co. (See Hartwig, William G., assignor.)
Rampacher, Fritz, Berlin-Charlottenburg, Germany, assignor to Westinghouse Electric & Manufacturing Company. Circuit breaker. 2,103,794; Dec. 28.
Ravnsbeck, Fred, Chicago, Ill., assignor to Ace Engineering Co. Handling liquids. 2,103,299; Dec. 28.
Ravenscroft, Arley E., Denbigh, Va. Cable cutter. 2,103,597; Dec. 28.
Read, Archie, Newcastle-on-Tyne, England. Controlling automatic Diesel electric generators. 2,103,491; Dec. 28.
Refinery Supply Company. (See Gregory, Lon S., assignor.)
Reilly, Alfred F., North Attleboro, Mass., assignor to Evans Case Company. Combined vanity case, cigarette case, and lighter. 2,103,755; Dec. 28.
Reiser, John G., Toledo, Ohio. Photographic apparatus. 2,103,694; Dec. 28.
Reppe, Walter, and O. Schlichting, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of polymerization products from vinyl ethers. 2,104,000; Dec. 28.
Reppe, Walter, and O. Schlichting, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Product of polymerization products from vinyl ethers. 2,104,001; Dec. 28.
Reppe, Walter, and O. Schlichting, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of polymerization products from vinyl ethers. 2,104,002; Dec. 28.
Reynolds, Joseph H., Cisco, Tex. Self-cooling bed and couch cushion. 2,103,553; Dec. 28.
Richter, George A., assignor to Brown Company, Berlin, N. H. Precipitation or setting of hydroxy-cellulose ethers from alkaline aqueous solutions. 2,103,639; Dec. 28.
Richter, George A., assignor to Brown Company, Berlin, N. H. Paper manufacture. 2,103,640; Dec. 28.
Richter, Harry. (See Kimble, H. K., and Richter.)
Ries, Ferdinand. (See Selfried, S., and Ries.)
Riley Stoker Corporation. (See Kuhner, Max H., assignor.)
Rinehimer, Clarence, Chicago, Ill. Advertising device. 2,103,756; Dec. 28.
Roach, Edmund J. (See Kitchel, G. B., and Roach.)
Roberts, Bruce, Hollywood, assignor to F. McQuoid, Los Angeles, Calif. Animated sign. 2,103,300; Dec. 28.
Roberson, Harvey D., assignor to Wachusett Shirt Company, Leominster, Mass. Collar. 2,103,492; Dec. 28.
Robertson, Charles P., Upper Clapton, London, England. Dispensing device. 2,103,493; Dec. 28.
Robertson, William W., Marlboro, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Control mechanism for shuttle changing looms. 2,103,823; Dec. 28.
Robertson, William W., Northboro, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Vibration arrester for tube frames. 2,103,824; Dec. 28.
Robertson, William W., Northboro, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Needle motion for axminster looms. 2,103,825; Dec. 28.
Robertson, William W., Northboro, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Needle motion for axminster looms. 2,103,826; Dec. 28.
Robertson, William W., Northboro, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Vibration arrester for tube frames. 2,103,827; Dec. 28.
Robinson, Cecil S., Ithaca, N. Y. Jar opener. 2,103,554; Dec. 28.

Robinson, Fred H., Rye, N. H. Cribbage scoring device. 2,103,916; Dec. 28.

Robinson, Harold C. (See Nelson, M. L., Robinson, and Bellamy.)

Rockwell, Edward A., Chicago, Ill., assignor, by mesne assignments, to General Auto Parts Corporation. Power brake system. 2,103,641; Dec. 28.

Rockola, David C., assignor, by mesne assignments, to Rock-Ola Manufacturing Corporation, Chicago, Ill. Game apparatus. 2,103,870; Dec. 28.

Rock-Ola Manufacturing Corporation. (See Rockola, David C., assignor.)

Roeder, Georg, assignor to Merck & Co. Inc., Rahway, N. J. Production of B-methylcholine ethers and salts thereof. 2,103,272; Dec. 28.

Roller, Robert, Haddonfield, N. J. Multiple master hanger. 2,103,642; Dec. 28.

Romano, Arthur, and A. Botta, Springfield, Mass. Inking device. 2,103,404; Dec. 28.

Rose, Bennie A., Swissvale, assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Turbine-generator field-winding. 2,103,795; Dec. 28.

Rosén, Nils I., Stocksund, Sweden. Card register. 2,103,695; Dec. 28.

Rosenblum, Israel, Jackson Heights, N. Y. Polyhydric alcohol-polybasic aliphatic acid resin. 2,103,273; Dec. 28.

Roskosky, Stephen J. (See Albrecht, H. O., McGlone, and Roskosky.)

Rosoff Bros., Inc., et al. (See Meyerstein, Anthony M., assignor.)

Rotaprint Akt.-Ges. (See Gericke, Erich, assignor.)

Rotermund, Maynard A. (See Kennedy, H. E., Rotermund, and Jones.)

Rothmund, Leopold, Stuttgart, Germany. Canal lock. 2,103,871; Dec. 28.

Rowe, Lawrence A., Oak Park, assignor to MacLean-Fogg Lock Nut Company, Chicago, Ill. Dust guard and seal assembly. 2,103,555; Dec. 28.

Ruckdeschel, Hans, assignor to the firm Ireks Aktiengesellschaft, Kulmbach, Germany. Production of valuable substances. 2,103,495; Dec. 28.

Rush, Theodore O., assignor to The Sherman-Klove Company, Chicago, Ill. Ratchet wrench. 2,103,556; Dec. 28.

Russell, Clyde D., Oakland, assignor to California Packing Corporation, San Francisco, Calif. Cherry splitter. 2,103,383; Dec. 28.

Salfisberg, Leroy L., South Orange, assignor to Wrap-Ade Machine Company, Inc., Newark, N. J. Package forming machine. 2,103,339; Dec. 28.

Salfisberg, Leroy L., South Orange, assignor to Ivers-Lee Company, Newark, N. J. Package fabrication. 2,103,385; Dec. 28.

Salfisberg, Leroy L., South Orange, assignor to Ivers-Lee Company, Newark, N. J. Color packaging. 2,103,386; Dec. 28.

Salfisberg, Leroy L., South Orange, assignor to Ivers-Lee Company, Newark, N. J. Article feeding construction. 2,103,387; Dec. 28.

Salfisberg, Leroy L., South Orange, assignor to Ivers-Lee Company, Newark, N. J. Packaging feeding system. 2,103,388; Dec. 28.

Salfisberg, Leroy L., South Orange, assignor to Ivers-Lee Company, Newark, N. J. Container for fluids. 2,103,389; Dec. 28.

Salfisberg, Leroy L., South Orange, assignor to Ivers-Lee Company, Newark, N. J. Packaging machine. 2,103,390; Dec. 28.

Salomon, François M. M. B., Paris, France. Device adapted to eliminate oscillations. 2,103,643; Dec. 28.

Sanford, Roy S., New York, N. Y., assignor to Bendix-Westinghouse Automotive Air Brake Company, Pittsburgh, Pa. Control mechanism. 2,103,274; Dec. 28.

Saunders, Albert F., assignor to T. N. Benedict Manufacturing Company, East Syracuse, N. Y. Planked food server. 2,103,496; Dec. 28.

Saunders, Norman H., assignor to Associated Electric Laboratories, Inc., Chicago, Ill. Telephone system. 2,103,301; Dec. 28.

Sawdey, Neil T., Shaker Heights, and N. E. Colegrove, Lakewood, assignors to White Sewing Machine Corporation, Cleveland, Ohio. Knee control for sewing machines. 2,103,557; Dec. 28.

Schaefer, George W., Quincy, Mass. Typewriter ribbon and ink composition therefor. 2,103,275; Dec. 28.

Schaffer, Robert M., St. Louis, Mo. Building structure or tie. 2,103,644; Dec. 28.

Schaffer, Charles A., and C. C. Foil, Port Carbon, Pa. Circular knit tubing cutter attachment for sewing machines. 2,103,696; Dec. 28.

Schenck, Charles. (See Lewis, R. A., and Schenck.)

Scherfel, Otto C., Haddon Heights, N. J., assignor to Audubon Wire Cloth Corporation, Philadelphia, Pa. Wire fabric and making the same. 2,103,917; Dec. 28.

Schering-Kahlbaum A. G. (See Schoeller, W., Schwenk, and Hildebrandt, assignors.)

Scherin-Kahlbaum A. G. (See Schoeller, W., and Borgwardt, assignors.)

Schering-Kahlbaum A. G. (See Skraup, Siegfried, assignor.)

Schering-Kahlbaum A. G. (See Ziegler, Karl, assignor.)

Schieffer, Johann, Oberhausen, Germany, assignor, by mesne assignments, to Diamond Power Specialty Corporation, Detroit, Mich. Soot blower. 2,104,003; Dec. 28.

Schierl, Friedrich. (See Severin, E., and Schierl.)

Schlegel, Charles P., assignor to The Schlegel Manufacturing Company, Rochester, N. Y. Weather stripping and making the same. 2,103,697; Dec. 28.

Schlegel Manufacturing Company, The. (See Schlegel, Charles P., assignor.)

Schleifer, Carlo, Novara, Italy. Wharve for spindles for spinning, twisting, winding, and similar machines. 2,103,436; Dec. 28.

Schlesinger, Kurt, Berlin, Germany. Braun tube. 2,103,645; Dec. 28.

Schlesinger, Kurt, Berlin, Germany. Receiving aerial for ultrashort waves. 2,103,646; Dec. 28.

Schlichting, Otto. (See Reppe, W., and Schlichting.)

Schmid, Alfred, Berlin-Dahlem, Germany. Safety ignition composition containing semi-pyrophoric metal. 2,103,698; Dec. 28.

Schmidinger, Joseph, Long Island City, N. Y. Flasher device. 2,103,276; Dec. 28.

Schmidinger, Joseph, Long Island City, N. Y. Flasher device. 2,103,277; Dec. 28.

Schmidinger, Joseph, New York, N. Y. Combined incandescent lamp and flasher device and manufacture thereof. 2,103,278; Dec. 28.

Schmidt, William H., Wauwatosa, Wis. Typewriter. 2,103,734; Dec. 28.

Schneck, Nathan, Manitowoc, Wis. Optical trial frame. 2,103,340; Dec. 28.

Schneider, George, Montclair, N. J., assignor to Celanese Corporation of America. Artificial textile material and preparing the same. 2,103,497; Dec. 28.

Schoeller, Conrad, and P. Koerding, Ludwigshafen-on-the-Rhine, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. High molecular nitrogenous organic compounds containing carboxylic groups. 2,103,872; Dec. 28.

Schoeller, Walter, Berlin-Westend, and E. Borgwardt, Berlin-Hermsdorf, assignors to Schering-Kahlbaum A. G., Berlin, Germany. Phosphates of amino acid esters and producing same. 2,103,558; Dec. 28.

Schoeller, Walter, Berlin-Westend, Germany, E. Schwenk, New York, N. Y., and F. Hildebrandt, Hohen Neuendorf, near Berlin, assignors to Schering-Kahlbaum A. G., Berlin, Germany. Isolating the follicle hormone from the urine of pregnant individuals. 2,103,735; Dec. 28.

Schrader, Harold J., Haddon Heights, N. J., assignor to Radio Corporation of America. Modulation metering device. 2,103,341; Dec. 28.

Schranz & Bieber Co. Inc. (See Konikoff, Robert H., assignor.)

Schröter, Fritz, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Photocell. 2,103,498; Dec. 28.

Schubert, Friedrich. (See Glietenberg, E., and Schubert.)

Schulz, Max F., Northbrook, Ill. Antiskid device. 2,103,437; Dec. 28.

Schultz, Raymond J., assignor to Madison-Kipp Corporation, Madison, Wis. Pressure casting apparatus. 2,103,438; Dec. 28.

Schumacher, August, Flushing, N. Y. Massage machine. 2,103,956; Dec. 28.

Schundler, F. E. & Company, et al. (See Jones, Otis L., assignor.)

Schur, Milton O., assignor to Brown Company, Berlin, N. H. Preparation of nitrocellulose. 2,103,647; Dec. 28.

Schweda, Albert M. (See Le Vesconte, H. J., and Schweda.)

Schwenk, Erwin. (See Schoeller, W., Schwenk, and Hildebrandt.)

Scofield, Gilbert J., Londonville, N. Y. Vending apparatus or the like. 2,103,391; Dec. 28.

Scott-Paine, Hubert, Hythe, England. Torpedo launching gear. 2,103,380; Dec. 28.

Scott, William H., Rochester, N. Y. Brush and an appliance for using the same. 2,103,957; Dec. 28.

Scovill Manufacturing Company. (See Fenton, Paul E., assignor.)

Sealand Corporation, The. (See Lindsey, William D., assignor.)

Security Products Corporation. (See Watson, Frederick W., assignor.)

Selfried, Simon, and F. Ries, Munich, Germany. File and rasp. 2,103,499; Dec. 28.

Selp, John J., Allentown, Pa. Apparatus for separating solids from liquids. 2,103,796; Dec. 28.

Selp, John J., Allentown, Pa. Process of and apparatus for clarifying liquids. 2,103,828; Dec. 28.

Selp, John J., Allentown, Pa. Clarifying liquids and apparatus therefor. 2,103,829; Dec. 28.

Selas Company, The. (See Hess, Fred, assignor.)

Seliger, Hellmuth. (See Suchy, R., and Seliger.)

Semple, John B., Sewickley, Pa. Gathering of salt. 2,103,757; Dec. 28.

Severin, Edwin, and F. Schierl, assignors to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany. Variable resistor device. 2,103,873; Dec. 28.

Seyfried, Arthur W., assignor to The Apex Electrical Manufacturing Company, Cleveland, Ohio. Ground connection for electrical appliances. 2,103,758; Dec. 28.

Sheehan, Joseph D., Brooklyn, N. Y. Fountain pen cleaner. 2,103,699; Dec. 28.

Shelton Tack Co., The. (See Anderson, Nils H., assignor.)

Sherman, John Q., Dayton, Ohio. Portable register. 2,103,279; Dec. 28.

Sherman-Klove Company, The. (See Rueb, Theodore O., assignor.)

Sherron, Percival H., Jamaica, N. Y. Telephone booth. 2,103,280; Dec. 28.

Shock, Harry C., Charleston, W. Va., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Cutting mechanism. 2,103,875; Dec. 28.

Shuger, Leroy W., assignor to Baltimore Paint and Color Works, Inc., Baltimore, Md. Masking the odor of drying paints, varnishes, and the like and fragrant odor-masked paint. 2,103,830; Dec. 28.

Shwayder, Ben, Ecorse, Mich. Folding chair. 2,103,874; Dec. 28.

Sidon, Max, assignor to Oswego Falls Corporation, Fulton, N. Y. Cup. 2,103,831; Dec. 28.

Siemens & Halski Aktiengesellschaft. (See Wollack, Kurt, assignor.)

Siemens-Schuckertwerke Aktiengesellschaft. (See Steenbeck, Max, assignor.)

Silberman, Jay D., Scarsdale, N. Y. Window construction. 2,103,876; Dec. 28.

Silver Oxide Products Company. (See Müller, John H., assignor.)

Silver, William C., Kansas City, Mo. Selector for sorting machine. 2,103,559; Dec. 28.

Simpson, Charlie W., assignor to The National Acme Company, Cleveland, Ohio. Electric chucking machine. 2,103,342; Dec. 28.

Simpson, Herbert S. (See Christensen, Alfred C., assignor.)

Singer Manufacturing Company, The. (See Fleckenstein, G. A., and Waterman, assignors.)

Singer Manufacturing Company, The. (See Myers, Walter, assignor.)

Skraup, Siegfried, Wurzburg, assignor to Schering-Kahlbaum A. G., Berlin, Germany. Alkyl derivatives of phenols and producing the same. 2,103,736; Dec. 28.

Slusher, George D., et al. (See Fletcher, Allen H., assignor.)

Smart, Algernon, Newcastle-upon-Tyne, England. Fuel mixture supply control for the internal-combustion engines of motor vehicles. 2,103,700; Dec. 28.

Smith, Alva T., and H. J. Moon, assignors to National Enameling & Stamping Company, Milwaukee, Wis. Electric cooking utensil. 2,103,560; Dec. 28.

Smith, Dallas M. (See Knoebel, Walter C., assignor.)

Smith, Dallas M., Kirkwood, Mo. Piston expander. 2,103,664; Dec. 28.

Smith, Harris A., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Converting hydrocarbon oil. 2,103,561; Dec. 28.

Smith, Irving R., Milwaukee, assignor to Sterling Wheelbarrow Company, West Allis, Wis. Wheelbarrow manufacture. 2,103,562; Dec. 28.

Smith, Rowland D., assignor to Corning Glass Works, Corning, N. Y. Metallizing composition for glass. 2,103,598; Dec. 28.

Snelling, Walter O., Allentown, Pa. Sealing expansion joints. 2,103,648; Dec. 28.

Société Anonyme André Citroen. (See Lefevre, André R., assignor.)

Societe Carbochimique, Société Anonyme. (See Ferrero, P., and Vandendries, assignors.)

Sofal Limited. (See Burden, W. M., Genders, and Harrison, assignors.)

Somohano, Manuel, Mexico, D. F., Mexico. Nonblurrable mirror. 2,103,384; Dec. 28.

Sortore, Emerson J. (See Wheeler, E. R., and Sortore.)

Spang, Joseph P., Quincy, Mass. Machine for slitting and broiling meat. 2,103,563; Dec. 28.

Spark King Corporation, The. (See Stupakoff, Semon H., assignor.)

Spaunburg, Harvey L., West Hartford, assignors to Veeder-Root Incorporated, Hartford, Conn. Counter for machines. 2,103,650; Dec. 28.

Spence, Howard. (See Hock, A. L., Kirkham, and Spence.)

Spence, Peter & Sons, Limited. (See Hock, A. L., Kirkham, and Spence, assignors.)

Sperry, Philmore F., and D. W. Lake, assignors to Excel Auto Radiator Company, Chicago, Ill. Air distributing means. 2,103,599; Dec. 28.

Sperry Products, Inc. (See Drake, Harcourt C., assignor.)

Sperry Products, Inc. (See Jones, G. L., and Winburn, assignors.)

Sperry Products, Inc. (See Perry, Walter M., assignor.)

Spinner, Edson F., Ava, Ill. Clutch for transmission gearing. 2,103,959; Dec. 28.

Spiro, George C., Yonkers, N. Y. Dispenser. 2,103,960; Dec. 28.

Spool Cotton Company, The. (See Bell, John, assignor.)

Squibb, E. R., & Sons. (See Lott, William A., assignor.)

Standard Oil Company (Ohio), The. (See Bale, Lester S., assignor.)

Standard Oil Development Company. (See Gohr, Edwin J., assignor.)

Standard Oil Development Company. (See Harris, John M., Jr., assignor.)

Standard Oil Development Company. (See Whiteley, J. M., and Vesterdal, assignors.)

Standard Oil Development Company. (See Wiezevich, P. J., and Gleason, assignors.)

Standard Process Manufacturing Corporation. (See Ericksson, Emil, assignor.)

Stanley, Leopold G., Maplewood, N. J. Traveling case. 2,103,281; Dec. 28.

Steenbeck, Max, assignor to Siemens-Schuckertwerke Aktiengesellschaft, Berlin-Siemensstadt, Germany. Device for producing electron rays of high energy. 2,103,303; Dec. 28.

Stein, Hall & Company. (See Frieden, A., and Werbin, assignors.)

Steiner Sales Company. (See Birr, Rudolph G., assignor.)

Sterling Wheelbarrow Company. (See Smith, Irving R., assignor.)

Stern, Charles, Jersey City, assignor to Ardco Manufacturing Company, Hoboken, N. J. Rail head and wheel flange lubricator. 2,103,701; Dec. 28.

Stevens, John C., Portland, Oreg. Scour prevention. 2,103,600; Dec. 28.

Stewart & McGuire, Inc. (See Hoban, Fairfield W., assignor.)

Stewart, Carlton D., Swissvale, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Fluid pressure brake. 2,103,343; Dec. 28.

Stiefelber, Merlin A. (See McWade, Walter N., assignor.)

Stigall, William H., Taft, Calif. Withdrawable sucker rod assembly. 2,103,601; Dec. 28.

Stillman, Thomas B., South Orange, assignor to The Babcock & Wilcox Company, Newark, N. J. Fuel burner. 2,103,958; Dec. 28.

Stilson, Herbert A., Chicago, Ill. Animal trap. 2,103,877; Dec. 28.

Stoddard, Edgar S., Berwyn, assignor to The Conover Company, Chicago, Ill. Conduit for washing machines. 2,103,797; Dec. 28.

Stolpe, Frederick J., Chicago, Ill., assignor, by mesne assignments, to Augustus F. Klasing. Operating device for hand brakes and the like. 2,103,282; Dec. 28.

Streeter-Amet Company. (See Haegele, Otto P., assignor.)

Strout, Ralph C., Wollaston, Mass., assignor, by mesne assignments, to E. I. du Pont de Nemours & Company, Wilmington, Del. Band applying machine. 2,103,302; Dec. 28.

Stuck, Harold D., Lawrence, and P. A. De Nault, North Andover, assignor to John W. Bolton & Sons, Inc., Lawrence, Mass. Making linings for Jordan engine shells. 2,103,344; Dec. 28.

Stupakoff, Semon H., Pittsburgh, Pa., assignor to The Spark King Corporation, New York, N. Y. Spark plug and making the same. 2,103,759; Dec. 28.

Sturtevant Mill Company. (See Doyle, W. T., and Sturtevant, assignors.)

Sturtevant, Thomas J. (See Doyle, W. T., and Sturtevant.)

Subkow, Philip. (See Merrill, D. R., and Subkow.)

Suchy, Robert, and H. Seliger, Bitterfeld, Germany, assignors, by mesne assignments, to Magnesium Development Corporation. Production of magnesium from magnesiferous raw materials by thermal reduction. 2,103,976; Dec. 28.

Sugden, Walter J. (See Drysdale, William D., assignor.)

Sullivan Machinery Company. (See Gartin, Elmer G., assignor.)

Sullivan Machinery Company. (See Wineman, Wade H., assignor.)

Sullivan, William J., assignor of one-half to C. P. Mertens, Chicago, Ill. Brick hacking for unit handling. 2,103,649; Dec. 28.

Sun Oil Company. (See Pearson, John M., assignor.)

Swanstrom, Carl A. (See Oestnaes, V. L., and Swanstrom.)

Swart, Leland K. (See Maurer, K. L., and Swart.)

Swart, Leland K., Mountain Lakes, N. J., assignor to American Telephone and Telegraph Company. Gas-filled tube. 2,103,439; Dec. 28.

Talon, Inc. (See Jacobs, Michael, assignor.)

Tancred, William L. (See Bliss, H. N., Wild, and Tancred.)

Tanner, Philip A., assignor to Johnson Motor Company, Waukegan, Ill. Internal combustion engine. 2,103,564; Dec. 28.

Tappé, Frank G., Oslo, Norway. Attaching skates to shoes. 2,103,737; Dec. 28.

Taradash, Mendel A., Toronto, Ontario, Canada. Tufting mechanism for tufting a fabric base. 2,103,798; Dec. 28.

Tarbox, Hugh B., Toronto, Ontario, Canada. Mop holder. 2,103,565; Dec. 28.

Tartaron, Francis X., and J. B. Duke, Mulberry, Fla., assignors to Phosphate Recovery Corporation, New York, N. Y. Concentration of phosphate-bearing minerals. 2,103,283; Dec. 28.

Taylor, James P., Los Angeles, Calif. Liquid recording mechanism. 2,103,566; Dec. 28.

Taylor, Lloyd J., Wichita Falls, Tex. Spider construction for stalk cutters. 2,103,345; Dec. 28.

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Gerhard, Ernst, assignor.)

Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Gothe, Albrecht, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Möller, Paul, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Schröter, Fritz, assignor.)
Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H. (See Severin, E., and Schlerl, assignors.)
Television and Electric Corporation of America. (See Kolozsy, Louis W., assignor.)
Teller, George L., and W. K. Teller, assignors, to H. H. Doering, Chicago, Ill. Cheese product. 2,103,304; Dec. 28.
Teller, W. Kedzie. (See Teller, George L., and W. K.)
Ter Horst, William P., Silver Lake, Ohio, assignor to United States Rubber Company, New York, N. Y. Accelerator of vulcanization. 2,103,749; Dec. 28.
Teubner, Kurt, assignor to the firm Atlas Ago, Chemische Fabrik A. G., Leipzig, Germany. Collar. 2,103,799; Dec. 28.
Texas Company, The. (See Smith, Harris A., assignor.)
Texas Gulf Sulphur Company. (See Bencowitz, Isaac, assignor.)
Thackeray, Norman C., Providence, R. I., assignor to Decorative Fabrics Company. Decorated fabric and making the same. 2,103,992; Dec. 28.
Thomas, Frank B., Irwin, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Test rack. 2,103,305; Dec. 28.
Thomas, Lester C., Denver, Colo. Accounting system. 2,103,651; Dec. 28.
Thompson, Leland E., Merchantville, N. J., assignor to Radio Corporation of America. Selective radio receiving system. 2,103,878; Dec. 28.
Thompson, Russell G., West Hartford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y. Typewriting machine. 2,103,921; Dec. 28.
Thumlert, Edgar A., assignor to The Fairfield Engineering Company, Marion, Ohio. Deflector means for hopper spouts. 2,103,392; Dec. 28.
Tibbetts, Milton, assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle latch. 2,103,702; Dec. 28.
Ticknor, Winton A., assignor to Corning Glass Works, Corning, N. Y. Flue structure. 2,103,602; Dec. 28.
Tilghman's Patent Sand Blast Company. (See Nichols, Thomas W., assignor.)
Timken Roller Bearing Company, The. (See Buckwalter, Tracy V., assignor.)
Timken Roller Bearing Company, The. (See Eastburg, Clifford L., assignor.)
Tindall, Donald J., Orlando, Fla. Corner clamp for mitered store front constructions. 2,103,832; Dec. 28.
Tinnerman, Albert H. (See Tinnerman, George A., assignor.)
Tinnerman, George A., Rocky River, assignor to Albert H. Tinnerman, Cleveland, Ohio. Combined fastening structure. 2,103,833; Dec. 28.
Toledo Scale Manufacturing Company. (See Weckerly, Mark A., assignor.)
Touceda, Enrique G., assignor to Consolidated Car-Heating Company, Inc., Albany, N. Y. Alloy. 2,103,500; Dec. 28.
Trabazo, Ramón B. M. (See De Deza, F. S., and Trabazo.)
Trico Products Corporation. (See Horton, Erwin C., assignor.)
Turner, John R., assignor to Universal Oil Products Company, Chicago, Ill. Tube cleaner. 2,103,760; Dec. 28.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Loom with shuttle changing and loom stopping mechanism. 2,102,800; Dec. 28.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft bobbin. 2,103,801; Dec. 28.
Tuttle & Bailey, Inc. (See Hart, S., and Zavorski, assignors.)
Tyson, John D., Derry Township, Mifflin County, Pa. 2,103,834; Dec. 28.
Ufer, Hanns, Ludwigshafen-on-the-Rhine, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Production of organic sulphur compounds. 2,103,879; Dec. 28.
Ufer, Hanns, Ludwigshafen-on-the-Rhine, assignor to I. G. Farbenindustrie Aktiengesellschaft Frankfort-on-the-Main, Germany. Production of organic sulphur compounds. 2,103,880; Dec. 28.
Ullrich, Alfred H., Bandoeng, Java, Dutch East Indies. Apparatus for separating in one operation hollow bricks from a clay rod or the like and for closing said bricks. 2,103,802; Dec. 28.
Underwood Elliott Fisher Company. (See Neldich, Samuel A., assignor.)
Underwood Elliott Fisher Company. (See Thompson, Russell G., assignor.)
Unger, Paul O., Elmhurst, assignor to Wilson-Jones Company, Chicago, Ill. Loose-leaf binder. 2,103,307; Dec. 28.
Union Carbide and Carbon Corporation. (See Drummond, Price, assignor.)
Union Carbide and Carbon Corporation. (See Jacobsson, Wilgot J., assignor.)
Union Carbide and Carbon Corporation. (See Kennedy, H. E., Rotermund, and Jones, assignors.)
Union Oil Company of California. (See Merrill, D. R., and Subkow, assignors.)
Union Special Machine Company. (See Kucera, Frank A., assignor.)
Union Special Machine Company. (See LeVesconte, H. J., and Schweda, assignors.)
Union Special Maschinenfabrik, G. m. b. H. (See Lutz, Frederick, assignor.)
Union Switch & Signal Company, The. (See Bone, Herbert L., assignor.)
Union Switch & Signal Company, The. (See Crooks, Ralph K., assignor.)
United Shoe Machinery Corporation. (See Fossa, Joseph, assignor.)
United Shoe Machinery Corporation. (See Hood, Charles E., assignor.)
United Shoe Machinery Corporation. (See Winnett, Thomas G., assignor.)
U. S. Galvanizing & Plating Equipment Corporation. (See Kaupp, Henry, assignor.)
United States Rubber Company. (See ter Horst, William P., assignor.)
U. S. Slicing Machine Company. (See van Berkel, Wilhelmus A., assignor.)
Universal Hydraulic Corporation. (See Kinzie, Phillip A., assignor.)
Universal Oil Products Company. (See Turner, John R., assignor.)
"Universelle" Cigarettenmachinenfabrik J. C. Mueller & Co. (See Herrmann, Paul J., assignor.)
Urschel, William E., Valparaiso, Ind. Cultivating and weeding device. 2,103,306; Dec. 28.
Valentine, Carroll E. (See Peterson, A. J. A., and Valentine.)
Van Ame, Emma W., Detroit, Mich. Garment cutter plotting instrument. 2,103,393; Dec. 28.
Van Berkel, Wilhelmus A., Clarens, Switzerland, assignor to U. S. Slicing Machine Company, La Porte, Ind. Slicing machine. 2,103,567; Dec. 28.
Vandendries, Corneille. (See Ferrero, P., and Vandendries.)
Van Gulder, Walter, Oak Park, Ill., assignor to General Electric Company. Mixing device. 2,103,922; Dec. 28.
Van Kooten, Jacob, Brooklyn, N. Y. Foldable table. 2,103,703; Dec. 28.
Van Vulpen, John, assignor to Vapor Car Heating Company, Inc., Chicago, Ill. Steam heating system. 2,103,835; Dec. 28.
Vapor Car Heating Company. (See Van Vulpen, John, assignor.)
Vawter, Will E., Bainbridge, assignor to American Plastics Corporation, New York, N. Y. Treating casein plastics. 2,103,993; Dec. 28.
Veeder-Root Incorporated. (See Bliss, H. N., Wild, and Tancred, assignors.)
Veeder-Root Incorporated. (See Spaunberg, Harvey I., assignor.)
Verzi, Linus A., Arlington, assignor of one-half to E. N. Hosmer, Arlington County, Va. Fish lure. 2,103,994; Dec. 28.
Vesterdal, Hans G. (See Whiteley, J. M., and Vesterdal.)
Visking Corporation, The. (See Hensel, Henry A., assignor.)
Voelkel, John F., et al., executor. (See Bokmer, Emil.)
Vogel, Otto, Farmingdale, N. Y. Automatic awning. 2,103,923; Dec. 28.
Voigt, Adolph, Miami, Fla. Removable ladder step. 2,103,603; Dec. 28.
Vollmer, Walter G. (See Holhut, M., and Vollmer.)
Vollmer, Walter G., assignor to H. & H. Machine & Motor Parts Co., St. Louis, Mo. Motor-block stand. 2,103,568; Dec. 28.
Von Ardenne, Manfred, Berlin, Germany. Intensity control system for cathode ray beams. 2,103,652; Dec. 28.
Vose, Lewis S., Needham, assignor to Crompton & Knowles Loom Works, Worcester, Mass. Electric feeler for drop box looms. 2,103,803; Dec. 28.
Wachusett Shirt Company. (See Roberson, Harvey D., assignor.)
Wade, William, Chicago, assignor to National Lock Co., Rockford, Ill. Venetian blind. 2,103,394; Dec. 28.
Wade, William, Chicago, and E. North, assignors to National Lock Company, Rockford, Ill. Venetian blind. 2,103,395; Dec. 28.
Wade, William, Chicago, and E. North, assignors to National Lock Company, Rockford, Ill. Venetian blind. 2,103,396; Dec. 28.
Wade, William, Chicago, and E. North, assignors to National Lock Company, Rockford, Ill. Blind housing structure. 2,103,397; Dec. 28.
Wade, William, Chicago, and E. North, assignors to National Lock Company, Rickford, Ill. Outside Venetian blind. 2,103,398; Dec. 28.
Wagner, Edward F., Philadelphia, Pa. Auto monoplane. 2,103,881; Dec. 28.
Wakefield, Walter H., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Warp slackener for looms. 2,103,836; Dec. 28.
Wakefield, Walter H., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft carrier for automatic looms. 2,103,837; Dec. 28.
Waldron, Fred D., Queens Village, N. Y., and A. J. Wier, Elizabeth, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Terminal box device. 2,103,501; Dec. 28.

Walker, Robert H., Barberton, assignor to The Ohio Brass Company, Mansfield, Ohio. Insulator. 2,103,399; Dec. 28.
Wallace, David A. and E., Detroit, Mich., said E. Wallace assignor to said D. A. Wallace. Brick support. 2,103,569; Dec. 28.
Wallace, Eugene. (See Wallace, David A. and E.)
Walter, George S., Chicago, Ill. Writing pen. 2,103,882; Dec. 28.
Walters, Michael E., and J. A. Wolfe, Huntington Park, Calif. Automatic liquid regulating system. 2,103,570; Dec. 28.
Wampler, Roy W. (See Watkins, G. B., and Wampler.)
Wamser, Charles J., Milwaukee, Wis. Illuminated sign. 2,103,738; Dec. 28.
Waterman, Charles N. (See Betterton, J. O., and Waterman.)
Waterman, Max L. (See Flecktenstein, G. A., and Waterman.)
Watkins, George B., and R. W. Wampler, assignors to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Laminated safety glass. 2,103,883; Dec. 28.
Watson, Frederick W., assignor to Security Products Corporation, New York, N. Y. Sewing kit. 2,103,571; Dec. 28.
Waukesha Motor Company. (See Melcher, Lee W., assignor.)
Webster, John W. L., Liverpool, England. Golf harness. 2,103,502; Dec. 28.
Weckerly, Mark ., assignor to Toledo Scale Manufacturing Company, Toledo, Ohio. Weighing device. 2,103,400; Dec. 28.
Wehrli, Walter, assignor to the firm of Chemical Works formerly Sandoz, Basel, Switzerland. Azo dyestuffs and their manufacture. 2,103,804; Dec. 28.
Weil, Lewis P., Philadelphia, Pa. Portable fountain. 2,103,653; Dec. 28.
Welmont, Joseph, Bogota, and F. A. Hazard, Elizabeth, N. J., assignors to A. Kimball Company, New York, N. Y. Machine for attaching price tags. 2,103,654; Dec. 28.
Weissenberg, Eugen, Vienna, Austria. Electrotherapeutic apparatus. 2,103,440; Dec. 28.
Welding Service, Inc. (See Frickey, Royal E., assignor.)
Wells, Donald H., Glen Ellyn, Ill. Filter. 2,103,572; Dec. 28.
Wentworth, Pearl J., Fort Thomas, Ky. Composition for shoe manufacture and making shoes. 2,103,884; Dec. 28.
Werbin, Sanford J. (See Frieden, A., and Werbin.)
Western Union Telegraph Company, The. (See Wheeler, E. R., and Sortore, assignors.)
Westinghouse Air Brake Company, The. (See Conant, W. I., and Farmer, assignors.)
Westinghouse Air Brake Company. (See Down, Sidney G., assignor.)
Westinghouse Air Brake Company, The. (See Farmer, Clyde C., assignor.)
Westinghouse Air Brake Company, The. (See Farmer, C. C., and Hewitt, assignors.)
Westinghouse Air Brake Company, The. (See Stewart, Carlton D., assignor.)
Westinghouse Air Brake Company, The. (See Thomas, Frank B., assignor.)
Westinghouse Electric & Manufacturing Company. (See Ashbaugh, John H., assignor.)
Westinghouse Electric & Manufacturing Company. (See Calvert, John F., assignor.)
Westinghouse Electric & Manufacturing Company. (See Friedländer, Erich, assignor.)
Westinghouse Electric & Manufacturing Company. (See Gier, John R., Jr., assignor.)
Westinghouse Electric & Manufacturing Company. (See Gulliksen, Finn H., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hadley, Donald L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hanson, Harold F., assignor.)
Westinghouse Electric & Manufacturing Company. (See Harder, Edwin L., assignor.)
Westinghouse Electric & Manufacturing Company. (See Hart, William J., assignor.)
Westinghouse Electric & Manufacturing Company. (See Janetschke, Erwin, assignor.)
Westinghouse Electric & Manufacturing Company. (See Kalischer, Milton, assignor.)
Westinghouse Electric & Manufacturing Company. (See Kucera, Jaroslav, assignor.)
Westinghouse Electric & Manufacturing Company. (See Leukert, Wilhelm, assignor.)
Westinghouse Electric & Manufacturing Company. (See Nason, Horace E., assignor.)
Westinghouse Electric & Manufacturing Company. (See Peterson, A. J. A., and Valentine, assignors.)
Westinghouse Electric & Manufacturing Company. (See Philpott, La Verne R., assignor.)
Westinghouse Electric & Manufacturing Company. (See Rampacher, Fritz, assignor.)
Westinghouse Electric & Manufacturing Company. (See Rose, Bennie A., assignor.)
Westinghouse Electric Elevator Company. (See Eames, William F., assignor.)
Westinghouse Electric Elevator Company. (See Williams, Harold W., assignor.)
Whalen, John T., New York, N. Y. Refrigerator. 2,103,885; Dec. 28.
Wheeler, Evan R., North Plainfield, and E. J. Sortore, Metuchen, N. J., assignors to The Western Union Telegraph Company, New York, N. Y. Selecting system. 2,103,761; Dec. 28.
Wheeling Steel Corporation. (See Conner, Guy O., assignor.)
Whelan, Howard J., Baltimore, and L. T. Clark, Ellicott City, Md. Talking device. 2,103,739; Dec. 28
Whitaker, James N., Tuckahoe, N. Y., assignor to Radio Corporation of America. Oscillation generator. 2,103,655; Dec. 28.
White, Clarence, Walnut Park, assignor to Oil Well Manufacturing Corporation, Los Angeles, Calif. Slush pump valve. 2,103,503; Dec. 28.
White Sewing Machine Corporation. (See Sawdey, N. T., and Colegrove, assignors.)
Whitehead & Kales Company. (See Perkins, E. H., and Mills, assignors.)
Whiteley, James M., Roselle, and H. G. Vesterdal, Elizabeth, N. J., assignors to Standard Oil Development Company. Purification of crude waxy hydrocarbons. 2,103,504; Dec. 28.
Whiting Holding Company. (See Fisher, Robert H., assignor.)
Whittington, Ralph S., Oak Park, Ill., assignor to Bendix Products Corporation, South Bend, Ind. Automatic control of clutch and throttle actuation of an automotive vehicle. 2,103,284; Dec. 28.
Wier, Anthony J. (See Waldron, F. D., and Wier.)
Wiezevich, Peter J., and A. H. Gleason, Elizabeth, N. J., assignors to Standard Oil Development Company. Production of polymers of ketene and preparation of esters thereof. 2,103,505; Dec. 28.
Wild, Edward. (See Bliss, H. N., Wild, and Tancred.)
Wilkinson, Ralph E., Irondequoit, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Microscope. 2,103,573; Dec. 28.
Williams, Harold W., assignor to Westinghouse Electric Elevator Company, Chicago, Ill. Control system for electric motors. 2,103,805; Dec. 28.
Willing, Mark S., Mount Holly, Va. Parachute. 2,103,806; Dec. 28.
Willing, Mark S., Mount Holly, Va. Antiaircraft projectile. 2,103,807; Dec. 28.
Willis, John H., Norwich, England. Chronological device. 2,103,656; Dec. 28.
Willis, Le Roy W., Stamford, Conn., and E. M. Goodbody, Long Island, assignors to Intertype Corporation, Brooklyn, N. Y. Metal pot for slug casting machines. 2,103,995; Dec. 28.
Wilmanns, Gustav, Wolfen Kreis, Bitterfeld, assignor to I. G. Farbenindustrie Aktiengesellschaft Frankfort-on-the-Main, Germany. Exposure frame for Röntgen film. 2,103,961; Dec. 28.
Wilson-Jones Company. (See Greenway, Erwin C., assignor.)
Wilson-Jones Company. (See Unger, Paul O., assignor.)
Winburn, Abraham. (See Jones, G. L., and Winburn.)
Winchester Repeating Arms Company. (See Burton, Frank F., assignor.)
Wineman, Wade H., Michigan City, Ind., assignor to Sullivan Machinery Company. Motor for pumping mechanisms. 2,103,308; Dec. 28.
Wineman, Wade H., Michigan City, Ind., assignor to Sullivan Machinery Company. Safety device. 2,103,962; Dec. 28.
Wineman, Wade H., Michigan City, Ind., assignor to Sullivan Machinery Company. Motor apparatus. 2,103,963; Dec. 28.
Wineman, Wade H., Michigan City, Ind., assignor to Sullivan Machinery Company. Motor for pumping mechanisms. 2,103,964; Dec. 28.
Wineman, Wade H., Michigan City, Ind., assignor to Sullivan Machinery Company. Motor for pumping mechanisms. 2,103,965; Dec. 28.
Winkler, Józef. (See Piotrowski, W. J., and Winkler.)
Winnett, Thomas G., Whitman, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Edge finishing machine. 2,103,285; Dec. 28.
Wintercorn, John B., Chicago, Ill. Positively controlled tube bore mandrel for tube forming machines. 2,103,574; Dec. 28.
Witt, Samuel E. (See Donnelly, John H., assignor.)
Wolfe, John A. (See Walters, M. E., and Wolfe.)
Wollack, Kurt, Berlin, assignor to Siemens & Halske Aktiengesellschaft, Wernewerk Siemensstadt, near Berlin, Germany. Measured service telephone system. 2,103,441; Dec. 28.
Woodall Industries Incorporated. (See Meller, William O., assignor.)
Worthington, Wayne H. (See McCormick E., and Worthington.)
Wrap-Ade Machine Company. (See Salfisberg, Leroy L., assignor.)
Wygodsky, Helen, executrix. (See Wygodsky, Leon.)
Wygodsky, Juliene M. (See Wygodsky, Leon, assignor.)
Wygodsky, Leon, deceased, by H. Wygodsky, executrix, Baltimore, Md., assignor of one-half to H. Wygodsky, and one-half to J. M. Wygodsky. Spring drip beverage maker. 2,103,704; Dec. 28.
Yeutter, Clyde S., Leonia, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Wave translating system. 2,103,506; Dec. 28.

Yingling, Frank B., assignor to C. J. Fitton, Hamilton, Ohio. Internal combustion engine. 2,103,604; Dec. 28.
Young, Eldridge H., et al. (See Bradford, William W., Jr., assignor.)
Young, Leonard A., Detroit, Mich. Safety razor. 2,103,924; Dec. 28.
Z Pack Corporation. (See Zarotschenzeff, Wladimir M., assignor.)
Zarotschenzeff, Wladimir M., Englewood, assignor to Z Pack Corporation, Jersey City, N. J. Freezing fruits. 2,103,925; Dec. 28.
Zavorski, Leonard. (See Hart, S., and Zavorski.)
Zelaskow, Joseph L. (See Dumble, Clifford R., assignor.)
Ziegler, Karl, Heidelberg, assignor to Schering-Kahlbaum A. G., Berlin, Germany. Producing compounds of cyclic B-ketocarboxylic acids. 2,103,286; Dec. 28.
Zink, John S., Tulsa, Okla. Combination burner. 2,103,605; Dec. 28.
Zworykin, Vladimir K., Philadelphia, Pa., assignor to Radio Corporation of America. Direction indicator. 2,103,507; Dec. 28.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 28TH DAY OF DECEMBER, 1937

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Building material. J. Tomec. 20,607; Dec. 28.
Electrical contact device. C. H. Koehler. 20,608; Dec. 28.
Paper making machine. C. R. Seaborne. 20,606; Dec. 28.
Petroleum distillates, Treating cracked. R. C. Osterstrom and C. R. Wagner. 20,605; Dec. 28.
Pump and electric motor unit, Submersible. J. F. Haldeman. 20,604; Dec. 28.
Refrigerating system and control mechanisms therefor. B. L. Gates. 20,603; Dec. 28.
Shoe. E. W. Dunbar. 20,609; Dec. 28.

LIST OF PLANT INVENTIONS

Begonia. R. Zeparo. Plant Pat. No. 265; Dec. 28.

LIST OF DESIGN INVENTIONS

Air conditioning unit. J. G. Zummach. 107,670; Dec. 28.
Atomizer. F. W. Lohse. 107,690–94; Dec. 28.
Atomizer. R. P. Vuillemenot. 107,709; Dec. 28.
Automobile. E. T. Gregorie. 107,644; Dec. 28.
Balloon. E. E. Krueger. 107,684; Dec. 28.
Bedspread or similar article. J. Shurin. 107,664; Dec. 28.
Boat hull. A. E. Luders. 107,724; Dec. 28.
Bottle or similar article. P. G. Lloyd. 107,688; Dec. 28.
Bridge for an ophthalmic mounting. G. E. Nerney. 107,697–8; Dec. 28.
Brooch pin. A. Katz. 107,648; Dec. 28.
Button. J. Lichter. 107,686; Dec. 28.
Cabinet, Ironing machine. J. A. Castricone. 107,674; Dec. 28.
Cabinet or similar article, Storage. M. Price. 107,659; Dec. 28.
Case, Display. J. J. Petzke. 107,658; Dec. 28.
Casing for furnaces or the like. G. D. Hauser. 107,683; Dec. 28.
Chair back, Sheet metal. I. R. Bromagem. 107,638; Dec. 28.
Chair, Office. K. F. Davis and J. J. Josephs. 107,677; Dec. 28.
Clip. B. T. Barrett and E. Johnson. 107,636; Dec. 28.
Clip, Fountain pen and pencil. P. M. Ressinger and I. D. Tofft. 107,708; Dec. 28.
Doll or similar article. V. S. Austin. 107,672; Dec. 28.
Dress. T. Coleman. 107,712; Dec. 28.
Dress. S. Comolli. 107,713; Dec. 28.
Dress. L. Fenaroli. 107,722; Dec. 28.
Dress. J. Frank. 107,679; Dec. 28.
Dress. J. Greenman. 107,681; Dec. 28.
Dress. E. Noest. 107,726; Dec. 28.
Dress. V. Rose. 107,727; Dec. 28.
Dress. M. A. Rudolph. 107,703; Dec. 28.
Dress. P. Schlessel. 107,728; Dec. 28.
Dress. M. E. Smith. 107,729–30; Dec. 28.
Dress. V. Tomshinsky. 107,731–3; Dec. 28.
Dress. J. Tuman. 107,734–5; Dec. 28.
Dress. A. Waxberg. 107,736; Dec. 28.
Dress. J. Zinn. 107,715; Dec. 28.
Dress ensemble. T. Coleman. 107,675; Dec. 28.
Dress ensemble. S. Messina. 107,725; Dec. 28.
Engine, Internal combustion. J. L. Doll and C. W. Rogers. 107,641; Dec. 28.
Eraser holding tip for pencils. J. De Quinzio. 107,640; Dec. 28.
Fabric, Corded knit lace. S. Saftlas. 107,663; Dec. 28.
Fabric or similar article, Openwork bead. M. Tannenbaum. 107,667; Dec. 28.
Fabric, Textile. E. Guarine. 107,645; Dec. 28.
Fabric, Textile. A. H. Klein. 107,651; Dec. 28.
Fabric, Textile. S. B. McDonald. 107,656; Dec. 28.
Fabric, Textile. M. Mey. 107,657; Dec. 28.
Fabric, Textile. M. Mey. 107,695; Dec. 28.
Garter. W. Govan. 107,643; Dec. 28.
Goblet or similar article. E. M. Bottome. 107,637; Dec. 28.
Grille or similar article. H. Smith and M. G. Werme. 107,705; Dec. 28.
Handbag. H. Felmann. 107,714; Dec. 28.
Handbag. H. Felmann. 107,716–21; Dec. 28.
Handbag. S. R. Goldsmith. 107,680; Dec. 28.
Handbag. D. Lewis. 107,685; Dec. 28.
Heater, Water. C. H. Morrow. 107,696; Dec. 28.
Holder, Lipstick. E. Schiaparelli. 107,704; Dec. 28.
Hood and scarf assembly, Knitted. S. Rosenberg. 107,702; Dec. 28.
House-coat, Duplex. H. Leone. 107,723; Dec. 28.
Jar or similar article. P. G. Lloyd. 107,689; Dec. 28.
Jewelry setting or similar article. H. R. Kiepe. 107,649–50; Dec. 28.
Juice extractor. J. M. Majewski, Jr. 107,652; Dec. 28.
Lamp, shade, and radio, Combination. J. J. Herrera, Jr. 107,646; Dec. 28.
Lamp unit, Signal. H. B. Donley. 107,678; Dec. 28.
Lens, Automobile headlight. M. A. Smith. 107,706–7; Dec. 28.
Lighting fixture or similar article. L. L. Stewart. 107,666; Dec. 28.
Ornament for Christmas trees, Tinsel. L. L. Raymond. 107,661–2; Dec. 28.
Pendant. J. F. Stedman. 107,665; Dec. 28.
Plate and crystal for a dial for a radio receiver, Combined escutcheon. R. C. Marholz. 107,654; Dec. 28.
Plate for a lever tuning device for a radio receiver, Escutcheon. R. C. Marholz. 107,655; Dec. 28.
Plate for radio receivers, Escutcheon. R. C. Marholz. 107,653; Dec. 28.
Plate, Switch. A. Fazekas. 107,642; Dec. 28.
Radio and lamp, Combined twin bed. J. J. Herrera, Jr. 107,647; Dec. 28.
Range, Gas. J. Beevar. 107,673; Dec. 28.
Shoe. B. L. Wales. 107,710; Dec. 28.
Slipper or similar article. R. S. Cook. 107,676; Dec. 28.
Smock. J. Wien. 107,737; Dec. 28.
Spoon or other article of flatware. J. R. Price. 107,660; Dec. 28.
Stand, Display. A. Campbell. 107,639; Dec. 28.
Stand, Display. C. D. Wilke. 107,669; Dec. 28.
Suitcase. E. E. Wilt. 107,711; Dec. 28.
Table, Coin operated billiard. J. C. Allen. 107,671; Dec. 28.
Tree, Miniature Christmas. S. C. Wadsworth and F. Bell. 107,668; Dec. 28.
Valve or the like, Automotive radiator sealing and pressure relief. A. F. Grigg and J. E. Zeller. 107,682; Dec. 28.
Vehicle, Trailer. F. M. Reid. 107,699–701; Dec. 28.
Watch and mirror with holder therefor, Combined. J. Lipschutz and H. C. Ruger. 107,687; Dec. 28.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 28TH DAY OF DECEMBER, 1937

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrading, polishing, and buffing device. W. H. Bauch. 2,103,444; Dec. 28.
Abrasion resisting chain, Heavy duty. L. T. Harris. 2,103,972; Dec. 28.
Abrasive holder. E. V. Corff. 2,103,320; Dec. 28.
Accelerator of vulcanization. W. P. ter Horst. 2,103,749; Dec. 28.
Accounting system. L. C. Thomas. 2,103,651; Dec. 28.
Acid derivatives, Acrylic. W. A. Lott. 2,103,265; Dec. 28.
Acid resin, Polyhydric alcohol-polybasic aliphatic. I. Rosenblum. 2,103,273; Dec. 28.
Acylated diols. W. A. Lott. 2,103,266; Dec. 28.
Advertising device. C. Rinehimer. 2,103,756; Dec. 28.
Aerial for ultrashort waves, Receiving. K. Schlesinger. 2,103,646; Dec. 28.
Aeroplane control. G. A. Clark. 2,103,933; Dec. 28.
Air conditioning device. A. W. Conley. 2,103,844; Dec. 28.
Air conditioning system. P. M. Raigorodsky. 2,103,596; Dec. 28.
Aircraft construction. H. G. Klemm and B. C. Boulton. 2,103,466; Dec. 28.
Aircraft propeller. W. W. Bradford, Jr. 2,103,242–3; Dec. 28.
Air distributing means. P. F. Sperry and D. W. Lake. 2,103,599; Dec. 28.
Air purifier unit, Portable. E. E. Buskirk. 2,103,893; Dec. 28.
Airscrew blade pitch controlling mechanism. G. Algarsson. 2,103,740; Dec. 28.
Alkyl derivatives of phenols and producing the same. S. Skraup. 2,103,736; Dec. 28.
Alkyl monochlorides, Production of secondary and tertiary. W. J. Piotrowski and J. Winkler. 2,103,692; Dec. 28.
Alloy. H. E. La Bour. 2,103,855; Dec. 28.
Alloy. E. G. Touceda. 2,103,500; Dec. 28.
Alloy for vacuum tube elements. A. J. Mandell. 2,103,267; Dec. 28.
Alloy steels. W. M. Burden, R. Genders, and R. Harrison. 2,103,610; Dec. 28.
Amusement apparatus. F. E. Pavelka. 2,103,954; Dec. 28.
Anchor for ships or the like. D. F. Lucking. 2,103,477; Dec. 28.
Animal poking implement. A. S. Bailey. 2,103,401; Dec. 28.
Animal trap. H. A. Stilson. 2,103,877; Dec. 28.
Animated sign. B. Roberts. 2,103,300; Dec. 28.
Antifrost device. M. L. J. d'Ornellas. 2,103,666; Dec. 28.
Antiskid device. M. F. Schulz. 2,103,437; Dec. 28.
Antiskidding device for motor vehicles. J. Mucha. 2,103,295; Dec. 28.
Applicator. S. W. Hughes. 2,103,261; Dec. 28.
Applicator for pessaries. P. L. Clark, Jr. 2,103,319; Dec. 28.
Arch support. A. Mirenta. 2,103,627; Dec. 28.
Arcing gap. R. Higgins. 2,103,366; Dec. 28.
Article and method, Beaded edged. W. Myers. 2,103,631; Dec. 28.
Article feeding construction. L. L. Salfisberg. 2,103,387; Dec. 28.
Article, Making an appliquéd. M. J. Garshman. 2,103,414; Dec. 28.
Ashtray. A. W. Pearce. 2,103,754; Dec. 28.
Automobile lock. O. M. Driscoll. 2,103,937; Dec. 28.
Awning, Automatic. O. Vogel. 2,103,923; Dec. 28.
Azo compounds and process for dyeing therewith. J. G. McNally and J. B. Dickey. 2,103,269; Dec. 28.
Azodyestuffs. E. Gilletenberg and F. Schubert. 2,103,778; Dec. 28.
Band applying machine. R. C. Stront. 2,103,302; Dec. 28.
Band, Elastic. E. Glück. 2,103,579; Dec. 28.
Bar lock. H. Machinist. 2,103,989; Dec. 28.
Base for Christmas trees, Ornamental. W. M. Flanagan. 2,103,939; Dec. 28.
Base for poles, Protective. H. P. Coustette. 2,103,246; Dec. 28.
Basket, Self-measuring coffee. D. L. Hadley. 2,103,780; Dec. 28.
Bearing. P. A. Kinzie. 2,103,465; Dec. 28.
Bearing. D. H. Montgomery. 2,103,912; Dec. 28.
Belt, Conveyer. R. J. Guba. 2,103,920; Dec. 28.
Beverage maker, Spring drip. L. Wygodsky. 2,103,704; Dec. 28.
Binaural flying. L. de Florez. 2,103,248; Dec. 28.
Binder, Loose-leaf. P. O. Unger. 2,103,307; Dec. 28.
Blind housing structure. W. Wade and E. North. 2,103,397; Dec. 28.
Blind, Outside Venetian. W. Wade and E. North. 2,103,398; Dec. 28.
Blind slat and making, Venetian. R. C. Pratt. 2,103,271; Dec. 28.
Blind, Venetian. H. H. Mohrfeld. 2,103,788; Dec. 28.
Blind, Venetian. W. Wade. 2,103,394; Dec. 28.
Blind, Venetian. W. Wade and E. North. 2,103,395–6; Dec. 28.
Block: *See*—
Chaser supporting block.
Turbine bucket wheel notch block.
Blower, Soot. J. Schieffer. 2,104,003; Dec. 28.
B-methylcholine ethers and salts thereof, Production of. G. Roeder. 2,103,372; Dec. 28.
Board: *See*—
Panel board. Tanning board.
Boats and other loads, Device for handling. W. Campbell. 2,103,708; Dec. 28.
Bobbin, Weft. R. G. Turner. 2,103,801; Dec. 28.
Bodies for burial, Appliance for preparing. H. R. Murray. 2,103,376; Dec. 28.
Bodies, Method and apparatus for shaping. H. K. Kimble and H. Richter. 2,103,585; Dec. 28.
Body member and making the same, Artificial. R. K. Brown. 2,103,511; Dec. 28.
Book, Drawing. E. H. Gorton. 2,103,943; Dec. 28.
Booth, Telephone. P. H. Sherron. 2,103,280; Dec. 28.
Box: *See*—
Display box.
Box. M. J. McClure. 2,103,373; Dec. 28.
Bracket: *See*—
Supporting bracket.
Brake: *See*—
Fluid pressure brake.
Brake adjusting tool. T. A. Milutin. 2,103,688; Dec. 28.
Brake and anchoring means therefor. L. D. Kay. 2,103,750; Dec. 28.
Brake control, Safety. O. L. Dargis, Jr. 2,103,613; Dec. 28.
Brake mechanism, Load. C. C. Farmer. 2,103,353; Dec. 28.
Brake shoe, Magnetic. C. C. Farmer. 2,103,354; Dec. 28.
Brake system for high speed trains. S. G. Down. 2,103,323; Dec. 28.
Brake system, Power. E. A. Rockwell. 2,103,641; Dec. 28.
Brakes and the like, Operating device for hand. F. J. Stolpe. 2,103,282; Dec. 28.
Brandy, Producing. C. L. Crutchfield and J. P. Foster. 2,103,449; Dec. 28.
Braun tube. K. Schlesinger. 2,103,645; Dec. 28.
Brick backing for unit handling. W. J. Sullivan. 2,103,649; Dec. 28.
Brick support. D. A. and E. Wallace. 2,103,569; Dec. 28.
Bricks from a clay rod or the like and for closing said bricks, Apparatus for separating in one operation, hollow. A. H. Ullrich. 2,103,802; Dec. 28.
Bridge, Constant-current magnetic. B. D. Bedford. 2,103,996; Dec. 28.
Bridge foot piece for stringed musical instruments. J. Johannessen. 2,103,675; Dec. 28.
Bridge for metal sheets or rotary printing machines, Stretching. E. Gericke. 2,103,617; Dec. 28.
Brush and an appliance for using the same. W. H. Scott. 2,103,957; Dec. 28.
Building construction. W. W. Macfarren. 2,103,859; Dec. 28.
Building structure or tie. R. M. Schaffer. 2,103,644; Dec. 28.
Burner: *See*—
Combination burner. Gas burner.
Fuel burner.
Button or the like. P. E. Fenton. 2,103,615; Dec. 28.
Button, Upholstery. B. C. Place. 2,103,955; Dec. 28.
Cabinet, table, and seat, Combined. A. Radyx. 2,103,552; Dec. 28.
Cable cutter. A. E. Ravenscroft. 2,103,597; Dec. 28.
Cable outlet top member, Parkway. O. S. Flath. 2,103,773; Dec. 28.
Calculator, Pole and guy. W. W. Mayfield. 2,103,332; Dec. 28.
Can spraying machine. J. H. Murch. 2,103,270; Dec. 28.
Canal lock. L. Rothmund. 2,103,871; Dec. 28.
Candles, Making sanctuary. D. O. C. Deckert. 2,103,237; Dec. 28.
Cap, Swimming. W. P. Barnes. 2,103,886; Dec. 28.
Car underframe, Welded. R. A. Lewis and C. Schenck. 2,103,730; Dec. 28.

Carbohydrate derivatives and making the same. L. Lilienfeld. 2,103,952; Dec. 28.
Carbonator, Household. W. Magee. 2,103,479; Dec. 28.
Carboy, Shipping and/or storing. W. Kline and W. A. Brubaker. 2,103,679; Dec. 28.
Carburetor. J. F. Mullen, Jr. 2,103,689; Dec. 28.
Carburetor, Anterior throttle. A. Moore. 2,103,629; Dec. 28.
Carbureter temperator control. R. M. Heintz. 2,103,902; Dec. 28.
Cardboard display device. J. V. Horr. 2,103,748; Dec. 28.
Cards, Device for playing. R. C. Hart. 2,103,460; Dec. 28.
Carrier for automatic looms, Weft. W. H. Wakefield. 2,103,837; Dec. 28.
Cart, Hand. K. Morris. 2,103,866; Dec. 28.
Carton, Egg. N. A. Petter. 2,103,382; Dec. 28.
Case: *See*—
Plaster case. Traveling case.
Case, cigarette case, and lighter, Combined vanity. A. F. Reilly. 2,103,755; Dec. 28.
Casein plastics, Treating. W. E. Vawter. 2,103,993; Dec. 28.
Casein, Producing varicolored. G. Morrell. 2,103,546; Dec. 28.
Casein and effecting closure therefor, Sausage. H. A. Hensel. 2,103,258; Dec. 28.
Caterpillar injury to car corn, Preventing. G. W. Barber. 2,103,607; Dec. 28.
Cathode ray device. M. C. Banca. 2,103,312; Dec. 28.
Ceiling construction and slab therefor. C. F. Davis, J. G. Brush, and L. K. Mayne. 2,103,969; Dec. 28.
Chair: *See*—
Folding chair.
Chair and roller for pipes, Adjustable. A. E. Davis. 2,103,811; Dec. 28.
Chair and step ladder, Combined. A. A. Harju. 2,103,671; Dec. 28.
Chaser supporting block. W. J. Hogg. 2,103,462; Dec. 28.
Cheese, Apparatus for making. R. Miollis. 2,103,545; Dec. 28.
Cheese product. G. L. and W. K. Teller. 2,103,304; Dec. 28.
Cherry splitter. C. D. Russell. 2,103,383; Dec. 28.
Chintz. A. L. Lippert. 2,103,293; Dec. 28.
Chlorhydrins, Preparation of. P. Ferrero and C. Vandendries. 2,103,813; Dec. 28.
Chocolate, Treatment of. W. Clayton, S. Back, J. F. Morse, and R. T. Johnson. 2,103,612; Dec. 28.
Chronological device. J. H. Willis. 2,103,656; Dec. 28.
Chuck. H. Klaucke. 2,103,681; Dec. 28.
Chucking machine, Electric. C. W. Simpson. 2,103,342; Dec. 28.
Cigar labeling and wrapping machine. F. X. Malocsay. 2,103,626; Dec. 28.
Cigarette holder. E. O. Brower. 2,103,662; Dec. 28.
Cigarette machine. P. J. Herrmann. 2,103,721; Dec. 28.
Circuit, Amplifier. E. Peterson. 2,103,489; Dec. 28.
Circuit, Automatic volume control. W. J. Poch. 2,103,637; Dec. 28.
Circuit breaker. F. Rampacher. 2,103,794; Dec. 28.
Circuit breaker operating means. G. A. Matthews. 2,103,268; Dec. 28.
Circuit, Electric control. B. D. Bedford. 2,103,997; Dec. 28.
Circuit, Signaling. H. O. Peterson and M. Katzin. 2,103,869; Dec. 28.
Circuit, Telegraph test board. C. W. Lucek. 2,103,476; Dec. 28.
Circuits, Wave translating. E. Peterson. 2,103,490; Dec. 28.
Clamp for mitered store front constructions, Corner. D. J. Tindall. 2,103,832; Dec. 28.
Classroom committee table. M. I. Eddy. 2,103,408; Dec. 28.
Cleaner: *See*—
Pen cleaner. Tube cleaner.
Cleat. P. G. Morin. 2,103,630; Dec. 28.
Cleat, Shoe. J. Lascari. 2,103,472; Dec. 28.
Clutch: *See*—
Friction clutch.
Clutch and throttle actuation of an automotive vehicle, Automatic control of. R. S. Whittington. 2,103,284; Dec. 28.
Clutch for transmission gearing. E. F. Spinner. 2,103,959; Dec. 28.
Coaster, Wheeled. F. G. Birkhead. 2,103,998; Dec. 28.
Coat and vest hanger. E. E. Palmer. 2,103,691; Dec. 28.
Coffins, Apparatus for making burial. E. M. Lewis. 2,103,951; Dec. 28.
Collar. H. D. Roberson. 2,103,492; Dec. 28.
Collar. K. Teubner. 2,103,799; Dec. 28.
Color packaging. L. L. Salfisberg. 2,103,386; Dec. 28.
Color selector for shuttle changing looms. A. Cederlund. 2,103,767; Dec. 28.
Comb and casing. S. Behr. 2,103,930; Dec. 28.
Combination burner. J. S. Zink. 2,103,605; Dec. 28.
Composition for shoe manufacture and making shoes. P. J. Wentworth. 2,103,884; Dec. 28.
Compounds of cyclic B-ketocarboxylic acids, Producing. K. Ziegler. 2,103,286; Dec. 28.
Conductors, Insulating. J. F. Calvert. 2,103,841; Dec. 28.
Conduit for washing machines. E. S. Stoddard. 2,103,797; Dec. 28.
Connecter: *See*—
Electric connecter.
Connection for electrical appliances, Ground. A. W. Seyfried. 2,103,758; Dec. 28.
Constant voltage generator. C. E. Hallmark. 2,103,619; Dec. 28.
Construction composition, Light weight. H. Guth. 2,103,746; Dec. 28.
Container. L. B. Koch. 2,103,290; Dec. 28.
Container and pump. R. Bernhardt. 2,103,932; Dec. 28.
Container and spout construction. G. O. Conner. 2,103,406; Dec. 28.
Container for fluids. L. L. Salfisberg. 2,103,389; Dec. 28.
Containers, Apparatus for filling. B. E. Johnson. 2,103,817; Dec. 28.
Control for burners, Automatic. W. G. Hartwig. 2,103,529; Dec. 28.
Control mechanism. R. S. Sanford. 2,103,274; Dec. 28.
Control mechanism for shuttle changing looms. W. W. Robertson. 2,103,823; Dec. 28.
Control switch. A. J. A. Peterson and C. E. Valentine. 2,103,792; Dec. 28.
Control system. W. F. Eames. 2,103,771; Dec. 28.
Control system. H. E. Nason. 2,103,790; Dec. 28.
Control system for electric motors. H. W. Williams. 2,103,805; Dec. 28.
Converting system for reversible alternating current-direct current conversion. W. Leukert. 2,103,950; Dec. 28.
Conveyer. H. Klaucke. 2,103,680; Dec. 28.
Conveyer mechanism. R. H. Gordon. 2,103,901; Dec. 28.
Conveyer mechanism. H. Kaupp. 2,103,906; Dec. 28.
Cooler: *See*—
Liquid cooler.
Cooling system for rotary machines. T. W. Nichols. 2,103,632; Dec. 28.
Core catcher. A. C. Catland and P. C. Efromson. 2,103,611; Dec. 28.
Cosmetic device. J. K. O. Farrell. 2,103,577; Dec. 28.
Couch, Radiographic. E. Pohl. 2,103,693; Dec. 28.
Counter for machines. H. L. Spaunburg. 2,103,650; Dec. 28.
Counterbalancing mechanism for lift bridges. T. E. Brown, Jr. 2,103,661; Dec. 28.
Counting machine, Multiple. H. N. Bliss, E. Wild, and W. L. Tancred. 2,103,659; Dec. 28.
Coupled weighing. O. P. Haegele. 2,103,618; Dec. 28.
Coupling: *See*—
Hose coupling.
Cribbage scoring device. F. H. Robinson. 2,103,916; Dec. 28.
Crusher for comminuting hard materials, Impact. B. Graemiger and W. Ludin. 2,103,454; Dec. 28.
Cultivating and weeding device. W. E. Urschel. 2,103,306; Dec. 28.
Cup. M. Sidon. 2,103,831; Dec. 28.
Curling and crimping device. C. Karasiewicz. 2,103,676; Dec. 28.
Cushion, Self-cooling bed and couch. J. H. Reynolds. 2,103,553; Dec. 28.
Cutter: *See*—
Cable cutter.
Cutter plotting instrument, Garment. E. W. Van Ame. 2,103,393; Dec. 28.
Cutting height, Device for regulating. K. Hagebeuker. 2,103,418; Dec. 28.
Cutting machine for spaghetti, macaroni, etc. N. J. Cavagnaro. 2,103,317; Dec. 28.
Cutting mechanism. H. C. Shock. 2,103,875; Dec. 28.
Cylinder motion, Jacquard. H. V. Foster. 2,103,815; Dec. 28.
Cylinder reboring-plate. E. R. Michener. 2,103,294; Dec. 28.
Dampening and inking mechanism for planographic and analogous presses, Dual. J. G. Goedike. 2,103,254; Dec. 28.
Deflector means for hopper spouts. E. A. Thumlert. 2,103,392; Dec. 28.
Device employing electronic tubes. P. Kapteyn. 2,103,621; Dec. 28.
Device for preventing evaporation of volatile products. R. E. Cossais. 2,103,935; Dec. 28.
Dial. F. Liessmann. 2,103,856; Dec. 28.
Dial for watches and other instruments. A. Lodge. 2,103,263; Dec. 28.
Diazodinitrophenol and product thereof, Producing. H. B. Alexander. 2,103,926; Dec. 28.
Diesel engine, Air chamber. F. Lang. 2,103,423; Dec. 28.
Direction indicator. V. K. Zworykin. 2,103,507; Dec. 28.
Discharge apparatus, Electric. F. H. Gulliksen. 2,103,779; Dec. 28.
Disinfective and antiseptic compound for the treatment of ulcers, sores, and the like. J. H. Müller. 2,103,999; Dec. 28.
Dispenser. G. C. Spiro. 2,103,960; Dec. 28.
Dispenser for tablets or the like. J. H. Donnelly. 2,103,520; Dec. 28.

Dispensing device. C. P. Robertson. 2,103,493; Dec. 28.
Dispensing machine. F. W. Hoban. 2,103,367; Dec. 28.
Display box. J. L. Hawkinson. 2,103,419; Dec. 28.
Display device. J. Bell. 2,103,241; Dec. 28.
Display holder. H. S. Ford. 2,103,578; Dec. 28.
Display stand. L. D. Long. 2,103,684; Dec. 28.
Domestic heater. D. J. Mosshart. 2,103,789; Dec. 28.
Door check and closer. E. Bommer. 2,103,660; Dec. 28.
Door closing warning signal. S. G. Down. 2,103,324; Dec. 28.
Door for bottom-discharging receptacles, Water sealed. A. M. Meyerstein. 2,103,975; Dec. 28.
Door, Watertight. A. L. and F. M. Lambert. 2,103,291; Dec. 28.
Dough products and the like, Apparatus for baking. J. Kremer. 2,103,469; Dec. 28.
Dough, Softening of. A. K. Balls and W. S. Hale. 2,103,443; Dec. 28.
Drawbar mechanism for electric chucking machines. A. E. Drissner. 2,103,350; Dec. 28.
Drill: *See*—
Rock drill.
Drive for lathes and other machines. O. I. Judelshon. 2,103,464; Dec. 28.
Drive for pumps, Enclosed. J. Goldsmith. 2,103,971; Dec. 28.
Drive mechanism. D. R. De Tar. 2,103,517–18; Dec. 28.
Ductilizing process. J. R. Gier, Jr. 2,103,777; Dec. 28.
Dye composition for the treatment of external burns in human beings. R. H. Aldrich and D. A. Bryce. 2,103,309; Dec. 28.
Dyestuffs and their manufacture, Azo. W. Wehrli. 2,103,804; Dec. 28.
Dyestuffs, Triphenylmethane. H. Grotowsky. 2,103,846; Dec. 28.
Edge finishing machine. T. G. Winnett. 2,103,285; Dec. 28.

Fuel supply for automobile engines, Auxiliary. C. J. Dempsey. 2,103,516; Dec. 28.
Furnace structure. J. A. Clauss and D. E. McGuire. 2,103,234; Dec. 28.
Furniture. H. E. Aulsbrook. 2,103,422; Dec. 28.
Fuse, Plug. E. A. G. Ganoe. 2,103,717; Dec. 28.
Gain control system, Superheterodyne automatic. J. C. Nonnekens. 2,103,865; Dec. 28.
Game. M. Pool. 2,103,435; Dec. 28.
Game apparatus. R. H. Konikoff. 2,103,467; Dec. 28.
Game apparatus. C. C. Lutes. 2,103,428; Dec. 28.
Game apparatus. D. C. Rockola. 2,103,870; Dec. 28.
Garbage, Apparatus for treating. N. Ohlsen. 2,103,488; Dec. 28.
Garment supporting attachment. C. Knol. 2,103,854; Dec. 28.
Garter, Cowtail. M. Jamba. 2,103,584; Dec. 28.
Gas burner. F. Hess. 2,103,365; Dec. 28.
Gas-filled tube. L. K. Swart. 2,103,439; Dec. 28.
Gases, Method and apparatus for testing hydrocarbon L. S. Gregory. 2,103,582; Dec. 28.
Gate: *See*—
Starting gate.
Gauge: *See*—
Tool setting gauge.
Gauze, Metal. W. H. Heraeus. 2,103,672; Dec. 28.
Gear: *See*—
Locomotive running gear. Vehicle running gear.
Torpedo launching gear. Yieldable gear.
Gear for three-cylinder locomotives, Valve. E. W. Blanchard. 2,103,658; Dec. 28.
Gear pump. W. Ernst. 2,103,524; Dec. 28.
Gear shaping machine, Helical. E. W. Miller. 2,103,911; Dec. 28.
Gear shift mechanism for automobile transmissions. J. L. Getaz. 2,103,326; Dec. 28.
Gear train, Epicyclic. H. C. Hitt. 2,103,259; Dec. 28.
Generator: *See*—
Constant voltage generator. Oscillation generator.
Generators, Controlling automatic Diesel electric. A. Read. 2,103,491; Dec. 28.
Gib for elevator guide shoes. H. F. Mason. 2,103,480; Dec. 28.
Glass, Laminated safety. G. B. Watkins and R. W. Wampler. 2,103,883; Dec. 28.
Glass, Metallizing composition for. R. D. Smith. 2,103,598; Dec. 28.
Glass sheets, Apparatus for supporting. R. S. Hinsey. 2,103,850; Dec. 28.
Glove. J. M. Murray. 2,103,594; Dec. 28.
Glue product for gluing veneers and cross-ply sheets, Novel. E. Geistlich. 2,103,776; Dec. 28.
Glycols, Making. J. R. Heard, Jr. 2,103,840; Dec. 28.
Goggles. B. A. Diggins. 2,103,575; Dec. 28.
Golf club handle. J. C. Brisick. 2,103,889; Dec. 28.
Goods containers on transportation vehicles, Locking. W. P. Kellett. 2,103,751; Dec. 28.
Grease trap. E. W. N. Boosey. 2,103,316; Dec. 28.
Grilling and toasting device. M. Le Masson. 2,103,426; Dec. 28.
Grinding machine, Cylindrical. H. E. Balsiger. 2,103,808; Dec. 28.
Guard and seal assembly, Dust. L. A. Rowe. 2,103,555; Dec. 28.
Guard, Cushioned stocking supporter. E. G. Boyle. 2,103,446; Dec. 28.
Guard for paring knives. J. H. Karlson. 2,103,329; Dec. 28.

Guide, Jacquard needle spring. H. V. Foster. 2,103,814; Dec. 28.
Hair curler. J. Goodman. 2,103,526; Dec. 28.
Hair curler. W. Huppert. 2,103,533–5; Dec. 28.
Hair waver. J. A. Cogswell. 2,103,934; Dec. 28.
Handbag frame. W. C. Hering. 2,103,724; Dec. 28.
Handle: *See*—
Golf club handle.
Handle and shank therefor. J. A. Bartosz. 2,103,442; Dec. 28.
Hanger: *See*—
Coat and vest hanger. Multiple master hanger.
Harness, Golf. J. W. L. Webster. 2,103,502; Dec. 28.
Heater: *See*—
Domestic heater.
Heater for internal combustion engines, Fuel. F. J. Holmes. 2,103,947; Dec. 28.
Heating medium, Method and apparatus for generating. C. A. and A. R. Dunham. 2,103,770; Dec. 28.
Heating system, Steam. J. Van Vulpen. 2,103,835; Dec. 28.
Heel building machine. C. H. Coulson. 2,103,712; Dec. 28.
Holder: *See*—
Abrasive holder. Display holder.
Cigarette holder. Mop holder.
Homogenizing apparatus. W. S. Bowen. 2,103,888; Dec. 28.
Homogenizing mechanism. W. S. Bowen and J. Freeman. 2,103,887; Dec. 28.
Hood and double back for garments, Combination. L. Blauer. 2,103,608; Dec. 28.
Hood, Sliding. H. Lange. 2,103,372; Dec. 28.
Hormone from the urine of pregnant individuals, Isolating the follicle. W. Schoeller, E. Schwenk, and F. Hildebrandt. 2,103,735; Dec. 28.
Horseshoe. J. A. Goodwin. 2,103,718; Dec. 28.
Hose coupling. A. M. Bach. 2,103,838; Dec. 28.
Hosiery. W. J. Longtin. 2,103,625; Dec. 28.
Hosiery drying and pressing device. J. and N. Lipson. 2,103,909; Dec. 28.
House construction and the like, Steel. W. T. Dean. 2,103,407; Dec. 28.
Humidity and temperature control system. D. H. Hill. 2,103,904; Dec. 28.
Hydrocarbons, Purification of crude waxy. J. M. Whiteley and H. G. Vesterdal. 2,103,504; Dec. 28.
Ignition composition containing semi-pyrophoric metal, Safety. A. Schmid. 2,103,698; Dec. 28.
Ignition timer controlling device. L. D. Boyce. 2,103,348; Dec. 28.
Illuminated sign. C. J. Wamser. 2,103,738; Dec. 28.
Indicator: *See*—
Direction indicator. Place indicator.
Indicator for multiple lock sets. L. L. Hansen. 2,103,363; Dec. 28.
Inking device. A. Romano and A. Botta. 2,103,494; Dec. 28.
Insect excluder. C. C. Farmer. 2,103,355; Dec. 28.
Instrument for determining the deviation of bore holes. J. C. Conrad. 2,103,235; Dec. 28.
Insulated homopolar generator. C. E. Berger. 2,103,931; Dec. 28.
Insulating composition, High temperature. O. L. Jones. 2,103,463; Dec. 28.
Insulator. R. H. Walker. 2,103,399; Dec. 28.
Intelligence, Transmission and reception of. S. G. Frantz and B. S. McCutchen. 2,103,745; Dec. 28.
Intensity control system for cathode ray beams. M. von Ardenne. 2,103,652; Dec. 28.
Internal combustion engine. P. R. McCrary. 2,103,787; Dec. 28.
Internal combustion engine. A. W. Nelson. 2,103,595; Dec. 28.
Internal combustion engine. P. A. Tanner. 2,103,564; Dec. 28.
Internal combustion engine. F. B. Yingling. 2,103,604; Dec. 28.
Jig, Pouring. M. Holhut and W. G. Vollmer. 2,103,531; Dec. 28.
Joint: *See*—
Expansion joint.
Joint for concrete building units. H. Bussmann. 2,103,894; Dec. 28.
Joint structure, Expansion. R. Hall. 2,103,981; Dec. 28.
Joints, Sealing expansion. W. O. Snelling. 2,103,648; Dec. 28.
Kit, Sewing. F. W. Watson. 2,103,571; Dec. 28.
Knitting machine. J. Kessler. 2,103,859; Dec. 28.
Lamp and flasher device and manufacture thereof, Combined incandescent. J. Schmidinger. 2,103,278; Dec. 28.
Lamps having coiled-coil filaments, Manufacture of electric incandescent. B. P. Dudding and R. E. Leeds. 2,103,938; Dec. 28.
Lapping machine. H. S. Indge. 2,103,984; Dec. 28.
Latch: *See*—
Motor vehicle latch.
Lathe. C. A. Birkebak. 2,103,315; Dec. 28.
Lathe, Multiple spindle center drive crankshaft. H. C. Pierle. 2,103,298; Dec. 28.
Leather and manufacture thereof. H. Böhm. 2,103,232; Dec. 28.
Lifting speed of differently loaded hydraulic jacks, System of equalizing the. C. D. Henry. 2,103,530; Dec. 28.
Light: *See*—
Portable light.
Light signal. O. S. Field. 2,103,251; Dec. 28.
Lights, Dimming radio. J. L. McWeeny. 2,103,334; Dec. 28.
Line resonator, Low power factor. J. W. Conklin and L. A. Battermann. 2,103,515; Dec. 28.
Linings for Jordan engine shells, Making. H. D. Stuck and P. A. De Nault. 2,103,344; Dec. 28.
Liquid cooler. W. D. Drysdale. 2,103,970; Dec. 28.
Liquid dispensing device. M. L. McKenney. 2,103,687; Dec. 28.
Liquid measuring device. L. McCandless. 2,103,482; Dec. 28.
Liquid recording mechanism. J. P. Taylor. 2,103,566; Dec. 28.
Liquid regulating system, Automatic. M. E. Walters and J. A. Wolfe. 2,103,570; Dec. 28.
Liquids and apparatus therefor, Clarifying. J. J. Selp. 2,103,829; Dec. 28.
Liquids, Cooling. L. T. Mart. 2,103,542; Dec. 28.
Liquids, Handling. F. Ravnsbeck. 2,103,299; Dec. 28.
Liquids, Process of and apparatus for clarifying. J. J. Selp. 2,103,828; Dec. 28.
Lock: *See*—
Automobile lock. Canal lock.
Bar lock.
Lock for motor vehicles, Steering gear. A. Jackson. 2,103,674; Dec. 28.
Lock securing device, Sash. H. H. Kistner. 2,103,987; Dec. 28.
Locomotive running gear. T. V. Buckwalter. 2,103,978; Dec. 28.
Loom dobby. E. R. Holmes. 2,103,784; Dec. 28.
Loom picker. F. W. Merrick. 2,103,991; Dec. 28.
Loom with shuttle changing and loom stopping mechanism. R. G. Turner. 2,103,800; Dec. 28.
Looms, Let-off for. O. V. Payne. 2,103,821; Dec. 28.
Looms, Picking motion for. O. V. Payne. 2,103,820; Dec. 28.
Lubricator: *See*—
Rail head and wheel flange lubricator.
Machine for attaching price tags. J. Weimont and F. A. Hazard. 2,103,654; Dec. 28.
Machine for capping tack heads. N. H. Anderson. 2,103,508; Dec. 28.
Machine for disintegrating, screening, and pumping fibrous or paper making stocks. W. T. Doyle and T. J. Sturtevant. 2,103,896; Dec. 28.
Machine for game playing. C. R. Dumble. 2,103,744; Dec. 28.
Machine for producing rubber and similar articles. H. Mazzeo. 2,103,860; Dec. 28.
Machine for removing lacings from shoe uppers. J. Fossa. 2,103,667; Dec. 28.
Machine for slitting and broiling meat. J. P. Spang. 2,103,563; Dec. 28.
Magnesium from magnesiferous raw materials by thermal reduction, Reduction of. R. Suchy and H. Seliger. 2,103,976; Dec. 28.
Massage machine. A. Schumacher. 2,103,956; Dec. 28.
Material and preparing the same, Artificial textile. G. Schneider. 2,103,497; Dec. 28.
Materials, Treatment of textile. G. H. Ellis and E. W. Kirk. 2,103,452; Dec. 28.
Matrices, Making level faced. C. E. Boutwell. 2,103,764; Dec. 28.
Mattress protector. F. Y. Briscoe. 2,103,244; Dec. 28.
Meat tenderer. S. W. Neldner. 2,103,914; Dec. 28.
Mercoid switch. J. M. Harris, Jr. 2,103,459; Dec. 28.
Mercury compounds, Organic. C. N. Andersen. 2,103,657; Dec. 28.
Mesh, Reinforcement. W. S. Edge. 2,103,897; Dec. 28.
Metalworking machine. R. Eckardt. 2,103,351; Dec. 28.
Metals, Refining. J. O. Betterton and C. N. Waterman. 2,103,762; Dec. 28.
Microscope. G. B. Gallasch. 2,103,525; Dec. 28.
Microscope. R. E. Wilkinson. 2,103,573; Dec. 28.
Microscope illuminator. J. R. Benford and L. V. Foster. 2,103,230; Dec. 28.
Milk products and stabilizer therefor. A. Frieden and S. J. Werbin. 2,103,411; Dec. 28.
Minerals, Concentrating. E. S. Curtis. 2,103,663; Dec. 28.
Minerals, Concentration of phosphate-bearing. F. X. Tartaron and J. B. Duke. 2,103,283; Dec. 28.
Mining machine. C. L. Bowman. 2,103,509; Dec. 28.
Mirror, Nonblurrable. M. Somohano. 2,103,384; Dec. 28.
Mitt, Abrasive. H. Greenwald. 2,103,455; Dec. 28.
Mitten, Timer's. E. W. Cole. 2,103,711; Dec. 28.
Mixing device. R. F. Bean. 2,103,928; Dec. 28.
Mixing device. W. Van Guilder. 2,103,922; Dec. 28.
Modulation metering device. H. J. Schrader. 2,103,341; Dec. 28.
Monoplane, Auto. E. F. Wagner. 2,103,881; Dec. 28.
Mop holder. H. B. Tarbox. 2,103,565; Dec. 28.
Motor: *See*—
Electric motor.
Motor and compressor unit. L. W. Melcher. 2,103,861; Dec. 28.

Motor apparatus. W. H. Wineman. 2,103,963; Dec. 28.

Rail treatment method. R. E. Frickey. 2,103,716; Dec. 28.
Ratchet wrench. T. O. Rueb. 2,103,556; Dec. 28.
Razor, Safety. P. Beckley. 2,103,402; Dec. 28.
Razor, Safety. L. A. Young. 2,103,924; Dec. 28.
Receptacle: *See*—
Spaced wall receptacle.
Rectifying and filtering system. P. Müller. 2,103,487; Dec. 28.
Reflector. F. P. Kolb. 2,103,538; Dec. 28.
Refractories, Production of. H. P. Eells, Jr. 2,103,249; Dec. 28.
Refrigerating apparatus. A. D. Karr. 2,103,726; Dec. 28.
Refrigerating apparatus and method. F. H. Hibberd. 2,103,722; Dec. 28.
Refrigerating construction. F. H. Hibberd. 2,103,723; Dec. 28.
Refrigerating system. J. Kirgan. 2,103,728; Dec. 28.
Refrigerating unit. L. W. Melcher. 2,103,862; Dec. 28.
Refrigeration apparatus. J. H. Ashbaugh. 2,103,682; Dec. 28.
Refrigeration apparatus. M. Kallischer. 2,103,683; Dec. 28.
Refrigerator. J. T. Whalen. 2,103,885; Dec. 28.
Refrigerator, Transportable anchorable. H. W. Blake. 2,103,231; Dec. 28.
Register, Adjustable. S. Hart and L. Zavorski. 2,103,982; Dec. 28.
Register, Card. N. I. Rosen. 2,103,695; Dec. 28.
Register, Portable. J. Q. Sherman. 2,103,279; Dec. 28.
Regulating system. E. Friedländer. 2,103,774; Dec. 28.
Regulating system. J. Kucera. 2,103,818; Dec. 28.
Regulator: *See*—
Motor speed regulator. Pressure regulator.
Regulator. E. L. Harder. 2,103,782; Dec. 28.

Reradiation, Eliminating. A. Gothe. 2,103,358; Dec. 28.
Resilient wheel. A. J. Park. 2,103,867; Dec. 28.
Resin manufacture, Synthetic. H. O. Albrecht, R. A. McGlone, and S. J. Roskosky. 2,103,238; Dec. 28.
Resins, Vinyl. D. M. Gray. 2,103,581; Dec. 28.
Ribbon and ink composition therefor, Typewriter. G. W. Schaefer. 2,103,275; Dec. 28.
Ring: *See*—
Finger ring.
Ring for floor maintenance machine brushes, Drive. K. C. Atkin. 2,103,311; Dec. 28.
Rings, Making finger. F. J. Gaertner. 2,103,413; Dec. 28.
Rock drill. E. G. Gartin. 2,103,252; Dec. 28.
Rock drill. F. F. Graham. 2,103,359; Dec. 28.
Rosin esters, Refining of. J. N. Borglin. 2,103,445; Dec. 28.
Rotary switch, Double circuit. C. B. Howard. 2,103,287; Dec. 28.
Rubber composition and preservation of rubber. G. D. Martin. 2,103,686; Dec. 28.
Rubber or other materials, Vulcanization of. A. L. Hock, A. Kirkham, and H. Spence. 2,103,461; Dec. 28.
Rubberized product. E. G. Budd. 2,103,245; Dec. 28.
Safety device. W. H. Wineman. 2,103,962; Dec. 28.
Salt, Gathering of. J. B. Semple. 2,103,757; Dec. 28.
Sash and store front construction. C. D. Lowry. 2,103,731–2; Dec. 28.
Scalp-treating device. M. E. Koehler. 2,103,949; Dec. 28.
Scour prevention. J. C. Stevens. 2,103,600; Dec. 28.
Scraper. C. Le Bleu. 2,103,588; Dec. 28.
Screw part and driver. A. V. Gulliborg. 2,103,944; Dec. 28.
Seal. H. Leach. 2,103,292; Dec. 28.
Seal, Electric bag. N. B. Henley. 2,103,945; Dec. 28.
Sealing equipment, Refrigerated. W. N. McWade. 2,103,544; Dec. 28.
Selecting system. E. R. Wheeler and E. J. Sortore. 2,103,761; Dec. 28.
Selector for sorting machines. W. C. Silver. 2,103,559; Dec. 28.
Self-hardening compositions, Acid-proof. K. Dietz and K. Frank. 2,103,768; Dec. 28.
Separator. T. C. Bleth. 2,103,809; Dec. 28.
Server, Planked food. A. F. Saunders. 2,103,496; Dec. 28.
Sewing machine. F. Lutz. 2,103,478; Dec. 28.
Sewing machines, Circular knit tubing cutter attachment for. C. A. Scheaffer and C. C. Foil. 2,103,696; Dec. 28.
Sewing machines, Knee control for. N. T. Sawdey and N. E. Colegrove. 2,103,557; Dec. 28.
Sewing machines, Lubricating device for. G. A. Fleckenstein and M. L. Waterman. 2,103,899; Dec. 28.
Sewing machines, Lubricating system for. H. J. LeVesconte and A. M. Schweda. 2,103,473; Dec. 28.
Sewing machines, Presser mechanism for. F. A. Kucera. 2,103,470; Dec. 28.
Shade adapter, Lamp. W. N. de Sherbinin. 2,103,322; Dec. 28.
Sharpener, Drill steel. C. W. Beamer. 2,103,705; Dec. 28.
Shaving implement. J. Muros. 2,103,753; Dec. 28.
Sheets, Making equalizer. E. C. Greenway. 2,103,360; Dec. 28.
Shelf, Angular display. P. H. Meyer. 2,103,484; Dec. 28.
Ship construction. H. P. Frear. 2,103,715; Dec. 28.
Shock absorber. J. H. Herr. 2,103,946; Dec. 28.
Side tracking apparatus. R. B. Kinzbach. 2,103,622; Dec. 28.
Sight feed device. W. J. Powers. 2,103,733; Dec. 28.
Sign: *See*—
Animated sign. Illuminated sign.
Signal: *See*—
Door closing warning signal. Railroad crossing signal.
Light signal.
Signal means. V. Cranford. 2,103,247; Dec. 28.
Signal system. W. D. Lindsey. 2,103,857; Dec. 28.
Signal translating apparatus. E. C. Guedon. 2,103,361; Dec. 28.
Signaling. C. W. Hansell. 2,103,847; Dec. 28.
Signaling system and method. R. C. Mathes. 2,103,481; Dec. 28.
Silencer for the exhaust gases of internal combustion engines. E. Caspar. 2,103,810; Dec. 28.
Skates to shoes, Attaching. F. G. Tappé. 2,103,737; Dec. 28.
Slab. H. H. Bunker. 2,103,765; Dec. 28.
Slackener control for loom warps. E. R. Holmes. 2,103,783; Dec. 28.
Slicer, Vegetable. T. A. and R. T. Killman. 2,103,537; Dec. 28.
Slicing machine. W. A. van Berkel. 2,103,567; Dec. 28.
Slush pump valve. C. White. 2,103,503; Dec. 28.
Solids from liquids, Apparatus for separating. J. J. Seip. 2,103,796; Dec. 28.
Sound and picture control, Synchronized. T. Cahill. 2,103,766; Dec. 28.
Spaced wall receptacle. W. Kline and W. A. Brubaker. 2,103,677; Dec. 28.
Spark plug and making the same. S. H. Stupakoff. 2,103,759; Dec. 28.
Speed responsive apparatus. H. L. Bone. 2,103,706; Dec. 28.
Speed responsive apparatus. R. K. Crooks. 2,103,707; Dec. 28.
Spider construction for stalk cutters. L. J. Taylor. 2,103,345; Dec. 28.
Spray plate and making the same, Faucet attachment. C. E. Lehman. 2,103,424; Dec. 28.
Spring wind-up for wagons. J. Kuchar. 2,103,471; Dec. 28.
Stairway, Moving. A. E. Handy. 2,103,327; Dec. 28.
Stand: *See*—
Display stand. Motor-block stand.
Stapling device. W. G. Pankonin. 2,103,551; Dec. 28.
Starter, Engine. J. A. Charter. 2,103,233; Dec. 28.
Starting gate. J. M. Mason. 2,103,968; Dec. 28.
Starting mechanism for internal combustion engines, Automatic. F. T. Christian. 2,103,405; Dec. 28.
Starting system, Automatic. M. W. Morris. 2,103,375; Dec. 28.
Staybolts, Testing. G. R. Greenslade. 2,103,256; Dec. 28.
Steels, Heat treatment of. J. W. Harsch. 2,103,848; Dec. 28.
Step, Removable ladder. A. Voigt. 2,103,603; Dec. 28.
Sterilizer. H. E. Cann. 2,103,709; Dec. 28.
Stock-quotation system. M. L. Nelson, H. C. Robinson, and J. I. Bellamy. 2,103,297; Dec. 28.
Stoker control and method of maintaining desired fuel bed resistance. H. S. Morton. 2,103,913; Dec. 28.
Stone from gravel, Apparatus for eliminating soft. V. Mikan. 2,103,374; Dec. 28.
Stopcock. M. C. Inge. 2,103,536; Dec. 28.
Strainer, Rotary. D. R. McNeal. 2,103,483; Dec. 28.
Strip feed mechanism. A. S. Howell. 2,103,369; Dec. 28.
Strips, Forming felted. D. C. Drill. 2,103,769; Dec. 28.
Sucker rod assembly, Withdrawable. W. H. Stigall. 2,103,601; Dec. 28.
Sucker rod stabilizer. C. L. Coshow. 2,103,236; Dec. 28.
Sulphur compounds, Production of organic. H. Ufer. 2,103,879–80; Dec. 28.
Sulphuric derivatives, Process for preparation of. E. J. Gohr. 2,103,255; Dec. 28.
Supercharging mechanism for Diesel engines. B. Loeffler. 2,103,974; Dec. 28.
Support: *See*—
Arch support. Brick support.
Supporting bracket, Variable inclination. P. H. Meyer. 2,103,485; Dec. 28.
Suspension device for motor cars or other vehicles, Resilient. A. R. Lefevre. 2,103,590; Dec. 28.
Switch: *See*—
Control switch. Mercoid switch.
Electrical switch. Rotary switch.
Flow controlled switch. Time switch.
Switch. P. S. Bear. 2,103,929; Dec. 28.
Table: *See*—
Classroom committee table. Foldable table.
Table unit, Collapsible. H. La Fetra. 2,103,330; Dec. 28.
Tag printing device. H. I. Lippard. 2,103,752; Dec. 28.
Talking device. H. J. Whelan and L. T. Clark. 2,103,739; Dec. 28.
Tank attachment, Flush. E. J. Goodman and J. W. Bibee. 2,103,580; Dec. 28.
Tank for motor vehicles, Gasoline. C. O. Castledine. 2,103,448; Dec. 28.
Tanning board. E. A. Headland. 2,103,983; Dec. 28.
Telephone system. N. H. Saunders. 2,103,301; Dec. 28.
Telephone system, Measured service. K. Wollack. 2,103,441; Dec. 28.
Terminal box device. F. D. Waldron and A. J. Wier. 2,103,501; Dec. 28.
Test rack. F. B. Thomas. 2,103,305; Dec. 28.
Therapeutic composition. J. Ebert. 2,103,522; Dec. 28.
Therapeutic device. A. C. Kleckner. 2,103,371; Dec. 28.
Thermometer. F. A. Nodine. 2,103,633–4; Dec. 28.
Thermostatic valve. G. J. Day. 2,103,614; Dec. 28.
Ticket issuing machine. R. H. Helsel. 2,103,720; Dec. 28.
Time delay apparatus. V. L. Cestnaes and C. A. Swanstrom. 2,103,378; Dec. 28.
Time switch. W. K. Kearsley. 2,103,907; Dec. 28.
Timing device. H. Hastings. 2,103,257; Dec. 28.
Tire lug. F. A. Olmstead. 2,103,550; Dec. 28.
Tool: *See*—
Brake adjusting tool. Valve reseating tool.
Tool construction. M. R. Ford. 2,103,409; Dec. 28.
Tool for well drilling, Fishing. G. F. Le Bus. 2,103,988; Dec. 28.
Tool, Forming a rotary. C. J. Oxford. 2,103,379; Dec. 28.
Tool machine, Rotary. E. R. Motch and J. G. Moohl. 2,103,486; Dec. 28.
Tool setting gauge. L. C. Hammond. 2,103,528; Dec. 28.
Top for dry cells, Metal. P. Drummond. 2,103,714; Dec. 28.
Torpedo launching gear. H. Scott-Paine. 2,103,380; Dec. 28.

Towel dispensing apparatus. R. G. Birr. 2,103,403; Dec. 28.
Toy. L. Carl. 2,103,447; Dec. 28.
Train control device, Automatic. C. C. Farmer and E. E. Hewitt. 2,103,352; Dec. 28.
Transfer medium, Communicating. S. A. Neldich. 2,103,690; Dec. 28.
Transmission. E. McCormick and W. H. Worthington. 2,103,543; Dec. 28.
Transmission, Change speed. W. T. Livermore. 2,103,540; Dec. 28.
Transmitting and receiving system. M. L. Nelson, H. C. Robinson, and J. I. Bellamy. 2,103,296; Dec. 28.
Trap; *See*—
Animal trap. Grease trap.
Traveling case. L. G. Stanley. 2,103,281; Dec. 28.
Trouser cuff and fastening same. C. B. Goodstein. 2,103,845; Dec. 28.
Tronsers and making the same. M. Jacobs. 2,103,985; Dec. 28.
Truck. C. L. Eastburg. 2,103,979; Dec. 28.
Truck, Car. W. S. Dietrich. 2,103,713; Dec. 28.
Tube; *See*—
Braun tube. X-ray tube.
Gas-filled tube.
Tube bore mandrel for tube forming machines, Positively controlled. J. B. Wintercorn. 2,103,574; Dec. 28.
Tube cleaner. J. R. Turner. 2,103,760; Dec. 28.
Tube testing device. W. De Verter. 2,103,450; Dec. 28.
Tube welding. J. L. Anderson. 2,103,346; Dec. 28.
Tubing head. G. B. Kitchel and E. J. Roach. 2,103,586; Dec. 28.
Tufting mechanism for tufting a fabric base. M. A. Taradash. 2,103,798; Dec. 28.
Tuning indicin, Projecting and magnifying. J. L. McWeeny. 2,103,333; Dec. 28.
Turbine bucket wheel notch block. R. Hillner. 2,103,905; Dec. 28.
Turbine-generator field-winding. B. A. Rose. 2,103,795; Dec. 28.
Typewriter. W. A. Fowler. 2,103,668; Dec. 28.
Typewriter. W. H. Schmidt. 2,103,734; Dec. 28.
Typewriting machine. R. G. Thompson. 2,103,921; Dec. 28.
Typographical machine. H. R. Freund. 2,103,980; Dec. 28.
Umbrella point, Beach. E. Jones. 2,103,948; Dec. 28.
Utensil, Electric cooking. A. T. Smith and H. J. Moon. 2,103,560; Dec. 28.
Utensil of fibrous structure and making same, Culinary. A. L. Clapp. 2,103,318; Dec. 28.
Vaccine and producing same, Nonspecific spermatoxic. M. J. Baskin. 2,103,240; Dec. 28.
Valuable substances, Production of. H. Ruckdeschel. 2,103,495; Dec. 28.
Valve; *See*—
Pipe union and ball check valve. Slush pump valve.
Pump valve. Thermostatic valve.
Valve. W. J. Jacobsson. 2,103,725; Dec. 28.
Valve and the like, Tire. I. D. Perry. 2,103,822; Dec. 28.
Valve converting system, Electric. C. C. Herskind. 2,103,903; Dec. 28.
Valve device, Check. W. I. Conant and C. C. Farmer. 2,103,349; Dec. 28.
Valve reseating tool. R. P. Norton. 2,103,377; Dec. 28.
Variable resistor device. E. Severin and F. Schierl. 2,103,873; Dec. 28.
Vault, Burial. R. H. Morris. 2,103,547; Dec. 28.
Vehicle construction. L. M. Francis. 2,103,669; Dec. 28.
Vehicle construction. K. K. Propst. 2,103,915; Dec. 28.
Vehicle for forward and backward travel, Automobile. E. Luschinsky. 2,103,858; Dec. 28.
Vehicle, Motor road. H. L. P. Lester. 2,103,624; Dec. 28.
Vehicle running gear. E. H. Perkins and H. E. Mills. 2,103,381; Dec. 28.
Vending apparatus or the like. G. J. Scofield. 2,103,391; Dec. 28.
Vending machine. W. L. Kissel. 2,103,289; Dec. 28.
Ventilating system, Vehicle. W. J. Mayer. 2,103,990; Dec. 28.
Ventilator. M. Fillon, née Le Compte. 2,103,843; Dec. 28.
Vessel, Refrigerated shipping and/or storing metal. W. Kline and W. A. Brubaker. 2,103,678; Dec. 28.
Vibration arrester for tube frames. W. W. Robertson. 2,103,824; Dec. 28.
Vibration arrester for tube frame. W. W. Robertson. 2,103,827; Dec. 28.
Visor construction. W. O. Meller. 2,103,863; Dec. 28.
Warp beam. C. R. Howard. 2,103,785; Dec. 28.
Warp slackener for looms. W. H. Wakefield. 2,103,836; Dec. 28.
Washing machine. T. W. Behan. 2,103,966; Dec. 28.
Washing machine, Vehicle. H. C. Drake. 2,103,842; Dec. 28.
Wave system, Ultrashort. E. Gerhard. 2,103,357; Dec. 28.
Wave translating system. J. G. Kreer, Jr. 2,103,468; Dec. 28.
Wave translating system. C. S. Yeutter. 2,103,506; Dec. 28.
Waving device, Permanent. W. H. Brown. 2,103,890–1; Dec. 28.
Wax, Parting. C. V. Goodyear. 2,103,527; Dec. 28.
Weather strip and window guide, Combined. E. J. Feller. 2,103,772; Dec. 28.
Weather stripping and making the same. C. P. Schlegel. 2,103,697; Dec. 28.
Weave scanning device, Solid. D. B. Gardner. 2,103,253; Dec. 28.
Weighing device. M. A. Weckerly. 2,103,400; Dec. 28.
Welding, Electric. H. E. Kennedy, M. A. Rotermund, and L. T. Jones. 2,103,727; Dec. 28.
Well reamer. J. H. Howard and A. C. Catland. 2,103,583; Dec. 28.
Well tester. A. H. Fletcher. 2,103,940; Dec. 28.
Wells, Controlling. R. A. Mueller. 2,103,431; Dec. 28.
Welt-treating machine. C. E. Hood. 2,103,260; Dec. 28.
Welting and making the same. E. F. Mathews. 2,103,331; Dec. 28.
Wetting preparations, Manufacture and use of. H. Lier. 2,103,819; Dec. 28.
Wharve for spindles for spinning, twisting, winding, and similar machines. C. Schleifer. 2,103,436; Dec. 28.
Wheel; *See*—
Resilient wheel.
Wheel. J. D. Tyson. 2,103,834; Dec. 28.
Wheelbarrow manufacture. I. R. Smith. 2,103,562; Dec. 28.
Winch. J. J. Low. 2,103,541; Dec. 28.
Winding machine. J. C. Anderson. 2,103,239; Dec. 28.
Winding machine. R. J. Bartholomew. 2,103,347; Dec. 28.
Windmill. K. R. Lung. 2,103,910; Dec. 28.
Window. C. F. Hanson. 2,103,364; Dec. 28.
Window construction. T. I. Moseley. 2,103,864; Dec. 28.
Window construction. J. D. Silberman. 2,103,876; Dec. 28.
Wiper, Windshield. E. C. Horton. 2,103,973; Dec. 28.
Wrapper. H. W. Brown. 2,103,892; Dec. 28.
Wrench; *See*—
Ratchet wrench.
X-ray tube. H. F. Mesick, Jr., and M. J. Gross. 2,103,335; Dec. 28.
Yarns, Warping artificial. C. Hargreaves and R. Booth. 2,103,458; Dec. 28.
Yieldable gear. H. F. Hansen. 2,103,781; Dec. 28.

CLASSIFICATION OF PATENTS

ISSUED DECEMBER 28, 1937

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number=class, second number=subclass, third number=patent number

1— 3: 2,103,551
2— 68: 2,103,886
84: 2,103,608

U. S. GOVERNMENT PRINTING OFFICE: 1937

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 485—No. 1 TUESDAY, DECEMBER 7, 1937 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Designs	93—No.	107,307 to No.	107,399, inclusive.
Total	1,162		

Photostat Copies

In ordering photostat copies of United States and foreign patents, when only the number of the patent is given, the whole patent, comprising specification and drawing, will be furnished, unless the order specifically states that the "specification only" or "drawing only" is required. Care should be taken in making out orders for foreign patents to give the year of the patent, as in old French and British patents the same number may appear in different years.

Examiners' Letters and Amendments

Examiners are directed to recite in each letter in an application the date of the action by the applicant to which it is a reply, and applicants are requested to indicate in their actions on an application the date of the last Office letter.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,871,768, J. D. Wood, Operating mechanism for circuit breakers, decided September 24, 1937, claims 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, and 13.

Pat. 1,971,086, V. E. Trouant, Standard frequency apparatus, decided November 17, 1937, claim 2.

Pat. 2,032,091, H. S. Holt, Plasticized composition, decided October 26, 1937, claims 1 and 2.

Design Pat. 104,474, P. E. Roehrich, decided November 17, 1937, the claim as shown.

Design Pat. 104,728, P. E. Roehrich, decided November 17, 1937, the claim as shown.

Disclaimers

1,804,330.—*Harold T. Faus,* Lynn, Mass. Electric Measuring Instrument. Patent dated May 5, 1931. Disclaimer filed November 11, 1937, by the assignee, *General Electric Company.*

Hereby enters this disclaimer to claim 6 of said Letters Patent.

1,959,799.—*Kurt T. Potthoff,* Brooklyn, N. Y. Method and Apparatus for Treating Material. Patent dated May 22, 1934. Disclaimer filed November 17, 1937, by the assignee, *U. S. Galvanizing & Plating Equipment Corporation.*

Hereby enters this disclaimer to claims 34 and 36.

2,032,091.—*Harold S. Holt,* Wilmington, Del. Plasticized Composition. Patent dated February 25, 1936. Disclaimer filed November 18, 1937, by the assignee, *E. I. du Pont de Nemours and Company.*

Hereby enters this disclaimer to claims 1 and 2 of said specification.

2,036,229.—*Douglas George King Moss,* Sanderstead, England. Gyroscopic Navigation Instrument. Patent dated April 7, 1936. Disclaimer filed November 16, 1937, by the patentee.

Hereby enters this disclaimer to claim 3 in said specification.

Condition of Applications Under Examination at Close of Business November 20, 1937

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 42,271; Trade-Mark Division, 1,730. Oldest new case, May 18, 1937; oldest amended, May 7, 1937.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS	Oldest new application and oldest action by applicant awaiting office action: New	Amended	No. of applications awaiting action
6624	1. TUCKER, M. (Act.), Baths and Closets; Sewerage; Domestic Cooking Vessels; Closure Operators; Fences; Gates; Tillage.	June 28	July 3	724
6708	2. HERRMANN, D., Fishing and Trapping; Dairy, Animal Husbandry; Presses, Tobacco; Butchering; Bee Culture.	July 26	July 24	784
4093	3. LINDSEY, A., Heating; Metal Founding; Metallurgy; Metal Treatment; Electric Furnaces	Sept. 21	Sept. 16	447
7083	4. DONNELLY, A. E., Conveyors; Hoists; Handling Apparatus and Implements; Excavating; Elevators; Fire Escapes; Ladders, Scaffolds; Store Service; Pneumatic Despatch; Fluid Pressure Brakes.	Aug. 11	Aug. 10	476
3077	5. ROBINSON, C. W., Harvesters; Music; Acoustics; Sound Recording; Knotters; Buckles, Buttons,	Aug. 23	Aug. 26	568
4898C	6. LEWERS, A. M., Carbon Chemistry (part)	Aug. 21	Aug. 18	774
5725	7. JARBOE, C. G., Optics; Photography	Aug. 10	Aug. 10	1,015
3885	8. ADAMS, F. L., Beds; Chairs; Kitchen and Table Articles; Racks and Cabinets	July 30	Aug. 18	612
4624	9. ADAMS, R. E., Pumps; Fluid and Fluid-Current Motors	July 23	July 16	537
6612	10. HUNTER, O. F., Land Vehicles—Animal Draft Appliances, Wheel Substitutes, Bodies and Tops; Vehicle Fenders; Spring Devices.	July 6	July 21	821
5087B	11. BENHAM, E. V., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus; Hides, Skins, and Leather.	Aug. 13	Aug. 18	461
7701	12. HENRY, C. C., Machine Elements; Cylinders and Pistons; Mechanical Starters; Stop Mechanisms; Velocipedes.	July 6	July 8	630
5096	13. BORLIK, F. J., Gear Cutting, Milling, and Planing; Metal Drawing, Forging, and Welding, and Rolling; Metal and Plastic Metal Working; Needle and Pin Making; Turning; Boring and Drilling.	July 29	July 29	653
5097	14. SMITH, O. A., Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet Metal Ware, Making; Wire Fabrics; Wire Working; Metal Working, Blanks and Processes.	Aug. 20	Aug. 19	538
4897	15. HENKIN, BENJ., Glass; Plastic Block and Earthenware Apparatus; Plastics	Aug. 12	Aug. 12	1,036
5716	16. SPENCER, C. J., Telegraphy; Telephony	July 24	July 24	732
5701	17. ARMSTRONG, H., Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet or Web Feeding; Type Setting.	Aug. 21	Aug. 19	539
4612	18. KURZ, JOS. A., Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices	July 26	July 27	463
4096	19. KENNEDY, A. R., Furnaces and Stoves; Fuel Burners	July 21	July 22	807
6605	20. BROWN, L. M., Miscellaneous Hardware; Closure Fasteners; Locks; Safes; Undertaking; Bread, Pastry, and Confection Making.	Aug. 2	Aug. 6	464
7733	21. THOMPSON, T. J., Textiles; Cloth Finishing	Aug. 21	Aug. 24	539
5600	22. RINGLE, D., Aeronautics; Firearms, Ordnance, and Explosive Devices; Air Guns; Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion.	Aug. 24	Aug. 25	586
7624	23. BUTTNER, W. J., Registers (part)	May 18	May 7	297
5083	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Aug. 25	Aug. 25	624
5709	25. BLAKELY, C. F., Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors.	Aug. 12	Aug. 11	578
5893	26. YOUNG, R. R., Electricity, Generation; Motive Power	July 20	July 27	485
5708	27. CLARK, W. N., Brushing, Scrubbing, and Cleaning; Washing Apparatus; Textiles, Ironing	June 21	June 14	883
4628	28. SOLYOM, H. L., Internal-Combustion Engines	Aug. 31	Aug. 25	367
5082	29. SHKLARIN, J. B., Woodworking; Tools; Furniture; Metal Working; Cloth, Leather, and Rubber Receptacles; Baggage; Package and Article Carriers; Deposit and Collection Receptacles; Tables.	July 26	July 29	727
4083	30. SHIPMAN, J. L., Automatic Temperature and Humidity Regulation; Illuminating Burners; Illumination; Thermostats and Humidostats.	June 24	June 24	874
4716	31. DUNCOMBE, C. S., Mineral Oils; Hydrocarbons	Aug. 26	Aug. 21	569
4086	32. LESH, KARL, Gas and Liquid Contact; Heat Exchange; Gas Separation; Agitating	Aug. 7	Aug. 14	479
6096	33. WYMAN, W. I., Bridges; Masonry, Concrete, Metallic, and Wooden Structures; Roofs; Roads	Aug. 23	Aug. 12	867
6628	34. SAPERSTEIN, S., Electricity, Transmission to Vehicles; Railways, Rolling Stock, Switches, and Signals; Track Sanders.	Sept. 1	Sept. 7	325
3876	35. REYNOLDS, E. C., Card and Sign Exhibiting; Signals; Dispensing; Portable Receptacles	Aug. 14	Aug. 27	532
7992	36. McFADYEN, A. D., Measuring and Testing; Force Measuring; Automatic Weighers	July 6	June 28	544
5886B	37. WEAVER, M. E., Electricity, Circuit Makers and Breakers; Light-Sensitive Circuits	June 23	June 24	734
3084	38. KRAFFT, C. F., Earth Boring; Hydraulic and Earth Engineering; Mining and Quarrying; Stoneworking; Wells; Plastic Compositions.	July 28	July 31	616
4878	39. WHITNEY, F. I., Fluid-Pressure Regulators; Multiple Valves; Valves; Water Distribution; Railway Draft Appliances.	July 16	July 21	577
7880	40. OBERLIN, J. J., Metallic, Wood, Paper, and Special Receptacles	July 20	July 20	1,215

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Appeals for the District of Columbia

KOLLSMAN *v.* COE, COMMISSIONER OF PATENTS

No. 6,784. Decided September 13, 1937

PATENTABILITY—QUICK READING INDICATOR.

Certain claims of an application for patent on quick reading indicator *Held* unpatentable over the prior art.

APPEAL from the District Court of the United States for the District of Columbia. Affirmed.

Mr. Leonard Day for Kollsman.

Mr. R. F. Whitehead and *Mr. Wm. Wallace Cochran* for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB, VAN ORSDEL, GRONER, and STEPHENS, Associate Justices.

STEPHENS, *A. J.:*

This is a suit brought under section 4915 of the Revised Statutes (35 U. S. C. § 63). It was based upon a decision of the Board of Appeals of the United States Patent Office, which rejected claims 1 to 7 of the appellant's application for patent. The District Court of the United States for the District of Columbia decreed that the appellant was entitled to a patent on his application, Serial No. 705,642, filed January 8, 1934, entitled "Quick Reading Indicator", the patent to include claim 7, but not to include claims 1 to 6, both inclusive.

No appeal was taken from that part of the decree which allowed claim 7. The appellant abandoned claims 3 and 4, and the appeal involves only claims 1, 2, 5, and 6.

We have carefully considered the record and briefs. For the reasons set forth by the tribunals of the Patent Office, which we deem it unnecessary to reiterate, we are convinced that the appealed claims, read in the light of the specification, recite nothing that required invention.

Decree affirmed.

Affirmed.

VAN ORSDEL, *A. J.*, sat during the argument of this case, but died before the opinion was prepared.

U. S. Court of Customs and Patent Appeals

IN RE QUARTZ

No. 3,797. Decided May 29, 1937

[90 F.(2d) 255]

PATENTABILITY—CARBON SHEET.

Claims for a carbon sheet *Held* patentable over the prior art.

APPEAL from the Patent Office. Reversed.

Mr. George L. DeMott and *Mr. T. T. Greenwood* for Quartz.

Mr. R. F. Whitehead and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.:*

The appellant filed an application in the United States Patent Office for a patent on an improvement in carbon sheets and carbon binders. One claim, the only remaining one in the case, was rejected by both tribunals in the Patent Office, and is brought here on appeal. This claim is as follows:

22. A carbon sheet comprising a paper sheet having a carbon deposit on its working face and a projecting uncoated margin on one long edge of the sheet contrasting in color with the remainder of the sheet and coextensive with the top and bottom edges of the sheet, said uncoated margin having on its back face a continuous series of horizontal marks spaced apart by a distance equal to the single line spacing of a typewriter, the continuous series of single spaced line marks being coextensive with the length of the carbon deposit and said marks being progressively numbered throughout the length of the margin, said marks and said numbers serving to denote the position of typed characters on all portions of the sheet and to cooperate with the horizontal scale of the platen.

The Examiner relied on the following prior art: Burnett, 1,419,217, June 13, 1922; Smith, 1,133,331, March 30, 1915; Scott, 1,931,168, October 17, 1933; Ohashi, 898,916, September 15, 1908.

The same references were also relied upon by the Board of Appeals.

The appellant's contribution to the art is a carbon sheet

"with an uncoated strip along one edge and provided on the reverse side of the uncoated strip with marks spaced equal to the single line spacing of a typewriter, the marks being numbered * * * from 1 at the bottom to 63 at the top."

The sheet is so arranged that the uncoated strip and numbers project beyond the paper which is being written upon, and the carbon area is the same as that of the record sheets. The uncoated strip also has thereon printed spaces giving the trade name of the carbon sheet at various places along the numbered strip.

It is claimed by the appellant that his carbon sheet, which may also be used in a pack, enables the operator to arrange and handle the carbon sheets without soiling the hands, and that the numbers and marks appearing upon the margin enable the user to see when he is approaching the bottom of his record and duplicate sheets. It is also alleged that by means of the marginal numbers and marks, in conjunction with the scale on the platen, it is possible to make duplicate ribbon copies of matter which has been typewritten, and is very useful in arranging printed matter on copies, according to some prearranged desired form. In addition it is stated that by the single-space arrangement of the numbers on the uncoated margin, the carbons can be so shifted as to avoid the repeated use of the same space in the carbon sheet, to utilize each portion of the carbon surface, and to accomplish a great saving in the number of carbon sheets used.

Four patents are cited as references. Ohashi shows a backing sheet for typewriting. This sheet is made to project at one edge slightly beyond the right-hand edge of the sheet which receives the writing. A series of numerals is arranged on both sides so that they may be read in reverse order, running from 1 to 58, inclusive. These are at the right-hand opposite faces of the sheet, so that the sheet may be reversed, if desired.

The patentee Smith shows a carbon sheet with

an upper uncoated margin used for the purpose of avoiding loss of time in trimming off the carbon sheets, and making it

"simple and easy to assemble the carbons in the machine, with their leading edges in alinement with one another."

The patent to Burnett shows a carbon sheet with the carbon-coated surface extending entirely across the sheet. On the right-hand margin of the non-carbon-coated surface, along a part of the margin, namely, at the midpoint and at a number of points near both the upper and lower margins, indicia by which the operator is warned of the approach to the end of the sheet are provided.

The patent to Scott shows a carbon sheet having uncoated margins on both sides, each provided with indicia consisting of cut-in portions, by use of which the operator can note the approach of the end of the work sheet.

Accompanying the application is an affidavit of the inventor. There also appears in the record the affidavit of George F. Malcolm. These affidavits show very definitely the commercial success of the appellant's carbon sheets. It appears from these showings that during the last year more than $50,000 worth of carbon paper bearing this invention was sold, that the product has become commercially successful to a very considerable degree, and that it sells on the market at much higher prices than other competing papers. It is admitted by the Patent Office tribunals and by the Solicitor for the Patent Office in his argument here, that the product herein involved is useful and is a commercial success, and that it is novel and produces new and useful results. However, it is contended that it lacks invention over the reference patents.

As it seems to the court, the application of the appellant discloses a new and novel combination which is inventive. It is true that the prior art discloses two of the marked characteristics of utility in the carbon paper of appellant, namely, marginal numerals and margins free from carbon. There is, however, in this paper of appellant, a combination of utility and new and useful results which seems to entitle it to the award of a patent. The patent to Ohashi was not a carbon sheet. The patent to Smith was so remote as to obtain but slight mention from the Board of Appeals. The patent to Burnett lacked two of the main essentials, namely, a continuous line of marginal numerals and a soil-proof margin, and the patent to Scott had no marginal numerals. Carbon papers have been used for many years, and it is apparent that the art appreciated some of the difficulties which this inventor was seeking to overcome. However, while workers in the art approached, to some extent, a solution of the problem, the problem was not solved until this appellant conceived the fortunate combination of elements which converted these failures into a success. It is somewhat difficult, sometimes, to say just where invention begins, but it frequently happens, as it seems to have happened here, that someone will conceive of a fortunate combination which produces a great advance in the art, which, perchance, seems to be but a small deviation from the practice and prior knowledge of the art.

The utility of this carbon paper is plainly apparent on seeing it in operation. Economies are produced by the use of the entire carbon backing. It is possible to make exact ribbon copies by the combination of the marginal numbers and platen scale, which greatly facilitate the work of the typist. These were lacking in the prior art and constitute considerable advances.

We are of opinion that the appellant has made an invention, and that he should be given a patent therefor.

The decision of the Board of Appeals of the United States Patent Office is reversed.

Reversed.

U. S. Court of Customs and Patent Appeals

KIRSCHBRAUN *v.* DOHERTY

No. 3,798. Decided May 29, 1937

[90 F.(2d) 251]

1. INTERFERENCE—PRIORITY—RIGHT TO MAKE CLAIMS.
Record reviewed and *Held* that D. has no right to make count 1 of the issue and that priority as to that count should have been awarded to K.

2. SAME—SAME.
Evidence reviewed and *Held* to establish that D. was the first to conceive the invention of counts 2 and 3 and the first to reduce it to practice, and priority was properly awarded to him.

APPEAL from the Patent Office. Modified.

Mr. Charles M. Thomas and *Mr. Clarence O. McKay* for Kirschbraun.

Mr. Edmund G. Borden for Doherty.

GRAHAM, *P. J.*:

An interference proceeding was instituted in the United States Patent Office between the application of Lester Kirschbraun, for certain improvements in apparatus and process for treating hydrocarbon oils, filed April 1, 1920, and a pending application of one Henry L. Doherty, filed February 24, 1920, for a similar invention. There were originally five counts in the interference. Count 1 of the interference, as now before us, is the only remaining count which was in the original interference as count 3 thereof. Counts 2 and 3 of the present interference were added on the suggestion of the party Doherty. All three of the present counts originated in the Doherty application.

The three counts of the interference are as follows:

1. A process of distilling oil comprising heating a heavy hydrocarbon oil under pressure to a cracking temperature while it is being circulated in a stream, discharging the heated oil into an enlarged chamber while maintaining the pressure therein to separate vapors from the oil, continuously leading the vapors and the oil in separate streams from the chamber into a body of oil maintained at a cracking temperature and pressure, bringing the vapors into direct contact with the oil of the body and leading off vapors from the body and condensing them.

2. A continuous process for cracking hydrocarbon oils, which comprises heating the oil in a confined stream of restricted cross section in a cracking zone, passing cracked oil from said zone through successive vapor releasing chambers of decreasing temperature and pressure, passing vapors released in a chamber of higher temperature through and in intimate contact with liquid oil in the next succeeding chamber of lower temperature, and withdrawing and condensing vapors from the chamber of lowest temperature.

3. The process of cracking hydrocarbon oils which comprises, heating the oil to be cracked to a cracking temperature in a confined stream of restricted cross section in a heating zone, passing heated oil from said zone through successive vapor releasing zones of decreasing temperature and pressure, passing vapors released in each vapor releasing zone except the last, into the next succeeding zone of lower temperature in contact with liquid oil constituents therein, subjecting vapors remaining uncondensed in said zones to dephlegmating conditions to produce reflux condensate, passing reflux condensate produced by said dephlegmatic conditions to said heating zone for retreatment, and producing a final condensate from the vapors removed from the last vapor releasing zone.

The junior party Kirschbraun filed a motion to dissolve the interference on the ground that the Doherty application fails to disclose or teach the invention defined by the counts and will not support said counts.

The senior party Doherty moved to dissolve the interference on the grounds; first, on account of irregularity in its declaration; second, that the Universal Oil Products Company, the assignee of the junior party Kirschbraun, had waived its rights by failure to move to amend in interference No. 55,846 (*Doherty* v. *Dubbs*) and insert the counts of this interference in said interference; third, that the junior party's aforesaid assignee is estopped by its failure for more than two years after knowledge thereof to copy the then allowed claims 3, 4, and 5 from the senior party's application; fourth, that the junior party has no right to make counts 1 and 2 because of failure to disclose the subject matter defined by these counts, namely, and particularly, that it does not disclose the passage of "*all* of the cracked oil" and "*all* vapors." [Italics ours.]

The Examiner of Interferences sustained the Kirschbraun motion to dissolve as to counts 1 and 2 of the interference, and overruled it as to count 3, which was made, thereafter, count 1. The Doherty motion to dissolve was overruled in toto. Doherty's motion to add proposed counts 6 and 7 was allowed and these were added as new counts 2 and 3. The interference was dissolved as to counts 4 and 5 on the motions of both parties. The interference was then reformed with three counts as they are now before us.

On final hearing, the Examiner of Interferences awarded priority as to all counts to the senior party Doherty. On appeal, the Board of Appeals affirmed the decision of the Examiner of Interferences.

The matter comes to us on the appeal of the junior party Kirschbraun, and a number of questions are raised which will require a rather extended survey of the record. Both parties took evidence as to priority of conception and reduction to practice.

The counts now in the interference are each for a process.

The application of the senior party discloses a process for distilling heavy hydrocarbon oils. The product desired to be obtained is lighter hydrocarbon oils, particularly gasoline, and other fractional distillates. The invention contemplates rapidly circulating heavy oil through a heater in a comparatively small stream and carrying a stream of vaporizing and agitating inert gas in contact and parallel with the oil while it is being heated. The system inherently embraces the circulation of vapors and oil through a cracking chamber in countercurrent paths, thus bringing the vapors and oil in constant contact with each other. In order to effectively promote this process, the inventor passes the raw oil through a series of surface condensers where it receives heat from oil vapors which flow through the condensers countercurrent to the flow of oil. The oil is thus preheated by the vapors to from 300° to 450° F. and from the last of the condensers flows into the upper portion of a cracking chamber. This cracking chamber is an elongated tower with a conical base for the reception and collection of liquids, and the incoming oil flows downward through this cracking tower over a series of shallow pans or baffles from top to bottom of the chamber. The specification states, in part:

"In the cracking chamber, the oil is formed into a series of bodies which are separated by trays or horizontal partitions."

As this oil passes downward, it meets a body of heated oil about one-third of the way downward through the cracking chamber. This heated oil enters through a pipe by means of a pump from a chamber or a separator, in which oil from the still is separated into oil and vapors. As the downflowing liquid proceeds in its course, near the bottom of the cracking chamber it meets an inflowing current of heated gases which comes from the same separator. These gases are at a cracking temperature and move upward through the cracking chamber, meeting the downflowing oil. The trays are so arranged with small openings that the gases, in ascending, will bubble through the oil passing thereover. The downflowing liquids are therefore commingled with gases and after this intermixture the liquids are drawn off at the bottom and again sent back through the still for reheating. The gases which escape in the cracking chamber ascend, pass through the surface condensers, and the condensate is removed from the system by proper apparatus. As to the rising gases in the cracking chamber, the specification states, in part:

"In this way, the gas and vapors entering through the pipe 48 pass upwardly through the bodies of oil on the trays to actively agitate the oils and to transfer to the oil any superheat which they may possess."

The disclosure of the junior party is, briefly, in part, as follows: The material to be treated, namely, heavy hydrocarbon oil, is caused to pass through a series of separate retorts. The raw oil is pumped into a furnace and through a series of small cracking tubes therein, from which it goes to a series of retorts, four being shown in the drawings. The oil is caused to pass through each retort before it enters the next in the series. As this oil, heated to cracking temperature, is discharged into the first retort, some separation of vapors and fluids results, and the vapors rise through the body of oil and leave the retort at the top, from thence entering a dephlegmator above the retort from which the condensate returns for recirculation and the uncondensed vapors pass by means of a pipe into the next retort in the series, from which pipe, by means

of perforations, it is discharged into the condensates therein. From the first retort a stream of oil passes into the next retort where it again is brought into contact with a large body of oil and gases, and again the preceding process is repeated. Oil is drawn from each of these retorts by a standpipe, the level of the outlet of the standpipe being higher in each succeeding retort, thus retaining the condensate at a somewhat higher level. The lower part of the vapor injector pipe in each retort is perforated, permitting the vapor to be diffused in small streams through the condensates. This process is repeated in each retort until the series is completed. The object of this process is to keep vapors constantly passing into and through large bodies of oil heated to cracking temperature, thus bringing in constant contact the oil and vapors, and to increase the quantity and quality of the residual distillate.

The first and most important question to be determined in this case is whether the first count of the interference will read on the disclosure as made by the respective parties and, as it seems to the court, the principal point involved here is as to whether the applications of the parties disclose this element, namely, continuously leading the vapors and the oil in separate streams from the chamber "*into a body of oil.*" [Italics ours.] Counsel for the junior party insist that the Doherty disclosure does not satisfy this requirement, while the disclosure of the Kirschbraun application does.

It seems quite apparent that the apparatus of the respective parties, while intended to produce the same result, does not operate in the same manner. The count says, "*a* body of oil," [italics ours] as we have already shown. Doherty's application states that the oil is formed into a series of bodies and the "bodies of oil on the trays."

We find ourselves in agreement with the contention that the Doherty application shows rather an upflowing stream of gas and heated oil in contact with a downflowing stream of inflowing oil rather than two currents, one of oil and one of gas, entering *a* body of oil. The amounts of oil and condensate borne upon the various trays of Doherty are "bodies", it is true, however small they may be, but it is more in keeping with the language of the count that the body of oil which is in mind in the formation of the count is one considerable body, such as is shown in the disclosure of Kirschbraun.

It will also be noted that count 1 calls for the maintenance of "a cracking temperature and pressure" during the process of intermingling of the vapor and body of the oil. It appears quite plainly that in the Doherty application and disclosure, this language is not satisfied. During at least one-third of the flow of the oil in the upper portion of the cracking chamber, the incoming oil is not at a cracking temperature, but it gradually increases in temperature as it proceeds downward, with a consequent evident variance in temperature and pressure.

It also appears that the heavy hydrocarbon oil mentioned in the beginning of the count is the oil before treatment. It will be observed that the count recites,

"heating a heavy hydrocarbon oil under pressure to a cracking temperature while it is being circulated in a stream, discharging the heated oil into an enlarged chamber * * * to separate vapors from the oil."

Consideration of the specification and drawings discloses that the heavy hydrocarbon oil in Doherty is not discharged into a chamber and into a cracking temperature. As a matter of fact, it is discharged into much less than a cracking temperature. The temperature only becomes a cracking one after a part of the journey of the oil through the cracking chamber is finished.

[1] We are compelled, therefore, to differ with the Patent Office tribunals as to count 1 of the interference. In the judgment of the court, this count does not read upon the Doherty disclosure and the interference should have been dissolved as to said count.

It is not contended here that Doherty cannot make counts 2 and 3, and Kirschbraun's motion to dissolve, as to them, was, therefore, properly overruled.

The party Doherty claims in his motion to dissolve that the party Kirschbraun is estopped to make the counts of the interference, because of the failure of his assignee to claim the same in interference No. 55,846. In view of our conclusions that the interference should be dissolved as to count 1, and in view of our conclusions as to priority as to counts 2 and 3, hereinafter stated, we deem it unnecessary to here further discuss Doherty's said motion to dissolve.

The remaining question which we find it necessary to determine is that of priority as to the subject matter of counts 2 and 3. Doherty is the senior party and the burden, therefore, rests upon Kirschbraun to overcome Doherty's priority by a preponderance of the evidence. This he attempted to do by his testimony that he conceived the invention in October, 1919, after witnessing a demonstration of a small plant erected by C. P. Dubbs, at Wilmette, Illinois. He testified that he disclosed his invention to Frank L. Belknap, a patent attorney of Chicago representing his assignee, while upon a train travelling east from Chicago, drawing a rough sketch at that time. This rough drawing, known as Kirschbraun's Exhibit No. 1, is in evidence. Mr. Belknap, who was deceased before the evidence was taken herein, examined the drawing and wrote thereon:

"Explained to me by L. Kirschbraun, December 1st, 1919, en route to Washington, D. C., on 'Broadway', as process and apparatus for treating hydrocarbons. F. L. Belknap."

It sufficiently appears from the record that the memorandum and the signature attached thereto is in the handwriting and the signature of F. L. Belknap. It also appears that one Thomas E. Schofield, a patent lawyer, was associated with Belknap at that time, and that a part of his duties included the preparation of patent applications for clients.

By stipulation of the parties, it is stated that if Schofield were present he would testify as follows:

That if Thomas E. Schofield were called as a witness in this interference he would testify that he began the preparation of the Kirschbraun application involved in this interference on or about February 3rd, 1920, and that he completed a draft of an application on or about February 6th, 1920, describing substantially the same subject matter as that of the application as filed and that the entries on the said record sheets hereto attached as exhibits A and B under the dates of February 3rd and February 5th, 1920, have reference to the preparation of the said application of the party Kirschbraun involved in this interference.

Also included in this stipulation are certain memoranda showing charges for work done on the Kirschbraun application by Belknap from February 3rd to 6th, 1920, and charges for the expenses of the train trip mentioned in the testimony of Kirschbraun, in December, 1919.

Exhibit 1 is a sheet of scratch pad paper with a rough pencil sketch thereon. It bears a general resemblance to the final sketch accompanying the application. A few of the parts are lettered, but much is left unexplained and it lacks a great deal of the precision required of a sketch from which construction could be made. The evidence which was offered as to the memorandum of Mr. Belknap seems to have justified its admission.

[2] We cannot escape the conviction that this evidence offered on behalf of Kirschbraun lacked the certainty necessary to overcome Doherty's filing date. We do not, however, approve the view that this evidence so offered on behalf of Kirschbraun is "of no weight in view of the failure to submit the said completed draft."

We have examined the record evidence offered on behalf of Doherty on the question of the priority of conception. Without going into detail, it appears quite plainly from the testimony of David G. Brandt, Robert G. Griswold, Frederick E. Alexander, and Edmund G. Borden, that sometime in the summer of 1919, the party Doherty was in possession of the invention, the subject matter of the issue here, as stated in counts 2 and 3; that full and complete plans of the same were made by the witnesses Brandt and Alexander, under the direction and with the approval of the party Doherty; that Mr. Borden, a patent attorney representing the party Doherty, was retained and employed at work on these plans and was in continuous consultation with the employees of the party Doherty during the summer of 1919, on the matters now involved herein. In fact, a consideration of the testimony in this record shows conclusively that the invention here involved was conceived and fully disclosed by the party Doherty and those under his immediate employ at least as early as the summer of 1919, many months before the conception of the party Kirschbraun, even if he be given the date when he claims to have disclosed the same to Mr. Belknap, on the train.

Kirschbraun does not attempt to prove a reduction to practice prior to his date of filing. It, therefore, appears that, as to counts 2 and 3, Doherty was the first to conceive and the first to reduce to practice, allowing to him only the date of filing as his date of reduction to practice. Doherty is, therefore, entitled to priority as to counts 2 and 3.

The decision of the Board of Appeals of the United States Patent Office is, therefore, modified, being affirmed as to counts 2 and 3 and reversed as to count 1.

Modified.

U. S. Court of Customs and Patent Appeals

IN RE CROWELL AND SCHWARZ

No. 3,814. Decided June 7, 1937

[90 F.(2d) 125]

PATENTABILITY—LIQUID FUEL STOVES.

Claims for a liquid fuel stove *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. John Boyle, Jr., *Mr. F. M. Crawford*, and *Mr. S. W. Scott* for Crowell et al.

Mr. R. F. Whitehead and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.*:

The appellants have filed an application in the United States Patent Office for the issuance of a patent on certain claimed new and useful improvements in liquid fuel stoves. It is stated in the specification that the application is principally concerned with stoves which are designed to smokelessly burn liquid fuels, such as alcohol and the like, and that the alleged invention is a stove that is specially adapted for heating transportation or refrigerator cars, principally those used to transport fruit and foods which are easily injured by variations in temperature under transportation. The appellants' particular heater involves several elements, most of which are well defined by the rejected claims. Of these claim 30 is thought to be typical, and is as follows:

30. In an alcohol heater, the combination of a main fuel reservoir, a main heating burner and a pilot burner positioned below said main reservoir, an auxiliary reservoir positioned below said main reservoir and connected to the lower portion thereof by a liquid conduit, a float actuated valve positioned in said auxiliary reservoir and operatively connected to said conduit to maintain the liquid level in said auxiliary reservoir below the level of the burner tops, a liquid conduit connecting said auxiliary reservoir to the pilot burner, and a liquid conduit connecting said auxiliary reservoir to the main burner, a thermostatic valve in said last mentioned conduit and located between the float actuated valve and the main burner, the said float actuated valve providing a constant head of liquid to said thermostatic valve.

The claims remaining in the case at this time are claims 30 to 33, inclusive. These were all rejected by the Primary Examiner on the following references: Webster-Flockton, 11,730, October 10, 1844 (French); Sheer, 1,432,576, October 17, 1922; Sheer, 1,475,030, November 20, 1923; De Florez, 1,536,705, May 5, 1925; White et al., 1,891,855, December 20, 1932; Pickup, 1,900,520, March 7, 1933.

An affidavit having been filed under rule 75 of the Rules of Practice in the United States Patent Office, the patent to Pickup was withdrawn as a reference, and the claims were then rejected by both tribunals on the remaining references.

As to the patents to Sheer, 1,475,030, and to De Florez, the Solicitor for the Patent Office says:

The patents to Sheer, 1,475,030, and to De Florez, 1,536,705, were listed by the Examiner and the Board

of Appeals as being among the references relied upon but inasmuch as neither of these two patents seem to be specifically applied to any claim either by the Examiner or by the Board of Appeals further consideration of them here appears to be unnecessary.

Therefore, as stated by the Solicitor in his brief, there remain only three references relied upon, namely, the French patent to Webster-Flockton, the patent to Sheer, 1,432,576, and the patent to White et al. and two grounds of rejection. These two grounds are stated by him, as follows:

> * * * In brief these two grounds of rejection are that there is no invention in adding the thermostatic valve control to the structure of the references which disclose the float valve control, or on the other hand, that there is no invention over the references which does disclose the thermostatic valve control in the feature of providing a float controlled valve. In other words it was held that the prior art shows all the elements claimed and there is no invention, in view of the teachings of the art, to put these elements together in the form claimed by appellants. * * *

The application of the appellants discloses the heater to consist, as stated by the Examiner, of the following:

> The alleged invention resides in a liquid fuel feeding system for a combined main and pilot burner structure 36 employed in liquid fuel heaters and comprises a main fuel reservoir 11, an auxiliary, float controlled, constant level reservoir 8 intermediate the main reservoir and burner, an open top thermostatic valve 45 positioned intermediate the auxiliary reservoir and the main burner, and a connection 23a or 21a between said auxiliary reservoir and the pilot structure.

In other words, the heater has a central flue or chimney, at the bottom of which is a wickless burner. Above and at the sides of the heater is a tank with a principal fuel supply. Underneath one side of this principal tank is an auxiliary tank which feeds fuel to the burner in the center of the heater. The fuel supply is controlled between the auxiliary tank and the burner by a thermostat, activated by the surrounding outside temperature. Fuel is fed from the main reservoir to the auxiliary tank by means of a float type valve. If by any chance this float valve ceases to function, the fluid rising in the auxiliary tank will shut off the flow from the main fuel tank by closing the ingress of air into said main tank, in other words, by barometric pressure, until such time as further consumption of fuel permits further flow of fuel from the main to the auxiliary reservoir. A pilot light is provided which lights the one or more burners which are used, and this also obtains its fuel from the auxiliary tank.

As the court views the matter, the elements combined in this disclosure were all known to the prior art. The principal contention here is, was there invention in combining them as the appellants have done here? The tribunals of the Patent Office are of opinion that no such invention is shown.

The patent to White et al. discloses an automatic heater for water and other purposes. In this disclosure there is a principal fuel reservoir, with a smaller auxiliary fuel reservoir below the same and between the main reservoir and the heater. The patent recites that "a constant level of oil" or fuel is maintained between the principal and auxiliary reservoirs. This control is brought about by means of a thermostat of the ordinary bellows type, whereby the level of the oil in the burner is slightly varied by the thermostat as is necessary to regulate the size of the flame. This patent does not specifically refer to a float feed valve and the appellants insist that nothing of the kind may be inferred from this patent.

The French reference patent discloses a large capacity fuel reservoir and a supplemental supply reservoir, in which latter reservoir the fuel is held at a constant level by means of a float valve. The fuel which supplies the burner receives its supply from the supplemental reservoir. If the float valve ceases to work properly, the supply of fuel can be shut off by barometric pressure, and a supplemental chamber is also shown for additional safety provision for the same purpose. No thermostatic control is shown by this French patent.

The Board of Appeals was of the opinion that all the elements of the appellants' device were shown in the prior art, exemplified by the three reference patents. We have reached the same conclusion. It is evidently intended by the cited art to maintain a constant level in the supplementary tank. The references mention this feature, and while none of them shows a combination of the two elements as in appellants' disclosure, the characteristics of the thermostatic control and the float feed valve were well known to the art, and were fully explained in these patents severally. It does not appear that it would be invention to combine the valuable character of both features, as shown by these patents, into one apparatus. As a matter of fact, it would seem obvious to one skilled in the art to do so. The other features of appellants' device, such as a pilot burner, are shown by the reference patents.

We are unable to discover wherein any new and useful end is accomplished by the combination of the appellants, such as would make the combination patentable. The same objects are disclosed in the reference patents, and the adaptability of the various elements used are well known in the prior art.

Much the same principles were involved in *In re Cordes*, 22 C. C. P. A. (Patents) 1158, 76 F.(2d) 302. In that case, a combination was claimed, including a liquid supply tank connecting with a carbureting chamber, a means adapted to maintain a constant liquid level in said chamber, and other features. The prior art showed the various elements which were combined in the claims of this application, but which were separately shown, and not in combination, as in this application. The question before the court in that case was whether it would be obvious to combine these various elements, and, in discussing the combination, we said, in part:

> Both the patentee Bruce and appellant had the same objective, viz., the securing of a uniform gaseous mixture; both employed pressure regulators for this purpose, but appellant by the use of a constant level type of carbureter secures, no doubt, a more nearly uniform mixture than could be secured with the Bruce apparatus. The Examiner in his statement expressed the opinion that Bruce would produce a uniform mixture under all conditions, but that, assuming that appellant secures a somewhat better mixture, no new result was produced rendering his combination patentable. It is our view that no unexpected result is secured by appellant's combination and that one skilled in the art, with the Bruce, Garred, and Cornish patents before him, would realize that by substituting in the Bruce apparatus the constant level type of carbureter shown by Garred or Cornish for the carbureter shown by Bruce a more uniform mixture would be secured. Therefore the new combination did not require the exercise of the inventive faculty. If this substitution were made, the claims here involved would read upon the Bruce apparatus.

The decision of the Board of Appeals of the United States Patent Office is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

MYERS *v.* ROETHEL

No. 3,815. Decided June 7, 1937

[90 F.(2d) 122]

INTERFERENCE—PRIORITY.

Evidence reviewed and *Held* to establish that R. was the first to conceive the invention in issue and the first to reduce it to practice and that priority was properly awarded to him.

APPEAL from the Patent Office. Affirmed.

Mr. Daniel G. Culler for Myers.

Messrs. Dike, Calver & Gray, and *Mr. Elmer J. Gray* for Roethel.

GRAHAM, *P. J.*:

An interference was declared in the United States Patent Office between the application of John H. Roethel, appellee, which application was filed March 21, 1931, and embraced the subject matter of window control mechanism, and the application of Hubert A. Myers, involving the same subject matter, and which was filed January 29, 1931. This interference was twice re-declared, first to include the application of Burton S. Floraday, filed February 1, 1932, and second, the application of Stanley W. Nicholson, filed August 15, 1932.

As the interference comes to us, it has but one count which is as follows:

> 1. In a window regulating mechanism, the combination of a horizontally movable member adapted to be connected to a window, a support, a gear rotatable on said support and having a projecting arm pivoted to said member for moving the window vertically, and a second arm parallel to the first arm and pivoted to the support and member at vertically spaced points equidistant from the axis of rotation of said gear and the pivot of the first arm to said member.

The Examiner of Interferences awarded priority to John H. Roethel, the junior party, and this decision was affirmed by the Board of Appeals. The parties Floraday and Nicholson are not here involved. The party Myers only has appealed.

Both parties took testimony, and a voluminous record has been made bearing on the subjects of conception and reduction to practice. No other questions are presented except these.

The invention in issue is a window regulator, or glass lifter, substantially as set forth in the count. It will be observed that the count does not recite that the invention shall be confined to automobile windows, but might be applicable to any window. The underlying plan is the lifting of the glass in a window, particularly an automobile window, by two parallel metallic pivoted arms, each attached to a support and a lifting member in such a way that the glass window will be raised vertically and be retained horizontally while being raised, so that the window will not tip or jam while being raised or lowered. Each of the parties, particularly Roethel, had a clutch under consideration in connection with this device when the field was first entered, but such clutch does not enter into this controversy, and is not within the scope of the count of the interference.

There is also no controversy about the fact that the count of the interference reads upon both applications herein. The only controversy is about when the respective parties conceived the invention and reduced the same to practice.

John H. Roethel, the junior party, was a native of Austria and came to the United States in 1914, being now a citizen of the United States. Beginning in 1920, he ran an automobile repair garage in Brooklyn, N. Y. He remained in Brooklyn until 1930, when he removed to Detroit, Michigan, and thereafter worked for the Ferro Stamping & Manufacturing Corporation. While in Brooklyn he specialized in wrecked motor repair work, and began to work at window regulators in 1922. He states that he made a parallel arm regulator first in the fall of 1927 and again in 1928. He completed a parallel arm regulator and exhibited it to others in November, 1928. The regulator on that device was of the same construction as that now before us, but it had, in addition, a clutch by means of which the glass could be lowered without revolving the crank, and could be released and forced back upward by a spring.

During this work in Brooklyn in 1928, a model was made, in evidence here as Exhibit 1, which obviously satisfies the count of the interference. In it are two parallel arms, pivoted on the support at one end and pivoted on the glass supporting member at the other end

> "at vertically spaced points equidistant from the axis of rotation of said gear and the pivot of the first arm to said member."

This device was installed in a wooden form and fitted with a handle and operated by hand, repeatedly and with success. It was not installed in an automobile door.

Criticism is made of Roethel's corroborating testimony. It is said that this testimony was confused and contradictory and should not be given credence. There were seven of these witnesses. Some of them were foreign born and spoke English imperfectly. The cross-examination, also, was long and involved and repetitive. Roethel, for instance, was subjected to a cross-examination which covers 112 printed pages of the record. However, the very unlettered character of some of the witnesses, and the nature of the answers given in their involved cross-examination is convincing of the veracity of their statements. A significant fact is that Dr. W. J. Kriete, a man of learning, testified that he was so much convinced by the demonstration of the device by Roethel that he wanted to invest $25,000 in financing the new invention.

We are convinced that Roethel, in 1928, had conceived the invention here in issue, had constructed

a device embodying the same, and had subjected it to a shop test as heretofore stated.

The appellant insists vigorously that such shop test did not constitute a reduction to practice within the decisions of the courts, and cites *Payne* v. *Hurley*, 21 C. C. P. A. (Patents) 1144, 71 F.(2d) 208, 448 O. G. 3; *Jobski* v. *Johnson*, 47 App. D. C. 230, 247 O. G. 479; *Fageol* v. *Lyon*, 53 App. D. C. 361, 314 O. G. 178; *Urschel* v. *Crawford*, 22 C. C. P. A. (Patents) 727, 73 F.(2d) 510, 451 O. G. 238, and others.

As we view the matter, it will not be necessary to pass upon whether the reduction to practice of 1928 was sufficient.

When Roethel went to Detroit in September, 1930, he took his Exhibit 1 with him and soon thereafter showed it to Clarence C. Fairbank, sales manager of the Ferro Stamping & Manufacturing Corporation, who directed him to make another model. This was done and finished on October 9, 1930. This is in evidence, was stamped as of the date of completion, and embraces the subject matter of the count. A drawing of this regulator had previously, on September 29, 1930, been prepared, and it is in evidence. Two days after the completion of this regulator, known as Exhibit 2, it was put into a testing machine. The testing consisted of installing it in an automobile door, after which it was put into a machine, in which, by means of a rack and guide, the window was turned up and down "approximately about six thousand times." This testing was completed about October 15, 1930, and was satisfactory.

Roethel and his company then proceeded to attempt to work out a clutch for windows, and continued this until the application was filed on March 21, 1931.

As we view the matter, the test to which the Roethel device was subjected in 1930 was sufficient for a reduction to practice.

It is contended by the appellant that the tests made by the appellee of his Exhibit 2 were not a sufficient reduction to practice; that the devices must be tested in automobile doors, where they will be subjected to the bumps and roughness usually experienced by such vehicles. To support this theory, cases like *Payne* v. *Hurley*, supra, involving spark plugs, are cited. That case collates most of the recent cases on that subject. It seems to be the theory that the rule stated in the *Hurley* case, supra, is applicable to all automobile appliances or accessories. However, such is not the case, as appears from *Wilson et al.* v. *Sherts et al.*, 23 C. C. P. A. (Patents) 914, 81 F.(2d) 755, 467 O. G. 724, where laminated safety glass is involved; *Smith* v. *Place*, 23 C. C. P. A. (Patents) 1260, 84 F.(2d) 196, 472 O. G. 739, where trim panel was involved; *Creveling* v. *Jepson*, 44 App. D. C. 445, 226 O. G. 339, where electric distribution systems in car lighting systems, not necessarily automobile, were involved; *Schwalbenberg* v. *Dowell*, 54 App. D. C. 177, 322 O. G. 265, involving cooling systems for automobiles, and *Auflero* v. *Monnot*, 46 App. D. C. 297, 242 O. G. 750, where hand actuated alarm devices or mechanical horns were involved.

In the last case above cited, the count of the interference did not define the invention either as an automobile horn or as a device adapted for use on an automobile. The same is true in the case at bar. The count of the interference does not define the window regulator as one to be used on an automobile window, but upon any window where it might be used.

Therefore, whether Roethel be allowed a reduction to practice as of 1928, he is, at least, entitled to a reduction to practice of not later than October 15, 1930.

The party Myers, in his preliminary statement, contends that he is entitled to a date of reduction to practice as of November 15, 1930. Appellant filed a brief in the Patent Office which is here, by stipulation of the parties, as a physical exhibit. The Examiner of Interferences calls attention to the fact that counsel, in said brief, concedes that the regulator, known here as Exhibit G-6, was "constructed either during the latter part of November or during the month of December", which would follow Roethel's 1930 date of reduction to practice.

The party Myers filed a preliminary statement in which he states that he "conceived the invention set forth in the declaration of interference during the forepart of January, 1929." On May 10, 1934, he filed a motion to amend this preliminary statement. As to this motion to amend, the Examiner of Interferences says:

> Myers has moved to amend his preliminary statement to allege an earlier date of reduction to practice. This motion was filed after Roethel had taken testimony and could, therefore, be granted only on a most convincing showing. The reason given in support of the motion is that Myers did not realize how broad an interpretation might be given to the count until Roethel took his testimony. This is purely a mistake of law and it is well settled that such a mistake does not warrant the amendment of a preliminary statement (*Dalgren* v. *Crocker*, 98 O. G. 2586, 1902 C. D. 107; *Miller* v. *Wallace*, 131 O. G. 1089; *Foucler* v. *Boyce*, 108 O. G. 561). The motion must accordingly be denied. It further appears, as indicated above, that the device relied on as the basis for the amendment does not support the count. This fact affords a further ground for denial of the motion.

We are unable to see wherein any error was committed in the denial of said motion.

Myers first began to experiment with parallel arm window regulators in the latter part of 1928. In the latter part of July or first part of August, 1930, he first laid out on paper his idea for a two armed regulator. After this, several regulators were made up by him, or under his direction. These are in evidence and are known as G, G-1, G-2, G-3, G-4, and G-5. The model known as G-6 was the first one which conformed with the drawing in Myers' patent application here involved, and was made in the latter part of November or first part of December, 1930.
